

Background Modules

bio605 - Molecular Genetics and Cell Biology

Module label	Molecular Genetics and Cell Biology		
Module code	bio605		
Credit points	12.0 KP		
Workload	360 h		
Applicability of the module	<ul style="list-style-type: none"> • Master's Programme Biology (Master) > Background Modules • Master's Programme Biology (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules • Master's Programme Neuroscience (Master) > Background Modules 		
Responsible persons	<ul style="list-style-type: none"> • Neidhardt, John (module responsibility) • Neidhardt, John (authorised to take exams) • Koch, Karl-Wilhelm (authorised to take exams) • Jüschke, Christoph (authorised to take exams) 		
Prerequisites	BSc (Biologie, Biochemie)		
Skills to be acquired in this module	<p>++ deepened biological expertise ++ deepened knowledge of biological working methods + data analysis skills ++ interdisciplinary thinking + critical and analytical thinking + independent searching and knowledge of scientific literature + data presentation and discussion (E) (written and spoken) + teamwork + ethics and professional behaviour + project and time management</p> <p>Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology</p>		
Module contents	<p>Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases. Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.</p>

bio655 - Ornithology in theoretical Concepts

Module label	Ornithology in theoretical Concepts
Module code	bio655
Credit points	12.0 KP
Workload	360 h
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Background Modules• Master's Programme Biology (Master) > Background Modules
Responsible persons	<ul style="list-style-type: none">• Liedvogel, Miriam (module responsibility)• Bouwhuis, Sandra (Module counselling)• Köppl, Christine (Module counselling)• Langemann, Ulrike (Module counselling)• Mouritsen, Henrik (Module counselling)• Schmaljohann, Heiko (Module counselling)• Heim, Wieland (Module counselling)• Köppl, Christine (authorised to take exams)• Liedvogel, Miriam (authorised to take exams)• Bouwhuis, Sandra (authorised to take exams)• Langemann, Ulrike (authorised to take exams)• Mouritsen, Henrik (authorised to take exams)• Schmaljohann, Heiko (authorised to take exams)• Heim, Wieland (authorised to take exams)

Prerequisites

Skills to be acquired in this module

The aim of the module is to consolidate various aspects of ornithology. The module imparts advanced knowledge on different aspects of ornithology.

The students acquire:

An extended knowledge of behavioural, sensory, morphological and physiological characteristics in birds and relevant fundamental concept in conservation, ecology and evolution smorphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds

Knowledge, presentation and discussion of relevant English literature from various fields of ornithology

++ broad and deepened biological expertise

+ deepened in depths knowledge of biological working methods

+ interdisciplinary thinking

+ critical and analytical thinking

+ independent searching and knowledge of scientific literature

++ data presentation and discussion in German and English (written and spoken)

Module contents

The module is composed of the lecture "Ecology, evolution and sensory biology in birds", a seminar accompanying the lecture "Current Questions in Ornithology", a seminar "Behavioural Ecology of Birds", and a seminar "Methods in Field Ornithology".

Lecture "Ecology, evolution and sensory biology in birds":

This lecture covers in-depth and specific aspects of phylogeny, speciation and hybridisation, bird migration, orientation, behavioural ecology, population biology, life history and sensory systems of birds. Seminar "Current Questions of Ornithology":

In this seminar, original English publications are presented and discussed which deal with current research results from various fields covered in the lectures. Every student reads a paper on one scientific article, presents the study and discusses the results of that article with the other participants.

Seminar "Behavioural Ecology of Birds" (option 1):

In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

Seminar "Methods in Field Ornithology" (option 2):

The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

bio663 - Ornithology in Practice

Module label	Ornithology in Practice
Module code	bio663
Credit points	12.0 KP
Workload	360 h (2 weeks, 40h/week. Types of programme may differ slightly between the four different courses.)
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Background Modules
Responsible persons	<ul style="list-style-type: none">• Liedvogel, Miriam (module responsibility)• Bouwhuis, Sandra (Module counselling)• Langemann, Ulrike (Module counselling)• Vedder, Oscar Herman (Module counselling)• Schmaljohann, Heiko (Module counselling)• Liedvogel, Miriam (authorised to take exams)• Bouwhuis, Sandra (authorised to take exams)• Langemann, Ulrike (authorised to take exams)• Vedder, Oscar Herman (authorised to take exams)• Schmaljohann, Heiko (authorised to take exams)
Prerequisites	
Skills to be acquired in this module	<p>The aim</p> <ul style="list-style-type: none">++ broad and in depths biological expertise++ in depths knowledge of biological working methods++ data analysis skills+ interdisciplinary thinking+ critical and analytical thinking++ independent searching and knowledge of scientific literature++ data presentation and discussion in German and English (written and spoken)+ teamwork+ project and time management+ statistics and scientific programming <p>of the module is to consolidate various aspects of ornithology as well as to impart up to date methods applied in ornithological research.</p>
Module contents	<p>The module comprises four required elective courses (6 CP each), two of which have to be chosen.</p> <p><u>Required elective course 1:</u> Laboratory course and seminar "Ecology of Colonial Seabirds" (6 CP) The Institute of Avian Research safeguards a long-term individual-based study on common terns: colonially breeding, migratory, piscivorous seabirds. Students spend a week at the colony (located at the Banter See in Wilhelmshaven) to ask a scientific question (e.g. about foraging behaviour, coloniality or courtship behaviour) and collect data to answer it, then spend a week analysing the data statistically, writing a short report in Biology Letters format and presenting their results to their peers. Students receive one mark for the report and one for the presentation and the final mark for the course will be the average of these two marks.</p> <p><u>Required elective course 2:</u> Laboratory course and seminar "Communication in Birds" (6 CP). Original recordings from bird songs will be used to generate new data sets for the practical. From these recordings we will prepare spectrograms and analyze the waveforms and frequency spectra. Techniques and statistical method that allow to classify song types from individuals or from populations will be introduced and applied. For example, cluster analysis and discriminant analysis are statistical methods to assess the dissimilarity between "objects" or song type characteristics. The theoretical background for the practical is provided by the seminar using a standard text book on bird</p>

song Catchpole & Slater 2008).

Required elective course 3: Laboratory course and seminar "Japanese Quail" (6 CP). Observations and investigations of behaviour in relation to reproductive activity of male and female Japanese quail, at the Institute of Avian Research. Students will learn about theory regarding pace of life and exploration behaviour and develop predictions for inter-individual differences in exploration behaviour in relation to sex and reproductive activity. These predictions will be tested with standardized behavioural observations and measurements of food intake in the quail. The data will be analysed and discussed in the broader context of life-history theory.

Required elective course 4: Laboratory course and seminar "Scientific research in field ornithology, incl. identification of birds" (6 CP) This course has three teaching objectives. Firstly, to impart knowledge of the local bird community. This is conveyed through practical courses, work on bird specimens, and lectures. Secondly, learning and getting to know some standard methods of field ornithology, e.g. breeding survey, waterbird counts, radio telemetry, mist netting. Both teaching objectives form the basis for the third teaching objective. In this, the students independently conduct a scientific ornithological study. The data are analysed in the course under supervision. The results are summarised in a two-page scientific publication. At the end of the course, a kind of scientific conference takes place, in which all scientific projects are presented and discussed. The final grade is made up of the grades for the presentations and the scientific publication.

Prerequisites				
Skills to be acquired in this module	<p>The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.</p> <p>++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + interdisciplinary thinking + critical and analytical thinking + independent searching and knowledge of scientific literature ++ ability to perform independent biological research ++ data presentation and discussion (E) (written and spoken) + statistics & scientific programming</p>			
Module contents	<p>Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical. Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.</p>

Skills to be acquired in this module	+ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills; ++ critical and analytical thinking + independent searching and knowledge of scientific literature ++ data presentation and discussion in English (written and spoken) ++ statistics & scientific programming			
Module contents	Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses. Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.

Responsible persons	<ul style="list-style-type: none">• Zotz, Gerhard (module responsibility)• Gerlach, Gabriele (Module counselling)• Albach, Dirk Carl (Module counselling)• von Hagen, Klaus Bernhard (Module counselling)• Mouritsen, Henrik (Module counselling)• Nolte, Arne (Module counselling)• Schmaljohann, Heiko (Module counselling)• Zotz, Gerhard (authorised to take exams)• Gerlach, Gabriele (authorised to take exams)• Albach, Dirk Carl (authorised to take exams)• Will, Maria (authorised to take exams)• von Hagen, Klaus Bernhard (authorised to take exams)• Mouritsen, Henrik (authorised to take exams)• Nolte, Arne (authorised to take exams)• Khan, Gulzar (authorised to take exams)• Schmaljohann, Heiko (authorised to take exams)
Prerequisites	
Skills to be acquired in this module	<p>++ in-depth biological expertise ++ in-depth knowledge of biological working methods ++ data analysis skills + interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ ability to perform independent biological research + data presentation and discussion (E) (written and spoken) ++ project and time management ++ statistics & scientific programming</p> <p>The module aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).</p>
Module contents	<p>S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a "mini symposium" subsequent to the field studies. E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication</p>

Skills to be acquired in this module	<ul style="list-style-type: none">+ deepened biological expertise++ deepened knowledge of biological working methods++ data analysis skills++ critical and analytical thinking+ independent searching and knowledge of scientific literature++ data presentation and discussion in English (written and spoken)++ statistics and scientific computing
Module contents	<p><i>Content of the module:</i></p> <p>Lecture: The identification of organisms based on DNA sequences is well established and databased dedicated for this purpose are growing through ,barcoding of life' initiatives. Such information can be used to assign sequences extracted from environmental samples to individual species. This can be used to obtain species inventories and to study communities. While these methods are already used in fundamental research, they are only slowly adopted by fields such as conservation and ecosystem monitoring. The lecture covers concepts, methods, promises and problems of sequence based biomonitoring.</p> <p>Seminar: participants present topics relevant to the module.</p> <p>Exercise: We will generate and analyse sequence data data from environmental samples to generate species inventories for terrestrial and aquatic ecosystems. For this purpose we will extract eDNA from samples and apply next generation sequencing. The read data will be jointly analysed on the university hpc cluster. The participants will study methods and concepts associated with the analyses and present them in short presentations. The key aspect in the practical cours is to assign sequences to species and to discuss the applicability of the methods in fundamental research and in applied, management oriented research.</p>

Prerequisites	

Skills to be acquired in this module

Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

skills:

- ++ deepened biological expertise
- + deepened knowledge of biological working methods
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + teamwork

Module contents

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice

- Medical Implications of Developmental Biology

Prerequisites	mandatory prerequisite is the module bio845 (neu110) (Introduction to Development and Evolution)

Skills to be acquired in this module

Upon successful completion of this course, students have skills in methods of developmental biology:

- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab notebook
- know how to carry out formal laboratory reports (and the structure of a scientific paper)
- have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres

are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills:

- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- + data presentation and discussion (written and spoken)
- + teamwork
- + ethics and professional behaviour
- + project and time management

Module contents

Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature

neu360 - Auditory Neuroscience

Module label	Auditory Neuroscience
Module code	neu360
Credit points	6.0 KP
Workload	180 h (1 SWS Lecture (VO) Total workload 45h: 14 h contact / 31 h background reading 1 SWS Seminar (SE) Total workload 45h: 14 h contact / 15 h background reading / 16 h preparation and presentation 2 SWS Supervised exercise (UE) Total workload 90h: 10 h contact / 20 h literature search / 60 h work on essay paper)
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Background Modules• Master's Programme Biology (Master) > Background Modules• Master's Programme Neuroscience (Master) > Background Modules
Responsible persons	<ul style="list-style-type: none">• Ashida, Go (module responsibility)• Puschmann, Sebastian (authorised to take exams)• Ashida, Go (authorised to take exams)• Puschmann, Sebastian (Module counselling)
Prerequisites	Recommended previous knowledge/skills: Basics of Neurosensory Science and Behavioural Biology
Skills to be acquired in this module	<p>++ Neurosci. knowlg + Expt. methods ++ Scient. Literature + Social skills ++ Interdiscipl. knowlg ++ Data present./disc. ++ Scientific English + Ethics</p> <p>Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.</p> <p>Upon successful completion of this course, students</p> <ul style="list-style-type: none">• have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)• have basic knowledge of the large range of techniques used in auditory research• are able to read and critically report to others on an original research paper in auditory neuroscience• are able to research and review a specific topic in auditory neuroscience
Module contents	<p>One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.</p> <p>Topics: Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions Auditory nerve: phase locking, rate coding. Excitation patterns</p>

Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations
 Sound localisation in birds and mammals
 Central auditory processing: imaging techniques, auditory streams, cortex, primates
 Relation between psychophysics and neurophysiology

The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

neu380 - Neuroethology and Neurogenetics: Insect Models

Module label	Neuroethology and Neurogenetics: Insect Models
Module code	neu380
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Background Modules• Master's Programme Neuroscience (Master) > Background Modules
Responsible persons	<ul style="list-style-type: none">• Albert, Jörg (module responsibility)• Clemens, Jan (authorised to take exams)• Albert, Jörg (authorised to take exams)• Albert, Jörg (Module counselling)• Clemens, Jan (Module counselling)
Prerequisites	Enrolment in Master program Neuroscience or Biology, Students from other programs are welcome if space is available Attendance in pre-meeting

Skills to be acquired in this module

Goals of this module:

upon completion of this module, students...

- have knowledge on the emergence of behavior from neurosensory activation
- have learned about the interdependences between signals and their receivers (keyword: matched filters)
- have a basic understanding of the multiple determinants of behavior: molecular (e.g. genes), cellular (e.g. neurons), organismic (e.g. individuals), environmental (e.g. noise) and inter-individual (e.g. communication)
- have acquired basic skills in data analysis
- have acquired basic understanding of sensory signal processing
- have acquired an intuitive understanding of the multi-causal nature of behavior and the corresponding multiple levels of investigation

Skills to be acquired/ competencies:

- ++ Neuroscience knowledge
- ++ Experimental Methods
- + Scientific Literature
- + Social skills
- + Maths/Stats/Programming
- + Independent Research
- + Data presentation/discussion
- + Scientific English
- + Ethics

Module contents

The module consists of three weeks of seminar and hands-on lab exercises on insect behavioral experiments and electrophysiology (extracellular recordings from *Drosophila* or mosquito neurons).

The seminar covers the following topics:

- Introduction to Dipteran courtship behaviour (fruit flies and mosquitoes): common mechanisms and principles
- The cellular and molecular basis of Dipteran courtship: Between shared evolution and species-specific adaptation
- Introduction to the neurophysiological and neurogenetic toolbox to dissect behaviour (optogenetic, biophysical, behavioural)
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:

- Quantitative analysis of neural responses (electrophysiology, reporter imaging) from Dipteran insects

- Quantitative analysis of behavioural responses from Dipteran insects (e.g. courtship behaviour, flight tones)
- Design and Testing of different stimuli to probe neural and behavioural responses

Recommended reading	Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP Background and seminar literature will be available in Stud.IP

psy270 - Functional MRI Data Analysis

Module label	Functional MRI Data Analysis
Module code	psy270
Credit points	9.0 KP
Workload	270 h
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Background Modules• Master's Programme Neurocognitive Psychology (Master) > Mastermodule• Master's Programme Neuroscience (Master) > Background Modules
Responsible persons	<ul style="list-style-type: none">• Gießing, Carsten (module responsibility)• Gießing, Carsten (authorised to take exams)

Prerequisites

Enrolment in Master's programme Neurocognitive Psychology, Neuroscience, or Biology.

Skills to be acquired in this module

Goals of module:

Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

Competencies:

++ experimental methods
++ statistics & scientific programming
+ data presentation & discussion
++ group work

Module contents

Theoretical knowledge on functional MRI data analysis
Planning, performance and analysis of functional neuroimaging studies using MATLAB-based software
Hands-on fMRI data analysis with SPM

Duration (semesters)	1 Semester
Module frequency	The module will be offered every summer term.
Module capacity	30 (

The remaining places are reserved for Biology and Neuroscience students.

)

Reference text

Since the module is primarily offered for the Master's programme Biology it has to be offered as a blocked course. Please contact us if you are interested in the module but have problems with interfering other courses.

PLEASE NOTE: We strongly recommend to take either psy170, psy270, psy280, psy220 or psy290 to gain methodological competencies (EEG, fMRI, TBS, HCI, ambulatory assessment techniques) that are needed for most practical projects and Master's theses!

Type of module	Wahlpflicht / Elective	
Module level	MM (Mastermodul / Master module)	
Teaching/Learning method	blocked course with lecture, interactive seminar and exercise parts	
Previous knowledge	Students need to have solid statistical knowledge as taught in the Introductory Course Statistics and in Research Methods.	
Examination	Prüfungszeiten	Type of examination
Final exam of module	middle of summer term	Oral or written examination Required active participation for gaining credits: 1-2 presentations participation in discussions on other presentations attendance of at least 70% in the seminars and exercises within one semester (will be checked in StudIP).
Type of course	Seminar <i>blocked course in first half of the summer term.</i>

bio810 - External Research Project

Module label	External Research Project
Module code	bio810
Credit points	15.0 KP
Workload	450 h
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Research Modules• Master's Programme Biology (Master) > Research Modules
Responsible persons	<ul style="list-style-type: none">• Zotz, Gerhard (module responsibility)• der Biologie, Lehrende (authorised to take exams)
Prerequisites	

External research projects are done on an individual basis. They are supervised by one person from Oldenburg (see list of examiners, <https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte>) and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See <https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/> (Learning Agreement for External Research Module)

Skills to be acquired in this module

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion (written and spoken)
+ teamwork
++ project and time management
++ statistics & scientific programming

Students perform individual research projects to learn: • planning and organising of a research project in a group outside of University of Oldenburg • formulate a scientific hypothesis • planning, performing and analyzing experiments and / or simulations • working with scientific background literature on the specific context of the project • oral presentation and discussion of backgrounds and results in the lab seminar • write a scientific report in publication format • prepare and present a scientific poster

Module contents

Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad). The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English. Note: • all members of the regular Biology faculty at the University of Oldenburg can act as local supervisor (see list of examiners, <https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte>), students should contact appropriate supervisors individually • prior to project start, external and local supervisors must fill the learning agreement form • the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor • participation in a joint poster presentation of concurrent research modules is highly recommended.

Prerequisites				
Skills to be acquired in this module	<p>In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.</p> <p>+ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + critical and analytical thinking ++ independent searching and knowledge of scientific literature + ability to perform independent biological research ++ data presentation and discussion (E) (written and spoken) + teamwork + statistics & scientific programming</p>			
Module contents	<p>In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa. In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.</p>

neu730 - Biosciences in the Public Eye and in our Laws

Module label	Biosciences in the Public Eye and in our Laws
Module code	neu730
Credit points	6.0 KP
Workload	180 h (56h contact / 84h research for presentations / 40h term paper)
Applicability of the module	<ul style="list-style-type: none"> • Master's Programme Biology (Master) > Skills Modules • Master's Programme Biology (Master) > Skills Modules • Master's Programme Neuroscience (Master) > Skills Modules
Responsible persons	<ul style="list-style-type: none"> • Sienknecht, Ulrike (module responsibility) • Sienknecht, Ulrike (authorised to take exams)
Prerequisites	
Skills to be acquired in this module	<p>+ Expt. methods + Scient. Literature ++ Social skills ++ Interdiscipl. knowl/g + Data present./disc. + Scientific English ++ Ethics</p> <p>Upon completion of this course, students</p> <ul style="list-style-type: none"> • know basic rules of good scientific practise • are aware of the legal framework that is relevant to biological research, e.g. on animal welfare or genetically modified organisms • have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources • are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation • are able to prepare and give a coherent presentation in a team • have practised to lead a group discussion
Module contents	<p>In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.</p> <p>Example topics: Good scientific practise and fraud Neuroenhancement Artificial intelligence Animal welfare, Animal experiments Overfishing, Nature conservation State-of-the-art genetic tools and their implications Genetically modified organisms, e.g., in food production, chimeras Stem cells Humans as experimental subjects</p> <p>A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.</p>

neu751 - Laboratory Animal Science

Module label	Laboratory Animal Science
Module code	neu751
Credit points	3.0 KP
Workload	90 h (one week full-time in semester break + flexible time for studying and exam preparation 1 SWS Lecture total workload 45h: 2h contact / 20h background reading / 23h exam preparation 1 SWS Supervised exercise total workload 45h: 35h contact / 10h background reading)
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Skills Modules• Master's Programme Biology (Master) > Skills Modules• Master's Programme Molecular Biomedicine (Master) > Skills Modules• Master's Programme Neuroscience (Master) > Skills Modules
Responsible persons	<ul style="list-style-type: none">• Köppl, Christine (authorised to take exams)• Langemann, Ulrike (authorised to take exams)• Winkhofer, Michael (authorised to take exams)• Nolte, Arne (authorised to take exams)• Heyers, Dominik (authorised to take exams)• Ebbers, Lena (authorised to take exams)• Dedek, Karin (authorised to take exams)• Schmaljohann, Heiko (authorised to take exams)• Helgers, Simeon (module responsibility)
Prerequisites	none
Skills to be acquired in this module	++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics Upon successful completion of this course, students <ul style="list-style-type: none">• know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language• understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.• have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)• are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation• have practical skills in handling small rodents or birds or fish• have profound knowledge of anaesthesia, analgesia and basic principles of surgery.• have practised invasive procedures and euthanasia. <p>NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.</p>
Module contents	Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are: <ul style="list-style-type: none">• Legislation, ethics and the 3Rs• Scientific integrity• Data collection "• Basic biology of rodents, birds and fish• Husbandry, and nutrition of rodents, birds and fish• Animal Welfare• Health monitoring• Pain and distress• Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

neu790 - Communicating Neuroscience

Module label	Communicating Neuroscience
Module code	neu790
Credit points	3.0 KP
Workload	90 h (90 h (28 h contact / 62 h individual reading and preparing discussion questions))
Applicability of the module	<ul style="list-style-type: none">• Master's Programme Biology (Master) > Skills Modules• Master's Programme Biology (Master) > Skills Modules• Master's Programme Neuroscience (Master) > Skills Modules
Responsible persons	<ul style="list-style-type: none">• Kretzberg, Jutta (module responsibility)• Kretzberg, Jutta (authorised to take exams)• Köppl, Christine (authorised to take exams)
Prerequisites	
Skills to be acquired in this module	<p>+ Neurosci. knowlg. ++ Scient. Literature ++ Social skills + Interdiscipl. knowlg. ++ Data present./disc. + Scientific English ++ Ethics</p> <p>Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscience literature, learn about the scientific publication process and discuss science communication to the general public.</p>
Module contents	<p>The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover:</p> <ul style="list-style-type: none">• How to find literature?• How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers?• Publication process, Authorship and impact metrics• Alternative publication paths and data sharing in neuroscience• Science communication for the general public and on social media• Face-to-face scientific communication
Recommended reading	<p>List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP.</p> <p>Background neuroscience textbooks, e.g.:</p> <p>Galizia, Lledo 'Neuroscience – From Molecule to Behavior', 2013, Springer</p> <p>Nicholls et al. 'From Neuron to Brain', 5th edition 2012, Sinauer</p> <p>Kandel et al. 'Principles of Neural Science', 5th Edition 2013, McGraw-Hill Comp.</p>
