- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen
- Janssen-Bienhold, Ulrike (Module responsibility)
- Dedek, Karin (Module counselling)
- Janssen-Bienhold, Ulrike (Prüfungsberechtigt)
- Dedek, Karin (Prüfungsberechtigt)

Prerequisites
- attendance in pre-meeting

Skills to be acquired in this module
- Neurosci. knowlg. Expt. methods Independent research + Scient. literature + Social skills
- Practice: Performing neuroanatomical experiments. Gaining modern methodological skills.

Module contents
- Lecture: 14 h Introduction to current neurobiological approaches and results.
- Seminar: 14 h Discussion of background literature and results of own experiments.
- Lab course: 3 weeks, each 24 h neuroanatomical experiments in small groups on vertebrate retina and brain.

Literaturempfehlungen
- Background and seminar literature will be available in Stud.IP

Präsenzzeit Modul insgesamt
- 70 h
neu210 - Neurosensory Science and Behaviour

Module label: Neurosensory Science and Behaviour

Modulkürzel: neu210

Credit points: 9.0 KP

Workload: 270 h
- 4 SWS Lecture (VO) “Neuroethology” and “Behavioural ecology”
- Total workload 180h: 56h contact/ 60h background reading/ 64h exam preparation
- 2 SWS Seminar (SE) “Current issues of ethology”
- Total workload 90h: 28h contact/ 30h literature reading/ 32h preparation of presentation

Verwendbarkeit des Moduls:
- Master’s Programme Biology (Master) > Background Modules
- Master’s Programme Biology (Master) > Background Modules
- Master’s Programme Neuroscience (Master) > Background Modules

Zuständige Personen:
- Klump, Georg Martin (Module responsibility)
- Langemann, Ulrike (Module counselling)
- Mouritsen, Henrik (Module counselling)
- Feenders, Gesa (Module counselling)
- Klump, Georg Martin (Prüfungsberechtigt)
- Mouritsen, Henrik (Prüfungsberechtigt)
- Langemann, Ulrike (Prüfungsberechtigt)
- Feenders, Gesa (Prüfungsberechtigt)

Prerequisites:
Fundamentals of Neurobiology, Behavioural Biology, Evolution, Ecology

Skills to be acquired in this module:
++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of behavioural ecology and neuroethology
- are able to present and critically assess scientific data and approaches

Module contents:
The lecture “Neuroethology” provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.

The lecture “Behavioural ecology” provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.

In the seminar “Current issues of Ethology”, current original literature relating to behavioural biology is reported and discussed.

1 SWS Lecture (VL)
Total workload 36 h: 14 h contact / 22 h individual revision of lecture contents, test preparation, and application to portfolio tasks

1 SWS Seminar (SE)
Total workload 36 h: 14 h contact / 22 h individual reading and test preparation

3 SWS Supervised exercise
Total workload 108 h: 42 h contact/ 66 h individual work on portfolio tasks (programming and interpretation of simulation or analysis results)

Verwendbarkeit des Moduls
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen
- Anemüller, Jörn (Module responsibility)
- Anemüller, Jörn (Module counselling)
- Rieger, Jochem (Module counselling)
- Anemüller, Jörn (Prüfungsberechtigt)
- Rieger, Jochem (Prüfungsberechtigt)

Prerequisites
- attendance in pre-meeting

Skills to be acquired in this module
- Upon successful completion of this course, students
  - have refined their programming skills (in Matlab) in order to efficiently analyze large-scale experimental data
  - are able to implement a processing chain of prefiltering, statistical analysis and results visualization
  - have acquired an understanding of the theoretical underpinnings of the most common statistical analysis methods and basic machine learning principles
  - have practised using existing toolbox functions for complex analysis tasks
  - know how to implement new analysis algorithms in software from a given mathematical formulation
  - can interpret analysis results in a neuroscientific context
  - have applied these techniques to both single channel and multi-channel neurophysiological data

++ Neurosci. knowlg.
+ Scient. literature
+ Social skills
++ Interdiscipl. knowlg.
++ Maths/Stats/Progr.
+ Data present./disc.
+ Scientific English

Module contents
- data preprocessing, e.g., artifact detection and rejection, filtering, z-scoring, epoching
- data handling for high-volume data in Matlab
- introduction to relevant analysis toolbox software
- theory of multi-dimensional statistical analysis approaches, such as multi-dimensional linear regression, principal component analysis, independent component analysis, logistic regression, gradient-based optimization
- practical implementation from mathematical formulation to software code, debugging and unit testing
- postprocessing and results visualization
- consolidation during hands-on computer-based exercises (in Matlab)
- introduction to selected specialized analysis approaches during the seminar

Literaturempfehlungen
- Wallisch et al.: MATLAB for Neuroscientists, 2nd Ed. Academic Press. More text books will be suggested prior to the course. Scientific articles: Copies of scientific articles for the seminar will be provided prior to the course

**Workload**  
360 h  

- 2 SWS Lecture  
  Total workload 60h: 30h contact/30h individual revision of lecture contents, test preparation  
- 1 SWS Seminar  
  Total workload 45h: 15h contact/30h individual reading and test preparation  
- 10.5 SWS Supervised exercise  
  Total workload 255h: 145h contact/110h individual work on portfolio tasks (programming, interpretation of simulation results)

**Verwendbarkeit des Moduls**  
- Master's Programme Neuroscience (Master) > Background Modules

**Zuständige Personen**  
- Kretzberg, Jutta (Module responsibility)  
- Kretzberg, Jutta (Module counselling)  
- Kretzberg, Jutta (Prüfungsberechtigt)  
- Greschner, Martin (Prüfungsberechtigt)  
- Ashida, Go (Prüfungsberechtigt)

**Prerequisites**  
- Programming experience in Matlab (e.g. acquired by a 6 ECTS programming course)

**Skills to be acquired in this module**  
- ++ Neurosci. knowlg.
- + Scient. Literature
- + Social skills
- ++ Interdiscipl. knowlg.
- ++ Maths/Stats/Progr.
- + Data present./disc.
- + Scientific English

- Upon successful completion of this course, students  
  - are able to implement and apply algorithms in Matlab  
  - have learned to handle scientific data independently  
  - have acquired theoretical and practical knowledge of advanced data analysis techniques  
  - know about computational model approaches on different levels of abstraction  
  - know how to perform model simulations for single cells and small neuronal networks  
  - can interpret simulation results in a neuroscientific context

**Module contents**

This course consists of six weeks with different topics, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab). Portfolio tasks, mainly interpretation of programming results are given every day.

- **Weeks 1 and 2:** Spike train analysis  
  response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification
- **Weeks 3 and 4:** Neuron models  
  Conductance-based single cell models using differential equations (passive membrane equation, integrate and fire, Hodgkin Huxley, alpha synapses)
- **Weeks 5 and 6:** Small network models  
  Feed-forward and feedback networks, lateral inhibition, central pattern generator, spike-timing dependent plasticity, multi-compartment models

**Literature emphlehnungen**

Skripts for each course day will be provided prior to / during the course
Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course.

Recommended textbooks or other literature:
Dayan / Abbott: Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems, MIT Press (More textbook chapters will be suggested prior to the course).

- Hartmann, Anna-Maria (Module counselling)  
- Hartmann, Anna-Maria (Prüfungsberechtigt)  
- Nothwang, Hans Gerd (Prüfungsberechtigt)  
- Thiel, Christiane Margarete (Prüfungsberechtigt)  
- Neidhardt, John (Prüfungsberechtigt)  
- Greschner, Martin (Prüfungsberechtigt)  
- Bantel, Carsten (Prüfungsberechtigt)  

**Prerequisites**  
**Skills to be acquired in this module:**  
- Neurosci. knowlg.  
- Expt. Methods  
- Scient. Literature  
- Social skills  
- Interdiscipl. knowlg.  
- Maths/Stats/Progr.  
- Data present./disc.  
- Scientific English  
- Ethics  

1. have basic knowledge of different techniques (see content of the module) used in neurosciences  
2. have basic knowledge of realizing clinical studies, generating questionnaires and their biostatistical data analyses  
3. have acquired practical skills in whole brain imaging (fMRI) and molecular techniques  
4. have acquired practical skills in performing clinical studies  

**Module contents**  
**Lecture topics:**  
1. Whole brain imaging (CT, MRI, fMRI, PET, EEG, MEG)  
2. Animal Behaviour  
3. Microscopy and Visualizing nervous system structure  
4. Electrophysiology  
5. Identifying Gene of Interest and Gene delivery strategies  
6. Molecular Cloning, generation of transgenic organism, manipulating endogenous genes  
7. Cell culture techniques  
8. Biochemical assays and intracellular signalling  
9. Clinical studies  
10. questionnaire and biostatistics  
11. judicial basics of scientific work  

Laboratory course  
1. molecular methods (site directed mutagenesis, PCR, midi preparation, sequencing, bioinformatics)  
2. fMRI  
3. clinical studies

Prerequisites
Recommended previous knowledge/skills: cell biology of neurons

Skills to be acquired in this module
++ Neurosci. knowlg.
+ Independent research
+ Scient. Literature
++ Interdiscipl. knowlg.
+ Data present./disc.

- to gain a general understanding of sensory reception
- to acquire specific knowledge of sensory reception at the molecular and cellular level,
  with focus on the relationship between structure and function of sensory molecules

- to be able to perform simple quantitative assessments of detection sensitivity to physical stimuli
- to understand common features in transduction pathways among various senses

Module contents

Literaturempfehlungen
Required reading:
The reading list will be updated on an annual basis to include new developments. The current reading list can be found on StudIP.

Students will learn the basics about planning and performing a neuroimaging study. They will focus on the
statistical and methodological background of functional neuroimaging data analysis and analyse a sample
functional MRI data set.

Module contents
The module comprises (i) a lecture “Functional MRI data analysis” [2 SWS], and (ii) a practical course [5 SWS]
and (iii) a seminar “Experiments on Neurocognition” [1 SWS] including aspects of planning, performance and
analysis of functional neuro-imaging studies using MATLAB based software.

Students will learn the basics about performing a psychoacoustic experiment. Based on an experiment in which they study their own hearing, they will learn how to conduct a behavioural study in hearing and analyze the data. In addition, they will be provided with an overview of the mechanisms of auditory perception.

**Module contents**

The modul comprises (i) a seminar “Hearing” [2 SWS] (ii) an exercise “Fundamentals in psychoacoustic data analysis” [1 SWS], and a (iii) practical course [7 SWS] including aspects of planning and conducting psychoacoustic experiments.

**Literaturempfehlungen**

Plack, Christopher J. (2005) The sense of hearing. Mahwah, NJ [u.a.]: Erlbaum (sufficient number of copies available in the university library)

Final exam of module: end of summer term

70% report or oral exam, 30% presentation In addition, mandatory but ungraded: regular active participation

Type of examination: end of summer term
neu320 - Introduction to Neurophysics

Module label: Introduction to Neurophysics
Modulkürzel: neu320
Credit points: 6.0 KP

Workload:
- 180 h
- 2 SWS Lecture
  - total workload: 90h: 28h contact / 62h background reading/exam preparation
- 2 SWS Supervised exercise
  - total workload: 90h: 28h contact / 62h self-conducted exercise work/literature reading

Verwendbarkeit des Moduls:
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen:
- Anemüller, Jörn (Module responsibility)
- Anemüller, Jörn (Prüfungsberechtigt)

Prerequisites:
- recommended in semester: 3 (with Matlab prereq.: 1)

Skills to be acquired in this module:
- ++ Neurosci. knowlg.
- + Independent research
- + Scient. Literature
- ++ Interdiscipl. knowlg.
- ++ Maths/Stats/Progr.
- + Data present./disc.

Students will learn to recognize the dynamics in neuronal networks as the result of an interplay of physical, chemical and biological processes. Overview over major physical measurement procedures for the quantification of structure and function in neuronal systems. Using the language of mathematics as a fundamental tool for the description of underlying biophysical processes with stochastics, linear algebra, differential equations. Information as represented on different length- and timescales: From microscopic processes to macroscopic functional models. Learning and adaptation as adjustment of a biophysical system to its environment.

Module contents:
- Biophysics of synaptic and neuronal transmission
- Single neuron models: Hodgkin Huxley model, integrate and fire model, firing rate model
- Biophysics of sensory systems in the auditory, visual and mechano-sensory modality
- Description of neuronal dynamics: Theory of dynamical systems, from microscopic to macroscopic activity - Principles of neuronal activity measurements: from single-cell recordings to EEG, MEG and fMRI
- Functional description of small neuronal networks: Receptive fields and their description with linear and non-linear models - The neuronal code: Spikes, spike trains, population coding, time- vs. rate-code - Decoding neuronal activity and its applications
- Simulation of artificial neural networks as a functional model, Hopfield network, Boltzmann machine, Perceptron and deep networks - Informationtheoretic approaches, stimulus statistics, entropy, mutual information
- Learning and plasticity, conditioning and reinforcement learning, Hebbian learning, long-term potentiation and long-term depression

Literaturempfehlungen:
- Chow, Gutkin, Hansel, Meunier, Dallibard (Eds.): Methods and Models in Neurophysics (2003)
- Galizia, Lledo (Eds.): Neurosciences, from molecule to behauvior (2013)
- Gerstner, Kistler, Naud, Paninski: Neuronal Dynamics - From single neurons to networks and models of Cognition (2014)

bio605 - Molecular Genetics and Cell Biology

Module label: Molecular Genetics and Cell Biology
Modulkürzel: bio605
Credit points: 12.0 KP
Workload: 360 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen:
- Neidhardt, John (Module responsibility)
- Neidhardt, John (Prüfungsberechtigt)
- Koch, Karl-Wilhelm (Prüfungsberechtigt)
- Jäschke, Christoph (Prüfungsberechtigt)

Prerequisites:
BSc (Biologie, Biochemie)

Skills to be acquired in this module:
++ deepened biological expertise
++ deepened knowledge of biological working methods
+ data analysis skills
++ interdisciplinary thinking
+ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ data presentation and discussion (E) (written and spoken)
+ teamwork
+ ethics and professional behaviour
+ project and time management

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

Module contents:
Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases. Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

| Prerequisites |

Skills to be acquired in this module

Upon successful completion of this course, students
- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

Skills:
++ deepened biological expertise
+ deepened knowledge of biological working methods
++ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ ability to perform independent biological research
+ teamwork

Module contents

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:
- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

### Literatureempfehlungen

Skills to be acquired in this module

Upon successful completion of this course, students have skills in methods of developmental biology:

- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab notebook
- know how to carry out formal laboratory reports (and the structure of a scientific paper)
- have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres
- are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills:
  + deepened biological expertise
  + deepened knowledge of biological working methods
  + data analysis skills
  + critical and analytical thinking
  + independent searching and knowledge of scientific literature
  + ability to perform independent biological research
  + data presentation and discussion (written and spoken)
  + teamwork
  + ethics and professional behaviour
  + project and time management

Module contents

Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse
embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature

- Basic knowledge of neurobiology

**Skills to be acquired in this module**
- ++ Neurosci. knowlg.
- ++ Expt. Methods
- + Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Upon successful completion of this course, students
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

**Module contents**
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

**Literatureempfehlungen**
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP.
Background and seminar literature will be available in Stud.IP.

- Independent Research
- Data present./disc.
- Scientific English
- Ethics

**Module contents**

The module consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation.

The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments
- Planning a small individual team-work project based on the techniques taught in this module, that can be used as basis for the module neu345

**Literaturempfehlungen**

Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP Background and seminar literature will be available in Stud.IP

- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen
- Kretzberg, Jutta (Module responsibility)
- Kretzberg, Jutta (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
- have planned and conducted a small, self-defined and self-organized project in a team
- have knowledge on an invertebrate neuronal system
- have knowledge on neural coding and corresponding data analysis techniques
- have acquired skills in data analysis and / or experimental techniques and / or modeling
- are able to critically evaluate and discuss experimental results
- have prepared and presented a scientific poster
- Neurosci. knowlg.
- Expt. Methods
- Independent research
- Scient. Literature
- Social Skills
- Maths/Stats/Progr.
- Data present./disc.
- Scientific English
- Ethics

Module contents

This module builds up on the knowledge and methods acquired in the module neu340 Invertebrate Neuroscience.

In the seminar, the knowledge on invertebrate systems and neural coding in general is deepened based on scientific literature.

In the practical exercise of the module, students can choose one topic from a range of different research questions on computation in the leech nervous system (e.g. comparison of different cell types, electrical and chemical synaptic connections, exact measurement of spike threshold, phase locking). Small groups (2-3) of students plan, perform, and analyze experiments (intracellular recordings) or model simulations (model framework will be provided or can be self-written based on module neu241 computational neuroscience - Introduction) to tackle their topic. The portfolio consists of assignments covering the planning, analysis, interpretation, and presentation of the results with feedback given during the course on each project stage.
Course scripts and background and seminar literature will be available in Stud.IP. Scientific literature discussed in the seminar depends on the project topics.

+ Ethics

Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students
- have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)
- have basic knowledge of the large range of techniques used in auditory research
- are able to read and critically report to others on an original research paper in auditory neuroscience
- are able to research and review a specific topic in auditory neuroscience

Module contents
One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.
Topics:
- Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission
- Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions
- Auditory nerve: phase locking, rate coding. Excitation patterns
- Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations
- Sound localisation in birds and mammals
- Central auditory processing: imaging techniques, auditory streams, cortex, primates
- Relation between psychophysics and neurophysiology

The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

Literaturempfehlungen
About 20 selected original papers (selection varies)

Verwendbarkeit des Moduls

- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen

Dietz, Mathias (Prüfungsberechtigt)
Dietz, Mathias (Module responsibility)

Further responsible persons

Anna Dietze

Prerequisites

Either Neurophysics (5.04.4211) or Computational Neuroscience

Skills to be acquired in this module

- Neurosci. knowlg.
- Expt. Methods
- Scient. Literature
- Social skills
- Interdiscipl. knowlg.
- Maths/Stats/Progr.
- Data present./disc.
- Ethics [nop] Upon successful completion of this course, students
- understand how neuroprostheses work
- have an interdisciplinary understanding of the underlying principles of electrical stimulation of neurons
- can implement a coding strategy for neuroprostheses
- knows how a cochlear implant operates in detail and why it operates this way.

Module contents

Topics
- electrical field distribution
- electrical stimulation of neurons
- biocompatibility
- coding strategies
- cochlear implants
- student seminar presentations on various types of neuroprosthetics

Literatureempfehlungen

Scientific articles: Copies of scientific articles for the seminar will be provided prior to the course
Text books or papers will be suggested prior to the course.

**Verwendbarkeit des Moduls**
- Master's Programme Neuroscience (Master) > Research Modules

**Zuständige Personen**
Köppl, Christine (Module responsibility)
der Neuroscience, Lehrende (Prüfungsberechtigt)

**Further responsible persons**
all MSc Neuroscience teachers, see list of examiners

**Prerequisites**
A learning agreement signed by the student, the supervisor at the host institution, and the Oldenburg supervisor (from the list of examiners), needs to be submitted to the examination office prior to the start of lab work.

Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor)

**Skills to be acquired in this module**

- Neurosci. knowlg.
- + Expt. methods
- ++ Independent research
- ++ Scient. literature
- ++ Social skills
- + Interdiscipl. knowlg.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Students are introduced to independent research in a specific area of neuroscience by a scientifically working group outside of the regular MSc Neuroscience faculty at the University of Oldenburg (usually a university, research institute, clinics or scientifically working company in Germany or abroad)

Students perform individual research projects to learn:

- planning and organization of a research project in a group outside of University of Oldenburg
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- prepare and present a scientific poster

**Module contents**

The External Research Module is carried out under the guidance and supervision of an experienced researcher who is not part of the regular Neuroscience faculty at the University of Oldenburg. It comprises approximately 7
(minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time.

After completion of the lab work, students will continue to be advised during the writing phase of the project report by the external supervisor and / or by a local Neuroscience faculty member.

The timing of projects is by individual arrangement with the supervisor.

Participation in the Stud.IP workshop on science communication (https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e38e0f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

neu600 - Neuroscience Research Project

Module label: Neuroscience Research Project
Modulkürzel: neu600
Credit points: 15.0 KP

Workload: 450 h
- 2 SWS Seminar (SE)
  28 h contact / 62 h reading and presentation preparation
- 8 SWS Research Internship (IFP)
  120 h contact / 120 h independent lab work / 30 h data analysis / 60 h preparation of written internship report / 30 h science communication workshop with poster preparation and presentation

Verwendbarkeit des Moduls: Master's Programme Neuroscience (Master) > Research Modules

Zuständige Personen:
Kretzberg, Jutta (Module responsibility)
der Neuroscience, Lehrende (Prüfungsberechtigt)

Further responsible persons:
all MSc Neuroscience teachers, see list of examiners

Prerequisites:
Depending on project choice, please check Stud.IP and ask the supervisor. Module can be taken multiple times, however, supervision of individual projects is limited to 45 ECTS for the same combination of student and supervisor (1 research module + Master thesis OR up to 3 research modules, including external research projects)

Skills to be acquired in this module:
+ Neurosci. knowlg.
++ Expt. Methods
++ Independent research
++ Scient. Literature
+ Social skills
+ Interdiscipl. knowlg.
+ Maths/Stats/Progr.
+ Data present./disc.
+ Scientific English
+ Ethics

Students perform individual research projects to learn:
- planning and organization of a research project in a group outside of University of Oldenburg
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- prepare and present a scientific poster

Module may serve as preparation for a Master's thesis.

Module contents:
The Research Module is carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners). It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and a regular seminar for training, reporting and feedback advice during that time. Students can choose between many options of individual projects.
offered by the different groups involved in the MSc Neuroscience study program.

Research questions, methods and approaches differ between individual projects. Please refer to the list of
options in Stud.IP and contact potential supervisors directly.

The timing of projects is by individual arrangement with the supervisor. Many, but not all, project options can
also be scheduled during semester breaks, and / or as part-time options (lasting more than 7 weeks).

Note that, for some options, priority for admission to the project is given to students who passed a background
module offered by the supervisor.

Participation in the Stud.IP workshop on science communication
(https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7)
and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly
recommended.

</tr>
<tr>
<td>Workload</td>
<td>180 h</td>
</tr>
</tbody>
</table>

- 180 h

- 2 SWS Lecture (VL) and Seminar (SE)
  - Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments

- 2 SWS Supervised exercise (UE)
  - Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments

### Verwendbarkeit des Moduls
- Master's Programme Neuroscience (Master) > Skills Modules

### Zuständige Personen
- Kretzberg, Jutta (Module responsibility)
- Kretzberg, Jutta (Prüfungsberechtigt)

### Prerequisites

**Skills to be acquired in this module**

- Neurosci. knowlg.
- Social skills
- Interdiscipl. knowlg.
- Maths/Stats/Progr.
- Scientific English
- Ethics

Upon successful completion of this course, students

- understand basic programming concepts.
- have good knowledge about the most important aspects of the programming language Matlab and are able to write their own programs.
- have basic knowledge in statistical testing.
- have developed and applied a programs for the analysis of electrophysiological data.
- have practiced the interpretation of data analysis results in a neuroscience context

### Module contents

In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task:

- Matlab basics: Matlab windows, work space, vectors & matrices, saving & loading, graphics, scripts, functions
- Data types: numbers, logicals, text, categorical
- Control flow: if statements, loops (for, while)
- Software development: Flow charts, testing, debugging
- Working with data: Searching & sorting, logical indexing
- Advanced data types: sparse matrices, 3D matrices, cell arrays, structures, tables
- Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics
- Application data analysis: Implementation of spike train analysis methods and graphics, function handles
- Application Modelling: curve fitting, simulation of time series

With completing the seven tasks, each participant develops a toolbox of the most common analysis methods for electrophysiological (spike and continuous) data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results.

Hence, the goal of this module is two-fold: Learning the programming language Matlab and analysis methods for electrophysiological data.

**Workload**

180 h

- 56h contact / 84h research for presentations / 40h term paper

**Verwendbarkeit des Moduls**

- Master’s Programme Biology (Master) > Skills Modules
- Master’s Programme Biology (Master) > Skills Modules
- Master’s Programme Neuroscience (Master) > Skills Modules

**Zuständige Personen**

- Köppl, Christine (Module responsibility)
- Sienknecht, Ulrike (Module counselling)
- Köppl, Christine (Prüfungsberechtigt)
- Sienknecht, Ulrike (Prüfungsberechtigt)

**Prerequisites**

- Skills to be acquired in this module
  - Expt. methods
  - Scient. Literature
  - Social skills
  - Interdiscipl. knowlg
  - Data present./disc.
  - Scientific English
  - Ethics

Upon completion of this course, students

- know basic rules of good scientific practise
- are aware of the legal framework that is relevant to biological research, e.g. on animal welfare or genetically modified organisms
- have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources
- are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
- are able to prepare and give a coherent presentation in a team
- have practised to lead a group discussion

**Module contents**

In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
- Good scientific practise and fraud
- Neuroenhancement
- Artificial intelligence
- Animal welfare, Animal experiments
- Overfishing, Nature conservation
- State-of-the-art genetic tools and their implications
- Genetically modified organisms, e.g., in food production, chimeras
- Stem cells
- Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks.

A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

- Thedieck, Kathrin (Prüfungsberechtigt)
Prerequisites

Skills to be acquired in this module

+ Neurosci. knowlg.
+ Expt. methods
++ Scient. literature
++ Social skills
+ Interdiscipl. knowlg.
++ Data present./disc.
+ Scientific English
++ Ethics

In this module the participants gain an overview of arguments and experimental strategies in ageing research. We will focus on the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, and genetics. In addition, the main ageing theories will be covered. The participants work throughout the semester in project groups and present their results at a conference at the end of the course. Ethicists and philosophers from Germany and The Netherlands accompany the course, and chair at the conference a session on ethical aspects of ageing research. Under their moderation, the participants derive joint standpoints and policy recommendations.

At the end of this course the participants can

- understand, analyse, and present scientific articles from ageing research
- present the results of their studies and analyses using different presentation techniques
- apply the learned contents in novel contexts (ethics in ageing research)

Topics

Major ageing theories

- arguments and experimental strategies in the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, genetics in ageing research
- application of the learned contents in novel contexts (ethics in ageing research)
- understanding, analysing, and presentation of scientific articles
- presentation of results with different presentation techniques

Module contents

Lecture: major ageing theories and methods in ageing research are presented and discussed
Exercise: project work
1) Students: Choice of research focus
2) Independent work on the chosen research paper
3) Writing a 1 page thesis paper
4) Presentation in own expert group
5) Expert groups: research strategies, approaches, methods in chosen focus area
6) Development of a group presentation and group poster
7) Presentation at 1 day conference
8) Dutch and German ethics experts present bioethics and lobby work in German and Dutch political gremia
9) The students develop a comparative view on medical ethics in different countries and derive own standpoints and policy recommendations for the ethical assessment of metabolic and ageing research. The project work runs independently in the different expert groups throughout the semester and is organised via StudIP. The students and groups receive regular feedback and guidance in presence meetings.

The days for presence meetings and final conference are determined with the participants during the first meeting. The students organize their own work in groups according to the jigsaw concept. Their work is structured by a weekly schedule, tasks to be handed in at fixed deadlines across the semester, lectures and presence meetings.

Literaturempfehlungen

Primary and secondary literature will be provided and introduced at the first meeting

Recommended textbook(s) or other literature:
Roger B. McDonald, Biology of aging, Garland Science
Altern : Zellulaire und molekulare Grundlagen, körperliche Veränderungen und Erkrankungen, Therapieansa?tze
Ludger Rensing ; Volkhard Rippe

Prerequisites:
non-native speakers

Skills to be acquired in this module:
- + Neurosci. knowlg.
- ++ Social skills
- ++ Data present./disc.
- ++ Scientific English

Upon completion of this course, students:
- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

Module contents:
Lectures cover
- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

Winklhofer, Michael (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
- Neurosci. knowlg.
-++ Maths/Stats/Progr.
- Data present./disc.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/.

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.

Module contents
Data types and data structures, control structures, functions, modules, file input/output Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

**Skills to be acquired in this module**

++ Exp. Methods  
+ Independent Research  
+ Scient. Literature  
++ Social skills  
++ Interdiscipl. knowlg  
++ Scientific English  
++ Ethics

Upon successful completion of this course, students

- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.  
  - have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
  - are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
  - have practical skills in handling small rodents or birds or fish
  - have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
  - have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments” and EU directive D „Persons killing animals”.

**Module contents**

Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:

- Legislation, ethics and the 3Rs  
- Scientific integrity  
- Data collection  
- Basic biology of rodents, birds and fish  
- Husbandry, and nutrition of rodents, birds and fish  
- Animal Welfare  
- Health monitoring
Pain and distress
Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

++ Social skills
++ Interdiscipl. knowlg.
++ Data present./disc.
+ Scientific English
++ Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscience literature, learn about the scientific publication process and discuss science communication to the general public.

Module contents

The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover:

- How to find literature?
- How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers?
- Publication process, Authorship and impact metrics
- Alternative publication paths and data sharing in neuroscience
- Science communication for the general public and on social media
- Face-to-face scientific communication

Literaturempfehlungen

List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP.

Background neuroscience textbooks, e.g.:

Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer

Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer

Preparation, presentation and critical discussion of own studies for an international audience:
- participate in an international meeting
- prepare a poster or talk for an international meeting
- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

**Module contents**

Active participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days. Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis.

It is mandatory to present the poster or talk to Christine Köppl or Jutta Kretzberg prior to the meeting and incorporate the feedback on the presentation.

Students should be able to correctly identify the anatomical structures of the brain and describe the major pathways connecting the different parts of the nervous system. They also should acquire an understanding of the functional brain anatomy and brain circuitry and use this knowledge to analyse clinical symptoms and understand the basis of the neurological exam carried out to evaluate patients in the clinic.
Competencies:
- Developmental origin of the brain
- Anatomical knowledge of brain structure
- Functional anatomical knowledge of the brain
- Understanding the basis of the neurological exam
- Find and name anatomical structures during virtual dissections and annotations
Group work

Module contents:
This block course offers an introduction to neuroanatomy with a focus on the brain. The course combines lectures on the development and the anatomy of the brain with virtual dissection classes, 3D brain models, annotation exercises and clinical case studies.

Literaturempfehlungen: Scientific literature will be available in Stud.IP

2 SWS Seminar (SE): 28 h contact, 62 h individual preparation (reading, preparation of presentations)

18 SWS Thesis project: total 810 h. Percentages of contact (individual supervision) and independent work (independent lab work, data analysis, reading, thesis writing) depend on the topic and methods of the thesis project.

Verwendbarkeit des Moduls

- Master's Programme Neuroscience (Master) > Abschlussmodul

Zuständige Personen

Kretzberg, Jutta (Module responsibility)
der Neuroscience, Lehrende (Prüfungsberechtigt)

Prerequisites

The start of the master thesis requires prior completion of at least 60 ECTS.

Prior to the start of the thesis project, the form for application for the final thesis and final oral examination needs to be submitted to the examination office and approved by the examination committee. External examiners (not listed on the list of neuroscience examiners) need to apply for the status of an official examiner prior to the start of the project.

Depending on project choice, please ask the supervisor for additional requirements.

Skills to be acquired in this module

++ Neurosci. knowlg.
++ Expt. Methods
++ Independent research
++ Scient. Literature
++ Social skills
+ Interdiscipl. knowlg.
+ Maths/Stats/Progr.
++ Data present./disc.
+ Scientific English
+ Ethics

In their Master thesis, students perform individual research projects in the limited time of 6 month. Learning goals:

- planning and organization of a research project
- teamwork in a research group
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and/or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- optional: Prepare and present a scientific poster
**Module contents**

The master thesis comprises 6 months of experimental or theoretical work and thesis writing, and a regular seminar for training, reporting and feedback advice during that time. The aim, methods and results of the thesis are presented in a final oral presentation and exam (Master’s colloquium).

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program. Research questions, methods and approaches differ between individual projects. The timing of projects is by individual arrangement with the supervisor. Note that, for some options, priority for admission to the project is given to students who passed a background and / or research module offered by the supervisor.

Please refer to the Stud.IP MSc Neuroscience information community forum for information on the groups and contact potential supervisors directly.

The master thesis project is generally carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners) and additionally evaluated by a second examiner. External master thesis projects and / or evaluation by persons who are not on the list of examiners need prior approval by the examination committee.

Participation in the Stud.IP workshop on science communication ([https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7](https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7)) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

**Literaturempfehlungen**

Provided by the supervisor, depending on the project.
