

Mastermodule

mar500 - Physiology and diversity of microorganisms

Module label	Physiology and diversity of microorganisms
Modulkürzel	mar500
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Microbiology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none"> • Könneke, Martin (module responsibility) • der Mikrobiologie, Lehrende (Module counselling)
Prerequisites	
Skills to be acquired in this module	The students know the cells of pro- und eukaryotes and understand the basic mechanisms of microbial metabolism. Furthermore, students learn about the physiological and phylogenetic groups of prokaryotes, eukaryotic microorganisms and viruses and get an overview on applied aspects of microbiology.

Module contents

The module consists of 5 parts:

1) Physiology and life modes of prokaryotes (lecture + exercises)

Topics are cellular and subcellular organisation, assimilation and dissimilation, energy metabolism, transport, microbial growth, chemiosmotic theory, fermentation, anaerobic respiration, lithotrophy, photosynthesis, metabolism of different Archaea, Bacteria pathogenic prokaryotes, microbiological techniques.

2) Microbial diversity (lecture + exercises)

Topics are the eukaryotic cell, diversity, systematics and taxonomy of prokaryotes and eukaryotic microorganisms, algae, protozoa, molds, phagocytosis, symbioses, pathogenic eukaryotes, diversity of eukaryotic microbes, components of viruses, virus reproduction, bacteriophages, diversity of viruses, virus diseases.

3) Broadening lectures, one out of the following

- Biological significance of suspended matter:

Lecturer: Simon; Form of study: 1 lecture a week, partially blocked for 2 lectures a week; 3 CP; summer term;

- Sediment Microbiology:

Lecturer: Engelen; Form of study: 3 weeks block; 3 CP; summer term;

This lecture presents state of the art knowledge about occurrence, life and activities of microorganisms in these environments. Physiological issues are addressed as well as evolutionary and applied aspects.

Topics are: formation, diagenesis and special features of sediments; physico-chemical conditions and geological records; interpretation of gradients; microbes and biological processes in sediments; methods for cultivation of sediment organisms; molecular methods; biogeochemical methods; quantification of prokaryotes and viruses

- Scientific writing and presentation:

Lecturer: Engelen; Form of study: weekly seminar; 3 CP;

The students know the importance and structure of scientific publications. They learn to read papers critically and which require important for the different parts. Furthermore, students will train to give oral presentations as well as scientific reports and poste how to use the library and how to find relevant literature and how to use citation programs.

Topics are: types and relevance of scientific publications; parts of scientific publications step by step: Abstract, Introduction, Results, Discussion; university facilities for literature search; oral presentation; how to prepare posters; tips for using Excel, PowerPoint, Word and Endnote

- Alternative lectures of the MSc "Marine environmental sciences" or "Biology" (see current online schedule)

4) Excursions into the field, to companies and scientific institutions

5) ICBM and microbiological colloquium (alternating weekly)

mar510 - Molecular Mechanisms and Interactions

Module label	Molecular Mechanisms and Interactions
Modulkürzel	mar510
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Microbiology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Rabus, Ralf Andreas (module responsibility)• der Mikrobiologie, Lehrende (Module counselling)
Prerequisites	
Skills to be acquired in this module	The students know the molecular mechanisms of metabolism, genetics and evolution. They know regulatory mechanisms on the molecular level and feedback mechanisms between organisms. They know the basics of microbial ecology and the biogeochemistry of important microbial habitats. They know molecular and chemical-analytical methods of microbiology. They have experience with the field study of microorganisms.

Module contents

The module consists of 5 parts:

1) Molecular Microbiology (lecture + exercise)

Topic I - DNA: structure, DNA-proteins, DNA-replication, recombination, transposition, mutation, repair, plasmids and DNA-exchange

Topic II - gene expression: transcription, regulation of transcription, translation

Topic III - enzymes: protein structures, basic concepts and kinetics, catalytic and regulatory strategies

Topic IV - regulatory networks: diauxie and catabolite repression, oxygen regulation, chemotaxis

2) Microbial Ecology (lecture + exercise)

Principles of biogeochemistry, global element cycles, mineralisation of organic substances, chemotaxis, aquatic habitats, terrestrial habitats, deep subsurface biosphere, syntrophy and symbiosis, microbes in earth history, methods in microbial ecology, isotope fractionation, applied microbiology, bioremediation

3) Broadening lectures, one out of the following

- Biological significance of suspended matter:

Lecturer: Simon; Form of study: 1 lecture a week, partially blocked for 2 lectures a week; 3 CP; summer term;

- Sediment Microbiology:

Lecturer: Engelen; Form of study: 3 weeks block; 3 CP; summer term;

This lecture presents state of the art knowledge about occurrence, life and activities of microorganisms in these environments. Physiological issues are addressed as well as evolutionary and applied aspects.

Topics are: formation, diagenesis and special features of sediments; physico-chemical conditions and geological records; interpretation of gradients; microbes and biological processes in sediments; methods for cultivation of sediment organisms; molecular methods; biogeochemical methods; quantification of prokaryotes and viruses

- Scientific writing and presentation:

Lecturer: Engelen; Form of study: weekly seminar; 3 CP;

The students know the importance and structure of scientific publications. They learn to read papers critically and which require important for the different parts. Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Microbiology (Master) > Mastermodule 	
Zuständige Personen	<ul style="list-style-type: none"> • Garcia, Sarahi Lorena (module responsibility) • Brinkhoff, Thorsten Henning (Module counselling) 	
Prerequisites		
Skills to be acquired in this module	<p>The students learn how to address scientific questions and to carry out experimental and/or field work in scientific projects guided by experienced researchers and PhD students. The projects are designed in the context of ongoing research on the ecology of bacterial communities in the water column, oxic sediments and associated to eukaryotic organisms. The students learn to apply various state of the art methods and approaches in aquatic microbial ecology and how to interpret data and results of the projects. They learn to write protocols in the structure of scientific papers and to present own results and reference studies to an audience. The students gain competences in how to design experiments and address specific research questions in aquatic microbial ecology and to choose appropriate methods. They obtain practical experience in project-targeted application of state of the art methods. This enables them to obtain a more critical view on the application of these and other methods and on the validity of scientific investigations in aquatic microbial ecology.</p>	
Module contents	<p>"Ecology of marine microbes": The students carry out small projects coming out of ongoing research of PhD Thesis work and other current research of the working group. Typically a group of two of three students is guided by a senior researcher and/or a PhD student. In the accompanying seminar, recent scientific studies published in international journals are presented by the students. The results are written down and discussed in a protocol fulfilling scientific level requirements.</p>

Zuständige Personen	<ul style="list-style-type: none"> • Köneke, Martin (module responsibility) • Engelen, Bert (Module counselling)
Prerequisites	
Skills to be acquired in this module	

- The students know how to
- cultivate bacteria and generate pure cultures
 - determine growth curves by photometry and counting
 - prepare and use washed cell suspensions for experiments
 - measure bacterial activity
 - use a microscope and take digital microphotographs
 - quantify and analyse energy metabolism and fundamental physiological processes
 - present and discuss scientific results
 - write a scientific protocol

Module contents	The course starts with an introductory seminar every morning. Then, several experiments will be done over two day's round robin. Different physiological processes are analysed using various techniques, e.g. investigation of microbial growth under oxic and anoxic conditions, determination of protein contents and measurement of substrate turnover rates.

mar580 - Profile Module Microbial ecology of marine sediments

Module label	Profile Module Microbial ecology of marine sediments			
Modulkürzel	mar580			
Credit points	6.0 KP			
Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Microbiology (Master) > Mastermodule 			
Zuständige Personen	<ul style="list-style-type: none"> • Könneke, Martin (module responsibility) 			
Prerequisites				
Skills to be acquired in this module	<p>The students know how to take samples from marine habitats and characterise those biogeochemically and microbiologically. Furthermore, students learn to collect and analyse porewater, determine total cell counts and quantify groups of organisms by molecular methods. Also cultivation of different physiological groups of bacteria will be performed. Finally, scientific results will be presented by the students in a seminar presentation and discussed in a scientific protocol.</p>			
Module contents	<p>"SE/PR Microbial ecology of marine sediments": The physiological diversity of microorganisms and their spatial distribution within marine sediments are demonstrated according to chemical and physical parameters. Different physiological groups are analysed along a sediment column taken at the beach site of the island "Spiekeroo", which is sampled at the beginning of the course. At this high-energy beach, a submarine groundwater discharge is present, which leads to changing redox and salinity gradients. Therefore, especially anaerobic processes and the influence of seawater infiltration to the beach sediment is investigated. Thus, for example nitrate, sulfate and methane concentrations are measured in porewaters. As microbiological parameters, total cell numbers are counted and the numbers of archaea and bacteria as well as specific physiological groups are determined by using key genes targeted in quantitative PCR (qPCR). Furthermore, every group of students will specifically enrich representatives of a specific phylogenetic group and monitor growth and activity over time. During the accompanying seminar, each participant will give a short talk regarding the metabolic processes, ecology, physiology of a physiologic group. All the data and observations of the individual groups will be combined at the end of the course to provide an overall picture of microbial diversity and the occurrence of the different physiological groups corresponding to geochemical gradients.</p>

Zuständige Personen	<ul style="list-style-type: none">• Brinkhoff, Thorsten Henning (Module counselling)
Prerequisites	
Skills to be acquired in this module	

Skills to be acquired in this module

The students learn to...

- analyse bacterial substrates at ambient concentrations such as dissolved amino acids and carbohydrates by high performance liquid chromatography (HPLC).
- determine bacterial cell numbers by flow cytometry and epifluorescence microscopy and to analyse these data by image analysis.
- extract bacterial DNA from water and sediment samples.
- amplify bacterial genes by specific primers and PCR.
- assess bacterial communities by culture-independent methods such as denaturing gradient gel electrophoresis and next generation sequencing.
- present and discuss scientific results.
- write a scientific protocol.

The students gain competences in:

- Understanding how to analyse dissolved substrates of heterotrophic aquatic bacterial communities by state of the art approaches.
- How to assess the abundance of aquatic bacterial communities by state of the art approaches.
- Analysing the composition of bacterial communities by PCR-based culture-independent approaches.

Module contents

The course starts with a lecture introducing basic issues of aquatic microbial ecology with an emphasis on methodological aspects. This lecture is completed before the practical work starts.

During the practical course of a block of two weeks the participants carry out analyses and experiments on:

- determining the concentration of dissolved organic substrates (amino acids, carbohydrates),
- the abundance of bacterial communities in aquatic systems
- the composition of bacterial communities in environmental samples by 16S rRNA gene fragments.

The main emphasis is on analyses and approaches of bacterial communities in the water column.

Modulkürzel	mar610	
Credit points	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Microbiology (Master) > Mastermodule 	
Zuständige Personen	<ul style="list-style-type: none"> • Könncke, Martin (module responsibility) • Engelen, Bert (Module counselling) 	
Prerequisites		
Skills to be acquired in this module	<p>In this course the students will isolate bacteria and other microorganisms. They will learn classical microbiological techniques as enrichment culture, aseptic work, preparation of liquid and solid media, cultivation under oxic and anoxic condition, on agar plates and in deep agar dilution, description of microbes by techniques as staining, microscopy, microphotography.</p>	
Module contents	<p>Prior to the laboratory work the participants shall read literature and current studies about their target group of microorganisms and develop an enrichment strategy isolation. They will present this and their enrichment strategy in the seminar. During the course and at the end, results and a possible molecular identification of isolates will be presented and discussed.</p> <p>Practical work: Student prepares media and agar plates required for the enrichment and isolation of the different target organisms in small groups. The enrichment cultures will be monitored over time by measuring various biological and chemical parameters. If pure cultures have been isolated, they will be analysed microscopically and identified using molecular methods.</p>

Module frequency	annual	
Module capacity	unlimited	
Type of module	Wahlpflicht / Elective	
Module level	AC (Aufbaucurriculum / Composition)	
Teaching/Learning method	Seminar and laboratory work, twice per week, half a day each	
Previous knowledge	Module mar500 including lectures on "Physiology and life modes of prokaryotes" and "Microbial diversity"	
Examination	Prüfungszeiten	Type of examination
Final exam of module	Announced during the course.	

One assessment of examination:

Portfolio: Protocol (100 %), seminar presentation (no mark)

Active participation: Active and documented participation in practical courses (labs, exercises, seminars, field trips) and courses. These include e.g. the delivery of exercises, writing a lab report or seminar presentations according to the advice of the course supervisor.

Examination		Prüfungszeiten	Type of examination	
Form of instruction	Comment	SWS	Frequency	Workload of compulsory attendance
Seminar		1	SoSe	14
Exercises		4	SoSe	56
Präsenzzeit Modul insgesamt				70 h

mar620 - Profile Module Marine Chemical Ecology

Module label	Profile Module Marine Chemical Ecology			
Modulkürzel	mar620			
Credit points	6.0 KP			
Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Microbiology (Master) > Mastermodule 			
Zuständige Personen	<ul style="list-style-type: none"> • Schupp, Peter (module responsibility) • Kellermann, Matthias (Module counselling) • Rohde, Sven (Module counselling) 			
Prerequisites	Lecture: Organic chemistry			
Skills to be acquired in this module	Students will learn about the chemical properties and major ecological roles of secondary metabolites, how to investigate the secondary metabolites of marine invertebrates and algae, how to analyze secondary metabolite profiles, how to isolate compounds of interest and how to conduct various bioassays to assess potential ecological roles of crude extracts and potentially isolated compounds. Students will also learn how to statistically evaluate their results.			
Module contents	<p>"Chemical Ecology": The course consists of lectures, followed by laboratory experiments. Students will research about various topics in marine chemical ecology. Laboratory work will include production of extracts from various invertebrates and algae. Extracts will be tested in various feeding assays to assess the chemical properties of extracts. Extracts will also be tested for antimicrobial activity with environmental strains. This includes the culture of test bacteria and antimicrobial assays. Final evaluation will be a laboratory report about the experiments. This will include statistical analysis of their experiments and discussion of their results in the framework of the lectures and seminars presented during the course.</p>

mar622 - Profile Module R programming for (meta)-genomic sequence analysis

Module label	Profile Module R programming for (meta)-genomic sequence analysis
Modulkürzel	mar622
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Microbiology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Garcia, Sarahi Lorena (module responsibility)• Eren, Ahmet Murat (Module counselling)
Prerequisites	

Skills to be acquired in this module

The course will provide students with a general understanding of the utility of the UNIX terminal environment and shell scripting, Python programming language and its scripting abilities, and basics of R programming. The course is designed for life scientists with mock or real-world datasets that convey typical characteristics of what researchers often encounter in data-enabled microbiology, and help them develop dry-lab skills the way they developed wet-lab skills.

Specialist skills:

The students:

- Develop an appreciation of different scripting and programming tools and recognize task-specific best practices
- Learn the basics of how to solve bioinformatics challenges in reproducible manner

Methodological competence

The students:

- Can use BASH scripting to organize datasets and implement batch work solutions
- Can use Python for quick and effective data mining and reporting
- Can use R for statistical inference and exploratory visualization needs
- Able to generate reproducible .sh, .py, and .R files, and use Jupyter notebooks
- Develop an appreciation of the basics of programming, data structures, and algorithms

Module contents

- Basics of BASH, Python, and R, and how they integrate with one another.
- Description of a science question, dataset to address it, and a step-wise computational strategy.
- Goal-oriented community scripting to explore alternative solutions.
- Individual scripting to establish a student-specific solution.

Literaturempfehlungen

will be announced

Language of instruction	English
Duration (semesters)	1 Semester
Module frequency	
Module capacity	16
Type of module	je nach Studiengang Pflicht oder Wahlpflicht
Teaching/Learning method	Blockveranstaltung: SE/PR: R programming for (meta)-genomic sequence analysis (4 SWS, 6 KP)
Previous knowledge	Participation in mar454 Einführung in die DNA-Sequenzierung und

Sequenzanalyse. Basics of programming in R, basics of molecular taxonomy.

Examination	Prüfungszeiten	Type of examination
-------------	----------------	---------------------

Final exam of module

Will be announced

1 Examination performance:

Portfolio (max. 3 pieces of work) or minutes
(approx. 15-20 pages)

Active participation in seminars and exercises.

mar630 - Research Project

Module label	Research Project			
Modulkürzel	mar630			
Credit points	12.0 KP			
Workload	360 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Microbiology (Master) > Mastermodule 			
Zuständige Personen	<ul style="list-style-type: none"> • Könncke, Martin (module responsibility) • der Mikrobiologie, Lehrende (Module counselling) 			
Prerequisites				
Skills to be acquired in this module	The students are able to work (under guidance) on a project dealing with a specific scientific question. They use appropriate methods and carry out experiments to collect data. These data can be documented, analysed and interpreted. The students understand recent scientific literature and can regard it for their own work. They can present and defend their work in the public.			
Module contents	The contents concern variable recent scientific questions on a high scientific level.			
Literatureempfehlungen	Project-specific, will be announced
