

Background Modules

neu210 - Neurosensory Science and Behaviour

Modulbezeichnung	Neurosensory Science and Behaviour
Modulkürzel	neu210
Kreditpunkte	9.0 KP
Workload	270 h (4 SWS Lecture (VO) "Neuroethology" and "Behavioural ecology" Total workload 180h: 56h contact/ 60h background reading/ 64h exam preparation 2 SWS Seminar (SE) "Current issues of ethology" Total workload 90h: 28h contact/ 30h literature reading/ 32h preparation of presentation)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Biologie (Master) > Background Modules• Master Biology (Master) > Background Modules• Master Neuroscience (Master) > Background Modules
Zuständige Personen	<ul style="list-style-type: none">• Langemann, Ulrike (Modulverantwortung)• Langemann, Ulrike (Modulberatung)• Mouritsen, Henrik (Modulberatung)• Klump, Georg Martin (Prüfungsberechtigt)• Mouritsen, Henrik (Prüfungsberechtigt)• Langemann, Ulrike (Prüfungsberechtigt)• Albert, Jörg (Prüfungsberechtigt)• Clemens, Jan (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Fundamentals of Neurobiology, Behavioural Biology, Evolution, Ecology
Kompetenzziele	<p>++ Neurosci. knowl. + Expt. methods + Independent research + Scient. literature + Social skills ++ Interdiscipl. knowl. + Data present./disc. + Scientific English</p> <p>Upon successful completion of this course, students</p> <ul style="list-style-type: none">• know the fundamentals of behavioural ecology and neuroethology• are able to present and critically assess scientific data and approaches
Modulinhalte	The lecture "Neuroethology" provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation. The lecture "Behavioural ecology" provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication. In the seminar "Current issues of Ethology", current original literature relating to behavioural biology is reported and discussed.

Teilnahmevoraussetzungen				
Kompetenzziele	<p>[nop] ++ Neurosci. knowlg. + Expt. methods + Scient. literature + Social skills ++ Interdiscipl. knowlg. + Data present./disc. + Scientific English [/nop]</p> <p>Upon successful completion of this course, students know the fundamentals of neurotransmission know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease know the principles of drug treatment for psychiatric disorders have in-depth knowledge in selected areas of these topics are able to understand, explain and critically assess neuroscientific approaches in animals and humans are able to understand and critically assess published work in the area of cognitive neuroscience</p>			
Modulinhalte	<p>The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: History of cognitive neuroscience Methods of cognitive neuroscience Attention Learning Emotion Language Executive functions. The supervised exercise either deepens that knowledge by exercises or discussions of recent papers/ talks on the respective topic covered during that week. The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: Introduction to Terms and Definitions in Drug Research Dopaminergic and Noradrenergic System Cholinergic and Serotonergic System GABAergic and Glutamatergic System Addiction Depression Schizophrenia Anxiety Alzheimer's Disease</p>

Teilnahmevoraussetzungen

Kompetenzziele

Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

skills:

- ++ deepened biological expertise
- + deepened knowledge of biological working methods
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + teamwork

Modulinhalte

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation

- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

Literaturempfehlungen

Literature: **textbook:** Gilbert S.F.: Developmental Biology, Macmillan Publishers Ltd, 11th edition 2016 (current edition); and current literature on course topics

bio846 - Lab Exercises in Development and Evolution

Modulbezeichnung	Lab Exercises in Development and Evolution
Modulkürzel	bio846
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Biologie (Master) > Background Modules• Master Biology (Master) > Background Modules• Master Neuroscience (Master) > Background Modules
Zuständige Personen	<ul style="list-style-type: none">• Sienknecht, Ulrike (Modulverantwortung)• Sienknecht, Ulrike (Modulberatung)• Sienknecht, Ulrike (Prüfungsberechtigt)• Claußen, Maike (Prüfungsberechtigt)• Ebbers, Lena (Prüfungsberechtigt)
Teilnahmevoraussetzungen	mandatory prerequisite is the module bio845 (neu110) (Introduction to Development and Evolution)

Kompetenzziele

Upon successful completion of this course, students have skills in methods of developmental biology:

- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab notebook
- know how to carry out formal laboratory reports (and the structure of a scientific paper)
- have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres

are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills:

- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- + data presentation and discussion (written and spoken)
- + teamwork
- + ethics and professional behaviour
- + project and time management

Modulinhalte

Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature

Modulinhalte

This module builds up on the knowledge and methods acquired in the module neu340 Invertebrate Neuroscience.

In the seminar, the knowledge on invertebrate systems and neural coding in general is deepened based on scientific literature.

In the practical exercise of the module, students can choose one topic from a range of different research questions on computation in the leech nervous system (e.g. comparison of different cell types, electrical and chemical synaptic connections, exact measurement of spike threshold, phase locking). Small groups (2-3) of students plan, perform, and analyze experiments (intracellular

recordings) or model simulations (model framework will be provided or can be self-written based on module neu241 computational neuroscience - Introduction) to tackle their topic. The portfolio consists of assignments covering the planning, analysis, interpretation, and presentation of the results with feedback given during the course on each project stage.

Literaturempfehlungen	Course scripts and background and seminar literature will be available in Stud.IP. Scientific literature discussed in the seminar depends on the project topics.

psy270 - Functional MRI Data Analysis

Modulbezeichnung	Functional MRI Data Analysis
Modulkürzel	psy270
Kreditpunkte	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Biology (Master) > Background Modules• Master Neurocognitive Psychology (Master) > Mastermodule• Master Neuroscience (Master) > Background Modules
Zuständige Personen	<ul style="list-style-type: none">• Gießing, Carsten (Modulverantwortung)• Gießing, Carsten (Prüfungsberechtigt)

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology, Neuroscience, or Biology.

Kompetenzziele

Goals of module:
Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

Competencies:

- ++ experimental methods
- ++ statistics & scientific programming
- + data presentation & discussion
- ++ group work

Modulinhalte

Theoretical knowledge on functional MRI data analysis
Planning, performance and analysis of functional neuroimaging studies using MATLAB-based software
Hands-on fMRI data analysis with SPM

Aufnahmekapazität Modul	15 (

The remaining places are reserved for Biology and Neuroscience students.

)

Hinweise

Since the module is primarily offered for the Master's programme Biology it has

to be offered as
a blocked course. Please contact us if you are interested in the module but
have problems with
interfering other courses.

PLEASE NOTE: We strongly recommend to take either psy170, psy270,
psy280, psy220 or psy290 to gain methodological competencies (EEG, fMRI,
TBS, HCI, ambulatory assessment techniques) that are needed for most
practical projects and Master's theses!

Teilnahmevoraussetzungen

Enrolment in Master program Neuroscience; Students from other study programs are welcome if space is available. This module requires good programming skills! (As taught in neu710 or neu715.)

Kompetenzziele

Upon completion of this module, students

- are able to implement and apply algorithms in Matlab or Python
- have learned to handle scientific data independently
- have acquired theoretical and practical knowledge of advanced data analysis techniques- can interpret simulation results in a neuroscientific context

Skills to be acquired/ competencies:

- ++ Neuroscience knowledge
- + Scientific Literature
- + Social skills
- ++ Maths/Stats/Programming
- + Data presentation/discussion
- + Scientific English

Modulinhalte

This course consists of three weeks full-time work on the topics encoding and decoding of spike trains, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab or Python). Portfolio tasks consists of programming and the interpretation of the analyses.

Specific topics: response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification

Literaturempfehlungen

Skripts for each course day will be provided prior to / during the course. Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course.
Recommended textbooks or other literature:
Dayan / Abbott: Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems. MIT Press (More text book chapters will be suggested prior to the course).

Kompetenzziele

Goals of this module:

upon completion of this module, students...

- are able to implement and apply algorithms in Matlab
- have programmed and applied simulation techniques
- know about computational model approaches on different levels of abstraction
- know how to perform model simulations for single cells and small neuronal networks
- can interpret simulation results in a neuroscientific context

Skills to be acquired/ competencies:

- ++ Neuroscience knowledge
- + Scientific Literature
- + Social skills
- ++ Maths/Stats/Programming
- + Data presentation/discussion
- + Scientific English

Modulinhalte

This course consists of three weeks full-time work on the topic Biophysical modeling, which is introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab or Python). Portfolio tasks consists of programming and the interpretation of programming.
Specific topics:

Conductance-based single cell models using differential equations (passive membrane equation, integrate-and-fire, Hodgkin-Huxley)
Synaptic interaction in small network models (alpha synapses, spike-timing dependent plasticity, feed-forward and feed-back networks, lateral inhibition, central pattern generator)

Literaturempfehlungen

Skripts for each course day will be provided prior to the course
Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course.

Recommended textbooks or other literature:

Dayan / Abbott: Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems. MIT Press (More text book chapters will be suggested prior to the course).

Teilnahmevoraussetzungen

Enrolment in Master program Neuroscience or Biology,
Students from other programs are welcome if space is available
Attendance in pre-meeting

Kompetenzziele

Goals of this module:

upon completion of this module, students...

- have knowledge on the emergence of behavior from neurosensory activation
- have learned about the interdependences between signals and their receivers (keyword: matched filters)
- have a basic understanding of the multiple determinants of behavior: molecular (e.g. genes), cellular (e.g. neurons), organismic (e.g. individuals), environmental (e.g. noise) and inter-individual (e.g. communication)
- have acquired basic skills in data analysis
- have acquired basic understanding of sensory signal processing
- have acquired an intuitive understanding of the multi-causal nature of behavior and the corresponding multiple levels of investigation

Skills to be acquired/ competencies:

- ++ Neuroscience knowledge
++ Experimental Methods
+ Scientific Literature
+ Social skills
+ Maths/Stats/Programming
+ Independent Research
+ Data presentation/discussion
+ Scientific English
+ Ethics

Modulinhalte

The module consists of three weeks of seminar and hands-on lab exercises on insect behavioral experiments and electrophysiology (extracellular recordings from Drosophila or mosquito neurons).

The seminar covers the following topics:

- Introduction to Dipteran courtship behaviour (fruit flies and mosquitoes): common mechanisms and principles
- The cellular and molecular basis of Dipteran courtship: Between shared evolution and species-specific adaptation
- Introduction to the neurophysiological and neurogenetic toolbox to dissect behaviour (optogenetic, biophysical, behavioural)
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:

- Quantitative analysis of neural responses (electrophysiology, reporter imaging) from Dipteran insects

- Quantitative analysis of behavioural responses from Dipteran insects (e.g. courtship behaviour, flight tones)
- Design and Testing of different stimuli to probe neural and behavioural responses

Literaturempfehlungen	Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP Background and seminar literature will be available in Stud.IP

Teilnahmevoraussetzungen	<p>A learning agreement signed by the student, the supervisor at the host institution, and the Oldenburg supervisor (from the list of examiners), needs to be submitted to the examination office prior to the start of lab work.</p> <p>Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor)</p>

Kompetenzziele

+ Neurosci. knowl.

++ Expt. methods

++ Independent research

++ Scient. literature

++ Social skills

+ Interdiscipl. knowl.

++ Data present./disc.

+ Scientific English

+ Ethics

Students are introduced to independent research in a specific area of neuroscience by a scientifically working group outside of the regular MSc Neuroscience faculty at the University of Oldenburg (usually a university, research institute, clinics or scientifically working company in Germany or abroad)

Students perform individual research projects to learn:

- planning and organization of a research project in a group outside of University of Oldenburg
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- prepare and present a scientific poster

Modulinhalte

The External Research Module is carried out under the guidance and supervision of an experienced researcher who is not part of the regular Neuroscience faculty at the University of Oldenburg. It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time.

After completion of the lab work, students will continue to be advised during the writing phase of the project report by the external supervisor and / or by a local Neuroscience faculty member.

The timing of projects is by individual arrangement with the supervisor.

Participation in the Stud.IP workshop on science communication (<https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf> a53d7b3f5e3680f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Literaturempfehlungen	Provided by external and / or local supervisor, depending on the project

Angebotsrhythmus Modul	every semester
Aufnahmekapazität Modul	unbegrenzt (
Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor)	
)	

Hinweise

All teachers from the list of MSc Neuroscience examiners at the University of Oldenburg can act as examiners, students should contact appropriate supervisors individually.
Prior to project start, external and local supervisors must fill the learning agreement form. The supervisor at the host institution is invited to submit a short, written statement of assessment, final grading is done by the supervisor from the list of examiners.

- write a scientific report
- prepare and present a scientific poster

Module may serve as preparation for a Master's thesis.

Modulinhalte

The Research Module is carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners). It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and a regular seminar for training, reporting and feedback advice during that time. Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program.

Research questions, methods and approaches differ between individual projects. Please refer to the list of options in Stud.IP and contact potential supervisors directly.

The timing of projects is by individual arrangement with the supervisor. Many, but not all, project options can also be scheduled during semester breaks, and / or as part-time options (lasting more than 7 weeks).

Note that, for some options, priority for admission to the project is given to students who passed a background module offered by the supervisor

Participation in the Stud.IP workshop on science communication (<https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf> a53d7b3f5e3680f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Literaturempfehlungen	Provided by the supervisor, depending on the project.

Teilnahmevoraussetzungen

Students from other programs are welcome when space is available.

Dependent on the choice of the project, different modules are prerequisites:
Current choices:

neu340 (invertebrate neuroscience)
neu245 (Computational Neuroscience – biophysical modeling)

Kompetenzziele**Goals of this module:**

upon completion of this module, students have experienced the full cycle of a research project in a small (4 weeks full time) team project (2-5 students):

- Definition of an exact research question
- Development of a teamwork project schedule
- Literature search
- Application of experimental or modeling methods they have learned in a preceding background module

Data analysis

- Frequent oral status reports and data discussion
- Poster presentation

Skills to be acquired/ competencies:

- + Neuroscience knowledge
- + Experimental Methods
- + Scientific Literature
- ++ Social skills
- + Maths/Stats/Programming
- ++ Independent Research
- ++ Data presentation/discussion
- + Scientific English
- ++ Ethics

Modulinhalte

The seminar will cover topics of (tools for) scientific team work, literature search, and science communication.

The topics of the group projects for 2-5 students differ every year, because they are related to ongoing scientific projects (e.g. of PhD students). Current project choice:

- Invertebrate electrophysiology (requires neu340)
- Biophysical modeling (requires neu245)

Literaturempfehlungen

Journal papers will be selected based on the topic of the project

neu730 - Biosciences in the Public Eye and in our Laws

Modulbezeichnung	Biosciences in the Public Eye and in our Laws
Modulkürzel	neu730
Kreditpunkte	6.0 KP
Workload	180 h (56h contact / 84h research for presentations / 40h term paper)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Biologie (Master) > Skills Modules• Master Biology (Master) > Skills Modules• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	<ul style="list-style-type: none">• Köpll, Christine (Modulverantwortung)• Sienknecht, Ulrike (Modulberatung)• Köpll, Christine (Prüfungsberechtigt)• Sienknecht, Ulrike (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	<ul style="list-style-type: none">+ Expt. methods+ Scient. Literature++ Social skills++ Interdiscipl. knowlg+ Data present./disc.+ Scientific English++ Ethics <p>Upon completion of this course, students</p> <ul style="list-style-type: none">• know basic rules of good scientific practise• are aware of the legal framework that is relevant to biological research, e.g. on animal welfare or genetically modified organisms• have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources• are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation• are able to prepare and give a coherent presentation in a team• have practised to lead a group discussion
Modulinhalte	In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module. Example topics: Good scientific practise and fraud Neuroenhancement Artificial intelligence Animal welfare, Animal experiments Overfishing, Nature conservation State-of-the-art genetic tools and their implications Genetically modified organisms, e.g., in food production, chimeras Stem cells Humans as experimental subjects
	A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

Teilnahmevoraussetzungen	none
Kompetenzziele	<ul style="list-style-type: none">++ Expt. Methods+ Independent Research+ Scient. Literature++ Social skills++ Interdiscipl. knowlge+ Scientific English++ Ethics <p>Upon successful completion of this course, students</p> <ul style="list-style-type: none">• know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language• understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.• have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)• are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation• have practical skills in handling small rodents or birds or fish• have profound knowledge of anaesthesia, analgesia and basic principles of surgery.• have practised invasive procedures and euthanasia.
	<p>NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.</p>
Modulinhalte	Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are: <ul style="list-style-type: none">• Legislation, ethics and the 3Rs• Scientific integrity• Data collection "• Basic biology of rodents, birds and fish• Husbandry, and nutrition of rodents, birds and fish• Animal Welfare• Health monitoring• Pain and distress• Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

Kompetenzziele

- + Neurosci. knowlg.
- ++ Independent research
- + Scient. Literature
- ++ Social skills
- + Interdiscipl. knowlg.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Preparation, presentation and critical discussion of own studies for an international audience:

- participate in an international meeting
- prepare a poster or talk for an international meeting
- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

Modulinhalte

Active participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days. Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis.

It is mandatory to present the poster or talk to Christine Köpll or Jutta Kretzberg prior to the meeting and incorporate the feedback on the presentation.

neu715 - Neuroscientific Data Analysis in Python

Modulbezeichnung	Neuroscientific Data Analysis in Python
Modulkürzel	neu715
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	<ul style="list-style-type: none">• Clemens, Jan (Modulverantwortung)• Clemens, Jan (Prüfungsberechtigt)• Clemens, Jan (Modulberatung)
Teilnahmevoraussetzungen	Enrolment in Master program Neuroscience
Kompetenzziele	

Goals of this module:

upon completion of this module, students...

- understand basic programming concepts.
- have good knowledge about the most important aspects of the programming language Python and are able to write their own programs.
- have basic knowledge in statistical testing.
- have developed and applied programs for the analysis of neuroscientific data.
- have practiced the interpretation of data analysis results in a neuroscience context.
- have learned about and practiced data sharing and version control.

Skills to be acquired/ competencies:

- + Neuroscience knowledge
- + Social skills
- ++ Maths/Stats/Programming
- + Data presentation/discussion
- + Scientific English
- + Ethics

Modulinhalte

In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task:

- Python basics: jupyter notebooks; code environments; scripts and functions; loading and saving data; plotting
- Data types: numerical, logical, text, lists, dictionaries, tuples
- Control flow: if statements, loops (for, while)
- Software development: Testing, debugging, version control, sharing code and data, reproducibility
- Working with data: Searching & sorting, logical indexing
- Advanced data structures: Tables; image and video data
- Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics
- Application data analysis: Implementation of spike train analysis methods and graphics, function handles
- Application Modelling: curve fitting, simulation of time series

With completing the seven tasks, each participant programs a set of common analysis methods for neuroscientific data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results.

Hence, the goal of this module is two-fold: Learning the programming language Python and analysis methods for neuroscientific data.

Teilnahmevoraussetzungen

The start of the master thesis requires prior completion of at least 60 ECTS.

Prior to the start of the thesis project, the form for application for the final thesis and final oral examination needs to be submitted to the examination office and approved by the examination committee. External examiners (not listed on the list of neuroscience examiners) need to apply for the status of an official examiner prior to the start of the project.

Depending on project choice, please ask the supervisor for additional requirements.

Kompetenzziele

- ++ Neurosci. knowl.
- ++ Expt. Methods
- ++ Independent research
- ++ Scient. Literature
- ++ Social skills
- + Interdiscipl. knowl.
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

In their Master thesis, students perform individual research projects in the

limited time of 6 month. Learning goals:

- planning and organization of a research project
- teamwork in a research group
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- optional: Prepare and present a scientific poster

Modulinhalte

The master thesis comprises 6 months of experimental or theoretical work and thesis writing, and a regular seminar for training, reporting and feedback advice during that time. The aim, methods and results of the thesis are presented in a final oral presentation and exam (Master's colloquium).

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program. Research questions, methods and approaches differ between individual projects. The timing of projects is by individual arrangement with the supervisor. Note that, for some options, priority for admission to the project is given to students who passed a background and / or research module offered by the supervisor

Please refer to the Stud.IP MSc Neuroscience information community forum for information on the groups and contact potential supervisors directly.

The master thesis project is generally carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners) and additionally evaluated by a second examiner. External master thesis projects and / or evaluation by persons who are not on the list of examiners need prior approval by the examination committee.

Participation in the Stud.IP workshop on science communication (<https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf> a53d7b3f5e3680f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.
