Background Modules

bio703 - Basic Concepts in Plant Sciences

Module label: Basic Concepts in Plant Sciences
Modulkürzel: bio703
Credit points: 12.0 KP
Workload: 360 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules

Zuständige Personen:
Zotz, Gerhard (Module responsibility)
Albach, Dirk Carl (Module counselling)
von Hagen, Klaus Bernhard (Module counselling)
Zotz, Gerhard (Prüfungsberechtigt)
Albach, Dirk Carl (Prüfungsberechtigt)
von Hagen, Klaus Bernhard (Prüfungsberechtigt)

Prerequisites:
Skills to be acquired in this module:
- Communicating deeper knowledge in ecology, phylogeny, evolution and genetics of plants
- Communicating scale- and method-overarching thinking
- Communicating deeper theoretic concepts of ecology, evolution and genetics of plants.
  + deepened biological expertise
  + deepened knowledge of basic working methods
  + data analysis skills
  + interdisciplinary thinking
  + critical and analytical thinking
  + independent searching and knowledge of scientific literature
  + ability to perform independent biological research
  + data presentation and discussion in English (written and spoken)
  + teamwork
  + ethics and professional behaviour

Module contents:
V: Biodiversity of plants (2 SWS)
V: Resource acquisition and use by plants (1 SWS)
V: Gene expression in plants (1 SWS)
S: Phylogeny of plants (2 SWS)
S: Interactions of plants with environmental parameters (2SWS)

| Skills to be acquired in this module | The aim of the module is to consolidate various aspects of ornithology. The module imparts advanced knowledge on different aspects of ornithology.  
The students acquire:  
An extended knowledge of behavioural, sensory, morphological and physiological characteristics in birds and relevant fundamental concept in conservation, ecology and evolution morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds  
Knowledge, presentation and discussion of relevant English literature from various fields of ornithology  
++ broad and deepened biological expertise  
+ deepened in depths knowledge of biological working methods  
+ interdisciplinary thinking  
+ critical and analytical thinking  
+ independent searching and knowledge of scientific literature  
++ data presentation and discussion in German and English (written and spoken) |
| Module contents | The module is composed of the lecture “Ecology, evolution and sensory biology in birds”, a seminar accompanying the lecture “Current Questions in Ornithology”, a seminar “Behavioural Ecology of Birds”, and a seminar “Methods in Field Ornithology”.  
Lecture “Ecology, evolution and sensory biology in birds”:
This lecture covers in-depth and specific aspects of phylogeny, speciation and hybridisation, bird migration, orientation, behavioural ecology, population biology, life history and sensory systems of birds. Seminar “Current Questions of Ornithology”:
In this seminar, original English publications are presented and discussed which deal with current research |
results from various fields covered in the lectures. Every student reads a paper on one scientific article, presents the study and discusses the results of that article with the other participants.

Seminar “Behavioural Ecology of Birds” (option 1):

In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

Seminar “Methods in Field Ornithology” (option 2):

The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

- ++ data presentation and discussion (E) (written and spoken)
- ++ project and time management
- ++ statistics & scientific programming

The module aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).

**Module contents**
S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a “mini symposium” subsequent to the field studies. E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication

Knowledge of fundamentals, topical subjects and methods in Marine Biology and Marine Geology. Studies and critical assessment of the scientific literature.

**Module contents**

L: (AW) General Marine Geology
E: Biogenic sedimentation, Interaction benthos-sediment;
(SS) Plankton of the oceans;
(MH) unicellular plankton;
(IK) benthos of the North-Sea;
(PM) biodiversity in the deep sea and on sea-mountains;
(JG) conceptions and hypotheses of marine biodiversity, biodiversity of marine vertebrates;
(GG) animal migrations and dispersal behaviour.

Methods and scientific work on research vessels.

A lecture comprises the above-mentioned subjects and imparts marine biological theories, research results and methods. In the seminar, research is presented and discussed. In the laboratory course/exercises, subjects are treated in coordination with the contents of the lecture. With the aid of a computer, data are analysed and interpreted statistically.

| By actively participating in this module students acquire qualifications in the following fields: Biological oceanography, marine biology and marine ecology:  
  - Geological formation history of the Mediterranean Sea and Atlantic Ocean, respectively, or the Red Sea and adjacent seas  
  - Oceanography and hydrology: Development of the faunal and floral composition of the Atlantic Ocean, the Mediterranean Sea and the Mediterranean region or the Red Sea (biogeography)  
  - Commercial utilization of the seas and its impacts  
  - Biotopes and biotic communities: Evolution, systematics, morphology, modes of life, and ecology of selected animal groups  
  - Applying theoretical knowledge to real-world organisms/systems: Improved and specialized knowledge of species  
  - Interaction between organisms and environment: Dynamics of reef-building and reef-degrading processes  
  - Threat to coral reefs/protection of marine environments  
  - Formulation and definition of scientific approaches and selection of methods  
  - Observation and investigation of organisms and their habitats (snorkelling/diving): Documentation of small research projects in groups in the style of a scientific publication  
  - Editorial work to prepare a module report  
  - Popular presentation of results to be published by the media and to be presented at the University Further skills:  
  - Social engagement in groups/teamwork in projects  
  - Independent scientific work in groups  
  - Improved and specialized knowledge of species  
  - Adaptation of life cycles  
  - Interaction between organisms and environment  
  - Dynamics of reef-building and reef-degrading processes  
  - Threat to coral reefs/protection of marine environments  
  - History, culture, politics, and religion  
  - Physiological aspects of apnoediving  
  - Measures in case of accidents (also caused by "poisonous" organisms) |

Skills to be acquired in this module:
- + deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ data presentation and discussion (E) (written and spoken)
- + teamwork
- ++ statistics & scientific programming

Module contents:
Lecture conveys knowledge about the fields of population genetics, evolution and speciation. Important laboratory methods regarding DNA sequencing will be learned as well as basics and background information on the analysis of dispersal, distribution, genetic diversity of plant and animal species. Exercise: Data sets and methods will be analysed to determine distribution and genetic exchange between populations.

- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills;
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- data presentation and discussion in English (written and spoken)
- statistics & scientific programming

Module contents:
Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses.
Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.

Skills to be acquired in this module
- The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.

  + critical and analytical thinking
  + independent searching and knowledge of scientific literature
  ++ ability to perform independent biological research
  ++ data presentation and discussion (E) (written and spoken)
  + statistics & scientific programming

Module contents
- Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical. Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.

Literatureempfehlungen
- will be announced during the course

### Module Contents

Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases. Exercises: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

- Master's Programme Biology (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen

- Sienknecht, Ulrike (Module responsibility)
- Sienknecht, Ulrike (Module counselling)
- Sienknecht, Ulrike (Prüfungsberechtigt)
- Claußen, Maike (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

skills:

++ deepened biological expertise
+ deepened knowledge of biological working methods
++ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ ability to perform independent biological research
+ teamwork

Module contents

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

Prerequisites
- Fundamentals of Neurobiology, Behavioural Biology, Evolution, Ecology

Skills to be acquired in this module
- ++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills
- ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present/disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of behavioural ecology and neuroethology
- are able to present and critically assess scientific data and approaches

Module contents
The lecture “Neuroethology” provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.
The lecture “Behavioural ecology” provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.
In the seminar “Current issues of Ethology”, current original literature relating to behavioural biology is reported and discussed.

- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen
- Thiel, Christiane Margarete (Module responsibility)
- Thiel, Christiane Margarete (Module counselling)
- Thiel, Christiane Margarete (Prüfungsberechtigt)
- Gießing, Carsten (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module:
++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
know the fundamentals of neurotransmission
know the basic neural mechanisms underlying attention, learning, emotion, language and
effective functions
understand the relationship between disturbances in neurotransmitter systems, cognitive
functions and psychiatric disease
know the principles of drug treatment for psychiatric disorders
have in-depth knowledge in selected areas of these topics
are able to understand, explain and critically assess neuroscientific approaches in animals and
humans
are able to understand and critically assess published work in the area of cognitive neuroscience

Module contents
The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive
neuroscience methods and
then covers different cognitive functions.
Lecture topics:
- History of cognitive neuroscience
- Methods of cognitive neuroscience
- Attention
- Learning
- Emotion
- Language
- Executive functions.
The supervised exercises either deepen that knowledge by exercises or discussions of recent papers/ talks
on the respective topic covered
during that week.
The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its
links to psychiatric disease. The
lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge.
Lecture topics:
- Introduction to Terms and Definitions in Drug Research
- Dopaminergic and Noradrenergic System
- Cholinergic and Serotonergic System
- GABAergic and Glutamatergic System
- Addiction
- Depression
- Schizophrenia
- Anxiety
- Alzheimer's Disease

Prerequisites

Basic knowledge of neurobiology

Skills to be acquired in this module

-++ Neurosci. knowlg.
-++ Expt. Methods
- Independent research
-++ Scient. Literature
- Social skills
- Maths/Stats/Progr.
-++ Data present./disc.
- Scientific English
- Ethics

Upon successful completion of this course, students

- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

Module contents

The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:

- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

Literatureempfehlungen

Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP.

Background and seminar literature will be available in Stud.IP.

Prerequisites
Recommended previous knowledge/skills: Basics of Neurosensory Science and Behavioural Biology

Skills to be acquired in this module
- ++ Neurosci. knowlg
- + Expt. methods
- ++ Scient. Literature
- + Social skills
- ++ Interdiscipl. knowlg
- ++ Data present./disc.
- ++ Scientific English
- + Ethics

Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students
- have profound knowledge on auditory sensory processing at several levels (including cochlear
transduction mechanisms, central auditory processing)
- have basic knowledge of the large range of techniques used in auditory research
- are able to read and critically report to others on an original research paper in auditory neuroscience
- are able to research and review a specific topic in auditory neuroscience

Module contents
One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.
Topics:
- Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission
- Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions
- Auditory nerve: phase locking, rate coding. Excitation patterns
- Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular
specialisations
- Sound localisation in birds and mammals
- Central auditory processing: imaging techniques, auditory streams, cortex, primates
- Relation between psychophysics and neurophysiology

The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

+ Scient. Literature
+ Social skills
+ Maths/Stats/Progr.
+ Independent Research
+ Data present./disc.
+ Scientific English
+ Ethics

Upon successful completion of this course, students
- have knowledge on invertebrate neuronal systems in comparison to vertebrate systems
- have discussed an overview of experimental and theoretical methods of invertebrate neuroscience
- have acquired first practical skills in intracellular recordings from invertebrate neurons
- have acquired basic skills in data analysis
- have acquired an intuitive understanding of membrane potential and action potential generation based on computer simulations

Module contents

The module consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation.

The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments
- Planning a small individual team-work project based on the techniques taught in this module, that can be used as basis for the module neu345

Literatureempfehlungen
Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP Background and seminar literature will be available in Stud.IP

Prerequisites
Skills to be acquired in this module:
- * Neurosci. knowlg.
- ++ Expt. Methods
- + Social skills
- ++ Maths/Stats/Progr.
- + Data present./disc.
- + Scientific English

Students will learn the basics about performing a psychoacoustic experiment. Based on an experiment in which they study their own hearing, they will learn how to conduct a behavioural study in hearing and analyze the data. In addition, they will be provided with an overview of the mechanisms of auditory perception.

Module contents
- The module comprises (i) a seminar "Hearing" [2 SWS]
- an exercise "Fundamentals in psychoacoustic data analysis" [1 SWS], and a (iii) practical course [7 SWS] including aspects of planning and conducting psychoacoustic experiments.

Literatureempfehlungen

- der Biologie, Lehrende (Prüfungsberechtigt)

Prerequisites:

Skills to be acquired in this module:

- deepened knowledge of biological working methods
- data analysis skills
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- ability to perform independent biological research
- data presentation and discussion in German and English (written and spoken)
- teamwork
- project and time management
- statistics & scientific programming

Module contents:
The students develop an empirical investigation, carry it out and analyse the results. The students present and discuss their project both orally and in writing.

Reference text:

Students can choose between many options of individual projects, offered by the different groups involved in the MScBiology study program. All members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor (see list of examiners, https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte). Please refer to the list of options in Stud.IP and contact potential supervisors directly.

Within the Modul bio900 is it possible to take several courses as long as their contents differ substantially. When taking the course group 5.02.960 it is mandatory to choose two courses out of the group A – D.

Credit points 15.0 KP
Workload 450 h
Verwendbarkeit des Moduls
- Master's Programme Biology (Master) > Research Modules
- Master's Programme Biology (Master) > Research Modules

Zuständige Personen
Zotz, Gerhard (Module responsibility)
Zotz, Gerhard (Prüfungsberechtigt)
der Biologie, Lehrende (Prüfungsberechtigt)

Prerequisites
External research projects are done on an individual basis. They are supervised by one person from Oldenburg (see list of examiners, https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte) and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/ (Learning Agreement for External Research Module)

Skills to be acquired in this module
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion (written and spoken)
++ teamwork
++ project and time management
++ statistics & scientific programming

Students perform individual research projects to learn: • planning and organization of a research project in a group outside of University of Oldenburg • formulate a scientific hypothesis • planning, performing and analyzing experiments and / or simulations • working with scientific background literature on the specific context of the project • oral presentation and discussion of backgrounds and results in the lab seminar • write a scientific report in publication format • prepare and present a scientific poster

Module contents
Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad).
The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.
Note: • all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor (see list of examiners, https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte), students should contact appropriate supervisors individually • prior to project start, external and local supervisors must fill the learning agreement form • the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor • participation in a joint poster presentation of concurrent research modules is highly recommended.

bio880 - Skills in Plant Systematics

Module label: Skills in Plant Systematics
Modulkürzel: bio880
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Skills Modules

Zuständige Personen:
- Albach, Dirk Carl (Module responsibility)
- von Hagen, Klaus Bernhard (Module counselling)
- Albach, Dirk Carl (Prüfungsberechtigt)
- von Hagen, Klaus Bernhard (Prüfungsberechtigt)
- Khan, Gulzar (Prüfungsberechtigt)

Prerequisites:
Skills to be acquired in this module:
- In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.
  - + deepened biological expertise
  - ++ deepened knowledge of biological working methods
  - ++ data analysis skills + critical and analytical thinking
  - ++ independent searching and knowledge of scientific literature
  - + ability to perform independent biological research
  - ++ data presentation and discussion (E) (written and spoken)
  - + teamwork
  - + statistics & scientific programming

Module contents:
In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa. In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.

**Prerequisites**
- Skills to be acquired in this module
  - + biological knowledge
  - + biologically relevant, natural / mathematical scientific basic knowledge
  - ++ interdisciplinary knowledge and thinking
  - ++ abstract, logical, and analytical thinking
  - ++ expanded knowledge in a specific biological field
  - ++ presentation of results and factual discussion, both written and spoken
  - ++ (scientific) communication skills

To develop skills in the critical analysis and interpretation of results and themes in diverse areas of modern biology, including (but not limited to) evolutionary biology, population genetics, biodiversity, ecology, genomics, ornithology, and neurobiology.

**Module contents**
- Discussion and interpretations of one or more themes in modern biology. The themes and exact content will be provided by the instructor(s) at the beginning of the course. The module bio890 may be taken more than once as long as the content covered in the seminars differ substantially.

**Literaturempfehlungen**

- Teilnahme in einem oder mehreren Grundmodulen des Master Biologie

**Examination**
- Prüfungszeiten
- Type of examination: open

**Final exam of module**
- Final exam of module: 1 Portfolio. Components vary in the seminars. They are specified in Stud.IP in the respective seminar.

**Form of instruction**
- Seminar

**SWS**
- 2

**Frequency**
- SoSe und WiSe

**Workload Präsenzzeit**
- 28 h
### Module Contents

In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
- Good scientific practise and fraud
- Neuroenhancement
- Artificial intelligence
- Animal welfare, Animal experiments
- Overfishing, Nature conservation
- State-of-the-art genetic tools and their implications
- Genetically modified organisms, e.g., in food production, chimeras
- Stem cells
- Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

- Dedek, Karin (Prüfungsberechtigt)
- Schmaljohann, Heiko (Prüfungsberechtigt)
- Winklhofer, Michael (Prüfungsberechtigt)

## Prerequisites

- none

## Skills to be acquired in this module

- ++ Expt. Methods
- + Independent Research
- + Scient. Literature
- + Social skills
- ++ Interdiscipl. knowlg
- ++ Scientific English
- ++ Ethics

Upon successful completion of this course, students

- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery
- have practised invasive procedures and euthanasia

**NOTE**: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.

## Module contents

Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:

- Legislation, ethics and the 3Rs
- Scientific integrity
- Data collection
- Basic biology of rodents, birds and fish
- Husbandry, and nutrition of rodents, birds and fish
- Animal Welfare
- Health monitoring
Pain and distress
Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

|                    | Scientific English |

Upon completion of this course, students

- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

<table>

</tbody>
</table>

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

**Präsenzzeit Modul insgesamt** 56 h
neu780 - Biological Data Analysis with Python

Module label: Biological Data Analysis with Python
Modulkürzel: neu780
Credit points: 6.0 KP
Workload: 180 h
- 2 SWS Lecture total workload 90h: 30h contact / 60h individual reading
- 2 SWS Supervised exercise total workload 90h: 45h contact / 45h solving programming exercises

Verwendbarkeit des Moduls:
- Master’s Programme Biology (Master) > Skills Modules
- Master’s Programme Neuroscience (Master) > Skills Modules

Zuständige Personen:
Winklhofer, Michael (Module responsibility)
Winklhofer, Michael (Prüfungsberechtigt)

Prerequisites:
Skills to be acquired in this module:
+ Neurosci. knowlg.
++ Maths/Stats/Progr.
+ Data present./disc.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/.

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.

Module contents:
Data types and data structures, control structures, functions, modules, file input/output
Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

Literaturempfehlungen:
open access

Prerequisites

Skills to be acquired in this module
- Neurosci. knowlg.
- Scient. Literature
- Social skills
- Interdiscipl. knowlg.
- Data present./disc.
- Scientific English
- Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscience literature, learn about the scientific publication process and discuss science communication to the general public.

Module contents

The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover:
- How to find literature?
- How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers?
- Publication process, Authorship and impact metrics
- Alternative publication paths and data sharing in neuroscience
- Science communication for the general public and on social media
- Face-to-face scientific communication

Literatureempfehlungen

List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP.

Background neuroscience textbooks, e.g.:
- Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer
- Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer

Preparation, presentation and critical discussion of own studies for an international audience:  
- participate in an international meeting  
- prepare a poster or talk for an international meeting  
- present own results in a way that is appropriate for the target audience  
- put own studies into the context of scientific literature  
- acquire additional knowledge about a broader field of research |
| Module contents | Active participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days.  
Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis.  
It is mandatory to present the poster or talk to Christine Köppl or Jutta Kretzberg prior to the meeting and incorporate the feedback on the presentation. |

Zuständige Personen
- Will, Maria (Module responsibility)
- Albach, Dirk Carl (Module counselling)
- Will, Maria (Prüfungsberechtigt)
- 1 N., N. (Prüfungsberechtigt)

Prerequisites
- *deepened biological expertise*
- **deepened knowledge of biological working methods**
- *interdisciplinary thinking*
- *critical and analytical thinking*
- *independent searching and knowledge of scientific literature*
- *ability to perform independent biological research*
- *data presentation and discussion (written and spoken)*
- *teamwork*
- **ethics and professional behaviour**
- **project and time management**

Module contents
- history of collections at universities and their importance for developing scientific theories;
- origin/formation of collections (objects in time and space)
- the collections of the CvO (overview) and their importance as infrastructure for teaching, learning and research
- collection work in biological collections such as botanical garden, natural history museums, didactic collections or the herbarium (concepts, object handling, conservation, documentation & digitalization)
- developing research questions and projects based on objects/collections, e.g., provenance research
- communicating object-based topics (e.g., speed talk presenting current scientific articles)
- ...

Literaturempfehlungen
- articles and book chapters referring to (1) the history/presence/future of collections, (2) collection management and (3) research projects based on objects/collections

Prerequisites:

Skills to be acquired in this module:

++deepened biological expertise
++deepened knowledge of biological working methods
+data analysis skills
++interdisciplinary thinking
+critical and analytical thinking
++independent searching and knowledge of scientific literature
++ability to perform independent biological research
++data presentation and discussion in German and English (written and spoken)
+teamwork
+ethics and professional behaviour
++project and time management

Module contents:

- documentation of a natural history collection (e.g., university or from an herbarium) including a description of the object(s), digitalization, check for traces of use and/or damage;
- if needed: restauration, i.e. fixing loose plants on herbarium vouchers;
- trace biographies of the collector and the collection/object (provenance);
- trace comparable collections using databases;
- as far as possible: identification/validation of scientific identification using databases and scientific literature
- generating and answer scientific questions based on the collection or develop an educational approach (e.g., teaching lecture)
- communicate the results, i.e. prepare a poster for a congress and defend your theses and summarize the results in a manuscripts;
...

neu820 - Neuroscience Journal Club

Module label: Neuroscience Journal Club

Modulkürzel: neu820

Credit points: 3.0 KP

Workload: 90 h
- 30h contact / 60h reading and preparation of oral and poster presentation

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Skills Modules
- Master's Programme Biology (Master) > Skills Modules
- Master's Programme Neuroscience (Master) > Skills Modules

Zuständige Personen:
Mertsch, Sonja (Module responsibility)
Mertsch, Sonja (Prüfungsberechtigt)

Prerequisites:
Skills to be acquired in this module:
- ++ Neurosci. knowledge
- + Expt. Methods
- ++ Scient. Literature
- ++ Social skills
- + Interdiscipl. knowledge
- ++ Data present./disc.
- + Scientific English
- + Ethics

Module contents:
Week 1: How to read and present a scientific paper and how to generate a scientific poster? Distribution of papers to participants
Week 2: Example presentation of a scientific paper by the teacher with discussion
Week 3-13: Oral presentation / moderation of discussion of one scientific paper per week by one or two student(s)
Week 14: Short poster presentations of all students

The focus topic of the scientific literature will change between semesters.
In winter semester 2021/22, the topic will be regenerative ophthalmology with the focus on tissue engineering.

Literaturempfehlungen:
Scientific literature will be available in Stud.IP

Verwendbarkeit des Moduls

- Master's Programme Biology (Master) > Abschlussmodul

Zuständige Personen

der Biologie, Lehrende (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Successful completion of the Master module demonstrates that students are able to work on a problem in the field of Biology within a fixed period applying scientific methods.

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
+ ethics and professional behaviour
++ project and time management

Module contents

Preparing the Master thesis
Active participation in the seminar of the research group, in which the Master thesis is written

Literaturempfehlungen

Supervisors may supply an initial reading list with important literature. The students are expected to find and use further literature as needed.
