Modules for Neurocognitive Psychology

Mastermodule

psy111 - Research methods I - Statistical Modeling

Module label	Research methods I - Statistical Modeling
Modulkürzel	psy111
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
After completion of this module, students will have basic knowledge in managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They can apply the statistical methodology in terms of good scientific practice and interpret, evaluate and synthesize empirical results in basic and applied research contexts. Students will be aware of statistical misconceptions and they can overcome them.

Competencies:
++ interdisciplinary kowledge & thinking
++ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
++ ethics / good scientific practice / professional behavior
++ critical & analytical thinking
++ scientific communication skills
+ group work

Module contents

Part 1: Multivariate statistical modeling

- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression models
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models (Polynomial regression, regression splines and local regression)
- Path modeling
- Factor analysis (exploratory & confirmatory)
- Structural equation modeling (SEM; linear and non-linear)

Part 2: Multivariate statistical modeling with R (hands-on seminar)

- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

psy112 - Research methods II - Statistical Learning

Module label	Research methods II - Statistical Learning
Modulkürzel	psy112
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Building upon the basic knowledge in multivariate statistical modeling covered in psy111, after completion of this module students will know how to deal with big data to address empirical questions in neurocognitive psychology. They will be able to solve prediction and classification problems to the realm of basic and applied statistical/machine learning purposes. Furthermore, students will understand the specifics of applied research and the statistical modeling of noisy, longitudinal data.

Competencies:
++ interdisciplinary kowledge & thinking
++ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
++ ethics / good scientific practice / professional behavior
++ critical & analytical thinking
++ scientific communication skills
+ group work

Module contents

Part 1: Statistical / machine learning methods

- Supervised and unsupervised statistical learning and prediction
- Resampling methods
- Regularized regression
- Linear and quadatic discriminant analysis
- Naive Bayes algorithm
- Tree-based methods
- Support vector machines
- The basics of neural networks
- Principal component regression
- Clustering methods

Part 2: Statistical / machine learning methods with R (voluntary hands-on seminar)

- Data examples and applications of the basic machine learning methods covered in the lecture

Part 3: Evaluation research (seminar with theory and practice)

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Multivariate statistical modeling of change over time and group differences in change
- Specific statistical tools for sampling and matching (e.g., Propensity score matching)
- Basics of causality theory and the estimation of average and conditional

effects in EffectLiteR
* Research synthesis and meta-analysis

psy125 - Neuropsychological Diagnostics

Module label	Neuropsychological Diagnostics
Modulkürzel	psy125
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Roheger, Mandy (module responsibility) • Roheger, Mandy (Prüfungsberechtigt) • Hildebrandt, Andrea (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Kiene, Franziska (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will acquire specific knowledge about (neuro-)psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. Students will learn how to analyze clinical cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate information in order to draw conclusions about the case given specific diagnostic strategies. Finally, students will learn about the requirements of assessment report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module. **Competencies:** + Neuropsychological / neurophysiological knowledge for clinical assessments + interdisciplinary knowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking
Module contents	**Part 1: Introduction to neuropsychological diagnostics (lecture): winter** • Psychological assessment as a decision process – descriptive and prescriptive models • Assessment methods, their construction and design, quality criteria • The logic of decision making in the assessment process • Classificatory decisions • Psychometrics to single cases • Examples of diagnostics processes in different clinical populations • Focus areas on different cognitive domains, their underlying models, respective possible impairments and possibilities for neuropsychological assessment • Reasoning for the applications of neuropsychological tests • Summarizing results and writing reports **Part 2: Applied Neuropsychological Diagnostics (seminar): winter** • Case conceptualization (neuropsychology and clinical psychology) • Formulating hypotheses • Selecting assessment procedures and planning administration • specific knowledge on neuropsychological testing • exercises in neuropsychological testing / practicing tests • Evaluating the application of assessment procedures • Analyzing, summarizing and visualizing results • Integrating results based on the decision rules • Writing a psychological/assessment report
Literaturempfehlungen	Will be specified in the courses.

psy126 - Test Theory and Test Construction

Module label	Test Theory and Test Construction
Modulkürzel	psy126
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt) • Hellmann, Andreas (Prüfungsberechtigt) • Debener, Stefan (Module counselling)

Prerequisites

Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will acquire specific knowledge of modern test theory and test construction and will be trained to apply this knowledge in the context of test development and test adaptation. They will reflect on the differences between traditional and modern test theory and their use in the domain of applied psychometrics and the systematic design of interview and observation methods. Finally, students will learn about the requirements for writing test construction and/or adaptation reports. Ethical guidelines in psychometrics and quality standards will be implicit topics throughout the module.

Competencies:
+ research methods and psychometric knowledge
+ interdisciplinary kowledge & thinking
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking

Module contents

Part 1: Test Theory and Test Construction (lecture): summer

- Classical test theory
- Generalizability theory
- Latent-State and Trait theory
- Latent variable models for different types of item responses
- Measurement invariance across groups and time
- Network modeling and machine learning in psychometrics
- Preference modeling for constructing faking-resistant questionnaires and tests

Part 2: Test Analysis Applied (hands-on seminar): summer

- Test adaptation conceptualization
- Test data processing
- Item mining and analysis
- Test analysis report writing

Literaturempfehlungen

Will be specified in the courses.

Links	
Language of instruction	English
Duration (semesters)	1 Semester

psy130 - Communication of scientific results

Module label	Communication of scientific results
Modulkürzel	psy130
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Herrmann, Christoph Siegfried (module responsibility) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Strüber, Daniel (Prüfungsberechtigt) • Roheger, Mandy (Prüfungsberechtigt) • Mahadevan, Rachana (Prüfungsberechtigt) • Strüber, Daniel (Module counselling)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	**Goals of module:** Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically. **Competencies:** ++ data presentation & discussion ++ scientific literature ++ scientific English / writing ++ scientific communication skills + group work
Module contents	**Part 1: Communication of scientific results (seminar)** Literature search Presentation skills Writing skills **Part 2: Psychological colloquium** Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite

psy141 - Minor

Module label	Minor
Modulkürzel	psy141
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Rieger, Jochem (Module counselling) • Bleichner, Kerstin (Module counselling) • Rieger, Jochem (Prüfungsberechtigt) • Gießing, Carsten (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Spiegler, Andreas (Prüfungsberechtigt) • Maier, Esther Christine (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	
	Goals of module: Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. Students may also broaden their psychological knowledge or language skills. **Competencies:**
Module contents	
	To complement the core of the study programme in a meaningful way, students can take Master modules and courses from the fields • Biology • Neurosciences • Computer Science • Physics • Mathematics • Pedagogy • Philosophy • related fields • Psychology (additional elective module (NOT psy170, psy220, psy270, psy280, psy290) or from another study programme) Students whose first language is not German, may take German classes. Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis). Students can take the academic writing course 'English for University Studies: 5. Writing and Reading pb337' from the language center. Other English classes cannot be taken as Minor. A list of already approved courses/modules can be found on our website. You can take other courses/modules if they fulfil the following requirements: • Master level (other than language courses) • may be ungraded, but need proof of competence (e.g. a pass/fail exam) Note that Minor courses/modules must not repeat contents of mandatory modules or taken elective modules of the programme. **We recommend taking modules/courses that strengthen your own professional profile.**
Literaturempfehlungen	
Links	List of approved courses/modules and approval form: https://uol.de/en/psychology/master/course-overview/

		-> Supporting documents
Languages of instruction		English , German
Duration (semesters)		1 Semester
Module frequency		irregular
Module capacity		unlimited
Reference text		PLEASE NOTE:

If you want to take a module/course which is not listed in the list of approved courses/modules, please check thoroughly whether the course/module fulfils the requirements listed under 'module contents' before you start the course/module. The requirements for the minor module are also described in the subject specific amendments to the general examination regulations (fachspez. Anlage).

In cases of doubt, the programme coordinator can advise you.

Recognition procedure:

- Certificates of completion of approved courses/modules (see list of approved courses) have to be sent directly to the examinations office.
- Certificates of completion for courses/modules without former approval have to be sent to the head of the examinations committee together with the approval form and a course/module description.

If you want to take an additional elective module for your Minor (taking only a part of an elective module is not possible), you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as approved for the Minor and the course credits will be automatically entered for your Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor.

Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.

It is your responsibility to ask the teacher whether you can take part in a course/module.

Please be aware that you can only use 6 credits for the module psy141 Minor. If you take more Minor courses/modules, these credits cannot be used for your degree. You can still ask the teacher to sign an attendance certificate (download https://uol.de/en/psychology/master/course-overview) or module examination form (https://uol.de/en/course-of-study/exams/neurocognitive-psychology-master-545) which is sufficient for later applications to prove that you took the additional course/module.

Type of module		Pflicht / Mandatory
Module level		MM (Mastermodul / Master module)
Teaching/Learning method		Lectures and seminars (depends on the chosen modules)
Examination	Prüfungszeiten	Type of examination
Final exam of module		If grades are earned in the minor, those are counted as pass/fail. Certificates for grades can be separately requested from the examination office.

psy150 - Clinical Psychology

Module label	Clinical Psychology
Modulkürzel	psy150
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Thiel, Christiane Margarete (module responsibility) • Thiel, Christiane Margarete (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of the Module:
Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the
medical guidelines and evidence-based practice.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ experimental methods
+ data presentation & discussion
+ scientific literature
+ critical & analytical thinking
+ knowledge transfer
+ group work

Module contents

The first part of the module provides students with a theoretical and practical background on
neurobiological and neurochemical bases of psychiatric disorders and pharmacological
interventions. This will be complemented by psychiatric interviews in simulated patients
focussing on psychopathological assessment. In the second part, the students will learn to plan
and assess the effectiveness of psychological interventions for selected disorders.

Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention
(lecture and seminar): winter
Basics of neurotransmitter systems and psychopharmacology
Substance Abuse (e.g. psychostimulants, hallucinogenics)
Depression
Anxiety Disorders
Alzheimer's Disease
Schizophrenia
psychopathological assessment

The seminar (voluntary) will be given in German as clinicians and patient actors are involved.
Part 2: Psychological interventions within the framework of evidence-based medicine
(3 seminars to chose from, one partly in German): summer
The seminars focus on concepts of evidence based treatment:
- with application to acquired dysfunctions of the brain (2.1)
- to selected psychiatric disorders (2.2)
- with application to trauma- and stress-related psychiatric disorders. Special emphasis is placed on children and adolescents (2.3)

Options:
1. Students attend both parts 2.1 and 2.2
2. Students attend the first four classes of 2.1 in addition to part 2.3

For summer term 2025, the seminars will most likely be restructured.

psy170 - Neurophysiology

Module label	Neurophysiology
Modulkürzel	psy170
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Debener, Stefan (module responsibility) • Debener, Stefan (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will understand the basic concepts of biomedical signal processing. They will use EEG
analysis tools interactively and independently and will understand the complete chain of EEG
analysis steps, from data import to the illustration of results. They will be able to use open
source tools for EEG analysis and apply theoretical knowledge to practical problems of
physiology.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
++ statistics & scientific programming
++ ethics / good scientific practice / professional behavior
+ group work
+ project & time management

Module contents

Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the
fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in recording EEG data and using EEGLAB, an open-source software
toolbox for advanced EEG analysis.

Part 1: Neurophysiology and neuroanatomy (lecture): winter
Neurophysiology, EEG, EMG, ECG
Neuroanatomy
Time-domain and frequency-domain analysis methods

Part 2: EEG recording and analysis (hands-on seminar): winter
In small groups under supervision of the lecturer, all students will record EEG
data of their fellow students and will serve as participants for their classmates.
We cannot guarantee same-gender groups.
Recording and analysis of biomedical signals
Averaging, filtering, signal-to-noise
Topographical EEG analysis

Part 3: EEG analysis with Matlab (hands-on seminar): summer
EEGLAB file I/O, data structure and scripting
Preprocessing, artefact rejection and artefact correction
Statistical decomposition
Event-related potentials, topographical mapping and power spectra
Illustration of results

psy181 - Neurocognition

Module label	Neurocognition
Modulkürzel	psy181
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Thiel, Christiane Margarete (module responsibility) • Thiel, Christiane Margarete (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students should be able to recognize and critically evaluate the value of considering
neuroscience in the study of psychological topics.

Competencies:
++ neuropsychological / neurophysiological knowledge
++ interdisciplinary kowledge & thinking
++ data presentation & discussion
++ scientific literature
+ scientific communication skills
+ group work

Module contents

Students will first acquire a general understanding of the brain mechanisms of different cognitive
functions and the methods used to study these functions. They will then apply this knowledge by
discussing current research topics (part 1). Knowledge will be transferred to the relation
between the development of the human brain and the cognitive processes it supports (part 2).

Part 1: Introduction to cognitive neuroscience (lecture and seminar): winter
Brain and cognition, methods of cognitive neuroscience
Attention, learning and memory
Emotional and social behaviour
Language, executive functions

Part 2: Neurocognitive development (seminar): summer
Brain development and cortical plasticity
Effects of early-life stress on brain development
Development of object recognition, social cognition, memory, and executive functions

psy190 - Sex and Cognition

Module label	Sex and Cognition
Modulkürzel	psy190
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Strüber, Daniel (module responsibility) • Strüber, Daniel (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Skills to be acquired in this module

Goals of module:
Students will acquire specific knowledge about sex differences in cognitive abilities and social
behaviours. They will be able to understand the interrelated impact of social and biological
influences on the brain's control of the (sex-specific) behaviours. Students should be able to
critically evaluate behavioural sex differences from different perspectives and to reflect on
possible implications for society.

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary kowledge & thinking
++ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
++ scientific communication skills
+ group work
+ project & time management

Inhalte

Module contents

Part 1: Introduction to the study of sex differences (lecture): winter
The measurement of sex differences
Sex differences in emotion
Sex differences in aggression
Sex differences in cognitive abilities
Hormones, sexual differentiation, and gender identity
Sex hormones and play preferences
Sex differences in hemispheric organization
Brain size and intelligence

Part 2: Sex, brain, and behaviour (seminar): winter
Sex differences in empathy
The extreme male brain theory of autism (S. Baron-Cohen)
Sex differences in neuropsychiatric disorders
Sex differences in stress response
Social implications of sex differences

Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Debener, Stefan (module responsibility) • Debener, Stefan (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module	
	Goals of module: Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 3), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3). **Competencies:** ++ neuropsychological / neurophysiological knowledge + interdisciplinary kowledge & thinking ++ experimental methods + data presentation & discussion ++ scientific literature + critical & analytical thinking + scientific communication skills

Module contents	
	Part 1: Introduction to Clinical Neuropsychology (lecture): winter Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests) Higher functions (learning & memory, language, emotion, spatial behavior attention) Plasticity and disorders (development, learning and reading disabilities, recovery) **Part 2: Cognitive Neurorehabilitation (seminar): summer** Behavioural and neuropsychological approaches neurofeedback in neurorehabilitation and ADHD memory rehabilitation effects of physical activity on cognition motor recovery **Part 3: Topics in Clinical Neuropsychology (seminar; taught partly in German): winter winter (will NOT be offered in winter term 2024/2025!)** Clinical neuroanatomy Neurodegenerative diseases Dementia Choose either part 2 or part 3!

Lecture		2	WiSe	28
Seminar		2	SoSe oder WiSe	28
Präsenzzeit Modul insgesamt				56 h

psy210 - Applied Cognitive Psychology

Module label	Applied Cognitive Psychology
Modulkürzel	psy210
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Rieger, Jochem (module responsibility) • Rieger, Jochem (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Skills to be acquired in this module

Goals of the module:
Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for
application. On completion of this module students should have a repertoire of cognitive
psychology concepts relevant for real world situations, be able to transfer the learned theoretical
concepts into practical contexts and evaluate potential issues arising in the process of
translation.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ interdisciplinary kowledge & thinking
+ experimental methods
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer

Module contents

The module will cover core concepts of cognitive psychology, their neuronal basis, basic
knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on
research aiming at complex real-world settings and translation of basic science in to practice.
Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In
the seminar the material is consolidated by examples from the literature which will be presented,
critically analyzed and discussed.

Part 1: (Neuro)Cognitive Psychology in the wild I (lecture): summer

- Neurocognitive Psychology with emphasis in real world context
- Methodological considerations: Generalization, validity of theories and research methods
- Information uptake and representation: Sensation, perception, categorization
- Selection of information and capacity: Attention and memory enhancement and failure
- Generation and communication: Language, reading, dyslexia
- Pursuing goals: Thinking, problem solving and acting

Part 2: (Neuro)Cognitive Psychology in the wild II (seminar): winter
In the accompanying seminar we will work through recent examples in the literature for topics of
the lecture. The goal is to apply novel knowledge from the lecture to understand and critically
discuss actual research approaches.

psy220 - Human Computer Interaction

Module label	Human Computer Interaction
Modulkürzel	psy220
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Rieger, Jochem (module responsibility) • Rieger, Jochem (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology or other programs related to the field (e.g. neuroscience, computer science, physics etc.).

Skills to be acquired in this module

Goals of module:
The goal of the module is to provide students with basic skills required to plan, implement and
evaluate brain computer interfaces as devices for human computer interaction. BCIs are an
ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and
evaluation. Importantly, classical BCI-methods can be used for modern data-driven basic neuroscience.
The module is designed as an "enabler course", meaning that ideally students should be able to understand and start independent studies into the BCI-methods. Therefore, it goes into depth instead of breadth. Good programming skills and some active knowledge of high school maths is strongly advised to maximize the learning outcome.

Competencies:
++ understanding of the foundations of statistical learning techniques
+ basics to understand technical time series processing and machine learning papers
++ interdisciplinary knowledge & thinking
+ experimental methods
++ statistics & scientific programming
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
+ group work
+ project & time management

Module contents

The module will introduce classic BCI paradigms and brain recoding techniques. However the main focus will be on a deeper understanding of the most important signal processing, machine learning, and performance evaluation techniques. The module combines a lecture on the theoretical foundations a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics.

Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer

Part 2: Hands on BCI implementation (practical seminar): summer
Topics covered:

- A brief history of BCIs and examples of HCI control and basic neuroscience using BCI
- techniques.
- Data preprocessing (e.g. filtering, projection techniques) and common artifacts and
- artifact treatment)

- Feature generation (e.g. fourier transform, spectral estimation techniques, principle
- components)
- Machine learning for classification and regression (e.g. model parameter optimization in
- multivariate regression)
- Evaluation (e.g. measures of model quality, cross validation to test model generalization,
- permutation tests)

Where possible the lecture provides mathematical backgrounds of the data analysis techniques.
The practical seminar implements BCI techniques on a real data set and further elaborates
specific topics in seminar form.

Literaturempfehlungen

There is no required textbook. The lecture slides and notes should be sufficient. However some
resources from which they were developed on are given below:

psy240 - Computation in Neuroscience

Module label	Computation in Neuroscience
Modulkürzel	psy240
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Stecher, Heiko (module responsibility) • Stecher, Heiko (Prüfungsberechtigt)
Prerequisites	
	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will acquire scientific programming skills as well as specific knowledge of
computational methods in neuroscience and cognition. They will learn to judge the
appropriateness and complexity of computational problems and solutions.

Competencies:
+ Neuropsychological / neurophysiological knowledge
+ experimental methods
++ statistics & scientific programming
+ critical & analytical thinking
+ knowledge transfer
+ group work

Module contents

Part 1: Introduction to scientific programming I (lecture): winter
Basic data types and structures
Flow control (conditions, loops, errors)
Testing and debugging
Functions

Part 2: Introduction to scientific programming II (lecture): summer

Complex data structures

EEG processing
Frequency analysis methods

Introduction to toolboxes

Part 3: Scientific programming I (excercise): winter
Implementation of examples from part 1

Part 4: Scientific programming II (exercise): summer
Implementation of examples from part 2

Part 5: Computer-controlled experimentation (hands-on seminar): summer
Computer hardware basics
Scripting and programming experiments
Combining stimulus delivery with EEG, Eyetracking, etc.
Temporal precision

psy251 - Internship

Module label	Internship
Modulkürzel	psy251
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Kranczioch-Debener, Cornelia (module responsibility) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	

Goals of module:
Students will obtain direct experience in the field of psychology. This includes being
involved in the provision of psychological or neuropsychological services in real-life situations,
such as neuropsychological testing or counselling in a hospital or mental health clinic, or
conducting and contributing to psychological research. The internship should be chosen by the
student such that it can provide a meaningful educational opportunity that will help students to
decide on their preferred area of work.

Competencies:
++ expert neuropsychological/neurophysiological knowledge
+ interdisciplinary knowledge & thinking
+ experimental methods
++ ethics / good scientific practice / professional behavior
++ knowledge transfer
+ project & time management

Module contents	The students will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

The internship lasts 360 hours (9-10 weeks). It can be performed at 2 different institutions with a
minimum duration of 150 hours (4 weeks) for each part.

A part of your internship (maximally 150 hours) can be performed internally in the Department of
Psychology. Internal internships cannot be performed in the same lab in which you will perform /
have performed your Practical Project psy260!

Your supervisor must be a psychologist. If your supervisor is NOT a psychologist, please
contact us for approval BEFORE you start your internship.

Please note that details are regulated in the exam regulations.
A blank internship certificate and the report form can be found on the programme website.

To generate ideas, a folder with information on internships that other students have performed is
available in the office of Dr. Cornelia Kranczioch.

Topics for projects will be presented in a colloquium at the end of the summer

term.

Type of module		Pflicht / Mandatory

psy260 - Practical project

Module label	Practical project
Modulkürzel	psy260
Credit points	9.0 KP
Workload	270 h (attendance in the lab and accompanying seminars as necessary for your project (~ 200h))
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Debener, Stefan (module responsibility) • Herrmann, Christoph Siegfried (module responsibility) • Hildebrandt, Andrea (module responsibility) • Puschmann, Sebastian (module responsibility) • Rieger, Jochem (module responsibility) • Roheger, Mandy (module responsibility) • Al-Zubaidi, Arkan (Prüfungsberechtigt) • Bleichner, Martin Georg (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Gießing, Carsten (Prüfungsberechtigt) • Hellmann, Andreas (Prüfungsberechtigt) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Hildebrandt, Andrea (Prüfungsberechtigt) • Hildebrandt, Helmut (Prüfungsberechtigt) • Rieger, Jochem (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Özyurt, Jale Nur (Prüfungsberechtigt) • Stecher, Heiko (Prüfungsberechtigt) • Strüber, Daniel (Prüfungsberechtigt) • Thiel, Christiane Margarete (Prüfungsberechtigt) • Rosemann, Stephanie (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Jäger, Manuela (Prüfungsberechtigt) • Boetzel, Cindy (Prüfungsberechtigt) • Vogeti, Sreekari (Prüfungsberechtigt) • Roheger, Mandy (Prüfungsberechtigt) • Daeglau, Mareike (Prüfungsberechtigt) • Kristanto, Daniel (Prüfungsberechtigt) • Abdolalizadeh Saleh, Amirhussein (Prüfungsberechtigt) • Jacobsen, Nadine (Prüfungsberechtigt) • Short, Cassie Ann (Prüfungsberechtigt) • Marek, Merle (Module counselling)
Further responsible persons	Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for psy260.
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. **You can only start the practical project if you have passed the exam of psy240 (psy241)** **Computation in Neuroscience!** Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.
Skills to be acquired in this module	**Goals of module:** Students are able to critically review the scientific literature and current state of knowledge concerning a certain topic in the field of cognitive neuroscience or neuropsychology. Based on this, they are able to develop a specific research question and to design an adequate experiment, acquire data and conduct appropriate statistical analyses, building on previously gained competencies in relevant research methods, computer programming and statistical methods. They know how to critically discuss the results of their study in context of the current literature and how to present their findings at a scientific poster

symposium.

Competencies:
++ experimental methods
+ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ scientific communication skills
+ knowledge transfer
+ group work
++ project & time management

Module contents

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

Skills to be acquired in this module

Goals of module:
Students will gain theoretical and practical knowledge on various non-invasive brain stimulation
techniques.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
+ statistics & scientific programming
+ scientific literature
+ ethics / good scientific practice / professional behaviour

Module contents

In this module, we will introduce the theoretical concepts, neurophysiological underpinnings and
neurocognitive as well as clinical applications of various non-invasive brain stimulation
techniques such as transcranial magnetic stimulation (TMS), transcranial direct current
stimulation (tDCS), transcranial alternating current stimulation (tACS), and transcranial random
noise stimulation (tRNS). A focus will be tACS, because it is especially suited to modulate brain
oscillations which have been shown to correlate with cognitive processes.

Part 1: Introduction to transcranial brain stimulation (lecture): summer

- Historical overview of brain stimulation
- Different techniques (TMS, tDCS, tACS, tRNS)
- Physiological mechanisms (entrainment, after-effects etc.)
- The use of transcranial brain stimulation in cognitive neuroscience - Experimental parameters (intensity, electrode montage, etc.)
- Pros and cons of TMS vs. tACS
- Technical aspects (artefact correction, modelling current flow, etc.)
- Safety issues
- Ethical considerations of brain stimulation

Part 2: Effects of tACS on physiology and cognition (seminar): summer

- Physiology of tACS (on-line and after-effects)
- Modulating cognitive functions (e.g. memory, attention, and perception)
- Clinical applications of tACS
- Hands-on experience in the lab

psy290 - Ambulatory Assessment in Psychology

Module label	Ambulatory Assessment in Psychology
Modulkürzel	psy290
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Roheger, Mandy (module responsibility) • Roheger, Mandy (Prüfungsberechtigt) • Bleichner, Martin Georg (Prüfungsberechtigt)

Prerequisites

Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will acquire specific knowledge about ambulatory assessment methods in psychological and public health research. They will know about the historical development of ambulatory assessment methods, the advantages and challenges of these methods and statistical methods for analyzing longitudinal data collected in ambulatory assessment research. Students will generate an own research idea and conduct their own study using ambulatory assessment tools such as e.g. mobile surveys or motion sensors. Students will be able to collect, analyze and present their data using ambulatory assessment tools.

Competencies:

++ Neuropsychological / neurophysiological knowledge
++ experimental methods
++ statistics & scientific programming
+ interdisciplinary knowledge & thinking
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ project & time management

Module contents

Part 1: Ambulatory Assessment in Psychology and Health Research (lecture): summer

• Definitions and historical overview of ambulatory assessment (AmbA) methods
• Reasons to use AmbA methods
• Introduction to different types of AmbA methods
• Designing a study of daily life
• Examples of usage of AmbA methods in different research fields and different research questions
• Statistical analysis of longitudinal data

Part 2: Researching daily life (hands-on seminar): summer

• Formulating hypotheses
• Selecting AmbA procedures and planning administration
• Data collection
• Evaluating the application of AmbA methods
• Analyzing, summarizing and visualizing results

Literaturempfehlungen

Researching Daily Life: A Guide to Experience Sampling and Daily Diary Methods by Paul J. Silvia, Katherine N. Cotter

Language of instruction	English
Duration (semesters)	1 Semester
Module frequency	The module will start every summer term.
Module capacity	unlimited

Reference text

PLEASE NOTE: We strongly recommend to take either psy170, psy270, psy280, psy220 or psy290 to gain methodological competencies (EEG, fMRI, TBS, HCI, ambulatory assessment techniques) that are needed for most practical projects and Master's theses!

Type of module	Wahlpflicht / Elective
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	part 1: lecture, part 2: seminar

Examination	Prüfungszeiten	Type of examination

Final exam of module

	Assignments will be collected during the term.	The module will be tested by a portfolio (consisting of 3 assignments):

- A theoretical background of the planned study and the presentation of the hypothesis (text, max. 1 page) – due before starting data collection
- A visualization of the study results – due after finishing data collection and analysis
- A scientific abstract of the whole study at the end of the seminar – due at the end of the seminar

Required active participation for gaining credits:

- attendance of at least 70% in the seminar within one semester
- recording of AmbA data

Lehrveranstaltungsform	Comment	SWS	Frequency	Workload of compulsory attendance
Lecture		2	SoSe oder WiSe	0
Seminar		2	SoSe oder WiSe	0

psy110 - Research methods

Module label	Research methods
Modulkürzel	psy110
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy110 is only relevant for students who started their studies before winter term 21/22. (All other students study modules psy111 and psy112.)
Skills to be acquired in this module	**Goals of module:** Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them. **Competencies:** ++ interdisciplinary kowledge & thinking ++ statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature ++ ethics / good scientific practice / professional behavior ++ critical & analytical thinking ++ scientific communication skills + group work
Module contents	**Part 1: Multivariate Statistics I (lecture): winter** • Graphical representation of multivariate data • The Generalized Linear Modeling (GLM) framework • Multiple and moderated linear regression with quantitative and qualitative predictors • Logistic regression • Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM) • Non-linear regression models • Path modeling • Factor analysis (exploratory & confirmatory) • (Multilevel) Structural equation modeling (SEM linear and non-linear) **Part 2: Analysis Methods with R (seminar): winter and summer** • Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM **Part 3: Multivariate Statistics II (lecture): summer** • Supervised and unsupervised statistical learning and prediction • Regularized regression • Resampling methods • Tree-based methods

- Support Vector Machines
- Neural Networks (basics)
- Principal components and clustering

Part 4: Evaluation research (seminar): summer

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
- Research synthesis and meta-analysis

psy121 - Psychological assessment and diagnostics

Module label	Psychological assessment and diagnostics
Modulkürzel	psy121
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Hildebrandt, Andrea (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt) • Hellmann, Andreas (Prüfungsberechtigt) • Roheger, Mandy (Prüfungsberechtigt) • Debener, Stefan (Module counselling)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will acquire specific knowledge about psychological assessment, test theory and test construction, and will be trained to utilize this knowledge within a research or test development context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of applied psychometrics and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of test and assessment report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:
+ Neuropsychological / neurophysiological knowledge
+ interdisciplinary kowledge & thinking
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking

Module contents

Part 1: Introduction to Psychological Assessment (lecture): winter and summer
• Psychological assessment as a decision process – descriptive and prescriptive models
• Introduction to test theories (will be detailed in Part 3)
• Assessment methods, their construction and design, quality criteria
• The logic of decision making in the assessment process
• Classificatory decisions
• Psychometrics to single cases
• Summarizing results and writing reports

Part 2: Test Theory and Test Construction (lecture): winter and summer

• Classical test theory
• Generalizability theory
• Latent-State and Trait theory
• Latent variable models for different types of item responses
• Measurement invariance across groups and time
• Network modeling in psychometrics
• Preference modeling for constructing faking-resistant questionnaires and tests

Part 3: applied seminars: winter and summer (choose a or b)
a: The Assessment Process Applied OR
• Case conceptualization (neuropsychology and clinical psychology)
• Formulating hypotheses
• Selecting assessment procedures and planning administration
• Deciding upon decision rules for data integration

• Evaluating the application of assessment procedures
• Analyzing, summarizing and visualizing results
• Integrating results based on the decision rules
• Writing a psychological/assessment report
• Discussing a report with the client

b: Test Construction Applied
• Construct conceptualization
• Deciding upon the response format
• Item mining
• Item analysis
• Test quality report and test manual

Part 4: Assessment in Clinical Neuropsychology (seminar): summer
• specific knowledge
• exercises in testing / practising tests

Literaturempfehlungen	Will be specified in the courses.

psy250 - Internship

Module label	Internship
Modulkürzel	psy250
Credit points	15.0 KP
Workload	450 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Kranczioch-Debener, Cornelia (module responsibility) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy250 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy251.)
Skills to be acquired in this module	**Goals of module:** Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work. **Competencies:** ++ expert neuropsychological/neurophysiological knowledge + interdisciplinary knowledge & thinking + experimental methods ++ ethics / good scientific practice / professional behavior ++ knowledge transfer + project & time management
Module contents	The student will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

psy140 - Minor

Module label	Minor
Modulkürzel	psy140
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	• Bleichner, Kerstin (Module counselling) • Rieger, Jochem (Module counselling)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy140 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy141.)
Skills to be acquired in this module	**Goals of module:** Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. **Competencies** ++ interdisciplinary kowledge & thinking
Module contents	Students can take Master modules and courses from the fields • Biology • Neurosciences • Computer Science • Physics • Mathematics • Pedagogy • Philosophy • related fields The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules. A list of approved courses/modules can be found on our website. Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module). Students whose first language is not German, may take German classes. We recommend taking modules/courses that strengthen your own professional profile.

Credit points	30.0 KP
Workload	900 h (attendance in the lab meetings: 28h (2 SWS); thesis work: 872 hours)
Verwendbarkeit des Moduls	• Master's Programme Neurocognitive Psychology (Master) > Abschlussmodul
Zuständige Personen	• Al-Zubaidi, Arkan (Prüfungsberechtigt) • Bleichner, Martin Georg (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Gießing, Carsten (Prüfungsberechtigt) • Rieger, Jochem (Prüfungsberechtigt) • Hellmann, Andreas (Prüfungsberechtigt) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Hildebrandt, Andrea (Prüfungsberechtigt) • Boetzel, Cindy (Prüfungsberechtigt) • Hildebrandt, Helmut (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Rosemann, Stephanie (Prüfungsberechtigt) • Özyurt, Jale Nur (Prüfungsberechtigt) • Stecher, Heiko (Prüfungsberechtigt) • Strüber, Daniel (Prüfungsberechtigt) • Thiel, Christiane Margarete (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Vogeti, Sreekari (Prüfungsberechtigt) • Jäger, Manuela (Prüfungsberechtigt) • Roheger, Mandy (Prüfungsberechtigt) • Daeglau, Mareike (Prüfungsberechtigt) • Kristanto, Daniel (Prüfungsberechtigt) • Jacobsen, Nadine (Prüfungsberechtigt) • Short, Cassie Ann (Prüfungsberechtigt) • Abdolalizadeh Saleh, Amirhussein (Prüfungsberechtigt)
Further responsible persons	thesis supervisors; Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for mam.
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Completion of at least 60 credit points in other modules including module psy240 (psy241) (Computation in Neuroscience). Assignment of a topic by thesis supervisor and official application with the examination office.
Skills to be acquired in this module	**Goals of module:** Students will demonstrate that they are able to perform a psychological or neuroscientific experiment and/or analyze data originating from such experiments by means of methods according to contemporary scientific standards. Metaanalyses are accepted if they were conducted by means of up to date tools for data extraction and analyses, according to best practices outlined in relevant community guidelines, such as for example Cochrane. In addition, the students will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form. **Competencies:** ++ experimental methods + statistics & scientific programming

+ data presentation & discussion
++ independent research
+ scientific literature
++ scientific English / writing
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
++ project & time management

Module contents

Part 1: Master's thesis
The students work on a given topic in cognitive neuroscience using literature research and the
appropriate experimental methods.

Part 2: Master's colloquium
The preparation of the thesis is accompanied by regular participation in the lab meetings of the
groups in which the thesis is performed. Students present their study design at the beginning of
their thesis preparation and their results towards the end. In addition, they listen to the
presentations of the other lab members and students in the group.
