

Basismodule

bio215 - Introduction to Biology

Module label	Introduction to Biology			
Modulkürzel	bio215			
Credit points	9.0 KP			
Workload	270 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Biology (Bachelor) > Basismodule • Bachelor's Programme Mathematics (Bachelor) > Nebenfachmodule • Dual-Subject Bachelor's Programme Biology (Bachelor) > Basismodule 			
Zuständige Personen	<ul style="list-style-type: none"> • Gerlach, Gabriele (Module responsibility) • Zotz, Gerhard (Module counselling) • Sienknecht, Ulrike (Module counselling) • Gerlach, Gabriele (Prüfungsberechtigt) • Zotz, Gerhard (Prüfungsberechtigt) • Köppl, Christine (Prüfungsberechtigt) • Sienknecht, Ulrike (Prüfungsberechtigt) • Käfer, Simon (Prüfungsberechtigt) 			
Prerequisites				
Skills to be acquired in this module	<p>++ biological knowledge ++ biologically relevant knowledge in the natural sciences and mathematics ++ interdisciplinary knowledge & thinking ++ abstract, logical, analytical thinking</p> <p>Qualifications that the module provides</p> <ul style="list-style-type: none"> • The theoretical basics of the different disciplines of biology are acquired • The overview gained enables the students to start their individual study planning, which fits their inclinations and abilities • for the professional field of school teachers: consideration of living nature on different system levels (organism, population, ecosystem, biosphere) and with regard to its evolutionary history. Content specifically relevant to this career field are plant morphology and physiology, animal morphology and physiology, neurobiology, behavioural biology, genetics, molecular biology, developmental biology, evolution and biodiversity (systematics), ecology, biogeography, sustainable use of nature, human biology and immunobiology. 			
Module contents	Lecture conveys knowledge in - evolution, ecology and biodiversity (WiSe) - animal physiology and developmental biology (SoSe)			
Literatureempfehlungen	Campbell et al. "Biologie", Pearson Sadava et al. "Purves, Biologie", Springer

Präsenzzeit Modul insgesamt				84 h

bio220 - Introductory Zoology-Botany

Module label	Introductory Zoology-Botany
Modulkürzel	bio220
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Bachelor's Programme Biology (Bachelor) > Basismodule• Dual-Subject Bachelor's Programme Biology (Bachelor) > Basismodule
Zuständige Personen	<ul style="list-style-type: none">• Ahlrichs, Wilko (Module responsibility)• Will, Maria (Module responsibility)• Bininda-Emonds, Olaf (Module counselling)• Zotz, Gerhard (Module counselling)• Ahlrichs, Wilko (Prüfungsberechtigt)• Will, Maria (Prüfungsberechtigt)• Zotz, Gerhard (Prüfungsberechtigt)• Bininda-Emonds, Olaf (Prüfungsberechtigt)• Plewka, Isabelle (Prüfungsberechtigt)• Käfer, Simon (Prüfungsberechtigt)
Prerequisites	keine
Skills to be acquired in this module	<p>++ biological knowledge + knowledge of biological working methods ++ biologically relevant knowledge in the natural sciences and mathematics + abstract, logical, analytical thinking + independent learning and (research-based) working + teamwork</p> <p>THEORY:</p> <ul style="list-style-type: none">* To understand the fundamentals of reconstructing phylogenetic relationships* To know the phylogenetic system and ground pattern of high-ranking ancestral animal species* To know the cell structures, organization, and reproduction of plants and animals* To know the morphology and anatomy of individual species <p>PRACTICE:</p> <ul style="list-style-type: none">* To improve and verify the theoretical knowledge acquired from lectures and textbooks by studying the original* To train visual and tactile perception by studying various species* To learn that representations in textbooks are abstractions of a much more complex reality* To be able to criticize representations in textbooks and models* To acquire the knowledge of the function in living animals and plants by studying preserved specimens* Learning how to follow preparation instructions* Learning that the organization of individual species may be highly variable* Preparing records or drawings from the information obtained by original specimens studied
Module contents	<p>GENERAL: Light microscopic methods are applied to study structures in plants and animals. Records in the form of descriptions and drawings.</p> <p>BOTANY: Morphological structure and reproduction of various plant organization types with a focus on the structure of plant tissue. Representation of the relationships between structure and function with regard to absorption processes, transport processes, transpiration, and photosynthesis.</p> <p>ZOOLOGY: Morphological structure of animal tissues. Biology of selected partial taxa and metazoans. Principles of phylogenetic systematics and the phylogenetic position in the animal system of the taxa dealt with.</p>
Literaturempfehlungen	<p>GENERAL:: Campbell: Biologie (Spektrum Verlag) or Purves: Biologie (Spektrum Verlag), latest edition</p> <p>ZOOLOGY: V. Storch: Kükenthal Zoologisches Praktikum, one of the latest</p>

editions; Optional: Ax, P. (1999-2001): Das System der Metazoa (I,II, III), Fischer Verlag.
 Westheide/Rieger (1996): Spezielle Zoologie " First part: Einzeller und Wirbellose Tiere, Gustav Fischer Verlag, Stuttgart; Westheide, Wilfried; Rieger, Reinhard Spezielle Zoologie. Second part: Wirbel- oder Schädeltiere 2003, 714 S., 650 s/w Abb. Gebunden ISBN 3-8274-0900-4.

BOTANY: Script; Kück, Wolff Botanisches Grundpraktikum, 2nd edition, Springer, 2008, UTB; Grundlagen der Botanik, UTB; Lüttge, Kluge, Bauer, Botanik, WILEY-VCH, 2010

Prerequisites	
Skills to be acquired in this module	<p>+ biological knowledge + knowledge of biological working methods + independent learning and (research-based) working + knowledge of safety and environmental issues</p> <p>The module conveys the basic knowledge in animal and plant identification and their diversity. This is essential for all parts of biology concerned with plants and animals. Especially, education for the field of conservation and schools rely on these expertises. Therefore, topics and methods relevant for these professions are emphasized. Students shall get a basic knowledge of species and learn methods to identify them. This is connected with a systemic knowledge of habitats in Northwestern Germany. Basic evaluation competence in the field of biodiversity, species diversity and conservation is conveyed to sensitize students for a respectful treatment of organisms.</p>
Module contents	<p>L: Introduction to the diversity of native flora and fauna, presentation of important plant and animal groups, introduction to systematics and major traits, ecological perspectives of species diversity EXE: Working with identification keys for plants and animals and their classification EXC: Excursion to characteristic habitats of Northwestern Germany, practicing work with field guides and identification of important traits</p>
Literatureempfehlungen	<p>Botany: Rothmaler - Exkursionsflora von Deutschland, Band 2 - Grundband, Spektrum Akademischer Verlag Zoology: M. Schaefer: Brohmer - Fauna von Deutschland, ab 20. Auflage B. Klausnitzer: Stresemann - Exkursionsfauna von Deutschland. Band 1: Wirbellose (ohne In-sekten)</p>

Prerequisites				
Skills to be acquired in this module	<p>++ biological knowledge ++ knowledge of biological working methods ++ biologically relevant knowledge in the natural sciences and mathematics + statistics & scientific programming ++ interdisciplinary knowledge & thinking ++ abstract, logical, analytical thinking ++ deepened expertise in biological specialist field</p> <p>The field of molecular ecology examines relationships among genotypes, phenotypes and the environment to explain evolution and diversity of organisms. The lecture will introduce basics in genomics, molecular evolution and population genetics to explore properties of the genome and the organism from an evolutionary perspective. Central aspects are the adaptation of species to their environment and ecological change, speciation, the genetic basis of phenotypic change. Methods and data used in genomics and molecular ecology will be introduced during the lecture and exercises.</p>			
Module contents	<p>Lecture: the lecture conveys knowledge about the fields of genomics, evolution and organismic biology. Moreover laboratory methods as well as basics and background information on the analysis of genetic and genomic datasets are given.</p> <p>Excercise: Modern data sets and up to date methods in genomics and population genetics are introduced. The practical emphasizes computer based data analyses.</p>

bio355 - Microscopical Anatomy

Module label	Microscopical Anatomy
Modulkürzel	bio355
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Bachelor's Programme Mathematics (Bachelor) > Nebenfachmodule • Dual-Subject Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Master of Education Programme (Gymnasium) Biology (Master of Education) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none"> • Ahlrichs, Wilko (Module responsibility) • Kieneke, Alexander (Module counselling) • Hoppenrath, Mona (Module counselling) • Ahlrichs, Wilko (Prüfungsberechtigt) • Hoppenrath, Mona (Prüfungsberechtigt) • Kieneke, Alexander (Prüfungsberechtigt)
Prerequisites	
Skills to be acquired in this module	<p> ++ biological knowledge ++ knowledge of biological working methods ++ biologically relevant knowledge in the natural sciences and mathematics + interdisciplinary knowledge & thinking ++ abstract, logical, analytical thinking ++ deepened expertise in biological specialist field ++ independent learning and (research-based) working ++ data presentation and evidence-based discussion (written and spoken) + teamwork ++ (scientific) communication skills + project and time management + knowledge of safety and environmental issues </p> <p> This course is designed for students to learn about the basic light and electron optical methods. Students will be able to work with preparative techniques for scanning electron microscopy, trans-mission electron microscopy, and light microscopy, and confocal scanning laser microscopy. Students completing this course will have learned basic principles for fixing and embedding biological materials for electron microscopy. Students will have learned how to operate a transmission electron microscope, a scanning electron microscope, several ultramicrotomes, a vacuum evaporator, a critical point dryer, and a sputter coater. Digital imaging techniques that will be learned will include print making, design and assembly of materials for publication, PowerPoint presentations, and poster design. Students will be introduced to the principles of light microscopy utilizing different optical systems and will have the opportunity to have hands-on experience with a Leica photomicroscope as well as the Leica SP5 confocal laser scanning. </p>
Module contents	<p>Microscopy of protists and micro metazoans. Students are required plan and carry out a research project that exposes them to some of the challenges and problems encountered by microscopical anatomy - and some of the techniques that are used to solve these problems. Students have to present a scientific poster, a short oral presentation and a scientific paper.</p>
Literatureempfehlungen	Will be announced in the course.

Prerequisites	
Skills to be acquired in this module	<p>++ biological knowledge ++ knowledge of biological working methods + interdisciplinary knowledge & thinking + abstract, logical, analytical thinking ++ deepened expertise in biological specialist field ++ independent learning and (research-based) working ++ data presentation and evidence-based discussion (written and spoken) + teamwork + (scientific) communication skills + project and time management</p> <p>By active participation the students acquire the following knowledge/abilities/qualification:</p> <ul style="list-style-type: none">* Preparation and organization of sampling* Keeping organisms – field study* Marine deposits, development of marine sediments and their effects on the fauna* Methods of meiofauna and macrofauna sampling, also plankton sampling* Methods of quantitative community analysis* Diversity comparison of various sites applying statistical methods* Multivariate statistics for correlation of biocenoses and environmental variables* Biocenoses of marine habitats* Biology, morphology, systematics, behaviour and ecology of selected taxa in marine water systems* Formulation and definition of scientific questions and selection of methods* Habitat and biocenoses, interstitial, littoral (lotic, lenitic), diversity* Planning behavioural experiments* Presentation and discussion of scientific results* Independent scientific work in groups and presentation of results
Module contents	<p>The module gives an introduction to marine biodiversity research demonstrated by various animal groups from the Wadden Sea and the North Sea including independent sampling on the coast and on the islands. The students will collect the organisms in the field or on board using sampling equipment. In the laboratory course, the biology and morphology as well as the ecology and behaviour of certain species are investigated and documented. The morphology of marine sediments and their development are further aspects of this module.</p>

Prerequisites	bio256 Flora and Fauna			
Skills to be acquired in this module	<p>+ biological knowledge + knowledge of biological working methods + deepened expertise in biological specialist field + independent learning and (research-based) working + data presentation and evidence-based discussion (written and spoken) + (scientific) communication skills + knowledge of safety and environmental issues</p> <p>The module is intended to give students in-depth knowledge on plant determination and the diversity of plants. Students shall increase their knowledge on species and learn and improve their abilities in plant determination and plant conservation. Subjects and methods relevant for nature conservation are emphasized. Along with these, students shall improve their systemic thinking with relation to nature in northwestern Germany and its flora. Students learn about plants and how to group them according to their phylogeny and evolutionary adaptations, so they can pass this knowledge on to others. Competence in assessment is conveyed in the areas of diversity and nature conservation to sensitize students for a respectful treatment of nature and passing on this ability to others. Finally, we will discuss sustainable use of plants and habitats and their restoration.</p>			
Module contents	<p>The module comprises a lecture in the Botanical Garden, where plants will be observed and investigated. This includes algae, bryophytes, ferns, gymnosperms and various families of angiosperms. The seminar is intended to let students study in-depth additional plant families with their typical characters.</p>

Prerequisites	bio375 Flora - Advanced Concepts bio256 Flora and Fauna	
Skills to be acquired in this module	<p>+ biological knowledge + knowledge of biological working methods + deepened expertise in biological specialist field + independent learning and (research-based) working + data presentation and evidence-based discussion (written and spoken) + (scientific) communication skills + knowledge of safety and environmental issues</p> <p>The module is intended to give students in-depth knowledge on plant determination and the diversity of plants. Students shall increase their knowledge on species and learn and improve their abilities in plant determination and plant conservation. Subjects and methods relevant for nature conservation are emphasized. Along with these, students shall improve their systemic thinking with relation to nature in northwestern Germany and its flora. Students learn about plants and how to group them according to their phylogeny and evolutionary adaptations, so they can pass this knowledge on to others. Competence in assessment is conveyed in the areas of diversity and nature conservation to sensitize students for a respectful treatment of nature and passing on this ability to others. Finally, we will discuss sustainable use of plants and habitats and their restoration.</p>	
Module contents	The exercises will be used to apply the abilities to identify plant species in the vicinity of Oldenburg and to practice methods in mapping and surveying plant species. Investigations applicable to school lessons will be presented and especially thoroughly discussed.

bio440 - Microfauna, Mircoflora & Protista of limnic and marine habitats

Module label	Microfauna, Mircoflora & Protista of limnic and marine habitats
Modulkürzel	bio440
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule• Dual-Subject Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule• Master of Education Programme (Gymnasium) Biology (Master of Education) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Ahlrichs, Wilko (Module responsibility)• Kieneke, Alexander (Module counselling)• Hoppenrath, Mona (Module counselling)• Ahlrichs, Wilko (Prüfungsberechtigt)• Kieneke, Alexander (Prüfungsberechtigt)• Hoppenrath, Mona (Prüfungsberechtigt)
Prerequisites	
Skills to be acquired in this module	<p>++ biological knowledge ++ knowledge of biological working methods ++ biologically relevant knowledge in the natural sciences and mathematics + statistics & scientific programming ++ interdisciplinary knowledge & thinking + abstract, logical, analytical thinking ++ deepened expertise in biological specialist field ++ independent learning and (research-based) working ++ data presentation and evidence-based discussion (written and spoken) + teamwork ++ (scientific) communication skills + project and time management</p> <p>The objectives of the module are the teaching and learning of methods in the field of taxonomy, systematics, morphology, ecology, and evolution. Competencies for finding, identifying, preparing, micro-copying, illustrating, describing, and publishing species are taught. It learns how a scientific collection is created and managed. Another goal is the teaching of basics of molecular systematics and barcoding.</p> <p>The focus is on taxa of the microfauna and protists of limnic and marine habitats.</p> <p>The goal is the knowledge of biotic and abiotic properties of aquatic habitats, their formation and biodiversity. The students should learn to hypothesize structural adaptations of organisms to aquatic habitats.</p>
Module contents	<p>We study microfauna and protists of limnic and marine habitats. Microfauna refers to microscopic animals. They live together with protists aquatic habitats in high diversity.</p> <p>Animals of the microfauna and protists usually belong to groups that developed early in evolution. The study of communities of these groups give a unique insight into the evolution of animals and protists.</p> <p>The microfauna and the protists are little studied compared to other groups of animals and offer great potential. But they must be examined under the optical microscope. This requires special techniques and knowledge. Fortunately, through digital techniques, the investigation and publications have been greatly simplified.</p> <p>We will make excursions to ponds, ponds, lakes, rivers, bogs, sea beaches, etc. It teaches where, when, and how to find species of microfauna and protists. The collected organisms are determined, prepared, microscoped, photographed, drawn, and digitally illustrated.</p> <p>Art descriptions are produced. Attention is paid to the correct application of nomenclature rules. We show how a scientific collection is built and managed. For this purpose, basic knowledge in SQL database technology is taught. Dichotomous, synoptic, and digital identification keys are presented and developed.</p> <p>In addition to the classical morphological methods, it will be shown how species for molecular barcoding and phylogenetic analyzes are investigated. The students will create art portraits. The results are communicated in the form of posters, short lectures, and scientific publications.</p>
Literatureempfehlungen	Will be announced in the course.

bio450 - Posters, Pictures, Presentations and Papers

Module label	Posters, Pictures, Presentations and Papers	
Modulkürzel	bio450	
Credit points	9.0 KP	
Workload	270 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Dual-Subject Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Master of Education Programme (Gymnasium) Biology (Master of Education) > Mastermodule 	
Zuständige Personen	<ul style="list-style-type: none"> • Bininda-Emonds, Olaf (Module responsibility) • Ahlrichs, Wilko (Module counselling) • Bininda-Emonds, Olaf (Prüfungsberechtigt) • Ahlrichs, Wilko (Prüfungsberechtigt) 	
Prerequisites		
Skills to be acquired in this module	<p>+ interdisciplinary knowledge & thinking + abstract, logical, analytical thinking + deepened expertise in biological specialist field ++ independent learning and (research-based) working ++ data presentation and evidence-based discussion (written and spoken) ++ (scientific) communication skills + project and time management</p> <p>Practical experience with four forms of scientific presentation: papers, presentations, scientific drawings, and posters. The students will learn / gain: 1) the logical and structural form of a scientific paper (or protocol or thesis) so as to communicate their results more effectively; 2) the distillation of the key information out of a project and its focused presentation in a lecture or poster; 3) experience with constructive criticism in a group setting as well as the critical assessment of scientific studies; 4) experience with scientific English; and 5) the art of scientific drawing, including the making of high-quality photo montages for papers or posters through microphotography and digital editing.</p>	
Module contents	<p>Theoretical part: General tips regarding the logical and structural form of a scientific paper, presentation, or posters, including how to avoid making the most common mis-takes.</p> <p>Practical part: Critical analysis of selected papers from the (evolutionary biological) literature. Writing of a scientific paper using pre-given results. Construction and presentation of a lecture and poster in front of the group based on a recent paper from the literature. Through the feedback obtained in this process, improvements will be made in both cases. Microscopic photography of selected zoological specimens that will then be transferred to / drawn on transparent paper before being rescanned for digital editing. High-quality photo montages of both the photos themselves and the drawings derived from them will be obtained through diverse software (e.g., Adobe Illustrator or InDesign).</p>	
Literatureempfehlungen	None. The relevant scientific literature will be distributed during the course.

bio460 - Diversity of marine Invertebrates

Module label	Diversity of marine Invertebrates
Modulkürzel	bio460
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Dual-Subject Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Master of Education Programme (Gymnasium) Biology (Master of Education) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none"> • 1 N., N. (Module responsibility)
Prerequisites	
Skills to be acquired in this module	<p>++ biological knowledge + knowledge of biological working methods + interdisciplinary knowledge & thinking ++ deepened expertise in biological specialist field ++ independent learning and (research-based) working ++ data presentation and evidence-based discussion (written and spoken) + teamwork ++ (scientific) communication skills ++ project and time management + knowledge of safety and environmental issues</p> <p>By actively participating in this module the students acquire qualifications in the fields stated below: -Survey of recent subjects concerning the biology and morphology of aquatic organisms -Extended knowledge of how morphological characteristics have developed -Technical skills in preparing and documenting morphological structures -Knowledge of organizational principles of these structures</p>
Module contents	<p>The module serves an extended examination of selected aquatic animals from a functional morphological point of view. Living and fixed animals are investigated and histological preparations are analysed. Thus, the morphology, anatomy, and histology are studied in detail.</p> <p>The biology and ecology of these animals are also considered, which enables the organisms to be studied very intensively and provides an illustrative basis for theoretical discussions.</p>
Literaturempfehlungen	<p>AX, P., 1995: Das System der Metazoa. I, II, III. Ein Lehrbuch der phylogenetischen Systematik. Gustav Fischer Verlag, Stuttgart, Jena. Textbook with somehow different ideas! Very well illustrated! Illustrations are suitable for presentations!</p> <p>GRUNER, H.-E., 1993: „Der Kaestner“, A., Lehrbuch der speziellen Zoologie. All volumes, Gustav Fischer/Spektrum Akademischer Verlag, Jena, Stuttgart. Many interesting details are found only in these volumes!</p> <p>GRÜTER, W., 2001: Leben im Meer – Vielfalt und Zusammenhänge. Dr. Friedrich Pfeil Verlag, München. This book arouses your curiosity about the underwater world.</p> <p>HAYWARD, P. NELSON-SMITH, T., SHIELDS, C. & M. KREMER, 2008: Der neue Kosmos Strandführer - 1500 Arten der Küsten Europas. Franckh-Kosmos Verlag. This coastal guide provides excellent and clearly arranged colour tables for individual groups.</p> <p>HOFRICHTER, R., 2002: Das Mittelmeer, Fauna-Flora-Ökologie. Band I, II, Spektrum Akademischer Verlag, Heidenberg, Berlin. Numerous details on individual groups in the second part.</p> <p>WESTHEIDE, W. & R., RIEGER, 2013: Spezielle Zoologie. Band I, II. Gustav Fischer Verlag, Stuttgart, Jena. The textbook absolute! My explicit recommendation! The literature listed above is available in the university library in Wechloy. Further reading will be recommended in the course of the lecture.</p>

bio473 - Evolutionsgeschichte des Lebens: Leben im Wandel der Erdzeitalter

Module label	Evolutionsgeschichte des Lebens: Leben im Wandel der Erdzeitalter	
Modulkürzel	bio473	
Credit points	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Dual-Subject Bachelor's Programme Biology (Bachelor) > Akzentsetzungsmodule • Master of Education Programme (Gymnasium) Biology (Master of Education) > Mastermodule 	
Zuständige Personen		
Prerequisites	none If there are more applicants than places available, a letter of motivation decides on the acceptance.	
Skills to be acquired in this module	++biological knowledge+knowledge of biological working methods ++biologically relevant knowledge in the natural sciences and mathematics ++interdisciplinary knowledge & thinking ++abstract, logical, analytical thinking ++deepened expertise in biological specialist field +independent learning and (research-based) working +data presentation and evidence-based discussion (written and spoken) +(scientific) communication skills Objective of the module/skills: Understanding of continental migration (plate tectonics), the formation of mountains and oceans. Understanding the formation of marine (coastal and deep sea), limnic and terrestrial habitats (e.g. swamp, forest, desert). Understanding the importance of climate change through continental migration, ice ages and climate catastrophes for the evolution of organisms. Knowledge of the phylogenetic system of important groups of organisms, their formation and evolution. Knowledge of the five major extinction events in Earth's history and their significance.	
Module contents	Content of the module: Earth age, continental migration, formation of marine, limnic and terrestrial habitats, species extinction, mass extinction and their causes (climate change, ice ages) and consequences (extinction and/or renewed radiation); anatomy and morphology ("baupläne") of ancestral species; evolution important characteristic complexes (nutrition, respiration, excretion and osmoregulation, reproduction, movement); important evolutionary steps of selected animals (e.g. molluscs with cephalopods, arthropods with insects, dinosaurs with birds, mammals with humans), taxa of plants and protists in the conquest of marine, limnic and terrestrial habitats.	
Literatureempfehlungen	Will be announced in Studt IP.

Prerequisites				
Skills to be acquired in this module	<p>Die Studierenden haben grundlegende Kenntnisse über den Aufbau von Atomen und Molekülen. Sie kennen das Periodensystem der chemischen Elemente, die Eigenschaften wichtiger Elemente und deren wichtigste Verbindungen und Reaktionen. Die Gleichgewichte in wässriger Lösung sind Ihnen vertraut. Sie können Gleichgewichtseinstellungen zur Lösung kleiner analytischer Aufgabenstellungen einsetzen und diese Gleichgewichte formelhaft beschreiben. Sie kennen Säuren und Basen sowie Reduktions- und Oxidationsreaktionen. Ausgewählte Methoden zur Quantifizierung von chemischen Verbindungen mittels Spektroskopie sind den Studierenden bekannt. Die Studierenden kennen die wichtigsten organischen Moleküle und Naturstoffklassen.</p>			
Module contents	<p>V: Allgemeine und Anorganische Chemie (3 SWS)</p> <p>Aufbau des Periodensystems; Grundlagen der chemischen Bindung; Nomenklatur chemischer Verbindungen; stöchiometrische Gesetze; chemische Gleichgewichte; fundamentale Stoffchemie; Struktur wichtiger Verbindungen; Säuren und Basen; Reduktionen und Oxidationen; Einführung in Methoden der Spektroskopie und der Chromatographie.</p> <p>Ü: Übung zur Vorlesung Allgemeine und Anorganische Chemie (1 SWS)</p>			
Literaturempfehlungen	<p>Zeeck: Chemie für Mediziner, Urban & Schwarzenberg; Latscha/Katzmaier: Chemie für Biologen, Springer; Riedel: Anorganische Chemie, de Gruyter; Holleman-Wiberg: Lehrbuch der Anorganischen Chemie, de Gruyter; Skript zur Vorlesung</p>

Prerequisites	Keine	
Skills to be acquired in this module	Die Studierenden sollen folgende Fähigkeiten erlangen: Theorie: - Verständnis von Naturvorgängen und ihre mathematische Beschreibung - Erhebung und quantitative Analyse von Messdaten - Verständnis der physikalischen Grundlagen von Messapparaturen mit Schwerpunkt auf die in der Biologie häufig verwendeten Messinstrumente. Praxis - Vertiefung und Überprüfung ihrer theoretischen Kenntnisse aus Vorlesungen und Lehrbuch am eigenen Experiment - Teamfähigkeit durch gemeinsames Durchführen der Experimente handwerkliche Fähigkeiten beim Umgang mit Messapparaturen sachkenntliches Arbeiten mit Messanleitungen - Protokollierung einer Messung	
Module contents	Vorlesung und Praktikum geben eine Einführung in die Physik, wobei schwerpunktmäßig die grundlegenden Sachverhalte aus Mechanik, Optik, Elektrodynamik, Wärmelehre sowie Atom- und Kernphysik behandelt werden. Zusätzlich werden allgemeine Themen wie Messfehler und Fehlerrechnung behandelt.	
Literaturempfehlungen	Giancoli, C.D., „Physik“, Verlag Pearson Studium Tipler, P.A., „Physik“, Spektrum Akademischer, Heidelberg Und ausgewählte Kapitel aus: Halliday, D., Resnick, R., Walker, J.: „Fundamentals of physics“, Wiley VCH Weltner, K., „Mathematik für Physiker 1+2“, Springer Verlag Außerdem speziell für das Praktikum: Anleitungsskript zum Praktikum Geschke, D., „Physikalisches Praktikum“, Teubner Walcher, W., „Praktikum der Physik“, Teubner Westphal W.H. , „Physikalisches Praktikum“, Vieweg

Prerequisites				
Skills to be acquired in this module	<p>Aufbauend auf einem mittleren Abiturwissen werden Teile des Schulstoffs wiederholt (Ableitung und Integral), ergänzt (allgemeiner Abbildungsbegriff, Folgen und Reihen) und weiterentwickelt (Taylorreihe, Differentialgleichungen). Die Mathematik wird dabei im wesentlichen ohne Beweise als Handwerkszeug präsentiert. Die Ideen hinter den Begriffen und die Bedeutung der Ergebnisse werden jedoch ausführlich erklärt. Die Studierenden sollen - ihr Schulwissen wiederholen und festigen, - die Anwendung von Mathematik in der Biologie mit zahlreichen praktischen Übungsaufgaben lernen, - ihr allgemeines Wissen mathematischer Methoden und Modelle verbreitern und üben, - die grundlegenden Formen von diskreten und kontinuierlichen, ungebremsten und gebremsten Wachstumsprozessen kennenlernen, - erfahren, wie analytisches und abstraktes Denken bei dem Studium realer Probleme helfen kann.</p>			
Module contents	<p>Folgen und Konvergenz: Abbildungen und Funktionen, rekursiv definierte Folgen und diskrete Wachstumsmodelle, Konvergenz, Reihen. Reelle Funktionen: Grenzwert und Stetigkeit, Exponential- und trigonometrische Funktionen, Koordinatentransformationen. Differential- und Integralrechnung: Ableitung und Integral, Mittelwertsatz, Taylorentwicklung, Newton-Verfahren, Hauptsatz, uneigentliche Integrale. Differentialgleichungen: Einfache Differentialgleichungen 1. Ordnung (linear homogen, logistisch), Richtungsfeld, stationäre Zustände und Stabilität, Anwendungen. Differentialgleichungen höherer Ordnung und Systeme (Schwingungsgleichung, Lotka-Volterra-Modell).</p>

Prerequisites	Erfolgreiche Teilnahme am Modul "che190 - Grundvorlesung Organische Chemie"			
Skills to be acquired in this module	Den Studierenden soll der Ausbau ihrer grundlegenden Kenntnisse über die Reaktivität organisch-chemischer Substanzen in Theorie und Praxis ermöglicht werden. Hierfür werden die Studierenden in die Lage versetzt, unter sicherheits- und umweltrelevanten Gesichtspunkten fach- und ordnungsgemäß mit einfachen Chemikalien umzugehen und selbständig organisch-chemische Experimente durchzuführen. Sie erlangen darüber hinaus grundlegende Fähigkeiten zur Präsentation wissenschaftlicher Sachverhalte in schriftlicher und mündlicher Form.			
Module contents	Mit diesem Modul bauen die Studierenden ihr Basiswissen der Organischen Chemie weiter aus und wenden es im Rahmen dieses Praktikums im Labor an. Sie erlernen dabei grundlegende Arbeitstechniken aus dem Bereich der präparativen Organischen Chemie, indem sie ausgewählte organische Reaktionen und Analysemethoden (z.B. Substitution, Eliminierung, Polymerisation, Veresterung, Verseifung, Oxidation, Reduktion, Aldolkondensation, Extraktion, Dünnschichtchromatographie) eigenhändig durchführen.

Zuständige Personen	<ul style="list-style-type: none"> der Biologie, Lehrende (Prüfungsberechtigt) 	
Prerequisites		
Skills to be acquired in this module	<p>Successful completion of the Bachelor module demonstrates that students are able to work on a problem in the field of Biology within a fixed period applying scientific methods.</p> <p>++ biological knowledge ++ knowledge of biological working methods + statistics & scientific programming + abstract, logical, analytical thinking ++ deepened expertise in biological specialist field ++ independent learning and (research-based) working ++ data presentation and evidence-based discussion (written and spoken) + (scientific) communication skills ++ project and time management</p>	
Module contents	<p>Preparing the Bachelor thesis Active participation in the seminar of the research group, in which the Bachelor's thesis is written</p>	
Literatureempfehlungen	<p>Supervisors may supply an initial reading list with important literature. The students are expected to find and use further literature as needed.</p>
