## bio655 - Ornithology in theoretical Concepts

Module label	Ornithology in theoretical Concepts
Modulkürzel	bio655
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Background Modules</li><li>• Master's Programme Biology (Master) &gt; Background Modules</li></ul>
Zuständige Personen	<ul style="list-style-type: none"><li>• Liedvogel, Miriam (module responsibility)</li><li>• Bouwhuis, Sandra (Module counselling)</li><li>• Köppl, Christine (Module counselling)</li><li>• Langemann, Ulrike (Module counselling)</li><li>• Mouritsen, Henrik (Module counselling)</li><li>• Schmaljohann, Heiko (Module counselling)</li><li>• Liedvogel, Miriam (Prüfungsberechtigt)</li><li>• Bouwhuis, Sandra (Prüfungsberechtigt)</li><li>• Köppl, Christine (Prüfungsberechtigt)</li><li>• Langemann, Ulrike (Prüfungsberechtigt)</li><li>• Mouritsen, Henrik (Prüfungsberechtigt)</li><li>• Schmaljohann, Heiko (Prüfungsberechtigt)</li></ul>

### Prerequisites

### Skills to be acquired in this module

The aim of the module is to consolidate various aspects of ornithology. The module imparts advanced knowledge on different aspects of ornithology.

The students acquire:

An extended knowledge of behavioural, sensory, morphological and physiological characteristics in birds and relevant fundamental concept in conservation, ecology and evolution smorphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds

Knowledge, presentation and discussion of relevant English literature from various fields of ornithology

++ broad and deepened biological expertise

+ deepened in depths knowledge of biological working methods

+ interdisciplinary thinking

+ critical and analytical thinking

+ independent searching and knowledge of scientific literature

++ data presentation and discussion in German and English (written and spoken)

---

### Module contents

The module is composed of the lecture "Ecology, evolution and sensory biology in birds", a seminar accompanying the lecture "Current Questions in Ornithology", a seminar "Behavioural Ecology of Birds", and a seminar "Methods in Field Ornithology".

Lecture "Ecology, evolution and sensory biology in birds":

This lecture covers in-depth and specific aspects of phylogeny, speciation and hybridisation, bird migration, orientation, behavioural ecology, population biology, life history and sensory systems of birds. Seminar "Current Questions of Ornithology":

In this seminar, original English publications are presented and discussed which deal with current research results from various fields covered in the lectures. Every student reads a paper on one scientific article, presents the study and discusses the results of that article with the other participants.

Seminar "Behavioural Ecology of Birds" (option 1):

In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

Seminar "Methods in Field Ornithology" (option 2):

The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

Prerequisites	none			
Skills to be acquired in this module	+ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills; ++ critical and analytical thinking + independent searching and knowledge of scientific literature ++ data presentation and discussion in English (written and spoken) ++ statistics & scientific programming			
Module contents	Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses. Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.

## bio675 - Molecular Ecology

<b>Module label</b>	Molecular Ecology			
<b>Modulkürzel</b>	bio675			
<b>Credit points</b>	12.0 KP			
<b>Workload</b>	360 h			
<b>Verwendbarkeit des Moduls</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Landscape Ecology (Master) &gt; Wahlpflichtmodule</li> </ul>			
<b>Zuständige Personen</b>	<ul style="list-style-type: none"> <li>• Nolte, Arne (module responsibility)</li> <li>• Gerlach, Gabriele (Module counselling)</li> <li>• Nolte, Arne (Prüfungsberechtigt)</li> <li>• Gerlach, Gabriele (Prüfungsberechtigt)</li> <li>• Dennenmoser, Stefan (Prüfungsberechtigt)</li> </ul>			
<b>Prerequisites</b>				
<b>Skills to be acquired in this module</b>	<p>The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.</p> <p>++ deepened biological expertise  ++ deepened knowledge of biological working methods  ++ data analysis skills  + interdisciplinary thinking  + critical and analytical thinking  + independent searching and knowledge of scientific literature  ++ ability to perform independent biological research  ++ data presentation and discussion (E) (written and spoken)  + statistics &amp; scientific programming</p>			
<b>Module contents</b>	<p>Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical. Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.</p>			
<b>Literatureempfehlungen</b>	will be announced during the course

<b>Prerequisites</b>	BSc (Biologie, Biochemie)		
<b>Skills to be acquired in this module</b>	<p>           ++ deepened biological expertise            ++ deepened knowledge of biological working methods            + data analysis skills            ++ interdisciplinary thinking            + critical and analytical thinking            + independent searching and knowledge of scientific literature            + data presentation and discussion (E) (written and spoken)            + teamwork            + ethics and professional behaviour            + project and time management         </p> <p>Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology</p>		
<b>Module contents</b>	<p>Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases. Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.</p>

## bio845 - Introduction to Development and Evolution

Module label	Introduction to Development and Evolution
Modulkürzel	bio845
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Background Modules</li><li>• Master's Programme Biology (Master) &gt; Background Modules</li><li>• Master's Programme Molecular Biomedicine (Master) &gt; Background Modules</li><li>• Master's Programme Neuroscience (Master) &gt; Background Modules</li></ul>
Zuständige Personen	<ul style="list-style-type: none"><li>• Sienknecht, Ulrike (module responsibility)</li><li>• Sienknecht, Ulrike (Module counselling)</li><li>• Sienknecht, Ulrike (Prüfungsberechtigt)</li><li>• Claußen, Maike (Prüfungsberechtigt)</li></ul>
Prerequisites	

Skills to be acquired in this module	<p>Upon successful completion of this course, students</p> <ul style="list-style-type: none"><li>• know the fundamental problems organisms share in development</li><li>• know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)</li><li>• know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis</li><li>• know the principles of gene regulatory networks in development and are able to explain examples</li><li>• are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms</li><li>• have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties</li></ul> <p>skills:</p> <ul style="list-style-type: none"><li>++ deepened biological expertise</li><li>+ deepened knowledge of biological working methods</li><li>++ interdisciplinary thinking</li><li>++ critical and analytical thinking</li><li>+ independent searching and knowledge of scientific literature</li><li>+ ability to perform independent biological research</li><li>+ teamwork</li></ul>
--------------------------------------	---

Module contents	<p>Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:</p> <ul style="list-style-type: none"><li>• Introduction to Developmental Biology</li><li>• Cell-Cell Communication</li><li>• Differential Gene Expression (I and II)</li><li>• Early Development of Vertebrates, Gastrulation</li><li>• Neurulation</li><li>• Brain Development</li><li>• Axonal Growth, Target Selection, Synaptogenesis and Refinement</li><li>• Neural Crest</li><li>• Mesoderm Development</li><li>• Morphogenesis</li><li>• Developmental Mechanisms of Evolutionary Change</li><li>• Model Organisms in Developmental Biology</li><li>• Transgenic Mice</li><li>• Medical Implications of Developmental Biology</li></ul>
-----------------	---

## bio846 - Lab Exercises in Development and Evolution

Module label	Lab Exercises in Development and Evolution
Modulkürzel	bio846
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Background Modules</li><li>• Master's Programme Biology (Master) &gt; Background Modules</li><li>• Master's Programme Neuroscience (Master) &gt; Background Modules</li></ul>
Zuständige Personen	<ul style="list-style-type: none"><li>• Sienknecht, Ulrike (module responsibility)</li><li>• Sienknecht, Ulrike (Module counselling)</li><li>• Sienknecht, Ulrike (Prüfungsberechtigt)</li><li>• Claußen, Maike (Prüfungsberechtigt)</li><li>• Ebbers, Lena (Prüfungsberechtigt)</li></ul>
Prerequisites	<b>mandatory</b> prerequisite is the module bio845 (neu110) (Introduction to Development and Evolution)
Skills to be acquired in this module	<p>Upon successful completion of this course, students have skills in methods of developmental biology:</p> <ul style="list-style-type: none"><li>• are capable of performing live embryo husbandry</li><li>• are able to carry out in-ovo stainings</li><li>• are familiar with the use of embryonic stage discrimination standards for model organisms</li><li>• document the observed embryonic stages by drawings with anatomical labelling</li><li>• are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods</li><li>• microscopy, data analysis, and photographic data documentation</li><li>• know the standards of proper documentation of research data and the universal format of a lab notebook</li><li>• know how to carry out formal laboratory reports (and the structure of a scientific paper)</li><li>• have basic knowledge in the field of auditory system development</li><li>• have basic knowledge of the organisation of the auditory system across vertebrate groups</li><li>• have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres</li></ul> <p>are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills:</p> <ul style="list-style-type: none"><li>++ deepened biological expertise</li><li>++ deepened knowledge of biological working methods</li><li>++ data analysis skills</li><li>++ critical and analytical thinking</li><li>+ independent searching and knowledge of scientific literature</li><li>++ ability to perform independent biological research</li><li>+ data presentation and discussion (written and spoken)</li><li>+ teamwork</li><li>+ ethics and professional behaviour</li><li>+ project and time management</li></ul>
Module contents	Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature

## bio900 - Biology Research Module

Module label	Biology Research Module			
Modulkürzel	bio900			
Credit points	15.0 KP			
Workload	450 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Research Modules</li><li>• Master's Programme Biology (Master) &gt; Research Modules</li></ul>			
Zuständige Personen	<ul style="list-style-type: none"><li>• Zotz, Gerhard (module responsibility)</li><li>• Zotz, Gerhard (Prüfungsberechtigt)</li><li>• der Biologie, Lehrende (Prüfungsberechtigt)</li><li>• der Biologie, Lehrende (Module counselling)</li></ul>			
Prerequisites				
Skills to be acquired in this module	<p>Students will learn to plan, perform and analyse a study in a biological field. Topics will be chosen in close coordination with teaching staff. Depending on the particular project, knowledge in statistics, molecular biology, physiology, modelling, or ethology will be necessary. Results will be related to the current biological literature in a written report and be presented in the seminar of the hosting working group.</p> <p>+ deepened knowledge of biological working methods ++ data analysis skills ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ ability to perform independent biological research ++ data presentation and discussion in German and English (written and spoken) + teamwork ++ project and time management + statistics &amp; scientific programming</p>			
Module contents	The students develop an empirical investigation, carry it out and analyse the results. The students present and discuss their project both orally and in writing

## bio810 - External Research Project

<b>Module label</b>	External Research Project	
<b>Modulkürzel</b>	bio810	
<b>Credit points</b>	15.0 KP	
<b>Workload</b>	450 h	
<b>Verwendbarkeit des Moduls</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Research Modules</li> <li>• Master's Programme Biology (Master) &gt; Research Modules</li> </ul>	
<b>Zuständige Personen</b>	<ul style="list-style-type: none"> <li>• Zotz, Gerhard (module responsibility)</li> <li>• Zotz, Gerhard (Prüfungsberechtigt)</li> <li>• der Biologie, Lehrende (Prüfungsberechtigt)</li> </ul>	
<b>Prerequisites</b>	<p>External research projects are done on an individual basis. They are supervised by one person from Oldenburg (see list of examiners, <a href="https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte">https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte</a>) and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See <a href="https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/">https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/</a> (Learning Agreement for External Research Module)</p>	
<b>Skills to be acquired in this module</b>	<p>++ deepened biological expertise  ++ deepened knowledge of biological working methods  ++ data analysis skills  ++ critical and analytical thinking  ++ independent searching and knowledge of scientific literature  ++ ability to perform independent biological research  ++ data presentation and discussion (written and spoken)  + teamwork  ++ project and time management  ++ statistics &amp; scientific programming</p> <p>Students perform individual research projects to learn: • planning and organization of a research project in a group outside of University of Oldenburg  • formulate a scientific hypothesis • planning, performing and analyzing experiments and / or simulations • working with scientific background literature on the specific context of the project • oral presentation and discussion of backgrounds and results in the lab seminar • write a scientific report in publication format • prepare and present a scientific poster</p>	
<b>Module contents</b>	<p>Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad).</p> <p>The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.</p> <p>Note: • all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor (see list of examiners, <a href="https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte">https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte</a>), students should contact appropriate supervisors individually • prior to project start, external and local supervisors must fill the learning agreement form • the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor • participation in a joint poster presentation of concurrent research modules is highly recommended.</p>

## bio880 - Skills in Plant Systematics

Module label	Skills in Plant Systematics			
Modulkürzel	bio880			
Credit points	6.0 KP			
Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Skills Modules</li><li>• Master's Programme Biology (Master) &gt; Skills Modules</li></ul>			
Zuständige Personen	<ul style="list-style-type: none"><li>• Albach, Dirk Carl (module responsibility)</li><li>• von Hagen, Klaus Bernhard (Module counselling)</li><li>• Albach, Dirk Carl (Prüfungsberechtigt)</li><li>• von Hagen, Klaus Bernhard (Prüfungsberechtigt)</li><li>• Khan, Gulzar (Prüfungsberechtigt)</li></ul>			
Prerequisites				
Skills to be acquired in this module	<p>In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.</p> <p>+ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + critical and analytical thinking ++ independent searching and knowledge of scientific literature + ability to perform independent biological research ++ data presentation and discussion (E) (written and spoken) + teamwork + statistics &amp; scientific programming</p>			
Module contents				
<p>In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa. In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.</p>

<b>Prerequisites</b>	
<b>Skills to be acquired in this module</b>	<p>+ Expt. methods + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Data present./disc. + Scientific English ++ Ethics</p> <p>Upon completion of this course, students</p> <ul style="list-style-type: none"><li>• know basic rules of good scientific practise</li><li>• are aware of the legal framework that is relevant to biological research, e.g. on animal welfare or genetically modified organisms</li><li>• have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources</li><li>• are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation</li><li>• are able to prepare and give a coherent presentation in a team</li><li>• have practised to lead a group discussion</li></ul>
<b>Module contents</b>	<p>In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.</p> <p>Example topics: Good scientific practise and fraud Neuroenhancement Artificial intelligence Animal welfare, Animal experiments Overfishing, Nature conservation State-of-the-art genetic tools and their implications Genetically modified organisms, e.g., in food production, chimeras Stem cells Humans as experimental subjects</p> <p>A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.</p>

## neu751 - Laboratory Animal Science

<b>Module label</b>	Laboratory Animal Science
<b>Modulkürzel</b>	neu751
<b>Credit points</b>	3.0 KP
<b>Workload</b>	<p>90 h ( one week full-time in semester break + flexible time for studying and exam preparation</p> <p>1 SWS Lecture total workload 45h: 2h contact / 20h background reading / 23h exam preparation</p> <p>1 SWS Supervised exercise total workload 45h: 35h contact / 10h background reading )</p>
<b>Verwendbarkeit des Moduls</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Molecular Biomedicine (Master) &gt; Skills Modules</li> <li>• Master's Programme Neuroscience (Master) &gt; Skills Modules</li> </ul>
<b>Zuständige Personen</b>	<ul style="list-style-type: none"> <li>• Köppl, Christine (module responsibility)</li> <li>• Köppl, Christine (Prüfungsberechtigt)</li> <li>• Langemann, Ulrike (Prüfungsberechtigt)</li> <li>• Nolte, Arne (Prüfungsberechtigt)</li> <li>• Heyers, Dominik (Prüfungsberechtigt)</li> <li>• Ebbers, Lena (Prüfungsberechtigt)</li> <li>• Dedek, Karin (Prüfungsberechtigt)</li> <li>• Schmaljohann, Heiko (Prüfungsberechtigt)</li> <li>• Winklhofer, Michael (Prüfungsberechtigt)</li> </ul>
<b>Prerequisites</b>	none
<b>Skills to be acquired in this module</b>	<p>++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics</p> <p>Upon successful completion of this course, students</p> <ul style="list-style-type: none"> <li>• know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language</li> <li>• understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.</li> <li>• have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)</li> <li>• are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation</li> <li>• have practical skills in handling small rodents or birds or fish</li> <li>• have profound knowledge of anaesthesia, analgesia and basic principles of surgery.</li> <li>• have practised invasive procedures and euthanasia.</li> </ul> <p>NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.</p>
<b>Module contents</b>	<p>Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:</p> <ul style="list-style-type: none"> <li>• Legislation, ethics and the 3Rs</li> <li>• Scientific integrity</li> <li>• Data collection "</li> <li>• Basic biology of rodents, birds and fish</li> <li>• Husbandry, and nutrition of rodents, birds and fish</li> <li>• Animal Welfare</li> <li>• Health monitoring</li> <li>• Pain and distress</li> <li>• Euthanasia</li> </ul>

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

## neu760 - Scientific English

<b>Module label</b>	Scientific English	
<b>Modulkürzel</b>	neu760	
<b>Credit points</b>	6.0 KP	
<b>Workload</b>	180 h ( 0,5 SWS Lecture (VO) Total workload 23h: 8h contact / 15h research for term paper  3,5 SWS Supervised exercise (UE) Total workload 158h: 46h contact / 46h preparation of texts and presentations / 66h term paper )	
<b>Verwendbarkeit des Moduls</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Molecular Biomedicine (Master) &gt; Skills Modules</li> <li>• Master's Programme Neuroscience (Master) &gt; Skills Modules</li> </ul>	
<b>Zuständige Personen</b>	<ul style="list-style-type: none"> <li>• Köppl, Christine (module responsibility)</li> <li>• Köppl, Christine (Prüfungsberechtigt)</li> </ul>	
<b>Prerequisites</b>	non-native speakers	
<b>Skills to be acquired in this module</b>	+ Neurosci. knowlg. ++ Social skills ++ Data present./disc. ++ Scientific English  Upon completion of this course, students <ul style="list-style-type: none"> <li>• have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience</li> <li>• are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation</li> <li>• are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)</li> <li>• are able to recognize and avoid common errors of non-native speakers.</li> </ul>	
<b>Module contents</b>	Lectures cover - characteristics of the different forms of scientific presentations - sentence structure using the passive voice - scientific vocabulary and terminology as contrasted to common speech - appropriate language for communication with scientific editors and referees  Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

## neu780 - Biological Data Analysis with Python

<b>Module label</b>	Biological Data Analysis with Python			
<b>Modulkürzel</b>	neu780			
<b>Credit points</b>	6.0 KP			
<b>Workload</b>	180 h ( 2 SWS Lecture total workload 90h: 30h contact / 60h individual reading 2 SWS Supervised exercise total workload 90h: 45h contact / 45h solving programming exercises )			
<b>Verwendbarkeit des Moduls</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Neuroscience (Master) &gt; Skills Modules</li> </ul>			
<b>Zuständige Personen</b>	<ul style="list-style-type: none"> <li>• Winklhofer, Michael (module responsibility)</li> <li>• Winklhofer, Michael (Prüfungsberechtigt)</li> </ul>			
<b>Prerequisites</b>				
<b>Skills to be acquired in this module</b>	+ Neurosci. knowlg. ++ Maths/Stats/Progr. + Data present./disc.  The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see <a href="https://www.python.org/">https://www.python.org/</a> .  Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).  Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetic data from various noise models to assess signal-to-noise ratio in instrumental datasets.			
<b>Module contents</b>	Data types and data structures, control structures, functions, modules, file input/output Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...			
<b>Literatureempfehlungen</b>	open access <a href="http://www.swaroopch.com/notes/python/">http://www.swaroopch.com/notes/python/</a> <a href="http://docs.python.org/3/tutorial/index.html">http://docs.python.org/3/tutorial/index.html</a>

## neu790 - Communicating Neuroscience

Module label	Communicating Neuroscience
Modulkürzel	neu790
Credit points	3.0 KP
Workload	90 h (  90 h  (28 h contact / 62 h individual reading and preparing discussion questions)  )
Verwendbarkeit des Moduls	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Skills Modules</li><li>• Master's Programme Biology (Master) &gt; Skills Modules</li><li>• Master's Programme Neuroscience (Master) &gt; Skills Modules</li></ul>
Zuständige Personen	<ul style="list-style-type: none"><li>• Kretzberg, Jutta (module responsibility)</li><li>• Kretzberg, Jutta (Prüfungsberechtigt)</li><li>• Köppl, Christine (Prüfungsberechtigt)</li></ul>
Prerequisites	
Skills to be acquired in this module	<p>+ Neurosci. knowlg. ++ Scient. Literature ++ Social skills + Interdiscipl. knowlg. ++ Data present./disc. + Scientific English ++ Ethics</p> <p>Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscience literature, learn about the scientific publication process and discuss science communication to the general public.</p>
Module contents	<p>The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover:</p> <ul style="list-style-type: none"><li>• How to find literature?</li><li>• How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers?</li><li>• Publication process, Authorship and impact metrics</li><li>• Alternative publication paths and data sharing in neuroscience</li><li>• Science communication for the general public and on social media</li><li>• Face-to-face scientific communication</li></ul>
Literatureempfehlungen	<p>List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP.</p> <p>Background neuroscience textbooks, e.g.:</p> <p>Galizia, Lledo 'Neuroscience – From Molecule to Behavior', 2013, Springer</p> <p>Nicholls et al. 'From Neuron to Brain', 5th edition 2012, Sinauer</p> <p>Kandel et al. 'Principles of Neural Science', 5th Edition 2013, McGraw-Hill Comp.</p>
