Mastermodule

psy130 - Communication of scientific results

Module label	Communication of scientific results	
Modulkürzel	psy130	
Credit points	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Neurocognitive Psychology (Master) > Mastermodule 	
Zuständige Personen	<ul style="list-style-type: none"> Herrmann, Christoph Siegfried (module responsibility) Herrmann, Christoph Siegfried (Prüfungsberechtigt) Strüber, Daniel (Prüfungsberechtigt) Roheger, Mandy (Prüfungsberechtigt) Mahadevan, Rachana (Prüfungsberechtigt) Strüber, Daniel (Module counselling) 	
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.	
Skills to be acquired in this module	<p>Goals of module: Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically.</p> <p>Competencies: ++ data presentation & discussion ++ scientific literature ++ scientific English / writing ++ scientific communication skills + group work</p>	
Module contents	<p>Part 1: Communication of scientific results (seminar) Literature search Presentation skills Writing skills</p> <p>Part 2: Psychological colloquium Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite</p>	
Literatureempfehlungen	- Sternberg, Robert (2000) Guide to Publishing in Psychology Journals, Cambridge University Press

Language of instruction	English	
Duration (semesters)	1-2 Semester	
Module frequency	Part 1 will be offered every winter term. Part 2 will be offered every semester.	
Module capacity	unlimited	
Reference text	Students can choose whether they want to attend the colloquium in the first, second or both semesters.	
Type of module	Pflicht / Mandatory	
Module level	MM (Mastermodul / Master module)	
Examination	Prüfungszeiten	Type of examination
Final exam of module	during winter term	Oral presentation

Examination		Prüfungszeiten	Type of examination	
			Required active participation for gaining credits: 70% attendance of the seminar within one semester and at least 8 colloquia within two semesters (will be checked in StudIP) and active discussion in at least 1 colloquium.	
Lehrveranstaltungsform	Comment	SWS	Frequency	Workload of compulsory attendance
Seminar		2	WiSe	28
Colloquium		2	SoSe und WiSe	28
Präsenzzeit Modul insgesamt				56 h

psy141 - Minor

Module label	Minor
Modulkürzel	psy141
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Rieger, Jochem (Module counselling)• Bleichner, Kerstin (Module counselling)• Rieger, Jochem (Prüfungsberechtigt)• Gießing, Carsten (Prüfungsberechtigt)• Puschmann, Sebastian (Prüfungsberechtigt)• Spiegler, Andreas (Prüfungsberechtigt)• Maier, Esther Christine (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	

Goals of module:

Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. Students may also broaden their psychological knowledge or language skills.

Competencies:

Module contents

To complement the core of the study programme in a meaningful way, students can take Master modules and courses from the fields

- Biology
- Neurosciences
- Computer Science
- Physics
- Mathematics
- Pedagogy
- Philosophy
- related fields
- Psychology (additional elective module (NOT psy170, psy220, psy270, psy280, psy290) or from another study programme)

Students whose first language is not German, may take German classes.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis).

Students can take the academic writing course 'English for University Studies: 5. Writing and Reading pb337' from the language center. Other English classes cannot be taken as Minor.

A list of already approved courses/modules can be found on our website.

You can take other courses/modules if they fulfil the following requirements:

- Master level (other than language courses)
- may be ungraded, but need proof of competence (e.g. a pass/fail exam)

Note that Minor courses/modules must not repeat contents of mandatory modules or taken elective modules of the programme.

We recommend taking modules/courses that strengthen your own professional profile.

Literatureempfehlungen

List of approved courses/modules and approval form:
<https://uol.de/en/psychology/master/course-overview/>

		-> Supporting documents
Languages of instruction		English , German
Duration (semesters)		1 Semester
Module frequency		irregular
Module capacity		unlimited
Reference text		PLEASE NOTE: If you want to take a module/course which is not listed in the list of approved courses/modules, please check thoroughly whether the course/module fulfils the requirements listed under 'module contents' before you start the course/module. The requirements for the minor module are also described in the subject specific amendments to the general examination regulations (fachspez. Anlage). In cases of doubt, the programme coordinator can advise you. Recognition procedure: <ul style="list-style-type: none">• Certificates of completion of approved courses/modules (see list of approved courses) have to be sent directly to the examinations office.• Certificates of completion for courses/modules without former approval have to be sent to the head of the examinations committee together with the approval form and a course/module description. If you want to take an additional elective module for your Minor (taking only a part of an elective module is not possible), you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as approved for the Minor and the course credits will be automatically entered for your Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor. Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module. It is your responsibility to ask the teacher whether you can take part in a course/module. Please be aware that you can only use 6 credits for the module psy141 Minor. If you take more Minor courses/modules, these credits cannot be used for your degree. You can still ask the teacher to sign an attendance certificate (download https://uol.de/en/psychology/master/course-overview) or module examination form (https://uol.de/en/course-of-study/exams/neurocognitive-psychology-master-545) which is sufficient for later applications to prove that you took the additional course/module.
Type of module		Pflicht / Mandatory
Module level		MM (Mastermodul / Master module)
Teaching/Learning method		Lectures and seminars (depends on the chosen modules)
Examination	Prüfungszeiten	Type of examination
Final exam of module		If grades are earned in the minor, those are counted as pass/fail. Certificates for grades can be separately requested from the examination office.

psy150 - Clinical Psychology

Module label	Clinical Psychology
Modulkürzel	psy150
Credit points	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Thiel, Christiane Margarete (module responsibility)• Thiel, Christiane Margarete (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	<p>Goals of the Module: Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.</p> <p>Competencies: ++ Neuropsychological / neurophysiological knowledge + experimental methods + data presentation & discussion + scientific literature + critical & analytical thinking + knowledge transfer + group work</p>
Module contents	<p>The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.</p> <p>Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar): winter Basics of neurotransmitter systems and psychopharmacology Substance Abuse (e.g. psychostimulants, hallucinogenics) Depression Anxiety Disorders Alzheimer's Disease Schizophrenia psychopathological assessment</p> <p>The seminar (voluntary) will be given in German as clinicians and patient actors are involved.</p> <p>Part 2: Psychological interventions within the framework of evidence-based medicine (3 seminars to chose from, one partly in German): summer The seminars focus on concepts of evidence based treatment: - with application to acquired dysfunctions of the brain (2.1) - to selected psychiatric disorders (2.2) - with application to trauma- and stress-related psychiatric disorders. Special emphasis is placed on children and adolescents (2.3)</p> <p>Options: 1. Students attend both parts 2.1 and 2.2 2. Students attend the first four classes of 2.1 in addition to part 2.3</p>

For summer term 2025, the seminars will most likely be restructured.

psy181 - Neurocognition

Module label	Neurocognition
Modulkürzel	psy181
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Thiel, Christiane Margarete (module responsibility)• Thiel, Christiane Margarete (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	

Goals of module:

Students should be able to recognize and critically evaluate the value of considering neuroscience in the study of psychological topics.

Competencies:

++ neuropsychological / neurophysiological knowledge
++ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ scientific communication skills
+ group work

Module contents

Students will first acquire a general understanding of the brain mechanisms of different cognitive functions and the methods used to study these functions. They will then apply this knowledge by discussing current research topics (part 1). Knowledge will be transferred to the relation between the development of the human brain and the cognitive processes it supports (part 2).

Part 1: Introduction to cognitive neuroscience (lecture and seminar): winter

Brain and cognition, methods of cognitive neuroscience
Attention, learning and memory
Emotional and social behaviour
Language, executive functions

Part 2: Neurocognitive development (seminar): summer

Brain development and cortical plasticity
Effects of early-life stress on brain development
Development of object recognition, social cognition, memory, and executive functions

psy190 - Sex and Cognition

Module label	Sex and Cognition
Modulkürzel	psy190
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Strüber, Daniel (module responsibility)• Strüber, Daniel (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.
Skills to be acquired in this module	

Goals of module:

Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain's control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.

Competencies:

++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
++ scientific communication skills
+ group work
+ project & time management

Inhalte

Module contents

Part 1: Introduction to the study of sex differences (lecture): winter

The measurement of sex differences
Sex differences in emotion
Sex differences in aggression
Sex differences in cognitive abilities
Hormones, sexual differentiation, and gender identity
Sex hormones and play preferences
Sex differences in hemispheric organization
Brain size and intelligence

Part 2: Sex, brain, and behaviour (seminar): winter

Sex differences in empathy
The extreme male brain theory of autism (S. Baron-Cohen)
Sex differences in neuropsychiatric disorders
Sex differences in stress response
Social implications of sex differences

psy220 - Human Computer Interaction

Module label	Human Computer Interaction
Modulkürzel	psy220
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Rieger, Jochem (module responsibility)• Rieger, Jochem (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology or other programs related to the field (e.g. neuroscience, computer science, physics etc.).

Skills to be acquired in this module

Goals of module:

The goal of the module is to provide students with basic skills required to plan, implement and evaluate brain computer interfaces as devices for human computer interaction. BCIs are an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation. Importantly, classical BCI-methods can be used for modern data-driven basic neuroscience.

The module is designed as an "enabler course", meaning that ideally students should be able to understand and start independent studies into the BCI-methods. Therefore, it goes into depth instead of breadth. Good programming skills and some active knowledge of high school maths is strongly advised to maximize the learning outcome.

Competencies:

++ understanding of the foundations of statistical learning techniques
+ basics to understand technical time series processing and machine learning papers
++ interdisciplinary knowledge & thinking
+ experimental methods
++ statistics & scientific programming
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
+ group work
+ project & time management

Module contents

The module will introduce classic BCI paradigms and brain decoding techniques. However the main focus will be on a deeper understanding of the most important signal processing, machine learning, and performance evaluation techniques. The module combines a lecture on the theoretical foundations a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics.

Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer

Part 2: Hands on BCI implementation (practical seminar): summer
Topics covered:

- A brief history of BCIs and examples of HCI control and basic neuroscience using BCI techniques.
- Data preprocessing (e.g. filtering, projection techniques) and common artifacts and artifact treatment)

- Feature generation (e.g. fourier transform, spectral estimation techniques, principle components)
- Machine learning for classification and regression (e.g. model parameter optimization in multivariate regression)
- Evaluation (e.g. measures of model quality, cross validation to test model generalization, permutation tests)

Where possible the lecture provides mathematical backgrounds of the data analysis techniques.

The practical seminar implements BCI techniques on a real data set and further elaborates specific topics in seminar form.

Literaturempfehlungen

There is no required textbook. The lecture slides and notes should be sufficient. However some resources from which they were developed on are given below:

General tutorial text providing and overview and accompanying python code on github:

PLEASE NOTE: We strongly recommend to take either psy170, psy270, psy280, psy220 or psy290 to gain methodological competencies (EEG, fMRI, TBS, HCI, ambulatory assessment techniques) that are needed for most practical projects and Master's theses!

Type of module	Wahlpflicht / Elective
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	Part 1: lecture; Part 2: practical seminar
Previous knowledge	Basic programming skills, some high-school level maths

Examination	Prüfungszeiten	Type of examination
-------------	----------------	---------------------

Final exam of module

last lecture in summer term

The module will be evaluated with an oral exam (max. 20 min).

Required active participation for gaining credits:
1-2 presentations
max. 24 programming exercises in the seminar
participation in discussions on other presentations
attendance of at least 70% in the seminar within
one semester (will be checked in StudIP).

Important note:
Passing the exam of psy240 is mandatory for starting a Practical Project (psy260) and the Master's thesis.

Type of module	Pflicht / Mandatory
Module level	MM (Mastermodul / Master module)
Teaching/Learning method	Part 1 and 2: lectures; Part 3 and 4: excercises; Part 5: seminar; additional tutorials

Examination	Prüfungszeiten	Type of examination
-------------	----------------	---------------------

Final exam of module

exam period at the end of the summer term

In a 120-minute written exam the participants will have to program MATLAB-scripts for a selection of neuroscientific data-analysis problems, demonstrating their skills in the different topics. The scripts and comments will be written on university-provided laptops and handed in via email or USB-drive.

Students need to hand in 1-2 programming tasks in the exercises to be allowed to take part in the exam.

Required active participation for gaining credits: script for the presentation of experimental stimuli in part 5
attendance of at least 70% in the seminar 'computer-controlled experimentation', part 5 within one semester (will be checked in StudIP).

psy260 - Practical project

Module label	Practical project
Modulkürzel	psy260
Credit points	9.0 KP
Workload	270 h (attendance in the lab and accompanying seminars as necessary for your project (~ 200h))
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none"> Debener, Stefan (module responsibility) Herrmann, Christoph Siegfried (module responsibility) Hildebrandt, Andrea (module responsibility) Puschmann, Sebastian (module responsibility) Rieger, Jochem (module responsibility) Roheger, Mandy (module responsibility) Al-Zubaidi, Arkan (Prüfungsberechtigt) Bleichner, Martin Georg (Prüfungsberechtigt) Debener, Stefan (Prüfungsberechtigt) Gießing, Carsten (Prüfungsberechtigt) Hellmann, Andreas (Prüfungsberechtigt) Herrmann, Christoph Siegfried (Prüfungsberechtigt) Hildebrandt, Andrea (Prüfungsberechtigt) Hildebrandt, Helmut (Prüfungsberechtigt) Rieger, Jochem (Prüfungsberechtigt) Kranczioch-Debener, Cornelia (Prüfungsberechtigt) Özyurt, Jale Nur (Prüfungsberechtigt) Stecher, Heiko (Prüfungsberechtigt) Strüber, Daniel (Prüfungsberechtigt) Thiel, Christiane Margarete (Prüfungsberechtigt) Rosemann, Stephanie (Prüfungsberechtigt) Puschmann, Sebastian (Prüfungsberechtigt) Jäger, Manuela (Prüfungsberechtigt) Boetzel, Cindy (Prüfungsberechtigt) Vogeti, Sreekari (Prüfungsberechtigt) Roheger, Mandy (Prüfungsberechtigt) Daeglau, Mareike (Prüfungsberechtigt) Kristanto, Daniel (Prüfungsberechtigt) Abdolalizadeh Saleh, Amirhussein (Prüfungsberechtigt) Jacobsen, Nadine (Prüfungsberechtigt) Short, Cassie Ann (Prüfungsberechtigt) Marek, Merle (Module counselling)
Further responsible persons	Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for psy260.
Prerequisites	<p>Enrolment in Master's programme Neurocognitive Psychology.</p> <p>You can only start the practical project if you have passed the exam of psy240 (psy241)</p> <p>Computation in Neuroscience!</p> <p>Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.</p>
Skills to be acquired in this module	<p>Goals of module:</p> <p>Students are able to critically review the scientific literature and current state of knowledge concerning a certain topic in the field of cognitive neuroscience or neuropsychology. Based on this, they are able to develop a specific research question and to design an adequate experiment, acquire data and conduct appropriate statistical analyses, building on previously gained competencies in relevant research methods, computer programming and statistical methods. They know how to critically discuss the results of their study in context of the current literature and how to present their findings at a scientific poster</p>

symposium.

Competencies:

- ++ experimental methods
- + statistics & scientific programming
- ++ data presentation & discussion
- + independent research
- + scientific literature
- + ethics / good scientific practice / professional behavior
- + scientific communication skills
- + knowledge transfer
- + group work
- ++ project & time management

Module contents

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

Skills to be acquired in this module	<p>Goals of module:</p> <p>Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.</p> <p>Competencies:</p> <ul style="list-style-type: none">++ interdisciplinary knowledge & thinking++ statistics & scientific programming++ data presentation & discussion+ independent research+ scientific literature++ ethics / good scientific practice / professional behavior++ critical & analytical thinking++ scientific communication skills+ group work

Module contents

Part 1: Multivariate Statistics I (lecture): winter

- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models
- Path modeling
- Factor analysis (exploratory & confirmatory)
- (Multilevel) Structural equation modeling (SEM linear and non-linear)

Part 2: Analysis Methods with R (seminar): winter and summer

- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

Part 3: Multivariate Statistics II (lecture): summer

- Supervised and unsupervised statistical learning and prediction
- Regularized regression
- Resampling methods
- Tree-based methods

- Support Vector Machines
- Neural Networks (basics)
- Principal components and clustering

Part 4: Evaluation research (seminar): summer

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
- Research synthesis and meta-analysis

psy121 - Psychological assessment and diagnostics

Module label	Psychological assessment and diagnostics
Modulkürzel	psy121
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Hildebrandt, Andrea (module responsibility)• Hildebrandt, Andrea (Prüfungsberechtigt)• Hellmann, Andreas (Prüfungsberechtigt)• Roheger, Mandy (Prüfungsberechtigt)• Debener, Stefan (Module counselling)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	

Goals of module:

Students will acquire specific knowledge about psychological assessment, test theory and test construction, and will be trained to utilize this knowledge within a research or test development context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of applied psychometrics and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of test and assessment report generation in written and oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:

- + Neuropsychological / neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking

Module contents

Part 1: Introduction to Psychological Assessment (lecture): winter and summer

- Psychological assessment as a decision process – descriptive and prescriptive models
- Introduction to test theories (will be detailed in Part 3)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Classificatory decisions
- Psychometrics to single cases
- Summarizing results and writing reports

Part 2: Test Theory and Test Construction (lecture): winter and summer

- Classical test theory
- Generalizability theory
- Latent-State and Trait theory
- Latent variable models for different types of item responses
- Measurement invariance across groups and time
- Network modeling in psychometrics
- Preference modeling for constructing faking-resistant questionnaires and tests

Part 3: applied seminars: winter and summer (choose a or b)

a: The Assessment Process Applied OR

- Case conceptualization (neuropsychology and clinical psychology)
- Formulating hypotheses
- Selecting assessment procedures and planning administration
- Deciding upon decision rules for data integration

- Evaluating the application of assessment procedures
- Analyzing, summarizing and visualizing results
- Integrating results based on the decision rules
- Writing a psychological/assessment report
- Discussing a report with the client

b: Test Construction Applied

- Construct conceptualization
- Deciding upon the response format
- Item mining
- Item analysis
- Test quality report and test manual

Part 4: Assessment in Clinical Neuropsychology (seminar): summer

- specific knowledge
- exercises in testing / practising tests

Literatureempfehlungen		Will be specified in the courses.

psy230 - Neuromodulation of Cognition

Module label	Neuromodulation of Cognition
Modulkürzel	psy230
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<ul style="list-style-type: none">• Rieger, Jochem (module responsibility)• Rieger, Jochem (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.
Skills to be acquired in this module	

Goals of module:

The aim of this module is to provide students with a theoretical background on how cognitive functions can be altered via neuromodulation.

Competencies:

++ Neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ experimental methods
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills

Module contents

Students will be introduced to the concepts of neuromodulation and the application of theoretical knowledge of neurophysiology to the modulation of cognitive functions.

Part 1: Neuromodulation of cognition (lecture): winter

Neurotransmitter and neuromodulator systems
Neuropharmacological intervention
Mechanisms of neural plasticity
Neurofeedback
Electric and magnetic brain stimulation
Therapeutical applications

Part 2: Topics in Neuromodulation (seminar): winter

Psychological and therapeutical effects of neuromodulation
Modulation of neuronal network function
Deep brain stimulation for therapeutical modulation

Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Neurocognitive Psychology (Master) > Mastermodule 			
Zuständige Personen	<ul style="list-style-type: none"> Stecher, Heiko (module responsibility) Stecher, Heiko (Prüfungsberechtigt) 			
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy241 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy240.)			
Skills to be acquired in this module	**Goals of module:** Students will acquire scientific programming skills as well as specific knowledge of computational methods in neuroscience and cognition. They will learn to judge the appropriateness and complexity of computational problems and solutions. **Competencies:** [nop] + Neuropsychological / neurophysiological knowledge + experimental methods ++ statistics & scientific programming + critical & analytical thinking + knowledge transfer + group work [/nop]			
Module contents	**Part 1: Introduction to scientific programming I (theoretical-practical seminar)** - Basic data types and structures - Flow control (conditions, loops, errors) - Testing and debugging - Functions **Part 2: Introduction to scientific programming II (theoretical-practical seminar)** - Classes and objects - Parallel processing - Frequency analysis methods - EEG processing **Part 3: Scientific programming I (exercise)** - Implementation of examples from part 1 **Part 4: Scientific programming II (exercise)** - Implementation of examples from part 2

psy250 - Internship

Module label	Internship	
Modulkürzel	psy250	
Credit points	15.0 KP	
Workload	450 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Neurocognitive Psychology (Master) > Mastermodule 	
Zuständige Personen	<ul style="list-style-type: none"> Kranczioch-Debener, Cornelia (module responsibility) Kranczioch-Debener, Cornelia (Prüfungsberechtigt) 	
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy250 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy251.)	
Skills to be acquired in this module	<p>Goals of module: Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.</p> <p>Competencies: ++ expert neuropsychological/neurophysiological knowledge + interdisciplinary knowledge & thinking + experimental methods ++ ethics / good scientific practice / professional behavior ++ knowledge transfer + project & time management</p>	
Module contents	The student will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

Languages of instruction	English , German	
Duration (semesters)	1 Semester	
Module frequency	irregular	
Module capacity	unlimited	
Reference text	<p>The internship lasts 450 hours (12 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part. Your supervisor must be a psychologist. Please note that details are regulated in the exam regulations. A blank internship certificate and the report form can be found on the programme website. To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kranczioch.</p> <p>Please note that, due to the Coronavirus pandemic, you have to hand in a risk assessment form before starting your internship. You can find this form in English or German in the list of supporting documents!</p>	
Type of module	Pflicht / Mandatory	
Module level	MM (Mastermodul / Master module)	
Teaching/Learning method	internship at (external) institution	
Examination	Prüfungszeiten	Type of examination
Final exam of module	Individual; 2-3 possibilities per semester to present the internship to other students	The students have to hand in a written report (2-3 pages) and give a short presentation about their internship. They have to show a certificate from the institution at which they performed the internship. The internship is evaluated as pass/fail.
Lehrveranstaltungsform	Practical training

psy120 - Psychological assessment and diagnostics

Module label	Psychological assessment and diagnostics		
Modulkürzel	psy120		
Credit points	9.0 KP		
Workload	270 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Neurocognitive Psychology (Master) > Mastermodule 		
Zuständige Personen	<ul style="list-style-type: none"> • Hildebrandt, Andrea (module responsibility) • Hellmann, Andreas (module responsibility) • Hildebrandt, Andrea (Prüfungsberechtigt) • Hellmann, Andreas (Prüfungsberechtigt) • Debener, Stefan (Module counselling) 		
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy120 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy121.)		
Skills to be acquired in this module	<p>**Goals of module:** Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written and oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module. **Competencies:** + Neuropsychological / neurophysiological knowledge + interdisciplinary knowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking</p>		
Module contents	<p>**Part 1: Introduction to Psychological Assessment (lecture)** - Psychological assessment as a decision process – descriptive and prescriptive models - Theories of reliability (classical and modern approaches) - Theories of validity (classical and modern approaches) - Assessment methods, their construction and design, quality criteria - The logic of decision making in the assessment process - Psychometrics to single cases - Summarizing results and writing reports **Part 2: Psychological Testing (seminar)** - Psychometric bases of tests and questionnaires - Types of tests and questionnaires - Challenges in psychological testing (for example faking good vs. bad) - Examples of published tests and questionnaires - Exercising test applications, scoring and result interpretations **Part 3: Assessment in Clinical Neuropsychology (seminar)** - specific knowledge - exercises in testing / practising tests</p>		
Literatureempfehlungen	Will be specified in the courses.

psy140 - Minor

Module label	Minor	
Modulkürzel	psy140	
Credit points	9.0 KP	
Workload	270 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Neurocognitive Psychology (Master) > Mastermodule 	
Zuständige Personen	<ul style="list-style-type: none"> Bleichner, Kerstin (Module counselling) Rieger, Jochem (Module counselling) 	
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Module psy140 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy141.)	
Skills to be acquired in this module	**Goals of module:** Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. **Competencies** ++ interdisciplinary knowledge & thinking	
Module contents	Students can take Master modules and courses from the fields • Biology • Neurosciences • Computer Science • Physics • Mathematics • Pedagogy • Philosophy • related fields The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules. A list of approved courses/modules can be found on our website. Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module). Students whose first language is not German, may take German classes. We recommend taking modules/courses that strengthen your own professional profile.

Abschlussmodul

mam - Master's Degree Module

Module label	Master's Degree Module
Modulkürzel	mam
Credit points	30.0 KP
Workload	900 h (attendance in the lab meetings: 28h (2 SWS); thesis work: 872 hours)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Neurocognitive Psychology (Master) > Abschlussmodul
Zuständige Personen	<ul style="list-style-type: none">• Al-Zubaidi, Arkan (Prüfungsberechtigt)• Bleichner, Martin Georg (Prüfungsberechtigt)• Debener, Stefan (Prüfungsberechtigt)• Gießing, Carsten (Prüfungsberechtigt)• Rieger, Jochem (Prüfungsberechtigt)• Hellmann, Andreas (Prüfungsberechtigt)• Herrmann, Christoph Siegfried (Prüfungsberechtigt)• Hildebrandt, Andrea (Prüfungsberechtigt)• Boetzel, Cindy (Prüfungsberechtigt)• Hildebrandt, Helmut (Prüfungsberechtigt)• Kranczioch-Debener, Cornelia (Prüfungsberechtigt)• Rosemann, Stephanie (Prüfungsberechtigt)• Özyurt, Jale Nur (Prüfungsberechtigt)• Stecher, Heiko (Prüfungsberechtigt)• Strüber, Daniel (Prüfungsberechtigt)• Thiel, Christiane Margarete (Prüfungsberechtigt)• Puschmann, Sebastian (Prüfungsberechtigt)• Vogeti, Sreekari (Prüfungsberechtigt)• Jäger, Manuela (Prüfungsberechtigt)• Roheger, Mandy (Prüfungsberechtigt)• Daeglau, Mareike (Prüfungsberechtigt)• Kristanto, Daniel (Prüfungsberechtigt)• Jacobsen, Nadine (Prüfungsberechtigt)• Short, Cassie Ann (Prüfungsberechtigt)• Abdolalizadeh Saleh, Amirhussein (Prüfungsberechtigt)
Further responsible persons	thesis supervisors; Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for mam.
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Completion of at least 60 credit points in other modules including module psy240 (psy241) (Computation in Neuroscience). Assignment of a topic by thesis supervisor and official application with the examination office.
Skills to be acquired in this module	<p>Goals of module: Students will demonstrate that they are able to perform a psychological or neuroscientific experiment and/or analyze data originating from such experiments by means of methods according to contemporary scientific standards. Metaanalyses are accepted if they were conducted by means of up to date tools for data extraction and analyses, according to best practices outlined in relevant community guidelines, such as for example Cochrane. In addition, the students will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.</p> <p>Competencies: ++ experimental methods + statistics & scientific programming</p>

- + data presentation & discussion
- ++ independent research
- + scientific literature
- ++ scientific English / writing
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking
- + scientific communication skills
- + knowledge transfer
- ++ project & time management

Module contents

Part 1: Master's thesis

The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.

Part 2: Master's colloquium

The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
