## psy111 - Research methods I - Statistical Modeling

<b>Module label</b>	Research methods I - Statistical Modeling
<b>Module code</b>	psy111
<b>Credit points</b>	6.0 KP
<b>Workload</b>	180 h
<b>Applicability of the module</b>	<ul style="list-style-type: none"> <li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li> </ul>
<b>Responsible persons</b>	<ul style="list-style-type: none"> <li>• Hildebrandt, Andrea (module responsibility)</li> <li>• Hildebrandt, Andrea (authorised to take exams)</li> </ul>
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology.

### Skills to be acquired in this module

Goals of module:  
 After completion of this module, students will have basic knowledge in managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They can apply the statistical methodology in terms of good scientific practice and interpret, evaluate and synthesize empirical results in basic and applied research contexts. Students will be aware of statistical misconceptions and they can overcome them.

- Competencies:**
- ++ interdisciplinary knowledge & thinking
  - ++ statistics & scientific programming
  - ++ data presentation & discussion
  - + independent research
  - + scientific literature
  - ++ ethics / good scientific practice / professional behavior
  - ++ critical & analytical thinking
  - ++ scientific communication skills
  - + group work

### Module contents

#### Part 1: Multivariate statistical modeling

- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression models
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models (Polynomial regression, regression splines and local regression)
- Path modeling
- Factor analysis (exploratory & confirmatory)
- Structural equation modeling (SEM; linear and non-linear)

#### Part 2: Multivariate statistical modeling with R (hands-on seminar)

- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

## psy112 - Research methods II - Statistical Learning

<b>Module label</b>	Research methods II - Statistical Learning
<b>Module code</b>	psy112
<b>Credit points</b>	6.0 KP
<b>Workload</b>	180 h
<b>Applicability of the module</b>	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
<b>Responsible persons</b>	<ul style="list-style-type: none"><li>• Hildebrandt, Andrea (module responsibility)</li><li>• Hildebrandt, Andrea (authorised to take exams)</li></ul>
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology.

---

### Skills to be acquired in this module

#### Goals of module:

Building upon the basic knowledge in multivariate statistical modeling covered in psy111, after completion of this module students will know how to deal with big data to address empirical questions in neurocognitive psychology. They will be able to solve prediction and classification problems to the realm of basic and applied statistical/machine learning purposes. Furthermore, students will understand the specifics of applied research and the statistical modeling of noisy, longitudinal data.

#### Competencies:

- ++ interdisciplinary knowledge & thinking
- ++ statistics & scientific programming
- ++ data presentation & discussion
- + independent research
- + scientific literature
- ++ ethics / good scientific practice / professional behavior
- ++ critical & analytical thinking
- ++ scientific communication skills
- + group work

---

### Module contents

#### Part 1: Statistical / machine learning methods

- Supervised and unsupervised statistical learning and prediction
- Resampling methods
- Regularized regression
- Linear and quadratic discriminant analysis
- Naive Bayes algorithm
- Tree-based methods
- Support vector machines
- The basics of neural networks
- Principal component regression
- Clustering methods

#### Part 2: Statistical / machine learning methods with R (voluntary hands-on seminar)

- Data examples and applications of the basic machine learning methods covered in the lecture

#### Part 3: Evaluation research (seminar with theory and practice)

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Multivariate statistical modeling of change over time and group differences in change
- Specific statistical tools for sampling and matching (e.g., Propensity score matching)
- Basics of causality theory and the estimation of average and conditional

- effects in EffectLiteR
- Research synthesis and meta-analysis

## psy126 - Test Theory and Test Construction

Module label	Test Theory and Test Construction
Module code	psy126
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Hildebrandt, Andrea (module responsibility)</li><li>• Hildebrandt, Andrea (authorised to take exams)</li><li>• Zaggia, Leonardo (authorised to take exams)</li><li>• Debener, Stefan (Module counselling)</li></ul>

### Prerequisites

Enrolment in Master's programme Neurocognitive Psychology.

---

### Skills to be acquired in this module

Goals of module:  
Students will acquire specific knowledge of modern test theory and test construction and will be trained to apply this knowledge in the context of test development and test adaptation. They will reflect on the differences between traditional and modern test theory and their use in the domain of applied psychometrics and the systematic design of interview and observation methods. Finally, students will learn about the requirements for writing test construction and/or adaptation reports. Ethical guidelines in psychometrics and quality standards will be implicit topics throughout the module.

#### Competencies:

- + research methods and psychometric knowledge
- + interdisciplinary knowledge & thinking
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking

---

### Module contents

#### Part 1: Test Theory and Test Construction (lecture): summer

- Classical test theory
- Generalizability theory
- Latent-State and Trait theory
- Latent variable models for different types of item responses
- Measurement invariance across groups and time
- Network modeling and machine learning in psychometrics
- Preference modeling for constructing faking-resistant questionnaires and tests

#### Part 2: Test Analysis Applied (hands-on seminar): summer

- Test adaptation conceptualization
- Test data processing
- Item mining and analysis
- Test analysis report writing

---

### Recommended reading

Will be specified in the courses.

---

## psy141 - Minor

<b>Module label</b>	Minor
<b>Module code</b>	psy141
<b>Credit points</b>	6.0 KP
<b>Workload</b>	180 h
<b>Applicability of the module</b>	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
<b>Responsible persons</b>	<ul style="list-style-type: none"><li>• Rieger, Jochem (Module counselling)</li><li>• Bleichner, Kerstin (Module counselling)</li><li>• Rieger, Jochem (authorised to take exams)</li><li>• Gießing, Carsten (authorised to take exams)</li><li>• Puschmann, Sebastian (authorised to take exams)</li><li>• Maier, Esther Christine (authorised to take exams)</li></ul>
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology.
<b>Skills to be acquired in this module</b>	

### Goals of module:

Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. Students may also broaden their psychological knowledge or language skills.

### Competencies:

---

## Module contents

To complement the core of the study programme in a meaningful way, students can take Master modules and courses from the fields

- Biology
- Neurosciences
- Computer Science
- Physics
- Mathematics
- Pedagogy
- Philosophy
- related fields
- Psychology (additional elective module (NOT psy170, psy220, psy270, psy280, psy290) or from another study programme)

Students whose first language is not German, may take German classes.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis).

Students can take the academic writing course 'English for University Studies: 5. Writing and Reading pb337' from the language center. Other English classes cannot be taken as Minor.

A list of already approved courses/modules can be found on our website.

You can take other courses/modules if they fulfil the following requirements:

- Master level (other than language courses)
- may be ungraded, but need proof of competence (e.g. a pass/fail exam)

Note that Minor courses/modules must not repeat contents of mandatory modules or taken elective modules of the programme.

**We recommend taking modules/courses that strengthen your own professional profile.**

---

List of approved courses/modules and approval form:  
<https://uol.de/en/psychology/master/course-overview/>  
-> Supporting documents

---

<b>Languages of instruction</b>	English , German
<b>Duration (semesters)</b>	1 Semester
<b>Module frequency</b>	irregular
<b>Module capacity</b>	unlimited
<b>Reference text</b>	PLEASE NOTE:

If you want to take a module/course which is not listed in the list of approved courses/modules, please check thoroughly whether the course/module fulfils the requirements listed under 'module contents' before you start the course/module. The requirements for the minor module are also described in the subject specific amendments to the general examination regulations (fachspez. Anlage).

In cases of doubt, the programme coordinator can advise you.

Recognition procedure:

- Certificates of completion of approved courses/modules (see list of approved courses) have to be sent directly to the examinations office.
- Certificates of completion for courses/modules without former approval have to be sent to the head of the examinations committee together with the approval form and a course/module description.

If you want to take an additional elective module for your Minor (taking only a part of an elective module is not possible), you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as approved for the Minor and the course credits will be automatically entered for your Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor.

Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.

It is your responsibility to ask the teacher whether you can take part in a course/module.

**Please be aware that you can only use 6 credits for the module psy141 Minor. If you take more Minor courses/modules, these credits cannot be used for your degree. You can still ask the teacher to sign an attendance certificate (download <https://uol.de/en/psychology/master/course-overview>) or module examination form (<https://uol.de/en/course-of-study/exams/neurocognitive-psychology-master-545>) which is sufficient for later applications to prove that you took the additional course/module.**

<b>Type of module</b>	Pflicht / Mandatory

---

### Skills to be acquired in this module

#### Goals of the Module:

Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.

#### Competencies:

- ++ Neuropsychological / neurophysiological knowledge
- + experimental methods
- + data presentation & discussion
- + scientific literature
- + critical & analytical thinking
- + knowledge transfer
- + group work

---

### Module contents

The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.

#### **Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar): winter**

Basics of neurotransmitter systems and psychopharmacology  
Substance Abuse (e.g. psychostimulants, hallucinogenics)  
Depression  
Anxiety Disorders  
Alzheimer's Disease  
Schizophrenia  
psychopathological assessment

The seminar (voluntary) will be given in German as clinicians and patient actors are involved.

#### **Part 2: Psychological interventions within the framework of evidence-based medicine**

**(3 seminars to chose from, one partly in German): summer**

The seminars focus on concepts of evidence based treatment:

- with application to acquired dysfunctions of the brain (2.1)
- to selected psychiatric disorders (2.2)
- with application to trauma- and stress-related psychiatric disorders. Special emphasis is placed on children and adolescents (2.3)

Options:

1. Students attend both parts 2.1 and 2.2
2. Students attend the first four classes of 2.1 in addition to part 2.3

For summer term 2025, the seminars will most likely be restructured.

Examination	Prüfungszeiten	Type of examination
-------------	----------------	---------------------

### Final exam of module

mid-February

The module will be tested with a written exam (2 h) on the contents of the lecture in part 1.

Required active participation for gaining credits:  
1 presentation (or if no presentation is offered in the seminar: reading and discussion of papers)  
participation in discussions on other presentations  
attendance of at least 70% in both seminars in part 2 within one semester (will be checked in StudIP).

## psy170 - Neurophysiology

Module label	Neurophysiology
Module code	psy170
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Debener, Stefan (module responsibility)</li><li>• Debener, Stefan (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.

---

### Skills to be acquired in this module

#### Goals of module:

Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology.

#### Competencies:

++ Neuropsychological / neurophysiological knowledge  
++ experimental methods  
++ statistics & scientific programming  
++ ethics / good scientific practice / professional behavior  
+ group work  
+ project & time management

---

### Module contents

Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in recording EEG data and using EEGLAB, an open-source software toolbox for advanced EEG analysis.

#### Part 1: Neurophysiology and neuroanatomy (lecture): winter

Neurophysiology, EEG, EMG, ECG  
Neuroanatomy  
Time-domain and frequency-domain analysis methods

#### Part 2: EEG recording and analysis (hands-on seminar): winter

In small groups under supervision of the lecturer, all students will record EEG data of their fellow students and will serve as participants for their classmates. We cannot guarantee same-gender groups.  
Recording and analysis of biomedical signals  
Averaging, filtering, signal-to-noise  
Topographical EEG analysis

#### Part 3: EEG analysis with Matlab (hands-on seminar): summer

EEGLAB file I/O, data structure and scripting  
Preprocessing, artefact rejection and artefact correction  
Statistical decomposition  
Event-related potentials, topographical mapping and power spectra  
Illustration of results  
Literatur

## psy181 - Neurocognition

Module label	Neurocognition
Module code	psy181
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Thiel, Christiane Margarete (module responsibility)</li><li>• Thiel, Christiane Margarete (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	

### Goals of module:

Students should be able to recognize and critically evaluate the value of considering neuroscience in the study of psychological topics.

### Competencies:

++ neuropsychological / neurophysiological knowledge  
++ interdisciplinary knowledge & thinking  
++ data presentation & discussion  
++ scientific literature  
+ scientific communication skills  
+ group work

---

### Module contents

Students will first acquire a general understanding of the brain mechanisms of different cognitive functions and the methods used to study these functions. They will then apply this knowledge by discussing current research topics (part 1). Knowledge will be transferred to the relation between the development of the human brain and the cognitive processes it supports (part 2).

#### Part 1: Introduction to cognitive neuroscience (lecture and seminar): winter

Brain and cognition, methods of cognitive neuroscience  
Attention, learning and memory  
Emotional and social behaviour  
Language, executive functions

#### Part 2: Neurocognitive development (seminar): summer

Brain development and cortical plasticity  
Effects of early-life stress on brain development  
Development of object recognition, social cognition, memory, and executive functions

---

## psy190 - Sex and Cognition

Module label	Sex and Cognition
Module code	psy190
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Strüber, Daniel (module responsibility)</li><li>• Strüber, Daniel (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

### Skills to be acquired in this module

#### Goals of module:

Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain's control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.

#### Competencies:

- ++ neuropsychological / neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- ++ data presentation & discussion
- ++ scientific literature
- + critical & analytical thinking
- ++ scientific communication skills
- + group work
- + project & time management

#### Inhalte

### Module contents

#### Part 1: Introduction to the study of sex differences (lecture): winter

The measurement of sex differences  
Sex differences in emotion  
Sex differences in aggression  
Sex differences in cognitive abilities  
Hormones, sexual differentiation, and gender identity  
Sex hormones and play preferences  
Sex differences in hemispheric organization  
Brain size and intelligence

#### Part 2: Sex, brain, and behaviour (seminar): winter

Sex differences in empathy  
The extreme male brain theory of autism (S. Baron-Cohen)  
Sex differences in neuropsychiatric disorders  
Sex differences in stress response  
Social implications of sex differences

## psy201 - Neuropsychology

Module label	Neuropsychology
Module code	psy201
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Debener, Stefan (module responsibility)</li><li>• Debener, Stefan (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.

---

### Skills to be acquired in this module

#### Goals of module:

Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 3), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3).

#### Competencies:

++ neuropsychological / neurophysiological knowledge  
+ interdisciplinary knowledge & thinking  
++ experimental methods  
+ data presentation & discussion  
++ scientific literature  
+ critical & analytical thinking  
+ scientific communication skills

---

### Module contents

**Part 1: Introduction to Clinical Neuropsychology (lecture): winter**  
Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)  
Higher functions (learning & memory, language, emotion, spatial behavior attention)  
Plasticity and disorders (development, learning and reading disabilities, recovery)

**Part 2: Cognitive Neurorehabilitation (seminar): summer**  
Behavioural and neuropsychological approaches  
neurofeedback in neurorehabilitation and ADHD  
memory rehabilitation  
effects of physical activity on cognition  
motor recovery

**Part 3: Topics in Clinical Neuropsychology (seminar; taught partly in German): winter winter (will NOT be offered in winter term 2024/2025!)**  
Clinical neuroanatomy  
Neurodegenerative diseases  
Dementia

Choose either part 2 or part 3!

## psy210 - Applied Cognitive Psychology

Module label	Applied Cognitive Psychology
Module code	psy210
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Rieger, Jochem (module responsibility)</li><li>• Bleichner, Kerstin (module responsibility)</li><li>• Rieger, Jochem (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

### Skills to be acquired in this module

#### Goals of the module:

Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for application. On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation.

#### Competencies:

++ Neuropsychological / neurophysiological knowledge  
+ interdisciplinary knowledge & thinking  
+ experimental methods  
+ scientific literature  
+ ethics / good scientific practice / professional behavior  
+ critical & analytical thinking  
+ scientific communication skills  
+ knowledge transfer

---

### Module contents

The module will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science in to practice. Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature which will be presented, critically analyzed and discussed.

#### Part 1: (Neuro)Cognitive Psychology in the wild I (lecture): summer

- Neurocognitive Psychology with emphasis in real world context
- Methodological considerations: Generalization, validity of theories and research methods
- Information uptake and representation: Sensation, perception, categorization
- Selection of information and capacity: Attention and memory enhancement and failure
- Generation and communication: Language, reading, dyslexia
- Pursuing goals: Thinking, problem solving and acting

#### Part 2: (Neuro)Cognitive Psychology in the wild II (seminar): winter

In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

## psy220 - Human Computer Interaction

Module label	Human Computer Interaction
Module code	psy220
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Rieger, Jochem (module responsibility)</li><li>• Rieger, Jochem (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology or other programs related to the field (e.g. neuroscience, computer science, physics etc.).

---

### Skills to be acquired in this module

#### Goals of module:

The goal of the module is to provide students with basic skills required to plan, implement and evaluate brain computer interfaces as devices for human computer interaction. BCIs are an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation. Importantly, classical BCI-methods can be used for modern data-driven basic neuroscience.

The module is designed as an "enabler course", meaning that ideally students should be able to understand and start independent studies into the BCI-methods. Therefore, it goes into depth instead of breadth. Good programming skills and some active knowledge of high school maths is strongly advised to maximize the learning outcome.

#### Competencies:

- ++ understanding of the foundations of statistical learning techniques
- + basics to understand technical time series processing and machine learning papers
- ++ interdisciplinary knowledge & thinking
- + experimental methods
- ++ statistics & scientific programming
- + critical & analytical thinking
- + scientific communication skills
- + knowledge transfer
- + group work
- + project & time management

---

### Module contents

The module will introduce classic BCI paradigms and brain recoding techniques. However the main focus will be on a deeper understanding of the most important signal processing, machine learning, and performance evaluation techniques. The module combines a lecture on the theoretical foundations a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics.

**Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer**

**Part 2: Hands on BCI implementation (practical seminar): summer**

Topics covered:

- A brief history of BCIs and examples of HCI control and basic neuroscience using BCI techniques.
- Data preprocessing (e.g. filtering, projection techniques) and common artifacts and artifact treatment)

- Feature generation (e.g. fourier transform, spectral estimation techniques, principle components)
- Machine learning for classification and regression (e.g. model parameter optimization in multivariate regression)
- Evaluation (e.g. measures of model quality, cross validation to test model generalization, permutation tests)

Where possible the lecture provides mathematical backgrounds of the data analysis techniques.

The practical seminar implements BCI techniques on a real data set and further elaborates specific topics in seminar form.

---

---

### Skills to be acquired in this module

#### Goals of module:

Students will acquire scientific programming skills as well as specific knowledge of computational methods in neuroscience and cognition. They will learn to judge the appropriateness and complexity of computational problems and solutions.

#### Competencies:

- + Neuropsychological / neurophysiological knowledge
- + experimental methods
- ++ statistics & scientific programming
- + critical & analytical thinking
- + knowledge transfer
- + group work

---

### Module contents

#### Part 1: Introduction to scientific programming I (lecture): winter

Basic data types and structures  
Flow control (conditions, loops, errors)  
Testing and debugging  
Functions

#### Part 2: Introduction to scientific programming II (lecture): summer

Complex data structures  
  
EEG processing  
Frequency analysis methods  
  
Introduction to toolboxes

#### Part 3: Scientific programming I (exercise): winter

Implementation of examples from part 1

#### Part 4: Scientific programming II (exercise): summer

Implementation of examples from part 2

#### Part 5: Computer-controlled experimentation (hands-on seminar): summer

Computer hardware basics  
Scripting and programming experiments  
Combining stimulus delivery with EEG, Eyetracking, etc.  
Temporal precision

---

### Skills to be acquired in this module

#### Goals of module:

Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.

#### Competencies:

++ expert neuropsychological/neurophysiological knowledge  
+ interdisciplinary knowledge & thinking  
+ experimental methods  
++ ethics / good scientific practice / professional behavior  
++ knowledge transfer  
+ project & time management

---

### Module contents

The students will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology. <b>You can only start the practical project if you have passed the exam of psy240 (psy241) Computation in Neuroscience!</b> Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

---

---

## Skills to be acquired in this module

### Goals of module:

Students are able to critically review the scientific literature and current state of knowledge concerning a certain topic in the field of cognitive neuroscience or neuropsychology. Based on this, they are able to develop a specific research question and to design an adequate experiment, acquire data and conduct appropriate statistical analyses, building on previously gained competencies in relevant research methods, computer programming and statistical methods. They know how to critically discuss the results of their study in context of the current literature and how to present their findings at a scientific poster symposium.

### Competencies:

- ++ experimental methods
- + statistics & scientific programming
- ++ data presentation & discussion
- + independent research
- + scientific literature
- + ethics / good scientific practice / professional behavior
- + scientific communication skills
- + knowledge transfer
- + group work
- ++ project & time management

---

## Module contents

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

---

## psy270 - Functional MRI Data Analysis

Module label	Functional MRI Data Analysis
Module code	psy270
Credit points	9.0 KP
Workload	270 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Biology (Master) &gt; Background Modules</li><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li><li>• Master's Programme Neuroscience (Master) &gt; Background Modules</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Gießing, Carsten (module responsibility)</li><li>• Gießing, Carsten (authorised to take exams)</li></ul>

### Prerequisites

Enrolment in Master's programme Neurocognitive Psychology, Neuroscience, or Biology.

---

### Skills to be acquired in this module

#### Goals of module:

Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

#### Competencies:

++ experimental methods  
++ statistics & scientific programming  
+ data presentation & discussion  
++ group work

---

### Module contents

Theoretical knowledge on functional MRI data analysis  
Planning, performance and analysis of functional neuroimaging studies using MATLAB-based software  
Hands-on fMRI data analysis with SPM

---

### Recommended reading

## psy280 - Transcranial Brain Stimulation

<b>Module label</b>	Transcranial Brain Stimulation
<b>Module code</b>	psy280
<b>Credit points</b>	6.0 KP
<b>Workload</b>	180 h
<b>Applicability of the module</b>	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
<b>Responsible persons</b>	<ul style="list-style-type: none"><li>• Herrmann, Christoph Siegfried (module responsibility)</li><li>• Herrmann, Christoph Siegfried (authorised to take exams)</li><li>• Strüber, Daniel (authorised to take exams)</li></ul>

### Prerequisites

Enrolment in Master's programme Neurocognitive Psychology.

---

### Skills to be acquired in this module

#### Goals of module:

Students will gain theoretical and practical knowledge on various non-invasive brain stimulation techniques.

#### Competencies:

- ++ Neuropsychological / neurophysiological knowledge
- ++ experimental methods
- + statistics & scientific programming
- + scientific literature
- + ethics / good scientific practice / professional behaviour

---

### Module contents

In this module, we will introduce the theoretical concepts, neurophysiological underpinnings and neurocognitive as well as clinical applications of various non-invasive brain stimulation techniques such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), and transcranial random noise stimulation (tRNS). A focus will be tACS, because it is especially suited to modulate brain oscillations which have been shown to correlate with cognitive processes.

#### Part 1: Introduction to transcranial brain stimulation (lecture): summer

- Historical overview of brain stimulation
- Different techniques (TMS, tDCS, tACS, tRNS)
- Physiological mechanisms (entrainment, after-effects etc.)
- The use of transcranial brain stimulation in cognitive neuroscience - Experimental parameters (intensity, electrode montage, etc.)
- Pros and cons of TMS vs. tACS
- Technical aspects (artefact correction, modelling current flow, etc.)
- Safety issues
- Ethical considerations of brain stimulation

#### Part 2: Effects of tACS on physiology and cognition (seminar): summer

- Physiology of tACS (on-line and after-effects)
- Modulating cognitive functions (e.g. memory, attention, and perception)
- Clinical applications of tACS
- Hands-on experience in the lab

---

### Skills to be acquired in this module

#### Goals of module:

Students will acquire specific knowledge about ambulatory assessment methods in psychological and public health research. They will know about the historical development of ambulatory assessment methods, the advantages and challenges of these methods and statistical methods for analyzing longitudinal data collected in ambulatory assessment research. Students will generate an own research idea and conduct their own study using ambulatory assessment tools such as e.g. mobile surveys or motion sensors. Students will be able to collect, analyze and present their data using ambulatory assessment tools.

#### Competencies:

- ++ Neuropsychological / neurophysiological knowledge
- ++ experimental methods
- ++ statistics & scientific programming
- + interdisciplinary knowledge & thinking
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking
- + project & time management

---

### Module contents

#### Part 1: Ambulatory Assessment in Psychology and Health Research (lecture): summer

- Definitions and historical overview of ambulatory assessment (AmbA) methods
- Reasons to use AmbA methods
- Introduction to different types of AmbA methods
- Designing a study of daily life
- Examples of usage of AmbA methods in different research fields and different research questions
- Statistical analysis of longitudinal data

#### Part 2: Researching daily life (hands-on seminar): summer

- Formulating hypotheses
- Selecting AmbA procedures and planning administration
- Data collection
- Evaluating the application of AmbA methods
- Analyzing, summarizing and visualizing results

---

-------------	----------------	---------------------

**Final exam of module**

Assignments will be collected during the term.

The module will be tested by a portfolio (consisting of 3 assignments):

- A theoretical background of the planned study and the presentation of the hypothesis (text, max. 1 page) – due before starting data collection
- A visualization of the study results – due after finishing data collection and analysis
- A scientific abstract of the whole study at the end of the seminar – due at the end of the seminar

Required active participation for gaining credits:

- attendance of at least 70% in the seminar within one semester
- recording of AmbA data

## psy110 - Research methods

<b>Module label</b>	Research methods
<b>Module code</b>	psy110
<b>Credit points</b>	12.0 KP
<b>Workload</b>	360 h
<b>Applicability of the module</b>	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
<b>Responsible persons</b>	<ul style="list-style-type: none"><li>• Hildebrandt, Andrea (module responsibility)</li><li>• Hildebrandt, Andrea (authorised to take exams)</li></ul>
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology. Module psy110 is only relevant for students who started their studies before winter term 21/22. (All other students study modules psy111 and psy112.)

### Skills to be acquired in this module

#### Goals of module:

Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.

#### Competencies:

- ++ interdisciplinary knowledge & thinking
- ++ statistics & scientific programming
- ++ data presentation & discussion
- + independent research
- + scientific literature
- ++ ethics / good scientific practice / professional behavior
- ++ critical & analytical thinking
- ++ scientific communication skills
- + group work

---

### Module contents

#### Part 1: Multivariate Statistics I (lecture): winter

- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models
- Path modeling
- Factor analysis (exploratory & confirmatory)
- (Multilevel) Structural equation modeling (SEM linear and non-linear)

#### Part 2: Analysis Methods with R (seminar): winter and summer

- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

#### Part 3: Multivariate Statistics II (lecture): summer

- Supervised and unsupervised statistical learning and prediction
- Regularized regression
- Resampling methods
- Tree-based methods

- Support Vector Machines
- Neural Networks (basics)
- Principal components and clustering

**Part 4: Evaluation research (seminar): summer**

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
- Research synthesis and meta-analysis

## psy121 - Psychological assessment and diagnostics

Module label	Psychological assessment and diagnostics
Module code	psy121
Credit points	12.0 KP
Workload	360 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Hildebrandt, Andrea (module responsibility)</li><li>• Hildebrandt, Andrea (authorised to take exams)</li><li>• Hellmann, Andreas (authorised to take exams)</li><li>• Roheger, Mandy (authorised to take exams)</li><li>• Debener, Stefan (Module counselling)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology.
Skills to be acquired in this module	

### Goals of module:

Students will acquire specific knowledge about psychological assessment, test theory and test construction, and will be trained to utilize this knowledge within a research or test development context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of applied psychometrics and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of test and assessment report generation in written and oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

### Competencies:

- + Neuropsychological / neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking

---

### Module contents

#### Part 1: Introduction to Psychological Assessment (lecture): winter and summer

- Psychological assessment as a decision process – descriptive and prescriptive models
- Introduction to test theories (will be detailed in Part 3)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Classificatory decisions
- Psychometrics to single cases
- Summarizing results and writing reports

#### Part 2: Test Theory and Test Construction (lecture): winter and summer

- Classical test theory
- Generalizability theory
- Latent-State and Trait theory
- Latent variable models for different types of item responses
- Measurement invariance across groups and time
- Network modeling in psychometrics
- Preference modeling for constructing faking-resistant questionnaires and tests

#### Part 3: applied seminars: winter and summer (choose a or b)

##### a: The Assessment Process Applied OR

- Case conceptualization (neuropsychology and clinical psychology)
- Formulating hypotheses
- Selecting assessment procedures and planning administration
- Deciding upon decision rules for data integration

- Evaluating the application of assessment procedures
- Analyzing, summarizing and visualizing results
- Integrating results based on the decision rules
- Writing a psychological/assessment report
- Discussing a report with the client

**b: Test Construction Applied**

- Construct conceptualization
- Deciding upon the response format
- Item mining
- Item analysis
- Test quality report and test manual

**Part 4: Assessment in Clinical Neuropsychology (seminar): summer**

- specific knowledge
- exercises in testing / practising tests

<b>Recommended reading</b>	Will be specified in the courses.

## psy230 - Neuromodulation of Cognition

Module label	Neuromodulation of Cognition
Module code	psy230
Credit points	6.0 KP
Workload	180 h
Applicability of the module	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li></ul>
Responsible persons	<ul style="list-style-type: none"><li>• Rieger, Jochem (module responsibility)</li><li>• Rieger, Jochem (authorised to take exams)</li></ul>
Prerequisites	Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.
Skills to be acquired in this module	

### Goals of module:

The aim of this module is to provide students with a theoretical background on how cognitive functions can be altered via neuromodulation.

### Competencies:

++ Neuropsychological / neurophysiological knowledge  
+ interdisciplinary knowledge & thinking  
++ experimental methods  
+ ethics / good scientific practice / professional behavior  
+ critical & analytical thinking  
+ scientific communication skills

---

### Module contents

Students will be introduced to the concepts of neuromodulation and the application of theoretical knowledge of neurophysiology to the modulation of cognitive functions.

#### Part 1: Neuromodulation of cognition (lecture): winter

Neurotransmitter and neuromodulator systems  
Neuropharmacological intervention  
Mechanisms of neural plasticity  
Neurofeedback  
Electric and magnetic brain stimulation  
Therapeutical applications

#### Part 2: Topics in Neuromodulation (seminar): winter

Psychological and therapeutical effects of neuromodulation  
Modulation of neuronal network function  
Deep brain stimulation for therapeutical modulation

---

## psy250 - Internship

<b>Module label</b>	Internship	
<b>Module code</b>	psy250	
<b>Credit points</b>	15.0 KP	
<b>Workload</b>	450 h	
<b>Applicability of the module</b>	<ul style="list-style-type: none"> <li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li> </ul>	
<b>Responsible persons</b>	<ul style="list-style-type: none"> <li>• Kranczoch-Debener, Cornelia (module responsibility)</li> <li>• Kranczoch-Debener, Cornelia (authorised to take exams)</li> </ul>	
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology. Module psy250 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy251.)	
<b>Skills to be acquired in this module</b>	<p><b>Goals of module:</b> Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.</p> <p><b>Competencies:</b> ++ expert neuropsychological/neurophysiological knowledge + interdisciplinary knowledge &amp; thinking + experimental methods ++ ethics / good scientific practice / professional behavior ++ knowledge transfer + project &amp; time management</p>	
<b>Module contents</b>	The student will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

<b>Links</b>	Information on internships and necessary forms: <a href="https://uol.de/en/psychology/master/course-overview/">https://uol.de/en/psychology/master/course-overview/</a>	
<b>Languages of instruction</b>	English , German	
<b>Duration (semesters)</b>	1 Semester	
<b>Module frequency</b>	irregular	
<b>Module capacity</b>	unlimited	
<b>Reference text</b>	<p>The internship lasts 450 hours (12 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part. Your supervisor must be a psychologist. Please note that details are regulated in the exam regulations. A blank internship certificate and the report form can be found on the programme website. To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kranczoch.</p> <p>Please note that, due to the Coronavirus pandemic, you have to hand in a risk assessment form before starting your internship. You can find this form in English or German in the list of supporting documents!</p>	
<b>Type of module</b>	Pflicht / Mandatory	
<b>Module level</b>	MM (Mastermodul / Master module)	
<b>Teaching/Learning method</b>	internship at (external) institution	
<b>Examination</b>	Prüfungszeiten	Type of examination
<b>Final exam of module</b>	Individual; 2-3 possibilities per semester to present the internship to other students	The students have to hand in a written report (2-3 pages) and give a short presentation about their internship. They have to show a certificate from the institution at which they performed the internship. The internship is evaluated as pass/fail.
<b>Type of course</b>	Practical training	
<b>SWS</b>	0	
<b>Frequency</b>	SuSe and WiSe	

## psy120 - Psychological assessment and diagnostics

<b>Module label</b>	Psychological assessment and diagnostics			
<b>Module code</b>	psy120			
<b>Credit points</b>	9.0 KP			
<b>Workload</b>	270 h			
<b>Applicability of the module</b>	<ul style="list-style-type: none"> <li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li> </ul>			
<b>Responsible persons</b>	<ul style="list-style-type: none"> <li>• Hildebrandt, Andrea (module responsibility)</li> <li>• Hellmann, Andreas (module responsibility)</li> <li>• Hellmann, Andreas (authorised to take exams)</li> <li>• Hildebrandt, Andrea (authorised to take exams)</li> <li>• Debener, Stefan (Module counselling)</li> </ul>			
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology. Module psy120 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy121.)			
<b>Skills to be acquired in this module</b>	<p><b>**Goals of module:**</b> Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module. <b>**Competencies:**</b> + Neuropsychological / neurophysiological knowledge + interdisciplinary knowledge &amp; thinking + ethics / good scientific practice / professional behavior + critical &amp; analytical thinking</p>			
<b>Module contents</b>	<p><b>**Part 1: Introduction to Psychological Assessment (lecture)**</b> - Psychological assessment as a decision process – descriptive and prescriptive models - Theories of reliability (classical and modern approaches) - Theories of validity (classical and modern approaches) - Assessment methods, their construction and design, quality criteria - The logic of decision making in the assessment process - Psychometrics to single cases - Summarizing results and writing reports <b>**Part 2: Psychological Testing (seminar)**</b> - Psychometric bases of tests and questionnaires - Types of tests and questionnaires - Challenges in psychological testing (for example faking good vs. bad) - Examples of published tests and questionnaires - Exercising test applications, scoring and result interpretations <b>**Part 3: Assessment in Clinical Neuropsychology (seminar)**</b> - specific knowledge - exercises in testing / practising tests</p>			
<b>Recommended reading</b>	Will be specified in the courses.			
<b>Links</b>				
<b>Language of instruction</b>	English			
<b>Duration (semesters)</b>	2 Semester			
<b>Module frequency</b>	The module will be offered every winter term.			
<b>Module capacity</b>	unlimited			
<b>Reference text</b>	If you want to earn the bonus, you need to use the official bonus sheet to prove your attendance which will be handed to you in the beginning of the winter term.			
Examination	Prüfungszeiten	Type of examination		
<b>Final exam of module</b>	summer term	The module will be tested by a practical exercise (test application and protocol). Bonus for two presentations or test executions (max.) and attendance of at least 70% in the seminars. Group presentations can be counted as one half.

## psy140 - Minor

<b>Module label</b>	Minor	
<b>Module code</b>	psy140	
<b>Credit points</b>	9.0 KP	
<b>Workload</b>	270 h	
<b>Applicability of the module</b>	<ul style="list-style-type: none"> <li>• Master's Programme Neurocognitive Psychology (Master) &gt; Mastermodule</li> </ul>	
<b>Responsible persons</b>	<ul style="list-style-type: none"> <li>• Bleichner, Kerstin (Module counselling)</li> <li>• Rieger, Jochem (Module counselling)</li> </ul>	
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology. Module psy140 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy141.)	
<b>Skills to be acquired in this module</b>	**Goals of module:** Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile. **Competencies** ++ interdisciplinary knowledge & thinking	
<b>Module contents</b>	Students can take Master modules and courses from the fields • Biology • Neurosciences • Computer Science • Physics • Mathematics • Pedagogy • Philosophy • related fields The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules. A list of approved courses/modules can be found on our website. Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module). Students whose first language is not German, may take German classes. We recommend taking modules/courses that strengthen your own professional profile.

<b>Languages of instruction</b>	English , German	
<b>Duration (semesters)</b>	1 Semester	
<b>Module frequency</b>	irregular	
<b>Module capacity</b>	unlimited	
<b>Reference text</b>	PLEASE NOTE: • If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website) • Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module. • It is your responsibility to ask the teacher whether you can take part.	
<b>Examination</b>	<b>Prüfungszeiten</b>	<b>Type of examination</b>
<b>Final exam of module</b>		If grades are earned in the minor, those are counted as pass/fail. Certificates for grades can be separately requested from the examination office.
<b>Type of course</b>	Course or seminar  <i>Please refer to the module description for information on the courses you can have counted towards psy140 Minor.</i>

# Abschlussmodul

## mam - Master's Degree Module

<b>Module label</b>	Master's Degree Module
<b>Module code</b>	mam
<b>Credit points</b>	30.0 KP
<b>Workload</b>	900 h (  attendance in the lab meetings: 28h (2 SWS); thesis work: 872 hours  )
<b>Applicability of the module</b>	<ul style="list-style-type: none"><li>• Master's Programme Neurocognitive Psychology (Master) &gt; Abschlussmodul</li></ul>
<b>Responsible persons</b>	<ul style="list-style-type: none"><li>• Al-Zubaidi, Arkan (authorised to take exams)</li><li>• Bleichner, Martin Georg (authorised to take exams)</li><li>• Debener, Stefan (authorised to take exams)</li><li>• Gießing, Carsten (authorised to take exams)</li><li>• Hellmann, Andreas (authorised to take exams)</li><li>• Rieger, Jochem (authorised to take exams)</li><li>• Roheger, Mandy (authorised to take exams)</li><li>• Herrmann, Christoph Siegfried (authorised to take exams)</li><li>• Hildebrandt, Andrea (authorised to take exams)</li><li>• Hildebrandt, Helmut (authorised to take exams)</li><li>• Kranczioch-Debener, Cornelia (authorised to take exams)</li><li>• Rosemann, Stephanie (authorised to take exams)</li><li>• Özyurt, Jale Nur (authorised to take exams)</li><li>• Stecher, Heiko (authorised to take exams)</li><li>• Strüber, Daniel (authorised to take exams)</li><li>• Thiel, Christiane Margarete (authorised to take exams)</li><li>• Puschmann, Sebastian (authorised to take exams)</li><li>• Vogeti, Sreekari (authorised to take exams)</li><li>• Jäger, Manuela (authorised to take exams)</li><li>• Daeglau, Mareike (authorised to take exams)</li><li>• Kristanto, Daniel (authorised to take exams)</li><li>• Jacobsen, Nadine (authorised to take exams)</li><li>• Short, Cassie Ann (authorised to take exams)</li><li>• Abdolalizadeh Saleh, Amirhussein (authorised to take exams)</li><li>• Angonese, Giulia (authorised to take exams)</li><li>• Barton, Simon (authorised to take exams)</li><li>• Burkhardt, Micha Jannis (authorised to take exams)</li><li>• Kiene, Franziska (authorised to take exams)</li><li>• Klapprott, Melanie (authorised to take exams)</li><li>• Mahadevan, Rachana (authorised to take exams)</li><li>• Marek, Merle (authorised to take exams)</li><li>• Marsh, Nina (authorised to take exams)</li><li>• Müller, Christina (authorised to take exams)</li><li>• Onken, Marc (authorised to take exams)</li><li>• Postin, Danilo (authorised to take exams)</li><li>• Spanknebel, Sebastian (authorised to take exams)</li><li>• Zaggia, Leonardo (authorised to take exams)</li><li>• Kumaravel, Velu Prabhakar (authorised to take exams)</li><li>• Kiebs, Maximilian (authorised to take exams)</li><li>• Michalke, Leo (authorised to take exams)</li><li>• Park, Seonghun (authorised to take exams)</li></ul>
<b>Further responsible persons</b>	thesis supervisors; Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for mam.
<b>Prerequisites</b>	Enrolment in Master's programme Neurocognitive Psychology. Completion of at least 60 credit points in other modules including module psy240 (psy241) (Computation in Neuroscience). Assignment of a topic by thesis supervisor and official application with the examination office.

---

## Skills to be acquired in this module

### Goals of module:

Students will demonstrate that they are able to perform a psychological or neuroscientific experiment and/or analyze data originating from such experiments by means of methods according to contemporary scientific standards. Metaanalyses are accepted if they were conducted by means of up to date tools for data extraction and analyses, according to best practices outlined in relevant community guidelines, such as for example Cochrane. In addition, the students will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

### Competencies:

- ++ experimental methods
- + statistics & scientific programming
- + data presentation & discussion
- ++ independent research
- + scientific literature
- ++ scientific English / writing
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking
- + scientific communication skills
- + knowledge transfer
- ++ project & time management

---

## Module contents

### Part 1: Master's thesis

The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.

### Part 2: Master's colloquium

The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
