bam - Bachelor's Thesis Module	29

Basismodule

phy509 - Mechanics

Module label	Mechanics			
Module code	phy509			
Credit points	6.0 KP			
Workload	180 h (Attendance: 84 hrs Self study: 96 hrs)			
Applicability of the module	<ul style="list-style-type: none"> Bachelor's Programme Engineering Physics (Bachelor) > Basismodule 			
Responsible persons	<ul style="list-style-type: none"> Kittel, Achim (authorised to take exams) Kühn, Martin (authorised to take exams) Lienau, Christoph (authorised to take exams) Nilius, Niklas (authorised to take exams) Peinke, Joachim (authorised to take exams) Schäfer, Sascha (authorised to take exams) Uppenkamp, Stefan (authorised to take exams) Wollenhaupt, Matthias (authorised to take exams) Kühn, Martin (module responsibility) 			
Prerequisites	Basic knowledge of mathematics acc. the pre-course of mathematics			
Skills to be acquired in this module	Introduction into scientific reasoning; understanding the basic physical principles that govern physical behaviour in the real world, application of these principles to solve practical problems. General introduction to the fundamentals of experimental mechanics.			
Module contents	<ul style="list-style-type: none"> Scientific reasoning Space and Time Kinematics Dynamics Motion in accelerated frames Work and Energy Laws of Conservation Physics of rigid bodies Deformable bodies and fluid media Oscillations Waves 			
Recommended reading	D. Halliday, R. Resnick, J. Walker, S. W. Koch: Fundamentals of physics / Physik. Wiley-VCH, Weinheim, 2003 P. A. Tipler, G. Mosca, D. Pelte, M. Basler: Physics/Physik. Spektrum Akademischer Verlag, 2004 W. Demtröder: Experimentalphysik, Band 1: Mechanik und Wärme. Springer, Berlin, 2004 L. Bergmann, C. Schäfer, H. Gobrecht: Lehrbuch der Experimentalphysik, Band 1: Mechanik, Relativität, Wärme. De Gruyter, Berlin, 1998

phy513 - Basic Laboratory

Module label	Basic Laboratory	
Module code	phy513	
Credit points	9.0 KP	
Workload	270 h (270 h (Präsenzzeit 140h, Selbststudium: 130h))	
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Basismodule 	
Responsible persons	<ul style="list-style-type: none"> • Krüger, Michael (module responsibility) • Koch, Sandra (module responsibility) • Huke, Philipp (authorised to take exams) • Hölling, Michael (authorised to take exams) • Koch, Sandra (authorised to take exams) • Krüger, Michael (authorised to take exams) • Neu, Walter (authorised to take exams) • Reck, Martin (authorised to take exams) • Schellenberg, Markus (authorised to take exams) • Schüning, Thomas (authorised to take exams) • Silies, Martin (authorised to take exams) • Teubner, Ulrich (authorised to take exams) 	
Prerequisites	- Simultaneous hearing of Mechanics & Electrodynamics and Optics lectures - Course I is a prerequisite for course II	
Skills to be acquired in this module	Students will learn the basics of physical experimentation, the use of modern instrumentation, data collection and analysis using appropriate hardware and software. They deepen lecture material through their own experiments. They acquire the skills for planning, implementation, evaluation, analysis, and reporting of physical experiments and presenting of results using multimedia tools. By working in groups, they gain competencies in the areas of teamwork and communication.	
Module contents	Introduction to software for scientific data analysis, analysis and assessment of measurement uncertainties, analysis and verification of measured data, fitting of functions to measured data, dealing with modern measurement techniques, carrying out experiments in the fields of mechanics, electricity, optics, nuclear radiation, electronics, signal acquisition, signal processing.	
Recommended reading	See http://www.physik.uni-oldenburg.de/Docs/praktika/45394.html for the first semester and will be provided via Stud-IP for the second semester.

Workload attendance time	112 h	

phy520 - Electrodynamics and Optics

Module label	Electrodynamics and Optics
Module code	phy520
Credit points	9.0 KP
Workload	270 h (Attendance 112 hrs Self study: 158 hrs)
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Basismodule
Responsible persons	<ul style="list-style-type: none"> • Groß, Petra (authorised to take exams) • Kittel, Achim (authorised to take exams) • Lienau, Christoph (authorised to take exams) • Nilius, Niklas (authorised to take exams) • Peinke, Joachim (authorised to take exams) • Schäfer, Sascha (authorised to take exams) • Schellenberg, Markus (authorised to take exams) • Uppenkamp, Stefan (authorised to take exams) • van de Par, Steven (authorised to take exams) • Wollenhaupt, Matthias (authorised to take exams) • Silies, Martin (authorised to take exams) • van de Par, Steven (module responsibility)
Prerequisites	Mechanics
Skills to be acquired in this module	<p>Electrodynamics and optics: Students will be able to understand the electric and magnetic phenomena and their treatment by an electromagnetic field including electromagnetic waves - with special emphasis on light.</p> <p>Optical systems: The students should be able with the help of optics basics to apply the optics to solve questions of informatics and measurement technology illumination technology materials processing with laser beams and the development of optical mechanical instruments and systems to implement the field of optics and to solve engineering questions.</p>
Module contents	<p>Electrodynamics and optics: Basics of Electrostatics, matter in an electric field, the magnetic field, motion of charges in electric and magnetic fields, magnetism in matter, induction, electromagnetic waves, light as electromagnetic wave</p> <p>Optical systems: Summary of optical basics, technical optics as basics, optical rays, behaviour and properties of electromagnetic waves, application of wave optic properties, area of validity and law of geometric optics, application of ray optic laws, optical image, imaging construction elements, ray bundle, bundle limitation, physics of rays and light, colours, optical systems, set-up and function of selected optical systems of the illumination technology, measurement technology, material processing with laser beams, Communication technology</p>

phy540 - Mathematical Methods for Physics and Engineering I

Module label	Mathematical Methods for Physics and Engineering I			
Module code	phy540			
Credit points	9.0 KP			
Workload	270 h (Präsenzzeit: 84 Stunden Selbststudium: 186 Stunden)			
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Basismodule • Bachelor's Programme Physics, Engineering and Medicine (Bachelor) > Basismodule 			
Responsible persons	<ul style="list-style-type: none"> • Uppenkamp, Stefan (module responsibility) • Doclo, Simon (authorised to take exams) • Hohmann, Volker (authorised to take exams) • Uppenkamp, Stefan (authorised to take exams) • van de Par, Steven (authorised to take exams) 			
Prerequisites	Abiturwissen Mathematik			
Skills to be acquired in this module	To obtain basic knowledge in application of mathematical methods to solve problems in physics and engineering			
Module contents	Vector algebra (vectors in 2- and 3-space, vector products, planes, lines, cylindrical and spherical coordinates) Preliminary calculus (elementary functions, limits, series, differentiation, integration) Preliminary complex analysis Introduction to ordinary differential equations Partial differentiation Vector calculus (scalar and vector fields, vector operators, line, surface and volume integrals, divergence and Stokes' theorem)			
Recommended reading	K. F. Riley, M. P. Hobson, S. J. Bence: Mathematical methods for physics and engineering. Third edition, 2006

Aufbaumodule

phy031 - Atomic and Molecular Physics

Module label	Atomic and Molecular Physics	
Module code	phy031	
Credit points	6.0 KP	
Workload	180 h (Präsenzzeit 84h, Selbststudium: 96h)	
Applicability of the module	<ul style="list-style-type: none">• Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule	
Responsible persons	<ul style="list-style-type: none">• Neu, Walter (module responsibility)• Bayer, Tim-Daniel (authorised to take exams)• Englert, Lars (authorised to take exams)• Groß, Petra (authorised to take exams)• Kittel, Achim (authorised to take exams)• Schäfer, Sascha (authorised to take exams)• Lienau, Christoph (authorised to take exams)• Neu, Walter (authorised to take exams)• Nilius, Niklas (authorised to take exams)• Pengel, Dominik (authorised to take exams)• Wollenhaupt, Matthias (authorised to take exams)• Silies, Martin (authorised to take exams)	
Prerequisites	Courses in Experimental Physics I and II and Mathematics I & II	
Skills to be acquired in this module	The students are competent on the fundamental principles of atomic and molecular physics. They are familiar to classical description and have established a quantum mechanical understanding. The exercises and tutorials deepen the knowledge by assigning appropriate homework.	
Module contents	<ul style="list-style-type: none">• concepts of atomic models• angular momentum, spin, and magnetic properties of the electrons• interaction with electric and magnetic fields• wave-particle dualism of electrons and photons• introduction to quantum mechanics: wave packets, Schrodinger equation, Heisenberg uncertainty principle• relativity and Dirac equation• coupling schemes and atomic spectra• Bosons and fermions• periodic system of the elements• introduction to molecular physics• molecular spectra• applications: the electron in the box, the harmonic oscillator, the hydrogen atom, fine and hyperfine structure, line shapes, spectroscopy and modern experimental methods

Prerequisites	courses experimental physics 1, 2, 3			
Skills to be acquired in this module	Procurement of fundamental principles of thermodynamics and statistical physics to enable students to understand and analyze formulation of relations for particle ensembles with appropriate magnitudes.			
Module contents	I. PHENOMENOLOGICAL THERMODYNAMICS A) Fundamental Concepts Temperature, thermal equilibrium, 0. law, heat, internal energy, work from a system, first law, thermodynamic states and processes, thermodynamic cycles, B) Application of Fundamental Concepts Carnot and Stirling cycle, second law, entropy, Legendre Transform and potential functions (Free Energy, Enthalpy, Gibbs Potential), irreversible processes and change in entropy, C) Open Systems, real Gases, phase transitions II. STATISTICS Isotropic particle distribution in space Diffusion (1-dim) via particle hopping entropy changes with volume alteration energy distribution for distinguishable particles (Boltzmann- and Maxwell-distribution) energy distribution for non-distinguishable Particles (Fermi-Dirac-, and Bose-Einstein-distribution) Black Body Radiator (Plancks law) Saha-Equation

Prerequisites	Lecture "Electronics"
Skills to be acquired in this module	<p>Laboratory: Knowledge and experience about experimental work, managing experimental work and evaluating results.</p> <p>Design Fundamentals: Achieving basic knowledge in reading, understanding and production of technical drawings, getting and overview about the features of CAD-Software, knowing about the basic principles of designing and dimensioning of machine elements.</p>
Module contents	<p>Laboratory: Experiments in the field of electronics and measurement technique</p> <p>Design Fundamentals: Rules and Standards for Technical Drawings,</p> <p>Design Phases:</p> <ul style="list-style-type: none"> • Functional requirements, performance specifications • Design methodology • Decision processes • Detailing • Manufacturing Drawings • Grouping of parts

Basic Machine Elements:

- Frames
- Joints
- Bearings
- Sealing

Recommended reading		Laboratory: Specific project descriptions Design Fundamentals: ISO- and EN- Standards, Childs: Mechanical Design, Ulrich/Eppinger: Product Design and Development, Matousek: Engineering Design

Prerequisites	Mechanics, Electrodynamics and Optics, Atomic and Molecular Physics, Mathematical Methods for Physics and Engineering I-III. These courses are mandatory prerequisites.
Skills to be acquired in this module	The students will gain knowledge of the fundamental principles of quantum mechanics and their application to the modelling of the equilibrium structure of different atomic, molecular and solid state material systems. The course will enhance their competence to understand and apply basic theoretical concepts in quantum mechanics. The students will learn how to rationalize quantum effects and wave phenomena in a variety of material systems and will become acquainted with strategies how to explain the equilibrium steady-state structure of different types of matter. The students will also be introduced into the nonequilibrium dynamics of selected quantum systems.
Module contents	<p>The course aims at providing a modern introduction into quantum mechanical foundations of the structure of atomic, molecular and solid state systems. It will bridge the gap between „Atomic and Molecular Physics“ and „Solid State Physics.“ The following content will be covered:</p> <ol style="list-style-type: none"> 1. Introduction into quantum mechanics 2. Quantum theory: techniques and applications 3. Atomic and molecular structure 4. Light-matter interaction 5. Molecular spectroscopy 6. Introduction into quantum dynamics 7. Molecular reaction dynamics 8. Macromolecules and Aggregates 9. Solid State Materials <p>The course will be held at the level of an advanced course in physical chemistry and requires basic knowledge of quantum mechanics as introduced in "Atomic and Molecular Physics".</p>
Recommended reading	<ul style="list-style-type: none"> • P. W. Atkins, J. de Paulo, Physical Chemistry, 9th Edition, W. H. Freeman (2009) • W. Prerequisites				
Skills to be acquired in this module	The students are enabled to establish an overview on principles and applications of engineering physics. The introduction to a specific field of specialization yields a basic knowledge on theoretical and experimental concepts and deepens on selected applications.			
Module contents	<p>Specialization</p> <p>Laser and Optics: Introduction to relevant research fields in Laser and Optics. Knowledge of the characteristics of waves, optical radiation, design und function of optical elements and instruments, basic design of photonic systems and optical metrology.</p> <p>Biomedical Physics & Acoustics: Overview of the research fields in Oldenburg related to biomedical physics and acoustics (acoustical signal processing, audiology, biomedical signal processing, neuro-sensory science and systems, medical radiation physics, medical imaging, noise control and vibration)</p> <p>Renewable Energies: Introduction into the areas of renewable energies, with special emphasis on energy conversion and utilization, based on complex physical models. The student will be able to understand the fundamental principles of the field renewable energies.</p>

phy570 - Electronics

Module label	Electronics			
Module code	phy570			
Credit points	6.0 KP			
Workload	180 h (Attendance: 70 hrs Self study: 110 hrs)			
Applicability of the module	<ul style="list-style-type: none"> Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule 			
Responsible persons	<ul style="list-style-type: none"> Haja, Andreas (authorised to take exams) Haja, Andreas (module responsibility) 			
Prerequisites	Basic Lab. I, Math. Methods for Physics and Engineering I			
Skills to be acquired in this module	The students acquire basic competences to set-up and analyze digital and analog electronic circuits; furthermore basic knowledge for measurement methods as well as for handling measurement systems are imparted			
Module contents	logic functions and gates, digital circuit analysis and synthesis, flip-flops, digital counters and memories, A/D- and D/A converters, programmable logic devices , impedances, inductances and capacitances, complex alternating electric quantities, RCL-filter circuits, semiconductor circuits, rectifier circuits, operational amplifier circuits			
Recommended reading	Excerpts from lecture script Weddigen, Jüngst: Elektronik, Springer Verlag Böhmer: Elemente der angewandten Elektronik, Vieweg Verlag Hering, Bressler, Gutekunst: Elektronik für Ingenieure und Naturwissenschaftler, Springer Verlag, 2005 Hill: The Art of Electronics, Cambridge University Press, 1989

phy581 - Materials Sciences

Module label	Materials Sciences	
Module code	phy581	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs Self study: 124 hrs)	
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule 	
Responsible persons	<ul style="list-style-type: none"> • Held, Esther (module responsibility) • Held, Esther (authorised to take exams) • Helms, Olaf (authorised to take exams) • Lünemann, Martin (authorised to take exams) • Schüning, Thomas (authorised to take exams) 	
Prerequisites		
Skills to be acquired in this module	The students are able - outgoing from the microscopic structure of engineering materials - to understand its macroscopic properties, so that they are able to involve the behaviour of engineering materials into engineering requirements independently.	
Module contents	<p>Introduction Classification of engineering materials in groups Constitution of engineering materials (microscopic structure, macroscopic properties) Physical basics of constitution: Constitution of single phase solids (crystals, amorphous materials, real materials) Constitution of multi-phase materials Basic diagrams of constitution of binary alloys Crystallisation Diffusion Properties of materials Physical properties Mechanical properties (plastic deformation, crack growth, friction, wear) Groups of materials (metals, ceramics, polymers) Selected materials (iron, aluminium, copper) Testing of materials (an overview of methods)</p>

Module label	Control Systems			
Module code	phy590			
Credit points	6.0 KP			
Workload	180 h (120 h)			
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule 			
Responsible persons	<ul style="list-style-type: none"> • Huke, Philipp (authorised to take exams) • Hein, Andreas (authorised to take exams) • Huke, Philipp (module responsibility) • Huke, Philipp (Module counselling) 			
Prerequisites				
Skills to be acquired in this module	<p>Understanding of basic open- and closed-loop control systems. Basic concepts for modelling of systems, design and development of controllers. Description of controller design using differential equations. Understanding the response function of a control-loop and testing the control structure with respect to instabilities.</p> <p>The students will achieve the competence to work into technical realization of controlled systems and to develop approaches for optimization.</p>			
Module contents	<p>The module contains: Design procedures for controllers, Basic description of components, development, understanding and working with functional diagrams, simulation and modelling, root locus, stability, controller types, linear control systems with reference- and disturbance response function.</p>

phy501 - Numerical Methods

Module label	Numerical Methods	
Module code	phy501	
Credit points	6.0 KP	
Workload	180 h (180h (attendance: 56h; self-study: 124h))	
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule 	
Responsible persons	<ul style="list-style-type: none"> • Anemüller, Jörn (authorised to take exams) • Brand, Thomas (authorised to take exams) • Dietz, Mathias (authorised to take exams) • Hartmann, Alexander (authorised to take exams) • Hohmann, Volker (authorised to take exams) • Lücke, Jörg (authorised to take exams) • Meyer, Bernd (authorised to take exams) • Petrovic, Cornelia (authorised to take exams) • Hohmann, Volker (module responsibility) 	
Prerequisites	Course Mathematical Methods II passed with a grade of at least 4.0.	
Skills to be acquired in this module	Students acquire theoretical knowledge of basic numerical methods and practical skills to apply these methods to physical problems within all areas of experimental, theoretical and applied physics.	
Module contents	<p>Basic concepts of numerical Mathematics are introduced and applied to Physics problems. Topics include: Finite number representation and numerical errors, linear and nonlinear systems of equations, numerical differentiation and integration, function minimization and model fitting, discrete Fourier analysis, ordinary and partial differential equations. The learned numerical methods will be partly implemented (programmed) and applied to basic problems from mechanics, electrodynamics, etc. in the exercises. The problems are chosen so that analytical solutions are available in most cases. In this way, the quality of the numerical methods can be assessed by comparing numerical and analytical solutions. Programming will be done in C or, preferably, in Matlab, which is a powerful package for numerical computing. Matlab offers easy, portable programming, comfortable visualization tools and already implements most of the numerical methods introduced in this course. These built-in functions can be compared to own implementations or used in the exercises in some cases when own implementations are too costly. The tutorials provide basic programming support.</p>

phy502 - Solid State Physics

Module label	Solid State Physics			
Module code	phy502			
Credit points	6.0 KP			
Workload	180 h (180 h (Präsenzzeit 84h, Selbststudium: 96h))			
Applicability of the module	<ul style="list-style-type: none"> • Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule 			
Responsible persons	<ul style="list-style-type: none"> • Nilius, Niklas (module responsibility) • Kittel, Achim (authorised to take exams) • Lienau, Christoph (authorised to take exams) • Nilius, Niklas (authorised to take exams) • Schäfer, Sascha (authorised to take exams) • Wollenhaupt, Matthias (authorised to take exams) 			
Prerequisites	Experimental Physics I-IV, Quantum structure of Matter			
Skills to be acquired in this module	The students gain comprehensive insights into solid state physics and associated phenomena. They learn how symmetry operations are interconnected with structural parameters of solids. From the chemical interaction between atoms, the binding properties and thermodynamic stability of solids are derived. The oscillatory motion of atoms in simple 1D chain models is extended towards the dynamic response of crystals, while a statistical analysis leads to the concept of heat capacity and heat conductance of solids. The quantum mechanical description of particles in a box is exploited to develop the model of free and quasi-free electrons as well as the band structure of solids. The students are made familiar with the economically relevant fields of semiconductor and low temperature physics as well as magnetism.			
Module contents	Crystal structures and symmetries, Bravais lattices, Reciprocal lattice and translational symmetry, Brillouin zone, Binding principles in solids (covalent, ionic, metallic, van-der Waals and hydrogen bonding), Dynamic properties of solids, Phonons, Atomic chain models, Dispersion relation, Specific heat, Heat conductance, Electrons in solids, Model of free and quasi-free electrons, State density, Fermi energy, Electrons in periodic potentials, Bloch theorem, Band model of electrons, Effective mass, Band gap, Occupation numbers, Semiconductors, Doping, Dielectric properties, Magnetic properties, Dia-, para- and ferro magnetism, Superconductivity

phy533 - Metrology

Module label	Metrology
Module code	phy533
Credit points	6.0 KP
Workload	180 h (180 h (Präsenzzeit 56h, Selbststudium: 124h))
Applicability of the module	<ul style="list-style-type: none">• Bachelor's Programme Engineering Physics (Bachelor) > Aufbaumodule
Responsible persons	<ul style="list-style-type: none">• Meyer, Bernd (module responsibility)• Meyer, Bernd (Module counselling)• Doclo, Simon (authorised to take exams)• Hohmann, Volker (authorised to take exams)• Huke, Philipp (authorised to take exams)• Kittel, Achim (authorised to take exams)• Kollmeier, Birger (authorised to take exams)• Meyer, Bernd (authorised to take exams)
Prerequisites	
Skills to be acquired in this module	The students will learn basic principles of measurement technology and signal processing as well as the application of complex measurement methods to extract the measurement information. They will acquire skills to carry out advanced internships and experimental work in research laboratories. Further, they will develop the competence for analytical thinking in the evaluation of measurement situations, which will enable them to solve measurement problems such as those encountered in different branches of industry (e.g. automotive and semiconductor industries; analytical, pharmaceutical and medical industries).
Module contents	<p>Lecture Measurement Technology:</p> <p>Sensors for measuring different physical quantities (e.g. force, temperature, charge, electric and magnetic fields, energies of particles and radiation), high-resolution measurements of small signals, influence of interfering signals, linearization and reduction of interfering variables through compensation methods, noise reduction, phase-sensitive detector, complex measurement systems such as nuclear magnetic resonance, electron resonance, laser measurement technology (including pump / probe systems), spatially resolved measurement methods such as magnetic resonance tomography, electron and scanning probe microscopy.</p> <p>Lecture Signal Processing:</p> <p>Characterization and processing of measurement signals (linear signal analysis, filtering), characterization and elimination of interferences (empirical statistics, noise in physical systems, correlation analysis, phase-sensitive amplifiers, methods of averaging), signal digitization, digital signal processing</p> <p>Signal processing (including time-variant filtering, complex processing algorithms)</p> <p>Filterung, komplexe Verarbeitungsalgorithmen)</p>
