Mastermodule

psy111 - Research methods I - Statistical Modeling

Modulbezeichnung	Research methods I - Statistical Modeling
Modulkürzel	psy111
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	<p>Hildebrandt, Andrea (Modulverantwortung)</p> <p>Hildebrandt, Andrea (Prüfungsberechtigt)</p>
Teilnahmevoraussetzungen	Enrolment in Master's programme Neurocognitive Psychology.
Kompetenzziele	<p>Goals of module: After completion of this module, students will have basic knowledge in managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They can apply the statistical methodology in terms of good scientific practice and interpret, evaluate and synthesize empirical results in basic and applied research contexts. Students will be aware of statistical misconceptions and they can overcome them.</p> <p>Competencies: ++ interdisciplinary knowledge & thinking ++ statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature ++ ethics / good scientific practice / professional behavior ++ critical & analytical thinking ++ scientific communication skills + group work</p>
Modulinhalte	<p>Part 1: Multivariate statistical modeling</p> <ul style="list-style-type: none"> Graphical representation of multivariate data The Generalized Linear Modeling (GLM) framework Multiple and moderated linear regression with quantitative and qualitative predictors Logistic regression models Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM) Non-linear regression models (Polynomial regression, regression splines and local regression) Path modeling Factor analysis (exploratory & confirmatory) Structural equation modeling (SEM; linear and non-linear) <p>Part 2: Multivariate statistical modeling with R (seminar)</p> <ul style="list-style-type: none"> Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

psy112 - Research methods II - Statistical Learning

Modulbezeichnung	Research methods II - Statistical Learning
Modulkürzel	psy112
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	Hildebrandt, Andrea (Modulverantwortung) Hildebrandt, Andrea (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Enrolment in Master's programme Neurocognitive Psychology.
Kompetenzziele	<p>Goals of module: Building upon the basic knowledge in multivariate statistical modeling covered in psy111, after completion of this module students will know how to deal with big data to address empirical questions in neurocognitive psychology. They will be able to solve prediction and classification problems to the realm of basic and applied statistical/machine learning purposes. Furthermore, students will understand the specifics of applied research and the statistical modeling of noisy, longitudinal data.</p> <p>Competencies: ++ interdisciplinary knowledge & thinking ++ statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature ++ ethics / good scientific practice / professional behavior ++ critical & analytical thinking ++ scientific communication skills + group work</p>
Modulinhalte	<p>Part 1: Statistical / machine learning methods</p> <ul style="list-style-type: none">• Supervised and unsupervised statistical learning and prediction• Resampling methods• Regularized regression• Linear and quadratic discriminant analysis• Naive Bayes algorithm• Tree-based methods• Support vector machines• The basics of neural networks• Principal component regression• Clustering methods <p>Part 2: Statistical / machine learning methods with R (voluntary seminar)</p> <ul style="list-style-type: none">• Data examples and applications of the basic machine learning methods covered in the lecture <p>Part 3: Evaluation research (seminar)</p> <ul style="list-style-type: none">• Paradigms and methods in applied evaluation research (quantitative, mixed-methods)• Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)• Multivariate statistical modeling of change over time and group differences in change• Specific statistical tools for sampling and matching (e.g., Propensity score matching)• Basics of causality theory and the estimation of average and conditional effects in EffectLiteR• Research synthesis and meta-analysis

psy121 - Psychological assessment and diagnostics

Modulbezeichnung	Psychological assessment and diagnostics
Modulkürzel	psy121
Kreditpunkte	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	Hildebrandt, Andrea (Modulverantwortung) Hildebrandt, Andrea (Prüfungsberechtigt) Hellmann, Andreas (Prüfungsberechtigt) Debener, Stefan (Modulberatung)
Teilnahmevoraussetzungen	
Kompetenzziele	<p>Goals of module: Students will acquire specific knowledge about psychological assessment, test theory and test construction, and will be trained to utilize this knowledge within a research or test development context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of applied psychometrics and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of test and assessment report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.</p> <p>Competencies: + Neuropsychological / neurophysiological knowledge + interdisciplinary knowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking</p>
Modulinhalte	<p>Part 1: Introduction to Psychological Assessment (lecture): winter</p> <ul style="list-style-type: none">• Psychological assessment as a decision process – descriptive and prescriptive models• Introduction to test theories (will be detailed in Part 3)• Assessment methods, their construction and design, quality criteria• The logic of decision making in the assessment process• Classificatory decisions• Psychometrics to single cases• Summarizing results and writing reports <p>Part 2: Test Theory and Test Construction (lecture): winter</p> <ul style="list-style-type: none">• Classical test theory• Generalizability theory• Latent-State and Trait theory• Latent variable models for different types of item responses• Measurement invariance across groups and time• Network modeling in psychometrics• Preference modeling for constructing faking-resistant questionnaires and tests <p>Part 3: applied seminars: summer (choose a or b)</p> <p>a: The Assessment Process Applied OR</p> <ul style="list-style-type: none">• Case conceptualization (neuropsychology and clinical psychology)• Formulating hypotheses• Selecting assessment procedures and planning administration• Deciding upon decision rules for data integration• Evaluating the application of assessment procedures• Analyzing, summarizing and visualizing results• Integrating results based on the decision rules• Writing a psychological/assessment report• Discussing a report with the client <p>b: Test Construction Applied</p> <ul style="list-style-type: none">• Construct conceptualization• Deciding upon the response format• Item mining• Item analysis• Test quality report and test manual

Part 4: Assessment in Clinical Neuropsychology (seminar): summer

- specific knowledge
- exercises in testing / practising tests

Literatureempfehlungen	Will be specified in the courses.

psy220 - Human Computer Interaction

Modulbezeichnung	Human Computer Interaction
Modulkürzel	psy220
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	Rieger, Jochem (Modulverantwortung) Rieger, Jochem (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Enrolment in Master's programme Neurocognitive Psychology or other programs related to the field (e.g. neuroscience, computer science, physics etc.).
Kompetenzziele	<p>Goals of module: The goal of the module is to provide students with basic skills required to plan, implement and evaluate brain computer interfaces as devices for human computer interaction. BCIs are an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation. Importantly, classical BCI-methods can be used for modern data-driven basic neuroscience. The module is designed as an "enabler course", meaning that ideally students should be able to understand and start independent studies into the BCI-methods. Therefore, it goes into depth instead of breadth. Good programming skills and some active knowledge of high school maths is strongly advised to maximize the learning outcome.</p> <p>Competencies: ++ understanding of the foundations of statistical learning techniques + basics to understand technical time series processing and machine learning papers ++ interdisciplinary knowledge & thinking + experimental methods ++ statistics & scientific programming + critical & analytical thinking + scientific communication skills + knowledge transfer + group work + project & time management</p>
Modulinhalte	<p>The module will introduce classic BCI paradigms and brain decoding techniques. However the main focus will be on a deeper understanding of the most important signal processing, machine learning, and performance evaluation techniques. The module combines a lecture on the theoretical foundations a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics.</p> <p>Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer</p> <p>Part 2: Hands on BCI implementation (practical seminar): summer Topics covered:</p> <ul style="list-style-type: none">• A brief history of BCIs and examples of HCI control and basic neuroscience using BCI techniques.• Data preprocessing (e.g. filtering, projection techniques) and common artifacts and artifact treatment)• Feature generation (e.g. fourier transform, spectral estimation techniques, principle components)• Machine learning for classification and regression (e.g. model parameter optimization in multivariate regression)• Evaluation (e.g. measures of model quality, cross validation to test model generalization, permutation tests) <p>Where possible the lecture provides mathematical backgrounds of the data analysis techniques. The practical seminar implements BCI techniques on a real data set and further elaborates specific topics in seminar form.</p>
Literatureempfehlungen	<p>There is no required textbook. The lecture slides and notes should be sufficient. Weitere verantwortliche Personen	Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for psy260.

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology.

You can only start the practical project if you have passed the exam of psy240 (psy241) Computation in Neuroscience!

Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

Kompetenzziele**Goals of module:**

Students are able to critically review the scientific literature and current state of knowledge concerning a certain topic in the field of cognitive neuroscience or neuropsychology. Based on this, they are able to develop a specific research question and to design an adequate experiment, acquire data and conduct appropriate statistical analyses, building on previously gained competencies in relevant research methods, computer programming and statistical methods. They know how to critically discuss the results of their study in context of the current literature and how to present their findings at a scientific poster symposium.

Competencies:

- ++ experimental methods
- + statistics & scientific programming
- ++ data presentation & discussion
- + independent research
- + scientific literature
- + ethics / good scientific practice / professional behavior
- + scientific communication skills
- + knowledge transfer
- + group work
- ++ project & time management

Modulinhalte

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

Dauer in Semestern 1 Semester

Angebotsrhythmus Modul The module will be offered every winter term.

Aufnahmekapazität Modul unbegrenzt

Hinweise Topics for projects will be presented in a colloquium at the end of the summer term.

Students can chose to perform the practical work in either of the research groups of the Department of Psychology. External projects are possible upon approval (information and approval form can be found on the programme website).

Please note that, due to the Coronavirus pandemic, you have to ask the external institution for their hygiene concept and keep this concept for your own documentation.

Modullevel / module level MM (Mastermodul / Master module)

Modulart / typ of module Pflicht / Mandatory

Lehr-/Lernform / Teaching/Learning method practical work and regular seminar meetings in the group where the project is performed

Vorkenntnisse / Previous knowledge PLEASE NOTE:

Many projects require knowledge of either EEG, fMRI, TBS, or HCI analysis! We strongly recommend to take either psy170: Neurophysiology, psy270: fMRI Data Analysis, psy280: Transcranial Brain Stimulation, or psy220 Human Computer Interaction prior to the practical project.

It is expected that students have basic knowledge of Matlab programming before starting the practical project. This is proven by having passed the exam in Computation in Neuroscience.

psy110 - Research methods

Modulbezeichnung	Research methods
Modulkürzel	psy110
Kreditpunkte	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neurocognitive Psychology (Master) > Mastermodule
Zuständige Personen	Hildebrandt, Andrea (Modulverantwortung) Hildebrandt, Andrea (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Enrolment in Master's programme Neurocognitive Psychology. Module psy110 is only relevant for students who started their studies before winter term 21/22. (All other students study modules psy111 and psy112.)
Kompetenzziele	<p>Goals of module: Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.</p> <p>Competencies: ++ interdisciplinary knowledge & thinking ++ statistics & scientific programming ++ data presentation & discussion + independent research + scientific literature ++ ethics / good scientific practice / professional behavior ++ critical & analytical thinking ++ scientific communication skills + group work</p>
Modulinhalte	<p>Part 1: Multivariate Statistics I (lecture): winter</p> <ul style="list-style-type: none">• Graphical representation of multivariate data• The Generalized Linear Modeling (GLM) framework• Multiple and moderated linear regression with quantitative and qualitative predictors• Logistic regression• Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)• Non-linear regression models• Path modeling• Factor analysis (exploratory & confirmatory)• (Multilevel) Structural equation modeling (SEM linear and non-linear) <p>Part 2: Analysis Methods with R (seminar): winter and summer</p> <ul style="list-style-type: none">• Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM <p>Part 3: Multivariate Statistics II (lecture): summer</p> <ul style="list-style-type: none">• Supervised and unsupervised statistical learning and prediction• Regularized regression• Resampling methods• Tree-based methods• Support Vector Machines• Neural Networks (basics)• Principal components and clustering <p>Part 4: Evaluation research (seminar): summer</p> <ul style="list-style-type: none">• Paradigms and methods in applied evaluation research (quantitative, mixed-methods)• Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)• Specific statistical tools (e.g., Propensity score matching)• Research synthesis and meta-analysis

psy120 - Psychological assessment and diagnostics

Modulbezeichnung	Psychological assessment and diagnostics			
Modulkürzel	psy120			
Kreditpunkte	9.0 KP			
Workload	270 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Neurocognitive Psychology (Master) > Mastermodule 			
Zuständige Personen	<p>Hildebrandt, Andrea (Modulverantwortung)</p> <p>Hellmann, Andreas (Modulverantwortung)</p> <p>Hildebrandt, Andrea (Prüfungsberechtigt)</p> <p>Hellmann, Andreas (Prüfungsberechtigt)</p> <p>Debener, Stefan (Modulberatung)</p>			
Teilnahmevoraussetzungen	Enrolment in Master's programme Neurocognitive Psychology. Module psy120 is only relevant for students who started their studies before winter term 19/20. (All other students study module psy121.)			
Kompetenzziele	<p>**Goals of module:** Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module. **Competencies:** [nop]+ Neuropsychological / neurophysiological knowledge + interdisciplinary knowledge & thinking + ethics / good scientific practice / professional behavior + critical & analytical thinking [/nop]</p>			
Modulinhalte	<p>**Part 1: Introduction to Psychological Assessment (lecture)** - Psychological assessment as a decision process – descriptive and prescriptive models - Theories of reliability (classical and modern approaches) - Theories of validity (classical and modern approaches) - Assessment methods, their construction and design, quality criteria - The logic of decision making in the assessment process - Psychometrics to single cases - Summarizing results and writing reports **Part 2: Psychological Testing (seminar)** - Psychometric bases of tests and questionnaires - Types of tests and questionnaires - Challenges in psychological testing (for example faking good vs. bad) - Examples of published tests and questionnaires - Exercising test applications, scoring and result interpretations **Part 3: Assessment in Clinical Neuropsychology (seminar)** - specific knowledge - exercises in testing / practising tests</p>			
Literaturempfehlungen	Will be specified in the courses.

Abschlussmodul

mam - Masterabschlussmodul

Modulbezeichnung	Masterabschlussmodul
Modulkürzel	mam
Kreditpunkte	30.0 KP
Workload	900 h (attendance in the lab meetings: 28h (2 SWS); thesis work: 872 hours)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neurocognitive Psychology (Master) > Abschlussmodul
Zuständige Personen	Al-Zubaidi, Arkan (Prüfungsberechtigt) Bleichner, Martin Georg (Prüfungsberechtigt) Debener, Stefan (Prüfungsberechtigt) Gießing, Carsten (Prüfungsberechtigt) Hellmann, Andreas (Prüfungsberechtigt) Herrmann, Christoph Siegfried (Prüfungsberechtigt) Hildebrandt, Andrea (Prüfungsberechtigt) Hildebrandt, Helmut (Prüfungsberechtigt) Kranczioch-Debener, Cornelia (Prüfungsberechtigt) Özyurt, Jale Nur (Prüfungsberechtigt) Rieger, Jochem (Prüfungsberechtigt) Stecher, Heiko (Prüfungsberechtigt) Strüber, Daniel (Prüfungsberechtigt) Thiel, Christiane Margarete (Prüfungsberechtigt) Puschmann, Sebastian (Prüfungsberechtigt) Vogeti, Sreekari (Prüfungsberechtigt) Jäger, Manuela (Prüfungsberechtigt) Rosemann, Stephanie (Prüfungsberechtigt) Roheger, Mandy (Prüfungsberechtigt) Daeglau, Mareike (Prüfungsberechtigt) Klein, Franziska (Prüfungsberechtigt) Kristanto, Daniel (Prüfungsberechtigt) Boetzel, Cindy (Prüfungsberechtigt)
Weitere verantwortliche Personen	thesis supervisors; Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for mam.
Teilnahmevoraussetzungen	Enrolment in Master's programme Neurocognitive Psychology. Completion of at least 60 credit points in other modules including module psy240 (psy241) (Computation in Neuroscience). Assignment of a topic by thesis supervisor and official application with the examination office.
Kompetenzziele	Goals of module: Students will demonstrate that they are able to perform a neuropsychological experiment according to scientific standards. In addition, they will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

Competencies:

- ++ experimental methods
- + statistics & scientific programming
- + data presentation & discussion
- ++ independent research
- + scientific literature
- ++ scientific English / writing
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking
- + scientific communication skills
- + knowledge transfer
- ++ project & time management

Modulinhalte	<p>Part 1: Master's thesis The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.</p> <p>Part 2: Master's colloquium The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.</p>
