Molecular Biomedicine - Master-Studiengang

im Wintersemester 2022/2023

erstellt am 04.10.2022

bio605 - Molecular Genetics and Cell Biology 4

bio695 - Biochemical concepts in signal transduction 6

gsw010 - Molecular Physiology 7

gsw020 - Cellular and Subcellular Structures 9

gsw030 - Biophysical Chemistry 11

gsw040 - Molecular and Cellular Biology of Hearing and Deafness 12

gsw050 - Current Topics of Genetics 14

neu141 - Visual Neuroscience - Physiology and Anatomy 15

neu150 - Visual Neuroscience - Anatomy 17

neu220 - Neurocognition and Psychopharmacology 18

gsw230 - Molecular Pharmacology 20

gsw240 - Basic Immunology in Health and Disease 22

gsw250 - Molecular Microbiology 24

gsw260 - Molecular Virology 26

gsw060 - Epigenetics and Gene Regulation 27

gsw070 - Gene-based Therapies in Human diseases 29

gsw080 - Genetic Diagnostics: from chromosomal aberrations to gene mutations 31

gsw090 - Current Topics in Clinical Research 32

gsw100 - Immunology and Inflammation 34

gsw110 - Clinical Aspects of Degenerative Diseases 36

gsw120 - Tumor Biology 38

gsw130 - Regenerative Medicine in Ophthalmology	40
gsw150 - Research Project Molecular Biomedicine	41
gsw160 - External Research Project Molecular Biomedicine	43
gsw170 - Research Techniques Molecular Biomedicine	44
gsw180 - Ethics in Medicine	45

neu760 - Scientific English	50
gsw210 - Scientific Communication	52
gsw220 - Bioinformatics and Omics	54
mam - Master Thesis Module	55

Background Modules

bio605 - Molecular Genetics and Cell Biology

Modulbezeichnung	Molecular Genetics and Cell Biology	
Modulkürzel	bio605	
Kreditpunkte	12.0 KP	
Workload	360 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules 	
Zuständige Personen	<p>Neidhardt, John (Modulverantwortung)</p> <p>Neidhardt, John (Prüfungsberechtigt)</p> <p>Koch, Karl-Wilhelm (Prüfungsberechtigt)</p> <p>Jüschke, Christoph (Prüfungsberechtigt)</p>	
Teilnahmevoraussetzungen	BSc (Biologie, Biochemie)	
Kompetenzziele	<p>++ vertiefte biologische Fachkenntnisse ++ vertiefte Kenntnisse biologischer Arbeitstechniken + Fähigkeit zur Datenanalyse ++ fächerübergreifendes Denken + kritisches und analytisches Denken + eigenständige Recherche und Kenntnisse wissenschaftlicher Primärliteratur + Datenpräsentation und Diskussion in Wort und Schrift (D/E) + Teamfähigkeit + Ethik und professionelles Verhalten + Projekt- und Zeitmanagement</p> <p>Für Studierende mit Interesse an einem molekularbiologischen, molekulargenetischen, zellbiologischen und neurobiologischen Schwerpunkt.</p>	
Modulinhalte	<p>Theorie: Vertiefung der Kenntnisse in der molekularen Genetik und Zellbiologie. Ein Bezug zu menschlichen Erkrankungen wird hergeleitet.</p> <p>Praxis: Überprüfung der theoretischen Kenntnisse im Experiment. Erwerb methodischer Kenntnisse der molekularen Genetik, Zellbiologie und Therapieentwicklung. Einblicke in die Durchführung von Forschungsvorhaben.</p> <p>Themen der Vorlesung und des Seminars: Molekulare Grundlagen neurodegenerativer Erkrankungen, Struktur und Funktion von DNA/RNA/Proteinen, Hochdurchsatz-Technologien, Struktur und Funktion von Membranen, Cytoskelett, Zellzyklus, programmierter Zelltod, Zellen im sozialen Verband</p> <p>Übungen: Vermittlung aktueller Methoden der Molekularbiologie und Humangenetik, Hochdurchsatztechnologien, Einführung in Zellkulturtechniken.</p>	
Literaturempfehlungen	Lehrbücher der Zellbiologie und Humangenetik

gsw010 - Molecular Physiology

Modulbezeichnung	Molecular Physiology
Modulkürzel	gsw010
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	<p>Milenkovic, Ivan (Modulverantwortung)</p> <p>Milenkovic, Ivan (Prüfungsberechtigt)</p> <p>Radulovic, Tamara (Prüfungsberechtigt)</p> <p>Keine, Christian (Prüfungsberechtigt)</p> <p>Radulovic, Tamara (Modulberatung)</p> <p>Milenkovic, Ivan (Modulberatung)</p>
Teilnahmevoraussetzungen	Enrolment in Master's programme Molecular Biomedicine; Knowledge of cell biology is beneficial for comprehension of lecture content
Kompetenzziele	<p>Goals of the Module: Upon successful completion of this module, students</p> <ul style="list-style-type: none"> - know molecular mechanisms of cellular physiology - know physiology of the following human body organ systems: muscular system, nervous system, cardiovascular system, respiratory system, urinary system - understand pathophysiology of certain diseases - know basic principles of functional tests for certain organ systems. <p>Competencies: ++ deepened biological expertise ++ deepened clinical/pathological expertise ++ deepened knowledge of medical diagnostic methods + data analysis and clinical interpretation + interdisciplinary thinking</p>
Modulinhalte	<p>The module focuses on physiology of the cell, physiology of human organ systems in health and disease, homeostatic regulation mechanisms</p> <p>Lecture topics:</p> <ol style="list-style-type: none"> 1. Cellular mechanisms of excitability 2. Synaptic transmission 3. Muscle contraction 4. Spinal cord reflexes 5. Motor skills 6. Basic principles of circulatory function 7. Pulmonary ventilation 8. Regulation of respiration 9. General sensory physiology 10. Physiology of special senses 11. Kidneys 12. Water homeostasis and osmoregulation <p>Exercise:</p> <ol style="list-style-type: none"> 1. Excitability of nerve cells and AP propagation 2. Reflexes 3. Electrocardiography 4. Pulmonary function tests and regulation of respiration 5. Functional tests for sensory systems 6. Water and osmolarity homeostasis
Literatureempfehlungen	<p>Guyton and Hall - Textbook of medical physiology (covers most topics)</p> <p>Kandler, Schwarz, Jessell - Principles of neural science</p> <p>Gary G. Matthews – Cellular Physiology of Nerve and Muscle</p>

Unterrichtssprache	Englisch
Dauer in Semestern	1 Semester
Angebotsrhythmus Modul	winter and summer term
Aufnahmekapazität Modul	10 (participation at lectures is not restricted)
Hinweise	The number of participants for the practical part of this module is limited to 10. Students which are enrolled in

Master's programme Molecular Biomedicine will be preferred.

Modullevel / module level	MM (Mastermodul / Master module)			
Modulart / typ of module	Wahlpflicht / Elective			
Lehr-/Lernform / Teaching/Learning method	Lecture and Exercise			
Vorkenntnisse / Previous knowledge	Basic knowledge in physiology and cell biology			
Prüfung	Prüfungszeiten		Prüfungsform	
Gesamtmodul			Oral examination (20 min.)	
Lehrveranstaltungsform	Kommentar	SWS	Angebotsrhythmus	Workload Präsenz
Vorlesung		2	SoSe und WiSe	28
Praktikum		2	SoSe und WiSe	28
Präsenzzeit Modul insgesamt				56 h

gsw020 - Cellular and Subcellular Structures

Modulbezeichnung	Cellular and Subcellular Structures	
Modulkürzel	gsw020	
Kreditpunkte	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Molecular Biomedicine (Master) > Background Modules 	
Zuständige Personen	<p>Bräuer, Anja (Modulverantwortung)</p> <p>Bräuer, Anja (Prüfungsberechtigt)</p> <p>Maier, Esther Christine (Prüfungsberechtigt)</p> <p>Maier, Esther Christine (Modulberatung)</p>	
Teilnahmevoraussetzungen	Enrolment in Master's programme Molecular Biomedicine	
Kompetenzziele	<p>Goals of the Module: Upon successful completion of this module, students know and understand cellular and subcellular structures and their function in the human body.</p> <p>Competencies: ++ deepened biological expertise ++ deepened clinical / pathological expertise ++ deepened knowledge of biological working methods ++ deepened knowledge of clinical / pathological diagnostics + interdisciplinary thinking + critical and analytical thinking + ability to perform independent biological research + ethics and professional behaviour</p>	
Modulinhalte	<p>The module aims to give students an insight into microscopic functional anatomy. In this module, we will cover aspects of cell compartmentalisation and tissue organisation as the basis for normal function and homeostasis. In addition, we will cover examples of organ organisation and organ function. To introduce students to clinical concepts, and to deepen their understanding of the functional roles of cells and tissues, we will also cover aspects of the pathological basis of disease for selected organs and organelles.</p> <p>In the accompanying seminar, students will have the chance to work on light and electron microscopic pictures, to practice annotation and identification of cells and tissues. In addition, the students will read and present original literature. This will introduce select aspects of disease, but also introduce research methodology and scientific thinking.</p> <p>This course is not a full histology course, but it serves as an introduction to the topic, recapitulates aspects of cell biology and introduces a few select aspects of pathology. Thus, this module is aimed at students with little experience in cell biology.</p>	
Literatureempfehlungen	Molecular Biology of the Cell (Alberts et al., 6th ed.) Junqueira's Basic Histology: Text and Atlas (Mescher, 14th ed.) Robbins Basic Pathology (Kumar et al., 9th ed.)

Teilnahmevoraussetzungen			
Kompetenzziele	[nop] ++ Neurosci. knowlg. + Expt. methods + Scient. literature + Social skills ++ Interdiscipl. knowlg. + Data present./disc. + Scientific English [nop] Upon successful completion of this course, students know the fundamentals of neurotransmission know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease know the principles of drug treatment for psychiatric disorders have in-depth knowledge in selected areas of these topics are able to understand, explain and critically assess neuroscientific approaches in animals and humans are able to understand and critically assess published work in the area of cognitive neuroscience		
Modulinhalte	The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: History of cognitive neuroscience Methods of cognitive neuroscience Attention Learning Emotion Language Executive functions. The supervised exercercise either deepens that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week. The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: Introduction to Terms and Definitions in Drug Research Dopaminergic and Noradrenergic System Cholinergic and Serotonergic System GABAergic and Glutamatergic System Addiction Depression Schizophrenia Anxiety Alzheimer's Disease

gsw240 - Basic Immunology in Health and Disease

Modulbezeichnung	Basic Immunology in Health and Disease
Modulkürzel	gsw240
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	<p>Loser, Karin (Modulverantwortung)</p> <p>Loser, Karin (Prüfungsberechtigt)</p> <p>Mykicki, Nadine (Prüfungsberechtigt)</p>
Teilnahmevoraussetzungen	Enrolment in Master's programme Molecular Biomedicine
Kompetenzziele	<p>Goals of this module: After completing this module, students are able to perform experimental approaches necessary to investigate selective immunological questions. These will comprise the normal function of the healthy immune system as well as processes leading to immune system dysregulation or immune system dysfunction in several systemic or organ specific diseases. Based on the basic knowledge of immunology acquired in the module students will be able to understand and analyze specific scientific problems, plan experimental approaches accordingly, and perform the experiments.</p> <p>Skills to be acquired/ competencies: ++ Deepened biological expertise ++ Deepened clinical expertise ++ Deepened knowledge of biological working methods + Deepened knowledge of clinical diagnostics ++ Data analysis skills + Interdisciplinary thinking ++ Critical and analytical thinking + Independent searching and knowledge of scientific literature + Ability to perform independent biological research ++ Data presentation and discussion (written and spoken) + Teamwork + Project and time management</p> <p>Methods: Key methods learned and implemented in this module include - Primary cell culture and cell separation - RNA extraction, reverse transcription and quantitative real-time PCR - Tissue sectioning, immunohistology and immunofluorescence staining including microscopy - Multicolor flow cytometry - Quantification of soluble factors and inflammatory mediators using multiplex-assay techniques</p>
Modulinhalte	<p>Lecture: - Regulation of innate and adaptive immune responses in healthy individuals - Dysregulation of the immune system in inflammatory diseases, cancer or autoimmunity - Impact of the environment on immune regulation</p> <p>Seminar: - Presentation and discussion of laboratory methods used in the practical part</p> <p>Exercise: This module involves working on small research projects in groups of 2-3 students. The projects include basic immunology in humans and mice with the goal of better understanding the development of allergy, sterile inflammation or autoimmunity as well as immune regulation during cancer or infection. Using the knowledge of immune regulation gained in the lecture and seminar, students will analyze and evaluate specific scientific problems. Required methods of immunology, cell and molecular biology (e.g., flow cytometry, cell separation, isolation and culture of primary immune cells, gene expression studies, histology) are taught and used.</p>

gsw250 - Molecular Microbiology

Modulbezeichnung	Molecular Microbiology		
Modulkürzel	gsw250		
Kreditpunkte	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Molecular Biomedicine (Master) > Background Modules 		
Zuständige Personen	<p>Noster, Janina (Modulverantwortung)</p> <p>Noster, Janina (Prüfungsberechtigt)</p>		
Teilnahmevoraussetzungen	Enrolment in Master's programme Molecular Biomedicine		
Kompetenzziele	<p>Goals of this module: Upon completion of this module the students will have a basic knowledge about bacteriology, antibiotic resistances and gene mutagenesis methods.</p> <p>Skills to be acquired/ competencies: ++ deepened biological expertise ++ deepened knowledge of biological working methods + deepened knowledge of clinical diagnostics + data analysis skills ++ interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ data presentation and discussion (written and spoken) + teamwork + ethics and professional behavior ++ project and time management</p>		
Modulinhalte	<p>Lecture: In the first lectures, basic knowledge of general and specific bacteriology is taught. Subsequently, antibiotic resistance as well as resistance mechanisms are explained in more detail. Finally, the topic of horizontal gene transfer and mobile genetic elements will be discussed.</p> <p>Seminar: The seminar will address with the topic of antibiotic resistances. Students gain initial experience in formulating a scientific question and designing experiments to answer it. Different cloning strategies are discussed in detail.</p> <p>Practical course: The methods developed in the seminar will be put into practice. Antibiotic resistance plasmids will be modified using various techniques and the effects of these manipulations on bacterial physiology and resistance patterns will be investigated.</p>		
Literatureempfehlungen	Textbooks of microbiology. Current literature on antibiotic resistances and horizontal gene transfer will be announced in the lecture.

Kompetenzziele	<p>Goals of the Module:</p> <p>Upon successful completion of this course, students</p> <ul style="list-style-type: none"> - are familiar with the basic epigenetic mechanisms - know the principles of different sequencing techniques, both for genetic and epigenetic research - are familiar with the "first 1000 days of life concept" and how the early environment influences long term health - know how the human body is colonized - know about the basic mechanisms involved in CNV development during fetal and early postnatal life - know about the methods used to study molecular intercellular signaling - know about the non-invasive methods used to study functional brain development - know about the insults leading to cerebral ischemia - know about the mechanism of the neurovascular response - know about the cellular and electrophysiological effects of acute and chronic cerebral ischemia - know about the cell types, cellular interactions and molecular changes during peripheral nerve; degeneration and regeneration following nerve trauma - are able to explain some oncogenic mechanisms of viruses - can explain preeclampsia and its immunological regulation - are familiar with antibiotic classes, mode of actions of antibiotics, principles of antibiotic resistance, dissemination of current plasmids causing multi-resistance - know about differences between susceptibility, tolerance, resistance and persistence to antibiotics, the methods to determine minimal inhibitory concentrations, the causes of persistent infections, the characteristics of persister cells and mechanisms of persister cell formation, and current medical treatment strategies - are able to explain the concept of cancer immunosurveillance and immunoediting - can explain current strategies in immunotherapy of cancer including checkpoint inhibition, CAR T cell therapy and cancer vaccination - are able to explain the mechanisms underlying therapy resistance in malignant diseases, particularly cancers of the gastrointestinal tract and the hepatico-pancreatico-biliary system - can explain current strategies in cancer diagnostic, particularly liquid biopsy <p>Competencies:</p> <ul style="list-style-type: none"> ++ deepened clinical expertise ++ deepened knowledge of biological working methods and clinical diagnostics ++ interdisciplinary thinking + data analysis skills ++ critical and analytical thinking + independent searching and knowledge of scientific literature + ethics and professional behavior
Modulinhalte	<p>The module focuses on molecular aspects as part of current clinical research in different fields.</p> <p>Lectures:</p>

- (Part 1)
- Genetic and epigenetic sequencing technology
 - Epigenetic programming by early life events
 - The human microbiome and colonization of the human body
 - Molecular insights into functional brain development
 - Basic mechanisms involved in CNS development during fetal and early postnatal life
 - Introduction to methods used to study molecular signaling
 - Introduction to non-invasive methods used to study functional brain development
- (Part 2)
- Contribution of the immune system to the progression of infection, autoimmunity, cancer or (neuro-) inflammation
 - Modulation of the immune system as a potential therapeutic option
 - Interaction of the microbiome with the immune system and impact of environmental factors on the development of immune-mediated diseases
- (Part 3)
- Oncogenic potential of viruses (e.g. Cervix carcinoma caused by HPV viruses)
 - Molecular insights into carcinogenesis
 - Preeclampsia and its immunological regulation
- (Part 4)
- Concept of cancer immunosurveillance and immunoediting
 - Current strategies for cancer immunotherapy
 - Mechanisms of cancer therapy resistance
 - Current strategies for cancer diagnosis and liquid biopsy
- (Part 5)
- Insights into antibiotic resistance (mode of antibiotics, principles of antibiotic resistance)
 - Emergence of multi-resistance and dissemination of plasmids causing multi-resistance
 - Differences between susceptibility, tolerance, resistance and persistence of pathogens to antibiotics
 - Current hypotheses of inducers for persister cell formation and medical treatment
- (Part 6)
- Neurovascular regulation in response to cerebral ischemia
 - Molecular and cellular mechanisms of peripheral nerve regeneration

gsw120 - Tumor Biology

Modulbezeichnung	Tumor Biology
Modulkürzel	gsw120
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Molecular Biomedicine (Master) > Clinical Modules
Zuständige Personen	<p>Griesinger, Frank (Modulverantwortung)</p> <p>Griesinger, Frank (Prüfungsberechtigt)</p> <p>Roeper, Julia (Prüfungsberechtigt)</p> <p>Dübbel, Lena (Prüfungsberechtigt)</p> <p>Loser, Karin (Prüfungsberechtigt)</p> <p>Mykicki, Nadine (Prüfungsberechtigt)</p> <p>Dübbel, Lena (Modulberatung)</p> <p>Roeper, Julia (Modulberatung)</p>
Teilnahmevoraussetzungen	Enrolment in Master's programme Molecular Biomedicine
Kompetenzziele	<p>Goals of the Module: Upon successful completion of this module, students</p> <ul style="list-style-type: none"> - can define and identify oncogenes and tumor suppressor genes - know about the hallmarks of cancer and can explain them based on example pathways and traits - know about the complexity of the tumor tissue and the different cells that are involved - know about the principles of metastasis. <p>Competencies:</p> <ul style="list-style-type: none"> ++ deepened biological & clinical expertise ++ interdisciplinary thinking <ul style="list-style-type: none"> + deepened knowledge of biological working methods & clinical diagnostics ++ data analysis skills <ul style="list-style-type: none"> + usage of databases and computational tools ++ critical & analytical thinking <ul style="list-style-type: none"> + independent searching & knowledge of scientific literature ++ data presentation & discussion (written and spoken) <ul style="list-style-type: none"> + teamwork ++ ethics & professional behavior
Modulinhalte	<p>Part 1 - Lecture: We will give a brief overview of several aspects of tumor biology: Types of mutation, hallmarks of cancer, tumor as a tissue, metastasis, oncogenes and tumor suppressor genes, signal transduction and many example pathways that are important for cancer progression. In addition, you will learn about tumor-infiltrating immune cells and new therapy options like tumor-immune therapy.</p> <p>Part 2 - Seminar: Students will be expected to demonstrate the ability to prepare presentations in small working groups where they critically evaluate current research regarding specific examples of tumor diseases and their therapy (problem-orientated learning)</p> <p>Optional: Lectures from the study programme Human Medicine (winter semester only; will be held in German) Lecture topics from the Human Medicine programme focusses on large tumor entities, therapy strategies, and basics of carcinogenesis and therapeutic implementation. Please note, that these lectures are not part of the curriculum and are therefore not relevant for the examinations.</p>
Literaturempfehlungen	<p>Current literature will be uploaded on Stud.IP. Previous literature research is not necessary. If you are looking for more information/background: Weinberg; "The Biology of Cancer"; Garland Science</p>

Teilnahmevoraussetzungen	none
Kompetenzziele	++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics Upon successful completion of this course, students <ul style="list-style-type: none">• know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language• understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.• have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)• are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation• have practical skills in handling small rodents or birds or fish• have profound knowledge of anaesthesia, analgesia and basic principles of surgery.• have practised invasive procedures and euthanasia. NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.
Modulinhalte	Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are: <ul style="list-style-type: none">• Legislation, ethics and the 3Rs• Scientific integrity• Data collection "• Basic biology of rodents, birds and fish• Husbandry, and nutrition of rodents, birds and fish• Animal Welfare• Health monitoring

- Pain and distress
- Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

Modulart / typ of module	je nach Studiengang Pflicht oder Wahlpflicht
Lehr-/Lernform / Teaching/Learning method	
Vorkenntnisse / Previous knowledge	minimum English level B2 (C1 preferred) according to Common European Framework of Reference for Languages (CEFR) priority to non-native speakers, higher semester

Prüfung	Prüfungszeiten	Prüfungsform		
Gesamtmodul	within 2 months of completing the course	Portfolio: 70% several quick tests, texts, presentations, 30% term paper Bonus system for active participation		
Lehrveranstaltungsform	Kommentar	SWS	Angebotsrhythmus	Workload Präsenz
Vorlesung		0.5	WiSe	7
Übung		3.5	WiSe	49
Präsenzzeit Modul insgesamt				56 h

gsw210 - Scientific Communication

Modulbezeichnung	Scientific Communication	
Modulkürzel	gsw210	
Kreditpunkte	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Molecular Biomedicine (Master) > Skills Modules 	
Zuständige Personen	<p>Plösch, Torsten (Modulverantwortung)</p> <p>Plösch, Torsten (Prüfungsberechtigt)</p> <p>Gibbs, Bernhard (Prüfungsberechtigt)</p> <p>Dömer, Patrick (Prüfungsberechtigt)</p> <p>Dittmann, Tim (Prüfungsberechtigt)</p>	
Teilnahmevoraussetzungen	Enrolment in Master's programme Molecular Biomedicine	
Kompetenzziele	<p>Goals of the module: Upon completion of this module, students</p> <ul style="list-style-type: none"> - have improved their competencies in scientific writing - demonstrate effective communication and presentation skills (oral and written) - can defend their findings in scientific discussions or rebuttal letters - know about major communication pitfall <p>Competencies: ++ scientific writing ++ data presentation and discussion + independent searching and knowledge of scientific literature + teamwork + critical and analytical thinking</p>	
Modulinhalte	<p>Seminar:</p> <ul style="list-style-type: none"> - Introduction to scientific writing (analysis of scientific publications, structure of publications, common mistakes, logical story plots) - types of scientific communications: posters, oral presentations, journal papers, grant applications, CV/job application - Literature management (information search/ literature management tools/ plagiarism) - presentation techniques (how to structure your poster/presentation, how to reach your audience) - how to write your Master's thesis - job application (CV, application letter) - how do others perceive your message? - "don'ts" of scientific communication - social media for scientists - the perfect abstract <p>Exercise</p> <ul style="list-style-type: none"> - analysis of scientific publications - writing an abstract - presentation (poster, short talk) 	
Literaturempfehlungen	A list will be distributed on forehand

Masterabschlussmodul

mam - Master Thesis Module

Modulbezeichnung	Master Thesis Module	
Modulkürzel	mam	
Kreditpunkte	30.0 KP	
Workload	900 h (attendance in the lab meetings: 28 hours (2 SWS); these work: 872 hours)	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Molecular Biomedicine (Master) > Masterabschlussmodul 	
Zuständige Personen		
Weitere verantwortliche Personen	all teachers of the curriculum	
Teilnahmevoraussetzungen	as defined in the admission and examination regulations	
Kompetenzziele	++ deepened biological and / or clinical expertise, ++ deepened knowledge of biological working methods and / or clinical diagnostics, ++ data analysis skills, + interdisciplinary thinking, ++ critical and analytical thinking, ++ independent searching and knowledge of scientific literature, ++ ability to perform independent biological research, ++ data presentation and discussion (written and spoken), + team work, + ethics and professional behaviour, ++ project and time management	
Modulinhalte	Preparation of the Master Thesis. There are several options for the lab projects, e.g. in the broad categories of: https://uol.de/en/neurosciences/ o https://uol.de/en/biochemistry/research/ o https://uol.de/en/neurogenetics/research/ o https://uol.de/en/retina/research/ https://uol.de/humanmedizin/ o https://uol.de/anatomie/forschung/ o https://uol.de/dermatologie/forschung/ o https://uol.de/humangenetik/research-and-clinical-collaborations/ https://uol.de/genetik-gehirnfehlbildungen/forschungsschwerpunkte/	
Literaturempfehlungen	Specific literature of the topics indicated above; original papers related to the current research question
