bio695 - Biochemical concepts in signal transduction

Module label: Biochemical concepts in signal transduction

Modulkürzel: bio695

Credit points: 12.0 KP

Workload: 360 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen:
- Koch, Karl-Wilhelm (Module responsibility)
- Koch, Karl-Wilhelm (Prüfungsberechtigt)
- Scholten, Alexander (Prüfungsberechtigt)

- Scholten, Alexander (Module counselling)

Prerequisites: keine

Skills to be acquired in this module:
- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- + interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- ++ data presentation and discussion (E) (written and spoken)
- + teamwork
- + project and time management

Module contents:
- Lecture: Molecular fundamentals of cellular signal processes
- Seminar: Signal transduction
- Exercises: Experiments on cellular signal transduction and enzymology

Mechanisms of biochemical signal transduction are imparted theoretically and experimentally

Literaturempfehlungen:
- Textbooks of cell biology and biochemistry.
- Current literature on topics of signal transduction (as announced in the preparatory meeting).

Links:
- Language of instruction: English

Duration (semesters): 1 Semester

Module frequency:
- Module capacity: 20
- Modulelevel / module level: MM (Mastermodul / Master module)
- Modulart / typ of module: Wahlpflicht / Elective

Lehr-/Lernform / Teaching/Learning method:

Vorkenntnisse / Previous knowledge:

Examination:
- Prüfungszeiten
- Type of examination:
- Final exam of module:
  - 90 minutes written exam
  - written examination (50%) protocols (50%)

Form of instruction:
- Lecture: 1 SWS, WiSe 14
- Seminar: 1 SWS, WiSe 14
- Exercises: 6 SWS, WiSe 84

Präsenzzeit Modul insgesamt: 112 h
**gsw010 - Molecular Physiology**

**Module label**
Molecular Physiology

**Modulkürzel**
gsw010

**Credit points**
6.0 KP

**Workload**
180 h

**Verwendbarkeit des Moduls**
- Master's Programme Molecular Biomedicine (Master) > Background Modules

**Zuständige Personen**
- Milenkovic, Ivan (Module responsibility)
- Milenkovic, Ivan (Prüfungsberechtigt)
- Radulovic, Tamara (Prüfungsberechtigt)
- Keine, Christian (Prüfungsberechtigt)
- Radulovic, Tamara (Module counselling)
- Milenkovic, Ivan (Module counselling)

**Prerequisites**
Enrolment in Master’s programme Molecular Biomedicine;
Knowledge of cell biology is beneficial for comprehension of lecture content

**Skills to be acquired in this module**

**Goals of the Module:**
Upon successful completion of this module, students
- know molecular mechanisms of cellular physiology
- know physiology of the following human body organ systems: muscular system, nervous system, cardiovascular system, respiratory system, urinary system
- understand pathophysiology of certain diseases
- know basic principles of functional tests for certain organ systems.

**Competencies:**
++ deepened biological expertise
++ deepened clinical/pathological expertise
++ deepened knowledge of medical diagnostic methods
+ data analysis and clinical interpretation
+ interdisciplinary thinking

**Module contents**
The module focuses on physiology of the cell, physiology of human organ systems in health and disease, homeostatic regulation mechanisms

**Lecture topics:**
1. Cellular mechanisms of excitability
2. Synaptic transmission
3. Muscle contraction
4. Spinal cord reflexes
5. Motor skills
6. Basic principles of circulatory function
7. Pulmonary ventilation
8. Regulation of respiration
9. General sensory physiology
10. Physiology of special senses
11. Kidneys
12. Water homeostasis and osmoregulation

**Exercise:**
1. Excitability of nerve cells and AP propagation
2. Reflexes
3. Electrocardiography
4. Pulmonary function tests and regulation of respiration
5. Functional tests for sensory systems
6. Water and osmolarity homeostasis

**Literaturempfehlungen**
Guyton and Hall - Textbook of medical physiology (covers most topics)
Kandler, Schwarz, Jessell - Principles of neural science
Gary G. Matthews – Cellular Physiology of Nerve and Muscle

**Links**
https://uol.de/physiologie

**Language of instruction**
English

**Duration (semesters)**
1 Semester

**Module frequency**
winter and summer semester

**Module capacity**
10 (participation at lectures is not restricted)

**Reference text**
The number of participants for the practical part of this module is limited to 10. Students which are enrolled in
Master’s programme Molecular Biomedicine will be preferred.

gsw020 - Cellular and Subcellular Structures

Module label: Cellular and Subcellular Structures

Modulkürzel: gsw020

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls: Master's Programme Molecular Biomedicine (Master) > Background Modules

Zuständige Personen:
- Bräuer, Anja (Module responsibility)
- Bräuer, Anja (Prüfungsberechtigt)
- Maier, Esther Christine (Prüfungsberechtigt)
- Maier, Esther Christine (Module counselling)

Prerequisites:
Enrolment in Master’s programme Molecular Biomedicine

Skills to be acquired in this module:
Goals of the Module:
Upon successful completion of this module, students know and understand cellular and subcellular structures and their function in the human body.

Competencies:
++ deepened biological expertise
++ deepened clinical / pathological expertise,
++ deepened knowledge of biological working methods
++ deepened knowledge of clinical / pathological diagnostics,
+ interdisciplinary thinking,
+ critical and analytical thinking,
+ ability to perform independent biological research
+ ethics and professional behaviour

Module contents:
The module aims to give students an insight into microscopic functional anatomy. In this module, we will cover aspects of cell compartmentalisation and tissue organisation as the basis for normal function and homeostasis. In addition, we will cover examples of organ organisation and organ function. To introduce students to clinical concepts, and to deepen their understanding of the functional roles of cells and tissues, we will also cover aspects of the pathological basis of disease for selected organs and organelles.

In the accompanying seminar, students will have the chance to work on light and electron microscopic pictures, to practice annotation and identification of cells and tissues. In addition, the students will read and present original literature. This will introduce select aspects of disease, but also introduce research methodology and scientific thinking.

This course is not a full histology course, but it serves as an introduction to the topic, recapitulates aspects of cell biology and introduces a few select aspects of pathology. Thus, this module is aimed at students with little experience in cell biology.

Literatureempfehlungen:
- Molecular Biology of the Cell (Alberts et al., 6th ed.)
- Junqueira’s Basic Histology: Text and Atlas (Mescher, 14th ed.)
- Robbins Basic Pathology (Kumar et al., 9th ed.)

Winklhofer, Michael (Prüfungsberechtigt)

**Prerequisites**
Enrolment in Master’s programme Molecular Biomedicine

**Skills to be acquired in this module**

**Goals of the Module:**
Upon successful completion of this module, students understand physical principles underlying biochemistry and cell biology.

**Competencies:**
- deepened biological expertise
- data analysis skills
- usage of databases and computational tools
- interdisciplinary thinking
- critical and analytical thinking
- data presentation and discussion

**Module contents**
The module focuses on molecular biophysics, biophysical chemistry, biochemistry, cell biology.

- Dynamics of single molecules, molecular thermodynamics, statistical thermodynamics; diffusion; chemical equilibria involving macromolecules, signal amplification; spectroscopical techniques (molecular vibration and rotation spectroscopy, electronic absorption and fluorescence spectroscopy, FRET, NMR, Atomic force microscopy).

**Competencies:**
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
+ data presentation and discussion (written and spoken)

**Module contents**
The module focuses on auditory neuroscience, molecular and cellular neurobiology.

**Lecture:**
Development, anatomy and function of the auditory system (cochlea to cortex), classification, molecular causes and inheritance of auditory disorders, investigation of these disorders in animal models, insights into possibilities of treatment/therapy

**Seminar:**
The seminar will focus on possibilities of treatment options in the field of auditory rehabilitation. In a flipped classroom, students will shortly present and discuss different approaches.

**Exercise:**
Laboratory experiments to study mouse models of deafness/auditory processing disorders

neu141 - Visual Neuroscience - Physiology and Anatomy

**Module label**
Visual Neuroscience - Physiology and Anatomy

**Modulkürzel**
eu141

**Credit points**
12.0 KP

**Workload**
360 h

- 3 SWS Lecture (VO)
- Total workload 90 h: 30h contact / 60h background literature reading and preparation for sh
- 1 SWS Seminar (SE)
- Total workload 30h: 10h contact / 20h literature reading and preparation of result presentation
- 8 SWS Supervised exercise (UE)
- Total workload 240h: 200h contact / 40h results analysis, writing of short reports for portfolio

**Verwendbarkeit des Moduls**
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

**Zuständige Personen**
- Greschner, Martin (Module responsibility)
- Greschner, Martin (Prüfungsberechtigt)
- Dedek, Karin (Prüfungsberechtigt)
- Janssen-Bienhold, Ulrike (Prüfungsberechtigt)
- Puller, Christian (Prüfungsberechtigt)

**Prerequisites**
Basic knowledge of neurobiology

**Skills to be acquired in this module**
- ++ Neurosci. knowlg.
- ++ Expt. Methods
- + Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Upon successful completion of this course, students
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

**Module contents**
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

**Literatureempfehlungen**
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

**Zuständige Personen**

- Thiel, Christiane Margarete (Module responsibility)
- Thiel, Christiane Margarete (Module counselling)
- Thiel, Christiane Margarete (Prüfungsberechtigt)
- Gießing, Carsten (Prüfungsberechtigt)

**Prerequisites**

- ++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills
- ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of neurotransmission
- know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions
- understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease
- know the principles of drug treatment for psychiatric disorders
- have in-depth knowledge in selected areas of these topics
- are able to understand, explain and critically assess neuroscientific approaches in animals and humans
- are able to understand and critically assess published work in the area of cognitive neuroscience

**Module contents**

The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics:
- History of cognitive neuroscience
- Methods of cognitive neuroscience
- Attention
- Learning
- Emotion
- Language
- Executive functions.

The supervised excersise either deepen that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week.

The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics:
- Introduction to Terms and Definitions in Drug Research
- Dopaminergic and Noradrenergic System
- Cholinergic and Serotonergic System
- GABAergic and Glutamatergic System
- Addiction
- Depression
- Schizophrenia
- Anxiety
- Alzheimer's Disease

### Verwendbarkeit des Moduls
- Master's Programme Molecular Biomedicine (Master) > Background Modules

### Zuständige Personen
- Rauch, Bernhard (Module responsibility)
- Rauch, Bernhard (Prüfungsberechtigt)
- Meyer, Ulrike (Module counselling)

### Prerequisites
- Enrolment in Master’s programme Molecular Biomedicine

### Skills to be acquired in this module
**Goals of the module:**
- Upon completion of this module, students
- Know about the subject of pharmacology in general, its areas of expertise such as pharmacokinetics and pharmacodynamics and their functions.
- Understand on which pathophysiological mechanisms diseases are based and on which molecular targets pharmaceuticals act in order to alleviate diseases.
- Know the basic actions and side effects of important drug groups.
- Understand basic parameters of clinical studies and the importance of clinical studies for therapeutic approaches.

**Skills to be acquired/ competencies:**
- Deepened biological expertise
- Deepened clinical expertise
- Deepened knowledge of biological working methods
- Deepened knowledge of clinical diagnostics
- Data analysis skills
- Interdisciplinary thinking
- Critical and analytical thinking
- Independent searching and knowledge of scientific literature
- Data presentation and discussion (written and spoken)
- Teamwork
- Ethics and professional behavior

### Module contents
- Fundamentals of general pharmacology, its specialist areas such as pharmacokinetics and pharmacodynamics
- Explanation of the pathophysiological mechanisms of diseases and the corresponding molecular drug targets
- Mechanisms of action and side effects of the major drug groups
- Knowledge of basic parameters of clinical studies and understanding of the importance of clinical studies for therapeutic approaches

### Literatureempfehlungen
- Basic & Clinical Pharmacology (Basic and Clinical Pharmacology), McGraw-Hill Education (2020)
- For German speaking students: Kurzlehrbuch Pharmakologie und Toxikologie, Herdegen, Thieme (2019)

### Links

**Verwendbarkeit des Moduls**
- Master's Programme Molecular Biomedicine (Master) > Background Modules

**Zuständige Personen**
Loser, Karin (Module responsibility)
Loser, Karin (Prüfungsberechtigt)
Mykicki, Nadine (Prüfungsberechtigt)

**Prerequisites**
Enrolment in Master’s programme Molecular Biomedicine
Basic knowledge in primary cell culture, quantitative real-time PCR, flow cytometry or histology would be highly desirable.

**Skills to be acquired in this module**

**Goals of this module:**
After completing this module, students are able to perform experimental approaches necessary to investigate selective immunological questions. These will comprise the normal function of the healthy immune system as well as processes leading to immune system dysregulation or immune system dysfunction in several systemic or organ specific diseases.

Based on the basic knowledge of immunology acquired in the module students will be able to understand and analyze specific scientific problems, plan experimental approaches accordingly, and perform the experiments.

**Skills to be acquired/ competencies:**
++ Deepened biological expertise
++ Deepened clinical expertise
++ Deepened knowledge of biological working methods
+ Deepened knowledge of clinical diagnostics
++ Data analysis skills
+ Interdisciplinary thinking
++ Critical and analytical thinking
+ Independent searching and knowledge of scientific literature
+ Ability to perform independent biological research
++ Data presentation and discussion (written and spoken)
+ Teamwork
+ Project and time management

**Methods:**
Key methods learned and implemented in this module include
- Primary cell culture and cell separation
- RNA extraction, reverse transcription and quantitative real-time PCR
- Tissue sectioning, immunohistology and immunofluorescence staining including microscopy
- Multicolor flow cytometry
- Quantification of soluble factors and inflammatory mediators using multiplex-assay techniques

**Module contents**

**Lecture:**
- Regulation of innate and adaptive immune responses in healthy individuals
- Dysregulation of the immune system in inflammatory diseases, cancer or autoimmunity
- Impact of the environment on immune regulation

**Seminar:**
- Presentation and discussion of laboratory methods used in the practical part

**Exercise:**
This module involves working on small research projects in groups of 2-3 students. The projects include basic immunology in humans and mice with the goal of better understanding the development of allergy, sterile inflammation or autoimmunity as well as immune regulation during cancer or infection. Using the knowledge of immune regulation gained in the lecture and seminar, students will analyze and evaluate specific scientific problems. Required methods of immunology, cell and molecular biology (e.g., flow cytometry, cell separation, isolation and culture of primary immune cells, gene expression studies, histology) are taught and used.

Due to restrictions in space and limitations in equipment availability the number of participants for this module has to be limited. Students have to be enrolled in the Master’s program Molecular Biomedicine.
High priority is given to students of the Master's program Molecular Biomedicine. In exceptional cases, vacancies may be allocated to Biology students. However, allocation to students not enrolled in the Master's program Molecular Biomedicine can only be made by the lecturer(s) responsible for this module (personal application required).

Noster, Janina (Module responsibility)
Noster, Janina (Prüfungsberechtigt)

**Prerequisites**  
Enrolment in Master’s programme Molecular Biomedicine

**Skills to be acquired in this module**

**Goals of this module:**
Upon completion of this module the students will have a basic knowledge about bacteriology, antibiotic resistances and gene mutagenesis methods.

**Skills to be acquired/ competencies:**
++ deepened biological expertise  
++ deepened knowledge of biological working methods  
+ deepened knowledge of clinical diagnostics  
+ data analysis skills  
++ interdisciplinary thinking  
++ critical and analytical thinking  
++ independent searching and knowledge of scientific literature  
++ data presentation and discussion (written and spoken)  
+ teamwork + ethics and professional behavior  
++ project and time management

**Module contents**

**Lecture:**
In the first lectures, basic knowledge of general and specific bacteriology is taught. Subsequently, antibiotic resistance as well as resistance mechanisms are explained in more detail. Finally, the topic of horizontal gene transfer and mobile genetic elements will be discussed.

**Seminar:**
The seminar will address with the topic of antibiotic resistances. Students gain initial experience in formulating a scientific question and designing experiments to answer it. Different cloning strategies are discussed in detail.

**Practical course:**
The methods developed in the seminar will be put into practice. Antibiotic resistance plasmids will be modified using various techniques and the effects of these manipulations on bacterial physiology and resistance patterns will be investigated.

**Literaturempfehlungen**
Textbooks of microbiology. Current literature on antibiotic resistances and horizontal gene transfer will be announced in the lecture.

Addressing students with emphasis on translational/therapeutical interest in molecular biology, molecular genetics, cell biology and neurobiology.

**Module contents**
The module focuses on translational research in human genetics, molecular biology, molecular genetics, translational medicine, cell- and neurobiology.

Subjects of the lecture: Therapeutic strategies and research applications, molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes.

Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases, gain knowledge in Antisense-Oligonucleotide-, U1- and CRISPR-based genetic therapies, viruses in gene therapy, cell sorting and diagnosis by FACS.

Exercises: Learning current methods of therapy development; molecular biology and human genetics; high throughput technologies; introduction to cell cultivation techniques.

Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.

gswo080 - Genetic Diagnostics: from chromosomal aberrations to gene mutations

Module label: Genetic Diagnostics: from chromosomal aberrations to gene mutations
Modulkürzel: gsw080
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Molecular Biomedicine (Master) > Clinical Modules

Zuständige Personen:
- Owczarek-Lipska, Marta (Module responsibility)
- Owczarek-Lipska, Marta (Prüfungsberechtigt)

Prerequisites:
Enrolment in Master's programme Molecular Biomedicine

Skills to be acquired in this module:
Goals of the Module:
- To expand the knowledge about classical cytogenetics and molecular genetics as well as modern cytogenetic and molecular genetics technics applied in clinical diagnostics and research.

Competencies:
- Deepened biological and clinical expertise (cytogenetics and molecular genetics)
- Deepened knowledge of biological working methods and clinical diagnostics (classical cytogenetic and molecular genetics laboratory methods)
- Data analysis skills
- Interdisciplinary thinking
- Critical and analytical thinking
- Independent searching and knowledge of scientific literature
- Ability to perform independent biological research
- Data presentation and discussion (written and spoken)
- Team work
- Project and time management

Module contents:
The module focuses on genome- and gene mutations, cytogenetic and molecular genetics, human syndromes and diseases caused by different chromosomal aberrations.

Lecture:
- Essentials of classical cytogenetics and molecular genetics, classification of mutations, genetics syndromes/diseases, introduction to the genetic diagnostic laboratory techniques

Exercises:
- Chromosomal stainings, microscopy, karyotyping, identification of chromosomal aberrations, identification of gene mutations

Literaturempfehlungen:
- Principles of Clinical Cytogenetics by Steven L. Gersen, Martha B. Keagle

Links:
- https://uol.de/genetik-gehirnfehlbildungen/forschungsschwerpunkte/

Language of instruction:
English

Duration (semesters):
1 Semester

Module frequency:
Second half of the winter semester

Module capacity:
10

Reference text:
The number of participants for the practical part of this module is limited to 10. If there are more students registered than places available, lots will be drawn. Students which are enrolled in Master’s programme Molecular Biomedicine will be preferred.

Modullevel / module level:
MM (Mastermodul / Master module)

Modulant / type of module:
Wahlpflicht / Elective

Lehr-/Lernform / Teaching/Learning method:
- Lecture, Seminar and Exercise

Vorkenntnisse / Previous knowledge:
- Basic knowledge of genetics and cell biology

Examination:
- Prüfungszeiten
- Written examination (90 min., 70%), presentation (30%)
- Additionally ungraded: signed lab protocols

Form of instruction:
- Lecture
- Seminar
- Practical training

Frequency:
- WiSe

Workload of compulsory attendance:
- 14
- 14
- 28

Präsenzzeit Modul insgesamt:
- 56 h

### Verwendbarkeit des Moduls
- Master's Programme Molecular Biomedicine (Master) > Clinical Modules

### Zuständige Personen
- Dömer, Patrick (Module responsibility)
- Dömer, Patrick (Prüfungsberechtigt)
- Heep, Axel (Prüfungsberechtigt)
- Plösch, Torsten (Prüfungsberechtigt)
- Loser, Karin (Prüfungsberechtigt)
- Hinz, Cornelia (Prüfungsberechtigt)
- Dübbel, Lena (Prüfungsberechtigt)
- Hamprecht, Axel (Prüfungsberechtigt)
- Noster, Janina (Prüfungsberechtigt)
- Rauch, Bernhard (Prüfungsberechtigt)
- Meyer, Helge (Prüfungsberechtigt)
- Helgers, Simeon (Prüfungsberechtigt)

### Prerequisites
- Enrolment in Master’s programme Molecular Biomedicine

### Skills to be acquired in this module

#### Goals of the Module:
Upon successful completion of this module, students

- are familiar with the basic epigenetic mechanisms
- know the principles of different sequencing techniques, both for genetic and epigenetic research
- are familiar with the “first 1000 days of life concept” and how the early environment influences long term health
- know how the human body is colonized
- know about the basic mechanisms involved in CNV development during fetal and early postnatal life
- know about the methods used to study molecular intercellular signaling
- know about the non-invasive methods used to study functional brain development
- know about the insults leading to cerebral ischemia
- know about the mechanism of the neurovascular response
- know about the cellular and electrophysiological effects of acute and chronic cerebral ischemia
- know about the cell types, cellular interactions and molecular changes during peripheral nerve; degeneration and regeneration following nerve trauma
- are able to explain some oncogenic mechanisms of viruses
- can explain preeclampsia and its immunological regulation
- are familiar with antibiotic classes, mode of actions of antibiotics, principles of antibiotic resistance, dissemination of current plasmids causing multi-resistance
- know about differences between susceptibility, tolerance, resistance and persistence to antibiotics, the methods to determine minimal inhibitory concentrations, the causes of persistent infections, the characteristics of persister cells and mechanisms of persister cell formation, and current medical treatment strategies
- are able to explain the concept of cancer immunosurveillance and immunoediting
- can explain current strategies in immunotherapy of cancer including checkpoint inhibition, CAR T cell therapy and cancer vaccination
- are able to explain the mechanisms underlying therapy resistance in malignant diseases, particularly cancers of the gastrointestinal tract and the hepatico-pancreatoco-biliary system
- can explain current strategies in cancer diagnostic, particularly liquid biopsy

#### Competencies:

- **++ deepened clinical expertise**
- **++ deepened knowledge of biological working methods and clinical diagnostics**
- **++ interdisciplinary thinking**
- **+ data analysis skills**
- **++ critical and analytical thinking**
- **+ independent searching and knowledge of scientific literature**
- **+ ethics and professional behavior**

### Module contents
The module focuses on molecular aspects as part of current clinical research in different fields.

### Lectures:

---

33 / 59
- Genetic and epigenetic sequencing technology
- Epigenetic programming by early life events
- The human microbiome and colonization of the human body
- Molecular insights into functional brain development
- Basic mechanisms involved in CNS development during fetal and early postnatal life
- Introduction to methods used to study molecular signaling
- Introduction to non-invasive methods used to study functional brain development

- Contribution of the immune system to the progression of infection, autoimmunity, cancer or (neuro-) inflammation
- Modulation of the immune system as a potential therapeutic option
- Interaction of the microbiome with the immune system and impact of environmental factors on the development of immune-mediated diseases

- Oncogenic potential of viruses (e.g. Cervix carcinoma caused by HPV viruses)
- Molecular insights into carcinogenesis
- Preeclampsia and its immunological regulation

- Concept of cancer immunosurveillance and immunoediting
- Current strategies for cancer immunotherapy
- Mechanisms of cancer therapy resistance
- Current strategies for cancer diagnosis and liquid biopsy

- Insights into antibiotic resistance (mode of antibiotics, principles of antibiotic resistance)
- Emergence of multi-resistance and dissemination of plasmids causing multi-resistance
- Differences between susceptibility, tolerance, resistance and persistence of pathogens to antibiotics
- Current hypotheses of inducers for persister cell formation and medic treatment

- Neurovascular regulation in response to cerebral ischemia
- Molecular and cellular mechanisms of peripheral nerve regeneration

---

Modulkürzel | gsw100
Credit points | 6.0 KP
Workload | 180 h

Verwendbarkeit des Moduls
- Master's Programme Molecular Biomedicine (Master) > Clinical Modules

Zuständige Personen
- Gibbs, Bernhard (Prüfungsberechtigt)
- Gibbs, Bernhard (Module counselling)
- Fakultät 6 Dekanat (Module responsibility)

Prerequisites
- Enrolment in Master’s programme Molecular Biomedicine

Skills to be acquired in this module
- Competencies:
  ++ comprehensive understanding of the fundamentals of immunology and inflammation
  ++ deepened knowledge of clinical aspects of diseases
  ++ systematic understanding in the therapy diseases
  + interdisciplinary thinking
  + critical and analytical thinking
  ++ independent searching and knowledge of scientific literature
  ++ data presentation and discussion (written and spoken)
  ++ teamwork
  + time management

Module contents
- The module focuses on dermatology, immunology and inflammation.
  
  Lectures:
  Fundamentals of immunology and inflammation

  Seminars:
  Worked examples of major inflammatory diseases (e.g. allergies, infections, autoimmune diseases) and advanced therapeutic concepts.

  Exercises:
  Students will be expected to demonstrate the ability to prepare presentations in small working groups where they critically evaluate current research regarding specific examples of inflammatory diseases and their therapy (problem-orientated learning)

- Koschate, Jessica (Prüfungsberechtigt)
- Meilert, Friedrich (Prüfungsberechtigt)
- Ort, Katharina (Prüfungsberechtigt)
- Hoppe, Florian (Prüfungsberechtigt)

#### Prerequisites
Enrolment in Master’s programme Molecular Biomedicine

#### Skills to be acquired in this module
**Competencies:**
- ++ comprehensive understanding of clinical manifestation, epidemiology, risk factors, treatment strategies of degenerative diseases
- ++ understanding of geriatric phenomena
- ++ understanding and application of the comprehensive geriatric assessment (CGA)
- ++ interdisciplinary thinking
- ++ ethics and professional behaviour
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ data presentation and discussion (written and spoken)
- ++ teamwork

#### Module contents
The module focuses on geriatric medicine.

**Lecture:**
Fundamentals of degenerative diseases (Alzheimer's disease, Parkinson's disease, Rheumatoid Arthritis, Osteoarthritis, heart valve disease, aortic dilatation) and geriatric phenomena as frailty, multimorbidity and polypharmacy and their impact on diagnostic and treatment options, basics of geriatric medicine, evidence of the impact of the CGA on patient outcomes, dimensions of the CGA, surgical and interventional heart procedures in geriatric patients

**Seminar:**
Instant ageing, the geriatric team, cognitive assessment with actors, work in heart team

**Excursion:**
Small groups (2 students) can accompany clinical rounds on the geriatric ward (either acute geriatric care or geriatric rehabilitation). Conduction of parts of the CGA with patients

#### Literatureempfehlungen
Textbooks on geriatric medicine and geriatric psychiatry, e.g. Zeyfang et al. Basiswissen Medizin des Alterns und des alten Menschen. Springer.
Textbooks on cardiac surgery and cardiology, e.g. Ziemer, Haverich: Herzchirurgie.
Scientific papers related to current research topics will be available in Stud.IP

Workload: 450 h

Verwendbarkeit des Moduls:
- Master's Programme Molecular Biomedicine (Master) > Research Modules

Zuständige Personen:
- Koch, Karl-Wilhelm (Module responsibility)
- Koch, Karl-Wilhelm (Prüfungsberechtigt)

Further responsible persons:
- all teachers of the curriculum (module counselling, authorized examiners)

Prerequisites:
as defined in the admission and examination regulations

Skills to be acquired in this module:
- Competencies:
  ++ deepened biological and / or clinical expertise
  ++ deepened knowledge of biological working methods and / or clinical diagnostics
  ++ data analysis skills
  + interdisciplinary thinking
  ++ critical and analytical thinking
  ++ independent searching and knowledge of scientific literature
  ++ ability to perform independent biological research
  ++ data presentation and discussion (written and spoken)
  ++ team work
  + ethics and professional behaviour
  ++ project and time management

Module contents:
- Emphasis on research
- Theory and practice of topics related to issues in molecular biomedicine; independent treatment of an individual project; acquiring an advanced theoretical knowledge in selected fields of the molecular biology of the cell (points of emphasis: genetics, biochemistry, cell biology; topics depending on research groups).

Literaturempfehlungen:
- Specific literature of the topics indicated above; original papers related to the current research question; will be different for every student and every year.

Verwendbarkeit des Moduls
- Master's Programme Molecular Biomedicine (Master) > Skills Modules

Zuständige Personen
- Hartmann, Anna-Maria (Module responsibility)
- Hartmann, Anna-Maria (Prüfungsberechtigt)

Prerequisites
- Enrolment in Master’s programme Molecular Biomedicine

Skills to be acquired in this module
Competencies:
- ++ deepened knowledge of biological working methods
- ++ deepened knowledge of clinical diagnostics
- ++ data analysis skills
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- ++ ability to perform independent biological research
- ++ data presentation and discussion (written and spoken)

Basic knowledge of techniques used in molecular biomedicine

Module contents
The module focuses on competence in research methods.

Seminar:
Hybridization and detection of nucleic acid, polymerase chain reaction, nucleic acid sequencing, analyses of epigenetic modifications, protein-nucleic acid interaction, immunological techniques, light microscopy techniques, mass spectrometry analyses, protein-protein interactions, fluorescence in situ hybridization

Exercise:
molecular biological techniques (PCR, agarose gel, plasmid preparation, restriction), immunological methods (cell culturing, cytchemistry), biochemistry techniques (SDS gel, western blotting, protein purification, photometry)

Präsenzzeit Modul insgesamt
- 56 h
### Module label
Ethics in Medicine

### Modulkürzel
gsw180

### Credit points
3.0 KP

### Workload
90 h

### Verwendbarkeit des Moduls
- Master's Programme Molecular Biomedicine (Master) > Skills Modules

### Zuständige Personen
- Schweda, Mark (Module responsibility)
- Schweda, Mark (Prüfungsberechtigt)
- Weßel, Merle (Prüfungsberechtigt)

### Prerequisites
Enrolment in Master’s programme Molecular Biomedicine

### Skills to be acquired in this module
**Competencies:**
- ++ deepened medical / ethical expertise with a focus on research ethics
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- ++ data presentation and discussion (written and spoken)
- + team work
- ++ ethics and professional behaviour
- + project and time management

### Module contents
Concept of ethics and central theoretical approaches to ethics
Research ethical standards and their evolution
Good scientific practice (scientific misconduct, criteria of authorship, documentation of research, IRB approval)
Central areas of ethically sensitive research (stem cell and embryonic research, genomic research, clinical studies, social research)
Ethical problems in research (research with incompetent and vulnerable populations)

Präsenzzzeit Modul insgesamt 28 h
neu751 - Laboratory Animal Science

Module label | Laboratory Animal Science
Modulkürzel | neu751
Credit points | 3.0 KP

Workload | 90 h
  | one week full-time in semester break + flexible time for studying and exam preparation
  | 1 SWS Lecture
  | total workload 45h: 2h contact / 20h background reading / 23h exam preparation
  | 1 SWS Supervised exercise
  | total workload 45h: 35h contact / 10h background reading

Verwendbarkeit des Moduls
- Master's Programme Biology (Master) > Skills Modules
- Master's Programme Molecular Biomedicine (Master) > Skills Modules
- Master's Programme Neuroscience (Master) > Skills Modules

Zuständige Personen
- Köppl, Christine (Module responsibility)
- Köppl, Christine (Prüfungsberechtigt)
- Langemann, Ulrike (Prüfungsberechtigt)
- Nolte, Arne (Prüfungsberechtigt)
- Heyers, Dominik (Prüfungsberechtigt)
- Ebbers, Lena (Prüfungsberechtigt)
- Dedek, Karin (Prüfungsberechtigt)
- Schmaljohann, Heiko (Prüfungsberechtigt)
- Winklhofer, Michael (Prüfungsberechtigt)

Prerequisites
- none

Skills to be acquired in this module
- ++ Expt. Methods
- + Independent Research
- + Scient. Literature
- ++ Social skills
- ++ Interdiscipl. knowlg
- + Scientific English
- ++ Ethics

Upon successful completion of this course, students
- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
- have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.

Module contents
- Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:
  - Legislation, ethics and the 3Rs
  - Scientific integrity
  - Data collection
  - Basic biology of rodents, birds and fish
  - Husbandry, and nutrition of rodents, birds and fish
  - Animal Welfare
  - Health monitoring
Pain and distress
Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by
every partipant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

- Master's Programme Neuroscience (Master) > Skills Modules

**Zuständige Personen**
- Köppl, Christine (Module responsibility)  
- Hildebrandt, Jannis (Prüfungsberechtigt)  
- Köppl, Christine (Prüfungsberechtigt)

**Prerequisites**
- non-native speakers

**Skills to be acquired in this module**
- Neurosci. knowlg.
- Social skills
- Data present./disc.
- Scientific English

Upon completion of this course, students
- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience  
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation  
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)  
- are able to recognize and avoid common errors of non-native speakers.

**Module contents**
- Lectures cover  
  - characteristics of the different forms of scientific presentations  
  - sentence structure using the passive voice  
  - scientific vocabulary and terminology as contrasted to common speech  
  - appropriate language for communication with scientific editors and referees

  Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

- Plösch, Torsten (Prüfungsberechtigt)
- Gibbs, Bernhard (Prüfungsberechtigt)
- Dörner, Patrick (Prüfungsberechtigt)
- Dittmann, Tim (Prüfungsberechtigt)

**Prerequisites**
Enrolment in Master’s programme Molecular Biomedicine

**Skills to be acquired in this module**
**Goals of the module:**
- have improved their competencies in scientific writing
- demonstrate effective communication and presentation skills (oral and written)
- can defend their findings in scientific discussions or rebuttal letters
- know about major communication pitfalls

**Competencies:**
++ scientific writing
++ data presentation and discussion
+ independent searching and knowledge of scientific literature
+ teamwork
+ critical and analytical thinking

**Module contents**
**Seminar:**
- Introduction to scientific writing (analysis of scientific publications, structure of publications, common mistakes, logical story plots)
- types of scientific communications: posters, oral presentations, journal papers, grant applications, CV/job application
- Literature management (information search/ literature management tools/ plagiarism)
- presentation techniques (how to structure your poster/presentation, how to reach your audience)
- how to write your Master’s thesis
- job application (CV, application letter)
- how do others perceive your message?
- “don’ts” of scientific communication
- social media for scientists
- the perfect abstract

**Exercise**
- analysis of scientific publications
- writing an abstract
- presentation (poster, short talk)

**Literature empfehlungen**
A list will be distributed on forehand

**Links**
- Language of instruction: English
- Duration (semesters): 1 Semester
- Module frequency: Winter term
- Module capacity: 12

**Reference text**
The number of participants for this module is limited to 12. If there are more students registered than places available, lots will be drawn. Students which are enrolled in Master’s programme Molecular Biomedicine will be preferred.
