Bio703 - Basic Concepts in Plant Sciences

Module label: Basic Concepts in Plant Sciences
Module code: bio703
Credit points: 12.0 KP
Workload: 360 h

Used in course of study:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules

Contact person:
Module responsibility:
- Dirk Carl Albach

Authorized examiners:
- Dirk Carl Albach
- Gerhard Wolfgang Zotz
- Sascha Laubinger
- Klaus Bernhard von Hagen

Module counseling:
- Gerhard Wolfgang Zotz
- Sascha Laubinger
- Klaus Bernhard von Hagen

Entry requirements:
Skills to be acquired in this module:
- Communicating deeper knowledge in ecology, phylogeny, evolution and genetics of plants
- Communicating scale- and method-overarching thinking
- Communicating deeper theoretic concepts of ecology, evolution and genetics of plants
- Deepened biological expertise
- Deepened knowledge of biological working methods
- Data analysis skills
- Interdisciplinary thinking
- Critical and analytical thinking
- Independent searching and knowledge of scientific literature
- Ability to perform independent biological research
- Data presentation and discussion in German and English (written and spoken)
- Teamwork
- Ethics and professional behaviour

Module contents:
- V: Biodiversity of plants (2 SWS)
- V: Resource acquisition and use by plants (1 SWS)
- V: Gene expression in plants (1 SWS)
- S: Phylogeny of plants (2 SWS)
- S: Interactions of plants with environmental parameters (2SWS)

Reader's advisory:

Total time of attendance for the module:
- 112 h
# Module Information

**Module label**: Current Methods in Plant Sciences - Ecology, Phylogeny and Molecular Biology  
**Module code**: bio765  
**Credit points**: 12.0 KP  
**Workload**: 360 h 

**Used in course of study**  
- Master's Programme Biology (Master) > Background Modules  
- Master's Programme Biology (Master) > Background Modules

**Contact person**  
*Module responsibility*
- Sascha Laubinger  

*Authorized examiners*
- Sascha Laubinger  
- Dirk Carl Albach  
- Gerhard Wolfgang Zotz  

*Module counseling*
- Dirk Carl Albach  
- Gerhard Wolfgang Zotz

**Entry requirements**

*Skills to be acquired in this module*
- Acquaintance and practicing ecological, phylogenetic and molecular methods  
- Communication of scale- and method-overarching thinking and project planning  
- Knowledge of current methods and questions in plant science  
- Capacity for teamwork, project- and time management  
- **deepened biological expertise**  
- **deepened knowledge of biological working methods**  
- **data analysis skills**  
- **interdisciplinary thinking**  
- **critical and analytical thinking**  
- **independent searching and knowledge of scientific literature**  
- **ability to perform independent biological research**  
- **data presentation and discussion in German and English (written and spoken)**  
- **teamwork**  
- **statistics & scientific programming**

**Module contents**  
Ü: Current Methods in Plant Science (8 SWS)

**Languages of instruction**: German, English  
**Duration (semesters)**: 1 Semester  
**Module frequency**:  
**Module capacity**: 12

**Vorkenntnisse / Previous knowledge**: Ökologie, Flora, Genetik  
**Examination**: Time of examination  
**Type of examination**: Portfolio  
**Final exam of module**:  
**Course type**: Exercises  
**SWS**: 8.00  
**Frequency**: WiSe  
**Workload attendance**: 112 h
**Module label**: Ornithology  
**Module code**: bio655  
**Credit points**: 12.0 KP  
**Workload**: 360 h  
**Used in course of study**:  
- Master's Programme Biology (Master) > Background Modules  
- Master's Programme Biology (Master) > Background Modules  

**Contact person**  
- **Module responsibility**: Franz Bairlein  
- **Authorized examiners**:  
  - Georg Martin Klump  
  - Sandra Bouwhuis  
  - Christine Köppl  
  - Ullrie Langemann  
  - Henrik Mouritsen  
  - Heiko Schmaljohann  
  - Franz Bairlein  
- **Module counseling**:  
  - Georg Martin Klump  
  - Sandra Bouwhuis  
  - Christine Köppl  
  - Ullrie Langemann  
  - Henrik Mouritsen  
  - Heiko Schmaljohann  
  - Franz Bairlein  

**Entry requirements**  
- The module imparts advanced knowledge on different aspects of ornithology. The students acquire:  
  - An extended knowledge of morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds  
  - Knowledge, presentation and discussion of relevant English literature from various fields of ornithology  
  - Deepened biological expertise  
  - Deepened knowledge of biological working methods  
  - Critical and analytical thinking  
  - Independent searching and knowledge of scientific literature  
  - Data presentation and discussion in German and English (written and spoken)  

**Skills to be acquired in this module**  
- The module is composed of the lecture “Ecology and Physiology of Birds”, a seminar accompanying the lecture “Current Questions of Ornithology”, a seminar “Behavioural Ecology of Birds”, and a seminar “Methods in Field Ornithology”.  

**Module contents**  
- **Lecture “Ecology and Physiology of Birds”**:  
  This lecture consolidates special aspects of systematics, morphology, physiology, migration, orientation, population biology, communication and behavioural ecology in birds.  

- **Seminar “Current Questions of Ornithology”**:  
  Seminar “Current Questions of Ornithology”  
  - In this seminar, original English publications are presented and discussed which deal with current research results from various fields treated in the lecture. Every student reads a paper on one scientific article and discusses the results of that article with the other participants.  

- **Seminar “Behavioural Ecology of Birds” (option 1)**:  
  Seminar “Behavioural Ecology of Birds” (option 1):  
  - In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.  

- **Seminar “Methods in Field Ornithology” (option 2)**:  
  Seminar “Methods in Field Ornithology” (option 2):  
  - The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

Entry requirements
Skills to be acquired in this module
- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- ++ data presentation and discussion in German and English (written and spoken)
- ++ project and time management
- ++ statistics & scientific programming

The molecule aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).

Module contents
S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a "mini symposium" subsequent to the field studies.
E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication.

Reader's advisory

**Entry requirements**: BSc (Biology)

**Skills to be acquired in this module**:  
- Deepened biological expertise  
- Deepened knowledge of biological working methods  
- Data analysis skills  
- Interdisciplinary thinking  
- Critical and analytical thinking  
- Independent searching and knowledge of scientific literature  
- Ability to perform independent biological research  
- Data presentation and discussion in German and English (written and spoken)  
- Teamwork and professional behaviour  
- Project and time management  
- Statistics and scientific programming  

**Module contents**:  
- Lecture (L): General Marine Geology  
- Exercises (E): Biogenic sedimentation, Interaction benthos-sediment  
- Seminar (S): Plankton of the oceans  
- Lecture (MH): unicellular plankton  
- Seminar (IK): benthos of the North-Sea  
- Lecture (PM): biodiversity in the deep sea and on seamounts  
- Seminar (JG): conceptions and hypotheses of marine biodiversity, biodiversity of marine vertebrates  
- Seminar (GG): animal migrations and dispersal behaviour

<td>Module contents</td>
<td>Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses. Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.</td>

# bio675 - Molecular Ecology

**Module label:** Molecular Ecology  
**Module code:** bio675  
**Credit points:** 12.0 KP  
**Workload:** 360 h  
**Used in course of study:**  
- Master's Programme Biology (Master) > Background Modules  
- Master's Programme Biology (Master) > Background Modules  
- Master's Programme Landscape Ecology (Master) > Basismodule  
**Contact person**  
- Module responsibility: Arne Nolte  
- Authorized examiners: Arne Nolte  
- Gabriele Gerlach  
- Module counseling: Gabriele Gerlach  
**Entry requirements:**  
- B.Sc. (Biologie, Umweltwissenschaften)  
- M.Sc. (Biologie, Marine Umweltwissenschaften, Landschaftsökologie)  
**Skills to be acquired in this module:**  
- The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.  
  - ++ deepened biological expertise  
  - ++ deepened knowledge of biological working methods  
  - ++ data analysis skills  
  - + interdisciplinary thinking  
  - + critical and analytical thinking  
  - + independent searching and knowledge of scientific literature  
  - ++ ability to perform independent biological research  
  - ++ data presentation and discussion in German and English (written and spoken)  
  - + statistics & scientific programming  
**Module contents**  
- Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical.  
- Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.  
**Reader's advisory:** will be announced during the course

### Entry requirements

- BSc (Biologie, Biochemie)

### Skills to be acquired in this module

- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- + data analysis skills
- ++ interdisciplinary thinking
- + critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + data presentation and discussion in German and English (written and spoken)
- + teamwork
- + ethics and professional behaviour
- + project and time management

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

### Module contents

**Lecture:** To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.

**Exercise:** Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.

**Subjects of the lecture and seminar:** Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.

**Exercises:** Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

bio845 - Introduction to Development and Evolution

Module label: Introduction to Development and Evolution
Module code: bio845
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Contact person:
- Module responsibility: Ulrike Sienknecht
- Authorized examiners:
  - Ulrike Sienknecht
  - Maike Claußen
- Module counseling: Maike Claußen

Entry requirements:
Upon successful completion of this course, students should:

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organo-genesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

Skills to be acquired in this module:
- ++ deepened biological expertise
- + deepened knowledge of biological working methods
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + teamwork

Module contents:
Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion.

Lecture topics:
- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Limb Development
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

**Skills to be acquired in this module**
- ++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills
- ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of behavioural ecology and neuroethology
- are able to present and critically assess scientific data and approaches

**Module contents**
The lecture "Neuroethology" provides an introduction to the mechanisms underlying the behaviour of animals. Subjects include, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.
The lecture "Behavioural ecology" provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.

In the seminar "Current issues of Ethology", current original literature relating to behavioural biology is reported and discussed.

# Visual Neuroscience - Physiology and Anatomy

## Module Overview

### Module label
- Visual Neuroscience - Physiology and Anatomy

### Module code
- neu141

### Credit points
- 12.0 KP

### Workload
- Total workload: 360 h
  - 3 SWS Lecture (VO)
  - 1 SWS Seminar (SE)
  - 8 SWS Supervised exercise (UE)

### Contact person
- Module responsibility: Martin Greschner
- Authorized examiners:
  - Martin Greschner
  - Karin Dedek
  - Ulrike Janssen-Bienhold
  - Christian Puller

### Entry requirements
- Basic knowledge of neurobiology

### Skills to be acquired in this module

- ++ Neurosci. knowlg.
- ++ Expt. Methods
- + Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

**Upon successful completion of this course, students**

- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

### Module contents

The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:

- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

### Reader's advisory

Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students
• have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)
• have basic knowledge of the large range of techniques used in auditory research
• are able to read and critically report to others on an original research paper in auditory neuroscience
• are able to research and review a specific topic in auditory neuroscience

Module contents
One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.
Topics:
Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission
Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions
Auditory nerve: phase locking, rate coding. Excitation patterns
Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations
Sound localisation in birds and mammals
Central auditory processing: imaging techniques, auditory streams, cortex, primates
Relation between psychophysics and neurophysiology

The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

Reader's advisory
Required reading:
About 20 selected original papers (selection varies)
Recommended textbook(s) or other literature:
Pickles JO (2012) An Introduction to the Physiology of Hearing. Brill, Netherlands

Entry requirements:
Skills to be acquired in this module:
- Neurosci. knowlg.
- ++ Expt. Methods
- + Social skills
- ++ Maths/Stats/Progr.
- + Data present./disc.
- + Scientific English

Students will learn the basics about performing a psychoacoustic experiment. Based on an experiment in which they study their own hearing, they will learn how to conduct a behavioural study in hearing and analyze the data. In addition, they will be be provided with an overview of the mechanisms of auditory perception.

Module contents:
The modul comprises (i) a seminar "Hearing" [2 SWS] (ii) an exercise "Fundamentals in psychoacoustic data analysis" [1 SWS], and a (iii) practical course [7 SWS] including aspects of planning and conducting psychoacoustic experiments.

Reader's advisory:
Plack, Christopher J. (2005) The sense of hearing. Mahwah, NJ [u.a.] : Erlbaum (sufficient number of copies available in the university library)

</tbody>
</table>

Hinweise:

- all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor, students should contact appropriate supervisors individually
- prior to project start, external and local supervisors must fill the learning agreement form
- the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor
- participation in a joint poster presentation of concurrent research modules is highly recommended.

Skills to be acquired in this module

- Students will learn to plan, perform and analyse a study in a biological field. Topics will be chosen in close coordination with teaching staff. Depending on the particular project, knowledge in statistics, molecular biology, physiology, modelling, or ethology will be necessary. Results will be related to the current biological literature in a written report and be presented in the seminar of the hosting working group.

- + deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- ++ data presentation and discussion in German and English (written and spoken)
- + teamwork
- ++ project and time management
- + statistics & scientific programming

Module contents

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project both orally and in writing

Entry requirements
External research projects are done on an individual basis. They are supervised by one person from Oldenburg and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/ (Learning Agreement for External Research Module)

Skills to be acquired in this module
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
++ project and time management
++ statistics & scientific programming

Students perform individual research projects to learn:
• planning and organization of a research project in a group outside of University of Oldenburg
• formulate a scientific hypothesis
• planning, performing and analyzing experiments and / or simulations
• working with scientific background literature on the specific context of the project
• oral presentation and discussion of backgrounds and results in the lab seminar
• write a scientific report in publication format
• prepare and present a scientific poster

Module contents
Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad)

The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.

Note:
• all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor, students should contact appropriate supervisors individually
• prior to project start, external and local supervisors must fill the learning agreement form
• the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor
• participation in a joint poster presentation of concurrent research modules is highly recommended.

**Entry requirements**
- Skills to be acquired in this module
  - In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.
  - deepened biological expertise
  - deepened knowledge of biological working methods
  - data analysis skills
  - critical and analytical thinking
  - independent searching and knowledge of scientific literature
  - ability to perform independent biological research
  - data presentation and discussion in German and English (written and spoken)
  - teamwork
  - data presentation and discussion in German and English (written and spoken)
  - statistics & scientific programming

**Module contents**
- In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa.
- In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.

- ++ Maths/Stats/Progr.
- + Scientific English

Upon successful completion of this course, students have basic statistical competencies for understanding data, understand the main statistical methods and their practical use through application, can evaluate statistical methods regarding the qualities and their limits.

**Module contents**

- populations and samples; exploratory data analysis through describing statistics
- elementary probabilities and random variables
- important discrete and continuous distributions
- estimating parameters through the method of maximum likelihood
- confidence intervals and classical significance testing
- pairs of random variables; distribution and dependence
- classical regression analysis
- basic use of the software R to apply those methods

**Reader's advisory**

Entry requirements:
- Social skills
- Interdiscipl. knowlg.
- + Maths/Stats/Progr.
- + Scientific English

Skills to be acquired in this module:
- students learn the use of the software R in application scenarios
- students learn to actively "speak" the programming language R
- students practice statistical data analysis with R

Module contents:
The lecture gives an intuitive introduction into the use of the statistics software R. We start by introducing the basic handling of R and the syntax of its programming language. We use those to obtain the first statistical analyses from R. The next important step is to create informative graphics to represent the statistical results. Finally, we look into programming concepts that allow for more complex statistical analyses.

Skills to be acquired in this module

+ Scient. Literature
++ Social skills
+ Data present./disc.
++ Ethics

Upon completion of this course, students

• have basic knowledge of non-biological aspects of professional life (e.g., law, management, languages)
• know the basic safety and environmental concerns in bioscientific workplaces
• are able to critically define and discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
• have the ability to communicate scientific concepts, both orally and in writing
• are able to prepare and give a coherent presentation in a team
• have practised to lead a group discussion

Module contents

Lectures introduce the legal framework and the application procedures for experimental work with animals, humans and genetically modified organisms. In supervised exercises, students research the ethical aspects and controversial issues of about 10 particular topics in the biosciences. They take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
Good scientific practise and fraud
Neuroenhancement
Artificial intelligence
Animal welfare, Animal experiments
Overfishing, Nature conservation
State-of-the-art genetic tools and their implications
Genetically modified organisms, e.g., in food production, chimeras
Stem cells
Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

Reader’s advisory

Current law and interpretative commentaries, e.g., by the German Research Council (DFG) or the German Ethics Panel
Introductory papers aimed at lay persons, e.g. from “The Scientist” or widely respected newspapers
Problem-based, independent search for relevant scientific literature is an integral part of this module

In this module the participants gain an overview of arguments and experimental strategies in ageing research. We will focus on the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, and genetics. In addition, the main ageing theories will be covered. The participants work throughout the semester in project groups and present their results at a conference at the end of the course. Ethicists and philosophers from Germany and The Netherlands accompany the course, and chair at the conference a session on ethical aspects of ageing research. Under their moderation, the participants derive joint standpoints and policy recommendations.

At the end of this course the participants can understand, analyse, and present scientific articles from ageing research present the results of their studies and analyses using different presentation techniques apply the learned contents in novel contexts (ethics in ageing research)

Topics

Major ageing theories arguments and experimental strategies in the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, genetics in ageing research application of the learned contents in novel contexts (ethics in ageing research) understanding, analysing, and presentation of scientific articles presentation of results with different presentation techniques

- + Scientific English
- ++ Ethics

Upon successful completion of this course, students
- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
- have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments” and EU directive D „Persons killing animals”. We aim to obtain accreditation by the Federation of European Laboratory Animal Science Associations (FeLaSa) by 2018.

### Module contents
Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:  
- Legislation, ethics and the 3Rs  
- Scientific integrity  
- Data collection  
- Basic biology of rodents, birds and fish  
- Husbandry, and nutrition of rodents, birds and fish  
- Animal Welfare  
- Health monitoring  
- Pain and distress  
- Euthanasia  
Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):  
- Handling and external examination  
- Administration of substances, blood sampling  
- Euthanasia and dissection  
- Transcardial perfusion  
- Anaesthesia and surgery

### Reader’s advisory

**Entry requirements**

- non-native speakers

**Skills to be acquired in this module**

- Neurosci. knowlg.
- Social skills
- Data present./disc.
- Scientific English

Upon completion of this course, students

- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

**Module contents**

Lectures cover

- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

**Entry requirements**

**Skills to be acquired in this module**
- Neurosci. knowlg.
- Maths/Stats/Progr.
- Data present./disc.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language Python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see [https://www.python.org/](https://www.python.org/).

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetic data from various noise models to assess signal-to-noise ratio in instrumental datasets.

**Module contents**
Data types and data structures, control structures, functions, modules, file input/output, Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

Entry requirements

Skills to be acquired in this module
- Neurosci. knowlg.
- Independent research
- Scient. Literature
- Social skills
- Interdiscipl. knowlg.
- Data present./disc.
- Scientific English
- Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of neuroscience.

Critical reading of neuroscience literature:
identify article type and audience
summarize scientific contents
identify strengths and weaknesses of methods, conclusions etc.
put into scientific context
discuss manuscript style
discuss social and ethical context and implications of the study

Critical discussion of own studies:
present own results in a way that is appropriate for the target audience
put own studies into the context of scientific literature
acquire additional knowledge about a broader field of research

Module contents
The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context can be achieved by different options: - Option 1: Seminar 'Neuroscience Journal Club': All students read and discuss 12 published papers (one each week). Different fields of neuroscience (e.g. molecular, cellular, behavioral, computational) will be covered with one classical and one recent paper each. Papers and questions about each paper will be provided prior to the start of the seminar. Students prepare answers to these questions independently and discuss their answers during the seminar. The module is passed when a student actively participated in the discussion of at least 10 papers. - Option 2: Written report on a neuroscientific topic of the student's choice, based on scientific literature, e.g. in the context of an independent student study group. The report should discuss scientific results in a scientific and a social / ethical context. - Option 3: Active participation in a scientific conference, workshop, summer school etc: Participation in a scientific conference, workshop, summer school etc. lasting a minimum of 3 full days can be credited with 3 ECTS, if the student presents own scientific results (poster, talk) obtained, e.g., in a research module or Master thesis. - Option 4: Participation in at least 20 scientific presentations (e.g. IBU / DfN colloquium, Hanse lecture neuroscience) and submission of a short (1 page) written summary of each talk. - For other individual options (e.g. teaching in neuroscience) ask the module organizer.

Reader's advisory
Option 1 (seminar): List of 12 published papers will be provided prior to the course. All students are required to
read at least 10 of those.
Other options: dependent on the scientific topic

Background neuroscience textbooks, e.g.:
Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer
Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer

Within this introductory course students will learn the basics of MATLAB programming. Participants will be introduced in fundamental programming concepts.

Module contents
The modul comprises an introduction to data structures, flow control, loops, graphics, basic data analyses with MATLAB, scripts and functions.

Presentation and critical discussion of own studies in front of an international audience:
- participate in an international meeting
- prepare a poster or talk for an international meeting
- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

Module contents:
Active participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days. Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis.

- Lehrende der Biologie

**Entry requirements**

**Skills to be acquired in this module**
- Successful completion of the Master module demonstrates that students are able to work on a problem in the field of Biology within a fixed period applying scientific methods.

- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- ability to perform independent biological research
- data presentation and discussion in German and English (written and spoken)
- teamwork
- ethics and professional behaviour
- independent biological research
- data presentation and discussion in German and English (written and spoken)
- project and time management

**Module contents**
- Preparing the Master thesis
- Active participation in the seminar of the research group, in which the Master thesis is written

**Reader’s advisory**
- Supervisors may supply an initial reading list with important literature. The students are expected to find and use further literature as needed.
