**Verwendbarkeit des Moduls**

- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

**Zuständige Personen**

Koch, Karl-Wilhelm (Module responsibility)
Koch, Karl-Wilhelm (Prüfungsberechtigt)
Neidhardt, John (Prüfungsberechtigt)

**Prerequisites**

- BSc (Biologie, Biochemie)

**Skills to be acquired in this module**

- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- + data analysis skills
- ++ interdisciplinary thinking
- + critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + data presentation and discussion in German and English (written and spoken)
- + teamwork
- + ethics and professional behaviour
- + project and time management

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

**Module contents**

Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.
Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.
Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.
Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

Präsenzzeit Modul insgesamt 112 h
bio695 - Biochemical concepts in signal transduction

Module label: Biochemical concepts in signal transduction

Modulkürzel: bio695

Credit points: 12.0 KP

Workload: 360 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen:
- Koch, Karl-Wilhelm (Module responsibility)
- Scholten, Alexander (Module counselling)
- Koch, Karl-Wilhelm (Prüfungsberechtigt)
- Scholten, Alexander (Prüfungsberechtigt)

Prerequisites:
- keine

Skills to be acquired in this module:
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
+ project and time management

Module contents:
- Lecture: Molecular fundamentals of cellular signal processes
- Seminar: Signal transduction
- Exercises: Experiments on cellular signal transduction and enzymology

Mechanisms of biochemical signal transduction are imparted theoretically and experimentally.

Literaturempfehlungen:
Textbooks of cell biology and biochemistry. Current literature on topics of signal transduction (as announced in the preparatory meeting).

Präsenzzeit Modul insgesamt: 112 h
gsw010 - Molecular Physiology

**Module label**
Molecular Physiology

**Modulkürzel**
gsw010

**Credit points**
6.0 KP

**Workload**
180 h

**Verwendbarkeit des Moduls**
- Master's Programme Molecular Biomedicine (Master) > Background Modules

**Zuständige Personen**
Milenkovic, Ivan (Prüfungsberechtigt)

**Prerequisites**
as defined in the admission and examination regulations

**Skills to be acquired in this module**
++ deepened biological expertise
++ deepened clinical/pathological expertise
++ deepened knowledge of biological working methods
+ data analysis skills
+ computer based data analysis
+ interdisciplinary thinking
+ ability to perform independent biological research
+ data presentation and discussion (written and spoken)

**Module contents**

**Emphasis on physiology of the cell, physiology of human organ systems in health and disease, homeostatic regulation mechanisms**

**Lecture:**
cellular mechanisms of excitability, physiology of intercellular communication with emphasis on synaptic transmission, muscle contraction, heart – mechanical and electrical properties, cardiovascular system, lungs – mechanical properties and regulation of respiration, kidney – regulation of diuresis, homeostatic pH regulation, somatosensory system, hearing, vision, central nervous system

**Exercise:**
Patch clamp technique – recordings from neurons in acute brain tissue preparation, action potentials, excitatory (EPSCs) and inhibitory postsynaptic currents (IPSCs).
Calcium imaging – investigation of excitatory glutamatergic receptors on neurons.
In vivo recordings – single cell recordings from central auditory neurons in small rodents. In vivo properties of action potentials and synaptic transmission upon acoustic stimulation.

**Literatureempfehlungen**
Guyton and Hall - Textbook of medical physiology
Kandler, Schwarz, Jessell - Principles of neural science
Pape, Kurz, Silbernagl - Physiologie
Schmidt, Lang, Heckmann - Physiologie des Menschen
Speckmann, Hescheler, Köhling - Physiologie

gsw030 - Biophysical Chemistry

Module label: Biophysical Chemistry
Modulkürzel: gsw030
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls: Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen: Winklhofer, Michael (Prüfungsberechtigt)
Prerequisites: as defined in the admission and examination regulations

Skills to be acquired in this module:

++ deepened biological expertise,
+ data analysis skills,
+ usage of databases and computational tools
+ interdisciplinary thinking
++ critical and analytical thinking,
++ data presentation and discussion

Understanding physical principles underlying biochemistry and cell biology

Module contents:

Emphasis on Molecular Biophysics, Biophysical Chemistry, Biochemistry, Cell Biology

- Molecular Biophysics, Biophysical Chemistry, Biochemistry, Cell Biology
- Dynamics of single molecules, molecular thermodynamics, statistical thermodynamics; diffusion; chemical equilibria involving macromolecules, signal amplification;
- Spectroscopical techniques (molecular vibration and rotation spectroscopy, electronic absorption and fluorescence spectroscopy, FRET, NMR, Atomic force microscopy)

Literaturempfehlungen:
- Principles of Biophysical Chemistry (van Holde et al., Pearson/Prentice Hall)
- Physical chemistry (Atkins, Wiley VCH)
- Biophysics - Searching for principles (Bialek, Princeton UP)

Skills to be acquired in this module:
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking,
++ critical and analytical thinking,
++ independent searching and knowledge of scientific literature
+ data presentation and discussion (written and spoken)
+ team work

Module contents:

Emphasis on auditory neuroscience, molecular and cellular neurobiology

Lecture: development, anatomy and function of the auditory system (cochlea to cortex), classification, molecular causes and inheritance of auditory disorders, investigation of these disorders in animal models, insights into possibilities of treatment/therapy

Seminar: Discussion of current topics in molecular and cellular biology of hearing and deafness

Exercise: Laboratory experiments to study mouse models of deafness/auditory processing disorders

Literaturempfehlungen:

Springer Handbook of Auditory Research Series Vol. 63:

Vona, B., Haaf, T. (Eds.), "Genetics of Deafness", 2016, Karger Publishers

- Greschner, Martin (Prüfungsberechtigt)
- Dedek, Karin (Prüfungsberechtigt)
- Janssen-Bienhold, Ulrike (Prüfungsberechtigt)
- Puller, Christian (Prüfungsberechtigt)

**Prerequisites**
- Basic knowledge of neurobiology

**Skills to be acquired in this module**
- ++ Neurosci. knowlg.
- ++ Expt. Methods
- + Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Upon successful completion of this course, students
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

**Module contents**
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

**Literatureempfehlungen**
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

Zuständige Personen
- Jüschie, Christoph (Prüfungsberechtigt)
- Neidhardt, John (Prüfungsberechtigt)

Prerequisites
- as defined in the admission and examination regulations

Skills to be acquired in this module

++ deepened biological expertise
++ deepened clinical expertise,
++ deepened knowledge of biological working methods
+ deepened knowledge of clinical diagnostics,
+ data analysis skills
+ interdisciplinary thinking,
++ critical and analytical thinking,
+ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
+ data presentation and discussion (written and spoken)
+ team work
+ project and time management

Adressing students with emphasis on translational/therapeutical interest in molecular biology, molecular genetics, cell biology and neurobiology.

Module contents

Emphasis on Translational Research in Human Genetics, Molecular biology, molecular genetics, translational medicine, cell- and neurobiology.

Subjects of the lecture: Therapeutic strategies and research applications, molecular bases of neurodegenerative diseases, structure and function of DNA/RNAproteins/membranes.

Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases, gain knowledge in Antisense-Oligonucleotide-, U1- and CRISPR-based genetic therapies, viruses in gene therapy, cell sorting and diagnosis by FACS.

Exercises: Learning current methods of therapy development; molecular biology and human genetics; high throughput technologies; introduction to cell cultivation techniques.

Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.

gsw080 - Genetic Diagnostics: from chromosomal aberrations to gene mutations

Module label: Genetic Diagnostics: from chromosomal aberrations to gene mutations
Modulkürzel: gsw080
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls: Master's Programme Molecular Biomedicine (Master) > Clinical Modules
Zuständige Personen: Owczarek-Lipska, Marta (Prüfungsberechtigt)

Prerequisites: as defined in the admission and examination regulations

Skills to be acquired in this module:
++ ability to perform independent biological research
+ data presentation and discussion (written and spoken)
+ team work
+ project and time management

To expand the knowledge about classical cytogenetics and molecular genetics as well as modern cyto- and molecular genetics technics applied in clinical diagnostics and research.

Module contents:
Emphasis on genome- and gene mutations, cyto- and molecular genetics, human syndromes and diseases caused by different chromosomal aberrations.

Lecture: essentials of classical cytogenetics and molecular genetics, classification of mutations, genetics syndromes/diseases, introduction to the genetic diagnostic laboratory techniques

Exercises: chromosomal stainings, microscopy, karyotyping, identification of chromosomal aberrations, identification of gene mutations

Literaturempfehlungen:
Chromosomen: Klassische und molekulare Cytogenetik. Springer-Lehrbuch, W. Traut, EAN: 9783540533191
Klassische und molekulare Genetik, C. Bresch, R. Hausmann, EAN: 9783540058021
Molekulare Biotechnologie. Konzepte und Methoden, M. Wink, EAN: 9783527309924
Essentials of medical genomics. S. M. Brown, EAN: 9780471270614

++ deepened clinical expertise  
++ deepened knowledge of biological working methods and clinical diagnostics  
+ data analysis skills  
++ interdisciplinary thinking,  
++ critical and analytical thinking,  
+ independent searching and knowledge of scientific literature  
+ ethics and professional behavior

Module contents

Emphasis on foetal and early postnatal life, n.n.

The module will focus on molecular aspects as part of current clinical research in different fields, e.g.: Molecular insights in the functional brain development, Neural cell migration, synaptogenesis and the development of the connectome are principle mechanisms during foetal and early postnatal life. The goal will be to learn about methods we are using to study molecular intercellular signalling (Nano vesicles, signalling molecules) and about non-invasive methods to study functional brain development (blood oxygenation level dependent response / BOLD / neonatal functional MRI)

Literatureempfehlungen
Current literature on topics will be provided via Stud.IP

**Prerequisites**
as defined in the admission and examination regulations

**Skills to be acquired in this module**

++ Comprehensive understanding of the fundamentals of immunology and inflammation
++ Deepened knowledge of clinical aspects of diseases
++ Systematic understanding in the therapy diseases
+ Interdisciplinary thinking
+ Critical and analytical thinking
++ Independent searching and knowledge of scientific literature
++ data presentation and discussion (written and spoken)
++ teamwork
+ time management

**Module contents**

**Emphasis on dermatology, immunology, inflammation**

Lectures: Fundamentals of immunology and inflammation

Seminars: Worked examples of major inflammatory diseases (e.g. allergies, infections, autoimmune diseases) and advanced therapeutic concepts.

Exercises: Students will be expected to demonstrate the ability to prepare presentations in small working groups where they critically evaluate current research regarding specific examples of inflammatory diseases and their therapy (Problem-orientated learning)

- Hackbarth, Michel (Prüfungsberechtigt)
- Brümleve, Nils (Prüfungsberechtigt)

Prerequisites

as defined in the admission and examination regulations

Skills to be acquired in this module

++ comprehensive understanding of clinical manifestation, epidemiology, risk factors, treatment strategies of degenerative diseases
++ understanding of geriatric phenomena
++ understanding and application of the comprehensive geriatric assessment (CGA)
++ interdisciplinary thinking
++ ethics and professional behaviour
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ data presentation and discussion (written and spoken)
++ teamwork

Module contents

Emphasis on geriatric medicine

Lectures: fundamentals of degenerative diseases (Alzheimer's disease, Parkinson's disease, Rheumatoid Arthritis, Osteoarthrits, heart valve disease, aortic dilatation) and geriatric phenomena as frailty, multimorbidity and polypharmacy and their impact on diagnostic and treatment options, basics of geriatric medicine, evidence of the impact of the CGA on patient outcomes, dimensions of the CGA, surgical and interventional heart procedures in geriatric patients

Seminars: instant ageing, the geriatric team, cognitive assessment with actors, work in heart team

Excursion: small groups (2 students) can accompany clinical rounds on the geriatric ward (either acute geriatric care or geriatric rehabilitation). Conduction of parts of the CGA with patients

Literatureempfehlungen
textbooks on geriatric medicine and geriatric psychiatry, e.g. Zeyfang et al. Basiswissen Medizin des Alterns und des alten Menschen. Springer.

textbooks on cardiac surgery and cardiology, e.g. Ziener, Haverich: Herzchirurgie

Scientific papers related to current research topics will be available in Stud.IP

#### Skills to be acquired in this module

- ++ comprehensive understanding of the fundamentals of regenerative ophthalmology research
- ++ Deepened knowledge of clinical aspects of eye diseases
- ++ deepened knowledge of biological working methods and clinical diagnostics (classical tissue engineering, cell culture and molecular laboratory methods)
- ++ Systematic understanding in translational research
- + Interdisciplinary thinking
- + Critical and analytical thinking
- ++ data analysis and interpretation skills
- ++ data presentation and discussion (written and spoken)
- ++ teamwork
- + time management

#### Module contents

**Emphasis on Regenerative Medicine in Ophthalmology**

- Lectures: Fundamentals of ophthalmologic diseases and insights of current ophthalmologic research projects including tissue engineering methods
- Exercises: practical laboratory work: generation of tissue engineered artificial cornea, preparation of porcine cornea and retina, cultivation of primary corneal stem cells, sample preparation for protein and mRNA, Western Blotting, PCR, Paraffin sectioning, HE-staining

#### Literaturempfehlungen

Textbooks of ophthalmology, anatomy, current literature concerning tissue engineering methods in ophthalmology. Primary and secondary literature of the field will be provided and introduced at the first meeting

Module contents

**Emphasis on current topics in molecular cell biology and biomedicine**

Original literature of molecular life science related to health and disease

**Literatureempfehlungen**

Specific literature of the topics indicated above; original papers related to the current research question; will be different for every student and every year. Textbooks of Cell Biology, Biochemistry, Genetics: Alberts et al. Molecular Biology of the Cell (5th Edition or later); Stryer Biochemistry (7th Edition or later); Lehninger Biochemistry (4th Edition or later). These textbooks are updated almost every 3 or 4 years.

**Links**

Language of instruction: English

Duration (semesters): 1 Semester

Module frequency: recommended in semester 3, time is flexible and subject to individual arrangement

Module capacity: unlimited

Modullevel / module level: MM (Mastermodul / Master module)

Modulart / typ of module: Wahlpflicht / Elective

Lehr-/Lernform / Teaching/Learning method: Seminar

Vorkenntnisse / Previous knowledge: Basic knowledge of Cell Biology, Genetics, Biochemistry

Examination: Prüfungszeiten

Type of examination: Portfolio; Presentation of journal articles, 2 presentations à 20 min.

Form of teaching: Seminar

SWS: 2

**gsw200 - Microscopic Imaging in Biomedical Sciences**

**Module label**
- Microscopic Imaging in Biomedical Sciences

**Modulkürzel**
- gsw200

**Credit points**
- 3.0 KP

**Workload**
- 90 h

**Verwendbarkeit des Moduls**
- Master's Programme Molecular Biomedicine (Master) > Skills Modules

**Zuständige Personen**
- Dedek, Karin (Prüfungsberechtigt)
- Groß, Petra (Prüfungsberechtigt)

**Prerequisites**
- as defined in the admission and examination regulations

**Skills to be acquired in this module**
- + deepened biological expertise
- ++ deepened knowledge of biological working methods
- + data analysis skills
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- ++ data presentation and discussion (written and spoken)
- + team work

**Module contents**

**Emphasis on Microscopy, Imaging, Methods of Microscopy**

Lectures: Basics in optics, microscopy methods, image processing, biomedical applications

Seminar: Examples for selected microscopy methods and their application

Different microscopical methods and their applications are discussed and compared. Students will understand the basics and limitations of microscopy methods and learn to evaluate them. Selected methods are demonstrated.

**Literaturempfehlungen**
- Literature will be provided during the lecture/seminar

**Links**
- Language of instruction: English
- Duration (semesters): 1 Semester
- Module frequency: afternoon event during winter semester
- Module capacity: 16 (Selection criteria: attendance at first meeting)

- Ebbers, Lena (Prüfungsberechtigt)
- Dedek, Karin (Prüfungsberechtigt)

Prerequisites
- none

Skills to be acquired in this module
- ++ Expt. Methods
- + Independent Research
- + Scient. Literature
- ++ Social skills
- ++ Interdiscipl. knowlg
- + Scientific English
- ++ Ethics

Upon successful completion of this course, students
- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
- have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.

Module contents
- Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:
  - Legislation, ethics and the 3Rs
  - Scientific integrity
  - Data collection
  - Basic biology of rodents, birds and fish
  - Husbandry, and nutrition of rodents, birds and fish
  - Animal Welfare
  - Health monitoring
  - Pain and distress
  - Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by
every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

| Prerequisites                    | non-native speakers |
|----------------------------------|--|------------------|

| Skills to be acquired in this module | + Neurosci. knowlg. |
|--------------------------------------| ++ Social skills |
|                                      | ++ Data present./disc. |
|                                      | ++ Scientific English |

Upon completion of this course, students
- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

<table>
<thead>
<tr>
<th>Module contents</th>
<th>Lectures cover</th>
</tr>
</thead>
<tbody>
<tr>
<td>- characteristics of the different forms of scientific presentations</td>
<td></td>
</tr>
<tr>
<td>- sentence structure using the passive voice</td>
<td></td>
</tr>
<tr>
<td>- scientific vocabulary and terminology as contrasted to common speech</td>
<td></td>
</tr>
<tr>
<td>- appropriate language for communication with scientific editors and referees</td>
<td></td>
</tr>
</tbody>
</table>

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.
