gsw010 - Molecular Physiology

Module label	Molecular Physiology
Modulkürzel	gsw010
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	 Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	 Milenkovic, Ivan (module responsibility) Milenkovic, Ivan (Prüfungsberechtigt) Radulovic, Tamara (Prüfungsberechtigt) Keine, Christian (Prüfungsberechtigt) Radulovic, Tamara (Module counselling) Milenkovic, Ivan (Module counselling)
Prerequisites	Enrolment in Master's programme Molecular Biomedicine; Knowledge of cell biology is beneficial for comprehension of lecture content
Skills to be acquired in this module	Goals of the Module: Upon successful completion of this module, students - know molecular mechanisms of cellular physiology - know physiology of the following human body organ systems: muscular system, nervous system, cardiovascular system, respiratory system, urinary system - understand pathophysiology of certain diseases - know basic principles of functional tests for certain organ systems. Competencies: ++ deepened biological expertise
	 ++ deepened clinical/pathological expertise ++ deepened knowledge of medical diagnostic methods + data analysis and clinical interpretation + interdisciplinary thinking
Module contents Literaturempfehlungen	The module focuses on physiology of the cell, physiology of human organ systems in health and disease, homeostatic regulation mechanisms Lecture topics: 1. Cellular mechanisms of excitability 2. Synaptic transmission 3. Muscle contraction 4. Spinal cord reflexes 5. Motor skills 6. Basic principles of circulatory function 7. Pulmonary ventilation 8. Regulation of respiration 9. General sensory physiology 10. Physiology of special senses 11. Kidneys 12. Water homeostasis and osmoregulation Exercise: 1. Excitability of nerve cells and AP propagation 2. Reflexes 3. Electrocardiography 4. Pulmonary function tests and regulation of respiration 5. Functional tests for sensory systems 6. Water and osmolarity homeostasis Guyton and Hall - Textbook of medical physiology (covers most topics)
Encluded in promising of	Kandler, Schwarz, Jessell - Principles of neural science Gary G. Matthews – Cellular Physiology of Nerve and Muscle

gsw020 - Cellular and Subcellular Structures

Module label	Cellular and Subcellular Structures
Modulkürzel	gsw020
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	 Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	 Bräuer, Anja (module responsibility) Bräuer, Anja (Prüfungsberechtigt) Maier, Esther Christine (Prüfungsberechtigt) Maier, Esther Christine (Module counselling)
Prerequisites	Enrolment in Master's programme Molecular Biomedicine
Skills to be acquired in this module	Goals of the Module: Upon successful completion of this module, students know and understand cellular and subcellular structures and their function in the human body.
	Competencies: ++ deepened biological expertise ++ deepened clinical / pathological expertise, ++ deepened knowledge of biological working methods ++ deepened knowledge of clinical / pathological diagnostics, + interdisciplinary thinking, + critical and analytical thinking, + ability to perform independent biological research + ethics and professional behaviour
Module contents	The module aims to give students an insight into microscopic functional anatomy. In this module, we will cover aspects of cell compartmentalisation and tissue organisation as the basis for normal function and homeostasis. In addition, we will cover examples of organ organisation and organ function. T introduce students to clinical concepts, and to deepen their understanding of the functional roles of cells and tissues, we will also cover aspects of the pathological basis of disease for selected organs and organelles. In the accompanying seminar, students will have the chance to work on light and electron microscopic pictures, to practice annotation and identification of cells and tissues. In addition, the students will read and present original

This course is **not** a full histology course, but it serves as an introduction to the topic, recapitulates aspects of cell biology and introduces a few select aspects of pathology. Thus, this module is aimed at students with little experience in cell biology.

Skills to be acquired in this module	Competencies: ++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature + data presentation and discussion (written and spoken)
Module contents	The module focuses on auditory neuroscience, molecular and cellular neurobiology. Lecture:
	Development, anatomy and function of the auditory system (cochlea to cortex), classification, molecular causes and inheritance of auditory disorders, investigation of these disorders in animal models, insights into possibilities of treatment/therapy
	Seminar: The seminar will focus on possibilities of treatment options in the field of auditory rehabilitation. In a flipped classroom, students will shortly present and discuss different approaches.
	Exercise: Laboratory experiments to study mouse models of deafness/auditory processing disorders
Literaturempfehlungen	Springer Handbook of Auditory Research Series Vol. 63: - Manley, G.A., Gummer, A.W., Popper, A.N., Fay, R.R. skills to be acquired in this module	++ Neurosci. knowlg.
	++ Expt. Methods
	+ Independent research
	++ Scient. Literature
	+ Social skills
	+ Maths/Stats/Progr.
	++ Data present./disc.
	+ Scientific English + Ethics
	T EU1103
	Upon successful completion of this course, students
	 have basic knowledge of electrophysiological techniques used in neuroscience research
	have acquired first practical skills in some electrophysiological techniques
	have acquired basic skills in data analysis
	 have knowledge on retinal physiology and anatomy of the visual system
	 have basic knowledge of brain structures and their function
	have profound knowledge of the architecture and circuits of the vertebrate
	retina • have aquired basic skills in histological techniques (tissue fixation,
	embedding, sectioning,
	staining procedures, immunohistochemistry)
	 have aquired fundamental skills in microscopy (differential interference contrast microscopy,
	phase-contrast microscopy, confocal microscopy)
Module contents	The background module Neurophysiology consists of two weeks of theoretica introduction and two weeks of hands-on lab exercises in patch or extracellula recordings and two weeks of hands-on lab exercises in anatomy.
	The seminars cover the following topics:
	Visual system Introduction to all attraphysical size I mathoda
	 Introduction to electrophysiological methods Introduction into methods used in neuranatomy and neurochemistry
	Introduction into methods used in neuralization and neurochemistry Introduction into microscopy and image analysis
	Presentation and discussion of results relating to the literature
iteraturempfehlungen	Course scripts and mandatory scientific literature discussed in the seminar w
	be available in Stud.IP.

Zuständige Personen	 Thiel, Christiane Margarete (module responsibility) Thiel, Christiane Margarete (Module counselling) Thiel, Christiane Margarete (Prüfungsberechtigt) Gießing, Carsten (Prüfungsberechtigt)
Prerequisites	
	++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics Upon successful completion of this course, students know the fundamentals of neurotransmission know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions understand the relationship between disturbances in neurotransmitter systems cognitive functions and psychiatric disease know the priniciples of drug treatement for psychiatric disorders have in-depth knowledge in selected areas of these topics are able to understand, explain and critically assess neuroscientific approache in animals and humans are able to understand and critically assess published work in the area of cognitive neurosciene
Module contents	The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: History of cognitive neuroscience Methods of cognitive neuroscience Attention Learning Emotion Language Executive functions. The supervised excersise either deepens that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week. The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease.The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: Introduction to Terms and Definitions in Drug Research Dopaminergic and Noradrenergic System Cholinergic and Serotonergic System GABAergic and Glutamatergic System GABAergic and Glutamatergic System Addiction Depression Schizophrenia Anxiety Alzheimer's Disease

bio845 - Introduction to Development and Evolution

Module label	Introduction to Development and Evolution
Modulkürzel	bio845
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	 Master's Programme Biology (Master) > Background Modules Master's Programme Biology (Master) > Background Modules Master's Programme Molecular Biomedicine (Master) > Background Modules Master's Programme Neuroscience (Master) > Background Modules
Zuständige Personen	 Sienknecht, Ulrike (module responsibility) Sienknecht, Ulrike (Module counselling) Sienknecht, Ulrike (Prüfungsberechtigt) Claußen, Maike (Prüfungsberechtigt)
Prerequisites	

Skills to be acquired in this module

Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

skills:

- ++ deepened biological expertise
- + deepened knowledge of biological working methods
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + teamwork

Module contents

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- · Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

Enrolment in Master's programme Molecular Biomedicine
Goals of the Module: Upon successful completion of this module, students are familiar with the basic epigenetic mechanisms know the principles of different sequencing techniques, both for genetic and epigenetic research are familiar with the "first 1000 days of life concept" and how the early environment influences long term health know how the human body is colonized know about the basic mechanisms involved in CNV development during fetal and early postnatal life know about the methods used to study molecular intercellular signaling know about the non-invasive methods used to study functional brain development know about the insults leading to cerebral ischemia know about the mechanism of the neurovascular response know about the cellular and electrophysiological effects of acute and chronic cerebral ischemia know about the cell types, cellular interactions and molecular changes during peripheral nerve; degeneration and regeneration following nerve traume are able to explain some oncogenic mechanisms of viruses can explain preeclampsia and its immunological regulation are familiar with antibiotic classes, mode of actions of antibiotics, principles of antibiotic resistance, dissemination of current plasmids causing multiresistance know about differences between susceptibility, tolerance, resistance and persistence to antibiotics, the methods to determine minimal inhibitory concentrations, the causes of persister cell formation, and current medica treatment strategies are able to explain the concept of cancer immunosurveillance and immunoediting can explain current strategies in immunotherapy of cancer including checkpoint inhibition, CAR T cell therapy and cancer vaccination are able to explain the mechanisms underlying therapy resistance in malignant diseases, particularly cancers of the gastrointestinal tract and the hepatico-pancreatico-bilary system can explain current strategies in cancer diagnostic, particularly liquid biopsy Competencies: + deepened clinical expertise + depened clin

Module contents

The module focuses on molecular aspects as part of current clinical research in different fields.

Lectures: (Part 1)

- Genetic and epigenetic sequencing technology
- Epigenetic programming by early life events
- The human microbiome and colonization of the human body
- Molecular insights into functional brain development
- Basic mechanisms involved in CNS development during fetal and early postnatal life
- Introduction to methods used to study molecular signaling
- Introduction to non-invasive methods used to study functional brain development

(Part 2)

- Contribution of the immune system to the progression of infection, autoimmunity, cancer or (neuro-) inflammation
- Modulation of the immune system as a potential therapeutic option
- Interaction of the microbiomed with the immune system and impact of environmental factors on the development of immune-mediated diseases (Part 3)
- Oncogenic potential of viruses (e.g. Cervix carcinoma caused by HPV viruses)
- Molecular insights into carcinogenesis
- Preeclampsia and it's immunological regulation

(Part 4)

- Concept of cancer immunosurveillance and immunoediting
- Current strategies for cancer immunotherapy
- Mechanisms of cancer therapy resistance
- Current strategies for cancer diagnosis and liquid biopsy (Part 5)
- Insights into antibiotic resistance (mode of antibiotics, principles of antibiotic resistance)
- Emergence of multi-resistance and dissemination of plasmids causing multi-resistance
- Differences between susceptibility, tolerance, resistance and presistence of pathogens to antibiotics
- Current hypotheses of inducers for persister cell formation and medicl treatment

(Part 6)

- Neurovascular regulation in response to cerebral ischemia
- Molecular and cellular mechanisms of peripheral nerve regeneration

Zuständige Personen	 Griesinger, Frank (module responsibility) Griesinger, Frank (Prüfungsberechtigt) Roeper, Julia (Prüfungsberechtigt) Dübbel, Lena (Prüfungsberechtigt) Loser, Karin (Prüfungsberechtigt) Mykicki, Nadine (Prüfungsberechtigt) Dübbel, Lena (Module counselling) Roeper, Julia (Module counselling)
Prerequisites	Enrolment in Master's programme Molecular Biomedicine
Skills to be acquired in this module	Goals of the Module: Upon successful completion of this module, students - can define and identify oncogenes and tumor suppressor genes - know about the hallmarks of cancer and can explain them based on example pathways and traits - know about the complexity of the tumor tissue and the different cells that are involved - know about the principles of metastasis.
	Competencies: ++ deepened biological & clinical expertise ++ interdisciplinary thinking + deepened knowledge of biological working methods & clinical diagnostics ++ data analysis skills + usage of databases and computational tools ++ critical & analytical thinking + independent searching & knowledge of scientific literature ++ data presentation & discussion (written and spoken) + teamwork ++ ethics & professional behavior
Module contents	Part 1 - Lecture: We will give a brief overview of several aspects of tumor biology: Types of mutation, hallmarks of cancer, tumor as a tissue, metastasis, oncogenes and tumor suppressor genes, signal transduction and many example pathways that are important for cancer progression. In addition, you will learn about tumor-infiltrating immune cells and new therapy options like tumor-immune therapy. Part 2 - Seminar:
	Students will be expected to demonstrate the ability to prepare presentations in small working groups where they critically evaluate current research regarding specific examples of tumor diseases and their therapy (problem-orientated learning) Optional: Lectures from the study programme Human Medicine (winter semester only; will be held in German): Lecture topics from the human Medicine programme focusses on large tumor entites, therapy strategies, and basics of carcinogenesis and therapetic implementation. Please note, that these lectures are not part of the curriculum and are therefore not relevant for the examinations.
Literaturempfehlungen	Current literature will be uploaded on Stud.IP. Previous literature research is not necessary. If you are looking for more information/background: Weinberg; "The Biology of Cancer"; Garland Science

Research Modules

gsw150 - Research Project Molecular Biomedicine

Module label	Research Project Molecular Biomedicine
Modulkürzel	gsw150
Credit points	15.0 KP
Workload	450 h
Verwendbarkeit des Moduls	 Master's Programme Molecular Biomedicine (Master) > Research Modules
Zuständige Personen	Koch, Karl-Wilhelm (module responsibility)Koch, Karl-Wilhelm (Prüfungsberechtigt)
Further responsible persons	all teachers of the curriculum (module counselling, authorized examiners)
Prerequisites	as defined in the admission and examination regulations
Skills to be acquired in this module	Competencies: ++ deepened biological and / or clinical expertise ++ deepened knowledge of biological working methods and / or clinical diagnostics ++ data analysis skills + interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ ability to perform independent biological research ++ data presentation and discussion (written and spoken) + team work + ethics and professional behaviour + project and time management
Module contents	Emphasis on research
Literaturempfehlungen	Theory and practice of topics related to issues in molecular biomedicine; independent treatment of an individual project; acquiring an advanced theoretical knowledge in selected fields of the molecular biology of the cell (points of emphasis: genetics, biochemistry, cell biology; topics depending on research groups) There are several options for the lab projects, for example in the broad categories of: https://uol.de/en/neurosciences/ https://uol.de/en/biochemistry/research/ https://uol.de/en/neurogenetics/research/ https://uol.de/en/retina/research/ https://uol.de/en/retina/research/ https://uol.de/anatomie/forschung/ https://uol.de/dermatologie/forschung/ https://uol.de/dermatologie/aktuelle-forschungsprojekte https://uol.de/genetik-gehirnfehlbildungen/forschungsschwerpunkte/ https://uol.de/augenheilkunde/forschungsschwerpunkte/
	current research question; will be different for every student and every year.

gsw200 - Microscopic Imaging in Biomedical Sciences

Module label		Microscopic Imaging in Biomedical Sciences
Modulkürzel		gsw200
Credit points		3.0 KP
Workload		90 h
Verwendbarkeit des Moduls		 Master's Programme Molecular Biomedicine (Master) > Skills Modules Master's Programme Neuroscience (Master) > Skills Modules
Zuständige Personen		 Dedek, Karin (module responsibility) Groß, Petra (Prüfungsberechtigt) Dedek, Karin (Prüfungsberechtigt) Solovyeva, Vita (Prüfungsberechtigt)
Prerequisites		Enrolment in Master's programmes Molecular Biomedicine and Neuroscience.
Skills to be acquired in this module		Competencies: + deepened biological expertise ++ deepened knowledge of biological working methods + data analysis skills ++ interdisciplinary thinking ++ critical and analytical thinking ++ data presentation and discussion (written and spoken) + team work
Module contents		The module focuses on microscopy, imaging and methods of microscopy. Lecture: Basics in optics, microscopy methods, image processing, biomedical applications
		Seminar: Examples for selected microscopy methods and their application. Different microscopical methods and their applications are discussed and compared. Students will understand the basics and limitations of microscopy methods and learn to evaluate them. Selected methods are demonstrated.
Literaturempfehlungen		Literature will be provided during the lecture/seminar
Links		
Language of instruction		English
Duration (semesters)		1 Semester
Module frequency		afternoon event during winter semester
Module capacity		16 (Selection criteria: attendance at first meeting)

neu751 - Laboratory Animal Science

Module label	Laboratory Animal Science
Modulkürzel	neu751
Credit points	3.0 KP
Workload	90 h (one week full-time in semester break + flexible time for stuying and exam preparation 1 SWS Lecture
	total workload 45h: 2h contact / 20h background reading / 23h exam preparation
	1 SWS Supervised exercise total workload 45h: 35h contact / 10h background reading)
Verwendbarkeit des Moduls	 Master's Programme Biology (Master) > Skills Modules Master's Programme Biology (Master) > Skills Modules Master's Programme Molecular Biomedicine (Master) > Skills Modules Master's Programme Neuroscience (Master) > Skills Modules
Zuständige Personen	 Köppl, Christine (module responsibility) Köppl, Christine (Prüfungsberechtigt) Langemann, Ulrike (Prüfungsberechtigt) Nolte, Arne (Prüfungsberechtigt) Heyers, Dominik (Prüfungsberechtigt) Ebbers, Lena (Prüfungsberechtigt) Dedek, Karin (Prüfungsberechtigt) Schmaljohann, Heiko (Prüfungsberechtigt) Winklhofer, Michael (Prüfungsberechtigt)
Prerequisites	none
Skills to be acquired in this module	++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics Upon successful completion of this course, students • know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language • understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint. • have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or
	fish) • are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation • have practical skills in handling small rodents or birds or fish • have profound knowledge of anaesthesia, analgesia and basic principles of surgery. • have practised invasive procedures and euthanasia. NOTE: These objectives aim to satisfy the requirements for EU directive A
Module contents	"Persons carrying out animal experiments" and EU directive D "Persons killing animals".
Module contents	Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are: • Legislation, ethics and the 3Rs • Scientific integrity • Data collection " • Basic biology of rodents, birds and fish • Husbandry, and nutrition of rodents, birds and fish • Animal Welfare • Health monitoring • Pain and distress • Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every partipant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
 Administration of substances, blood sampling
 Euthanasia and dissection
 Transaction

- Anaesthesia and surgery

gsw210 - Scientific Communication

Module label		Scientific Communication
Modulkürzel		gsw210
Credit points		6.0 KP
Workload		180 h
Verwendbarkeit des Moduls		Master's Programme Molecular Biomedicine (Master) > Skills Modules
Zuständige Personen		 Plösch, Torsten (module responsibility) Plösch, Torsten (Prüfungsberechtigt) Gibbs, Bernhard (Prüfungsberechtigt) Dömer, Patrick (Prüfungsberechtigt) Dittmann, Tim (Prüfungsberechtigt)
Prerequisites		Enrolment in Master's programme Molecular Biomedicine
Skills to be acquired in this module		Goals of the module: Upon completion of this module, students - have improved their competencies in scientific writing - demonstrate effective communication and presentation skills (oral and written) - can defend their findings in scientific discussions or rebuttal letters - know about major communication pitfall Competencies: ++ scientific writing ++ data presentation and discussion + independent searching and knowledge of scientific literature + teamwork + critical and analytical thinking
Module contents		Seminar: Introduction to scientific writing (analysis of scientific publications, structure of publications, common mistakes, logical story plots) types of scientific communications: posters, oral presentations, journal papers, grant applications, CV/job application Literature management (information search/ literature management tools/ plagiarism) presentation techniques (how to structure your poster/presentation, how to reach your audience) how to write your Master's thesis job application (CV, application letter) how do others perceive your message? "don'ts" of scientific communication social media for scientists the perfect abstract Exercise analysis of scientific publications writing an abstract presentation (poster, short talk)
Literaturempfehlungen		A list will be distributed on forehand
Links		
Language of instruction		English
Duration (semesters)		1 Semester
Module frequency		winter term
Module capacity		12
Reference text		The number of participants for this module is limited to 12. If there are more students registered than places available, lots will be drawn. Students which are enrolled in Master's programme Molecular Biomedicine will be preferred.
Type of module		Wahlpflicht / Elective
Module level		MM (Mastermodul / Master module)
Teaching/Learning method		Seminar and Exercise
Previous knowledge		English level B2 according to Common European Framework of Reference for
		Languages (CEFR)
Examination	Prüfungszeiten	Type of examination

Masterabschlussmodul

mam - Master Thesis Module

Module label		Master Thesis Module
Modulkürzel		mam
Credit points		30.0 KP
Workload		900 h (
		attendance in the lab meetings: 28 hours (2 SWS); theses work: 872 hours)
Verwendbarkeit des Moduls		 Master's Programme Molecular Biomedicine (Master) > Masterabschlussmodul
Zuständige Personen		
Further responsible persons		all to a chara of the auriculum
Proroguicitos		all teachers of the curriculum
Prerequisites		as defined in the admission and examination regulations
Skills to be acquired in this module		++ deepened biological and / or clinical expertise, ++ deepened knowledge of biological working methods and / or clinical diagnostics, ++ data analysis skills, + interdisciplinary thinking, ++ critical and analytical thinking, ++ independent searching and knowledge of scientific literature, ++ ability to perform independent biological research, ++ data presentation and discussion (written and spoken), + team work, + ethics and professional behaviour, ++ project and time management
Module contents		Preparation of the Master Thesis. There are several options for the lab projects, e.g. in the broad categories of:
		https://uol.de/en/neurosciences/
		o https://uol.de/en/biochemistry/research/
		o https://uol.de/en/neurogenetics/research/
		o https://uol.de/en/retina/research/
		https://uol.de/humanmedizin/
