Kompetenzziele

Goals of module:
Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.

Competencies:
++ interdisciplinary knowledge & thinking
++ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
++ ethics / good scientific practice / professional behavior
++ critical & analytical thinking
++ scientific communication skills
+ group work

Modulinhalt

Part 1: Multivariate Statistics I (lecture): winter
- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models
- Path modeling
- Factor analysis (exploratory & confirmatory)
- (Multilevel) Structural equation modeling (SEM linear and non-linear)

Part 2: Analysis Methods with R (seminar): winter and summer
- Data examples and applications of GLM. GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

Part 3: Multivariate Statistics II (lecture): summer
- Supervised and unsupervised statistical learning and prediction
- Regularized regression
- Resampling methods
- Tree-based methods
- Support Vector Machines
- Neural Networks (basics)
- Principal components and clustering

Part 4: Evaluation research (seminar): summer
- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
- Research synthesis and meta-analysis

Teilnahmevoraussetzungen

Goals of module:

Students will acquire specific knowledge about psychological assessment, test theory and test construction, and will be trained to utilize this knowledge within a research or test development context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of applied psychometrics and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of test and assessment report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:

+ Neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking

Modulinhalte

Part 1: Introduction to Psychological Assessment (lecture): winter

- Psychological assessment as a decision process – descriptive and prescriptive models
- Introduction to test theories (will be detailed in Part 3)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Classificatory decisions
- Psychometrics to single cases
- Summarizing results and writing reports

Part 2: Test Theory and Test Construction (lecture): winter

- Classical test theory
- Generalizability theory
- Latent-State and Trait theory
- Latent variable models for different types of item responses
- Measurement invariance across groups and time
- Network modeling in psychometrics
- Preference modeling for constructing faking-resistant questionnaires and tests

Part 3: applied seminars: summer (choose a or b)

a: The Assessment Process Applied OR

- Case conceptualization (neuropsychology and clinical psychology)
- Formulating hypotheses
- Selecting assessment procedures and planning administration
- Deciding upon decision rules for data integration
- Evaluating the application of assessment procedures
- Analyzing, summarizing and visualizing results
- Integrating results based on the decision rules
- Writing a psychological/assessment report
- Discussing a report with the client

b: Test Construction Applied

- Construct conceptualization
- Deciding upon the response format
- Item mining
- Item analysis
- Test quality report and test manual
### Part 4: Assessment in Clinical Neuropsychology (seminar): summer
- specific knowledge
- exercises in testing / practising tests

**Prüfung**

**Prüfungszeiten**

**Prüfungsform**

- Gesamtmodul
  - summer term
  - The module will be tested by a practical exercise (test application and protocol / test construction) 90% and an oral presentation of the planned contents 10%.
  - Required active participation for gaining credits:
    - 2 presentations or test executions
    - handing in 10 exercises
    - participation in discussions on other presentations
    - attendance of at least 70% in the seminars.

Psy130 - Communication of scientific results

Modulbezeichnung: Communication of scientific results
Modulkürzel: psy130
Kreditpunkte: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls: Master Neurocognitive Psychology (Master) > Mastermodule

Zuständige Personen:
- Herrmann, Christoph Siegfried (Modulverantwortung)
- Herrmann, Christoph Siegfried (Prüfungsberechtigt)
- Kasten, Florian (Prüfungsberechtigt)
- Strüber, Daniel (Prüfungsberechtigt)
- Strüber, Daniel (Modulberatung)

Teilnahmevoraussetzungen: Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele:
Goals of module:
Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically.

Competencies:
++ data presentation & discussion
++ scientific literature
++ scientific English / writing
++ scientific communication skills
+ group work

Modulinhalte:
Part 1: Communication of scientific results (seminar)
- Literature search
- Presentation skills
- Writing skills

Part 2: Psychological colloquium
- Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite

Literatureempfehlungen:

Links:

Unterrichtssprache: Englisch
Dauer in Semestern: 1-2 Semester
Angebotsrhythmus Modul: Part 1 will be offered every winter term. Part 2 will be offered every semester.

Aufnahmekapazität Modul: unbegrenzt

Hinweise: Students can chose whether they want to attend the colloquium in the first, second or both semesters.

Modullevel / module level: MM (Mastermodul / Master module)
Modulart / typ of module: Pflicht / Mandatory

Lehr-/Lernform / Teaching/Learning method: Communication of scientific results: seminar; Psychological colloquium: colloquium

Vorkenntnisse / Previous knowledge:
Prüfung: Prüfungszeiten: Prüfungsf orm: Oral presentation

Gesamtmodul: during winter term

Required active participation for gaining credits: 70% attendance of the seminar and at least 8 colloquia (use attendance sheet that will be handed out in the beginning of the term) and active discussion in at least 1 colloquium.

Lehrveranstaltungsform: Seminar 2 WiSe 28 Kolloquium 2 SoSe und WiSe 28 Präsenzzeit Modul insgesamt: 56 h

**Verwendbarkeit des Moduls**
- Master Neurocognitive Psychology (Master) > Mastermodule

**Zuständige Personen**
- Rieger, Jochem (Modulberatung)
- Blechner, Kerstin (Modulberatung)

**Teilnahmevoraussetzungen**
Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**
- Goals of module: Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile.

**Competencies:**
+ interdisciplinary knowledge & thinking

**Modulinhalt**
- Students can take Master modules and courses from the fields:
  - Biology
  - Neurosciences
  - Computer Science
  - Physics
  - Mathematics
  - Pedagogy
  - Philosophy
  - related fields
  - Psychology (additional elective module (NOT psy170, psy220, psy270, psy280) or from another study programme)

  Students whose first language is not German, may take German classes.

  Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master’s thesis). English classes cannot be taken as Minor.

  A list of already approved courses/modules can be found on our website. You can take other courses/modules upon approval.

  We recommend taking modules/courses that strengthen your own professional profile.

**Literaturrempfehlungen**

**Links**
- List of approved courses/modules and approval form: https://uol.de/en/psychology/master/course-overview/
- Supporting documents

**Unterrichtsprachen**
- Englisch, Deutsch

**Dauer in Semestern**
- 1 Semester

**Angebotsrhythmus Modul**
- irregular

**Aufnahmekapazität Modul**
- unbegrenzt

**Hinweise**
- PLEASE NOTE:
  - If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website)
  
  If you want to take an additional elective module for your Minor (taking only a part of an elective module is not possible), you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as approved for the Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor.

  Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.

  It is your responsibility to ask the teacher whether you can take part.

psy150 - Clinical Psychology

Goals of the Module:
Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ experimental methods
+ data presentation & discussion
+ scientific literature
+ critical & analytical thinking
+ knowledge transfer

Modulinhalte
The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.

Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar): winter
Basics of neurotransmitter systems and psychopharmacology
Substance Abuse (e.g. psychostimulants, hallucinogens)
Depression
Anxiety Disorders
Alzheimer's Disease
Schizophrenia
psychopathological assessment

The seminar will be given in German as clinicians and patient actors are involved.

Part 2: Psychological interventions within the framework of evidence-based medicine (seminar): summer
(partly in German): Concepts of evidence based treatment and treatment of acquired dysfunctions of the brain

treatment studies of selected psychiatric disorders

Literaturempfehlungen

- Selected papers (part 2)

**Kompetenzziele**

**Goals of module:**
Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology.

**Competencies:**
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
++ statistics & scientific programming
++ ethics / good scientific practice / professional behavior
+ group work
+ project & time management

**Modulinhalte**

Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in using EEGLAB, an open-source software toolbox for advanced EEG analysis.

**Part 1: Neurophysiology and neuroanatomy (lecture): winter**
Neurophysiology, EEG, EMG, ECG
Neuroanatomy
Time-domain and frequency-domain analysis methods

**Part 2: EEG recording and analysis (seminar): winter**
Recording and analysis of biomedical signals
Averaging, filtering, signal-to-noise
Topographical EEG analysis

**Part 3: EEG analysis with Matlab (seminar): summer**
EEGLAB file I/O, data structure and scripting
Preprocessing, artefact rejection and artefact correction
Statistical decomposition
Event-related potentials, topographical mapping and power spectra
Illustration of results

psy181 - Neurocognition

Modulbezeichnung: Neurocognition
Modulkürzel: psy181
Kreditpunkte: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master Neurocognitive Psychology (Master) > Mastermodule

Zuständige Personen:
Thiel, Christiane Margarete (Modulverantwortung)
Thiel, Christiane Margarete (Prüfungsberechtigt)

Teilnahmevoraussetzungen:
Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele:
Goals of module:
Students should be able to recognize and critically evaluate the value of considering neuroscience in the study of psychological topics.

Competencies:
++ neuropsychological / neurophysiological knowledge
++ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ scientific communication skills
+ group work

Modulinhalte:
Students will first acquire a general understanding of the brain mechanisms of different cognitive functions and the methods used to study these functions. They will then apply this knowledge by discussing current research topics (part 1). General knowledge will be focused on the relation between the development of the human brain and the cognitive processes it supports (part 2).

Part 1: Introduction to cognitive neuroscience (lecture and seminar): winter
Brain and cognition, methods of cognitive neuroscience
Attention, learning and memory
Emotional and social behaviour
Language, executive functions

Part 2: Neurocognitive development (seminar): summer
Brain development and cortical plasticity
Effects of early-life stress on brain development
Development of object recognition, social cognition, memory, and executive functions

psy190 - Sex and Cognition

Modulbezeichnung: Sex and Cognition
Modulkürzel: psy190
Kreditpunkte: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls: Master Neurocognitive Psychology (Master) > Mastermodule

Zuständige Personen:
- Strüber, Daniel (Modulverantwortung)
- Strüber, Daniel (Prüfungsberechtigt)

Teilnahmevoraussetzungen:
Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Kompetenzziele:
Goals of module:
Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain’s control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
++ scientific communication skills
+ group work
+ project & time management

Modulinhalte:

Part 1: Introduction to the study of sex differences (lecture): winter
- The measurement of sex differences
- Sex differences in emotion
- Sex differences in aggression
- Sex differences in cognitive abilities
- Hormones, sexual differentiation, and gender identity
- Sex hormones and play preferences
- Sex differences in hemispheric organization
- Brain size and intelligence

Part 2: Sex, brain, and behaviour (seminar): winter
- Sex differences in empathy
- The extreme male brain theory of autism (S. Baron-Cohen)
- Sex differences in neuropsychiatric disorders
- Sex differences in stress response
- Social implications of sex differences

Psy201 - Neuropsychology

Module: Neuropsychology

Module Code: psy201

Credits: 6.0 KP

Workload: 180 h

Module Availability: Master Neurocognitive Psychology (Master) > Mastermodule

Responsible Persons:
- Debener, Stefan (Module coordination)
- Debener, Stefan (Examination rights)

Participation Requirements:
- Enrolment in Master's programme Neurocognitive Psychology.

Competence Goals:
- Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 3), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3).

Competencies:
- ++ neuropsychological / neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- ++ experimental methods
- + data presentation & discussion
- ++ scientific literature
- + critical & analytical thinking
- + scientific communication skills

Module Contents:

Part 1: Introduction to Clinical Neuropsychology (lecture): winter
- Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
- Higher functions (learning & memory, language, emotion, spatial behavior attention)
- Plasticity and disorders (development, learning and reading disabilities, recovery)

Part 2: Cognitive Neurorehabilitation (seminar): summer
- Behavioural and neuropsychological approaches
- Neurofeedback in neurorehabilitation and ADHD
- Memory rehabilitation
- Effects of physical activity on cognition
- Motor recovery

Part 3: Topics in Clinical Neuropsychology (seminar; taught partly in German): winter
- Clinical neuroanatomy
- Neurodegenerative diseases
- Dementia

Choose either part 2 or part 3!

Recommended Literature:

Links:
- English

Duration in Semesters:
- 1-2 Semester

Capacity of the Module:
- 30 (Part 3 is not restricted)

Remarks:
- Part 1 (lecture) is mandatory. Choose either part 2 or part 3 (seminars).
- Note: The lecture of part 3 is given in German with accompanying English materials. Students who cannot follow a lecture in German are given priority in part 2.

Module Level / Module Type:
- MM (Mastermodule / Master module)

Teaching/Learning Method:
- Wahlpflicht / Elective

Participation Requirements:
- Part 1: lecture; Part 2: seminar; Part 3: seminar

Vorkenntnisse / Previous knowledge:

Examination:
- Exam period at the end of winter term

The module will be tested with a written exam of 2 h duration.

Required active participation for gaining credits:

Zuständige Personen

- Rieger, Jochem (Modulverantwortung)
- Rieger, Jochem (Prüfungsberechtigt)
- Unni, Anirudh (Prüfungsberechtigt)

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Kompetenzziele

Goals of the module:

Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for application. On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation.

Competencies:

- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Experimental methods
- Scientific literature
- Ethics / good scientific practice / professional behavior
- Critical & analytical thinking
- Scientific communication skills
- Knowledge transfer

Modulinhalte

The module will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science in to practice.

Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature which will be presented, critically analyzed and discussed.

Part 1: (Neuro)Cognitive Psychology in the wild I (lecture): summer

- Neurocognitive Psychology with emphasis in real world context
- Methodological considerations: Generalization, validity of theories and research methods
- Information uptake and representation: Sensation, perception, categorization
- Selection of information and capacity: Attention and memory enhancement and failure
- Generation and communication: Language, reading, dyslexia
- Pursuing goals: Thinking, problem solving and acting

Part 2: (Neuro)Cognitive Psychology in the wild II (seminar): winter

In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

Kompetenzziele

Goals of module:
The goal of the module is to provide students with basic skills required to plan, implement and evaluate brain computer interfaces as devices for human computer interaction. BCIs are an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation. Moreover, BCI-techniques can be used for modern data-driven basic neuroscience. The module combines a lecture on the theoretical foundations of the most important techniques with a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics.

Competencies:
+ Understanding of the foundations of statistical learning techniques
+ provide basics to understand technical time series processing and machine learning papers
+ interdisciplinary knowledge & thinking
+ experimental methods
+ statistics & scientific programming
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
+ group work
+ project & time management

Modulinhalte

Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer

Part 2: Hands on BCI implementation (practical seminar): summer

Topics covered:
- A brief history of BCIs and examples of HCI control and basic neuroscience using BCI techniques.
- Data preprocessing (e.g. filtering, projection techniques) and common artifacts and artifact treatment.
- Feature generation (e.g. fourier transform, spectral estimation techniques, principle components).
- Machine learning for classification and regression (e.g. model parameter optimization in multivariate regression).
- Evaluation (e.g. measures of model quality, cross validation to test model generalization, permutation tests).

Where possible the lecture provides mathematical backgrounds of the data analysis techniques. The practical seminar implements BCI techniques on a real data set and further elaborates specific topics in seminar form.

Literatureempfehlungen

There is no required textbook. The lecture slides and notes should be sufficient. However some resources from which they were developed are given below:

General tutorial text providing and overview and accompanying python code on github:

Signal processing:

PCA & SVD

Unsupervised feature Learning and deep learning tutorial:

General texts:

Machine learning and AI:

Hastie, Tibshirani, and Friedman. The elements of statistical learning. Covers a wide range of machine learning topics. Free online.

Additional literature and material will be provided on the course website.

- Rieger, Jochem (Prüfungsberechtigt)

#### Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

#### Kompetenzziele
**Goals of module:**
The aim of this module is to provide students with a theoretical background on how cognitive functions can be altered via neuromodulation.

**Competencies:**
++ Neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ experimental methods
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills

#### Modulinhalt
Students will be introduced to the concepts of neuromodulation and the application of theoretical knowledge of neurophysiology to the modulation of cognitive functions.

**Part 1: Neuromodulation of cognition (lecture): winter**
- Neurotransmitter and neuromodulator systems
- Neuropharmacological intervention
- Mechanisms of neural plasticity
- Neurofeedback
- Electric and magnetic brain stimulation
- Therapeutical applications

**Part 2: Topics in Neuromodulation (seminar): winter**
- Psychological an therapeutic effects of neuromodulation
- Modulation of neuronal network function
- Deep brain stimulation for therapeutical modulation

**Kompetenzziele**

Goals of module:
Students will acquire scientific programming skills as well as specific knowledge of computational methods in neuroscience and cognition. They will learn to judge the appropriateness and complexity of computational problems and solutions.

Competencies:
- Neuropsychological / neurophysiological knowledge
- experimental methods
- statistics & scientific programming
- critical & analytical thinking
- knowledge transfer
- group work

**Modulinhalte**

**Part 1: Introduction to scientific programming I (lecture): winter**
- Basic data types and structures
- Flow control (conditions, loops, errors)
- Testing and debugging
- Functions

**Part 2: Introduction to scientific programming II (lecture): summer**
- Complex data structures
- EEG processing
- Frequency analysis methods
- Introduction to toolboxes

**Part 3: Scientific programming I (exercise): winter**
- Implementation of examples from part 1

**Part 4: Scientific programming II (exercise): summer**
- Implementation of examples from part 2

**Part 5: Computer-controlled experimentation (seminar): summer**
- Computer hardware basics
- Scripting and programming in Presentation
- Combining stimulus delivery with EEG
- Temporal precision

**Literaturempfehlungen**

- Mathworks (2009): MATLAB online documentation

Weitere verantwortliche Personen

Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for psy260.

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology.
You can only start the practical project if you have passed the exam of psy240 (psy241) Computation in Neuroscience!
Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.
Goals of module:

Students are able to critically review the scientific literature and current state of knowledge concerning a certain topic in the field of cognitive neuroscience or neuropsychology. Based on this, they are able to develop a specific research question and to design an adequate experiment, acquire data and conduct appropriate statistical analyses, building on previously gained competencies in relevant research methods, computer programming and statistical methods. They know how to critically discuss the results of their study in context of the current literature and how to present their findings at a scientific poster symposium.

Competencies:

++ experimental methods
+ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ scientific communication skills
+ knowledge transfer
+ group work
++ project & time management

Modulinhalte

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

Unterrichtssprache

Englisch

Dauer in Semestern

1 Semester

Angebotsrhythmus Modul

The module will be offered every winter term.

Aufnahmekapazität Modul

unbegrenzt

Hinweise

Topics for projects will be presented in a colloquium at the end of the summer term.

Students can chose to perform the practical work in either of the research groups of the Department of Psychology. External projects are possible upon approval (information and approval form can be found on the programme website).

Please note that, due to the Coronavirus pandemic, you have to hand in a risk assessment form before starting your external practical project. You can find this form in English or German in the list of supporting documents!

PLEASE NOTE:

Many projects require knowledge of either EEG, fMRI, TBS, or HCI analysis! We strongly recommend to take either psy170: Neurophysiology, psy270: fMRI Data Analysis, psy280: Transcranial Brain Stimulation, or psy220 Human Computer Interaction prior to the practical project.

It is expected that students have basic knowledge of Matlab programming before starting the practical project. This is proven by having passed the exam in Computation in Neuroscience.

Prüfung

Gesamtmodul

usually end of April

Poster presentation in a student symposium (30% of the grade) and daily project work (70% of the grade).

Lehrveranstaltungsform

Seminar

Please select the group in which you perform your practical project.

Praktikum

attendance as necessary for your project (~ 200h)

Psy280 - Transcranial Brain Stimulation

Module: Transcranial Brain Stimulation

Module Code: psy280

Credit Points: 6.0 KP

Workload: 180 h

Module Availability: Master Neurocognitive Psychology (Master) > Mastermodule

Responsible Persons:
- Herrmann, Christoph Siegfried (Module Head)
- Herrmann, Christoph Siegfried (Examination Right)
- Strüber, Daniel (Examination Right)

Enrolment Requirements:
- Enrolment in Master's programme Neurocognitive Psychology.

Competency Goals:
- Students will gain theoretical and practical knowledge on various non-invasive brain stimulation techniques.

Competencies:
- ++ Neuropsychological / neurophysiological knowledge
- ++ experimental methods
- + statistics & scientific programming
- + scientific literature
- + ethics / good scientific practice / professional behaviour

Module Content:

Part 1: Introduction to transcranial brain stimulation (lecture): summer
- Historical overview of brain stimulation
- Different techniques (TMS, tDCS, tACS, tRNS)
- Physiological mechanisms (entrainment, after-effects etc.)
- The use of transcranial brain stimulation in cognitive neuroscience - Experimental parameters (intensity, electrode montage, etc.)
- Pros and cons of TMS vs. tACS
- Technical aspects (artifact correction, modeling current flow, etc.)
- Safety issues
- Ethical considerations of brain stimulation

Part 2: Effects of tACS on physiology and cognition (seminar): summer
- Physiology of tACS (on-line and after-effects)
- Modulating cognitive functions (e.g. memory, attention, and perception)
- Clinical applications of tACS
- Hands-on experience in the lab

Recommended Literature:

Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele
Goals of module:
Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases (“case conceptualization”), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:
+ Neuropsychological / neurophysiological knowledge
+ Interdisciplinary knowledge & thinking
+ Ethics / good scientific practice / professional behavior
+ Critical & analytical thinking

Modulinhalte

Part 1: Introduction to Psychological Assessment (lecture)

• Psychological assessment as a decision process – descriptive and prescriptive models
• Theories of reliability (classical and modern approaches)
• Theories of validity (classical and modern approaches)
• Assessment methods, their construction and design, quality criteria
• The logic of decision making in the assessment process
• Psychometrics to single cases
• Summarizing results and writing reports

Part 2: Psychological Testing (seminar)

• Psychometric bases of tests and questionnaires
• Types of tests and questionnaires
• Challenges in psychological testing (for example faking good vs. bad)
• Examples of published tests and questionnaires
• Exercising test applications, scoring and result interpretations

Part 3: Assessment in Clinical Neuropsychology (seminar)

• Specific knowledge
• Exercises in testing / practising tests

Literatureempfehlungen
Will be specified in the courses.

**Verwendbarkeit des Moduls**
- Master Neurocognitive Psychology (Master) > Mastermodule

**Zuständige Personen**
- Bleichner, Kerstin (Modulberatung)
- Rieger, Jochem (Modulberatung)

**Teilnahmevoraussetzungen**
- Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**

Goals of module:
- Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile.

Competencies:
- ++ interdisciplinary knowledge & thinking

**Modulinhalte**

- Students can take Master modules and courses from the fields
  - Biology
  - Neurosciences
  - Computer Science
  - Physics
  - Mathematics
  - Pedagogy
  - Philosophy
  - related fields

The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules.

A list of approved courses/modules can be found on our website.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module).

Students whose first language is not German, may take German classes.

We recommend taking modules/courses that strengthen your own professional profile.

**Literaturempfehlungen**

- List of approved courses/modules and approval form: https://uol.de/en/psychology/master/course-overview/

**Unterrichtsprachen**
- Englisch, Deutsch

**Dauer in Semestern**

**Hinweise**

PLEASE NOTE:
- If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website).
- Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.
- It is your responsibility to ask the teacher whether you can take part.

**Modullevel / module level**
- MM (Mastermodul / Master module)

**Modular / typ of module**
- Pflicht / Mandatory

**Lehr-/Lernform / Teaching/Learning method**

- Puschmann, Sebastian (Prüfungsberechtigt)
- Meyer-Abich de Sousa Guerreiro, Maria (Prüfungsberechtigt)
- thesis supervisors;
- Upon approval by the examination committee other staff members (e.g. PhD students in the laboratories of the Department of Psychology) can act as examiners for mam.

**Weitere verantwortliche Personen**

Enrolment in Master’s programme Neurocognitive Psychology, Completion of at least 60 credit points in other modules including module psy240 (psy241) (Computation in Neuroscience), Assignment of a topic by thesis supervisor and official application with the examination office.

**Kompetenzziele**

Goals of module:
Students will demonstrate that they are able to perform a psychological experiment according to scientific standards. In addition, they will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

Competencies:
- ++ experimental methods
- + statistics & scientific programming
- + data presentation & discussion
- ++ independent research
- + scientific literature
**Modul Inhalte**

**Part 1: Master’s thesis**
The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.

**Part 2: Master’s colloquium**
The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
