mar550 - Profile Module Physiology of bacteria	10
mar560 - Profile Module Fermentation	12
mar570 - Profile Module Introduction to DNA-sequencing and sequence analysis	13
mar580 - Profile Module Microbial ecology of marine sediments	14
mar600 - Profile Module Methods in Aquatic Microbial Ecology	15
mar610 - Profile Module Isolation and characterization of microorganisms	17
mar620 - Profile Module Marine Chemical Ecology	18
mar621 - Profile Module Techniques in light microscopy and electron microscopy	19
mar630 - Research Project	20
mar640 - Research Project	21
mar622 - Profile Module R programming for (meta)-genomic sequence analysis	22
mam - Master Thesis Module	24

Mastermodule

mar500 - Physiology and diversity of microorganisms

Modulbezeichnung	Physiology and diversity of microorganisms
Modulkürzel	mar500
Kreditpunkte	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Microbiology (Master) > Mastermodule
Zuständige Personen	<p>Könneke, Martin (Modulverantwortung)</p> <p>der Mikrobiologie, Lehrende (Modulberatung)</p>
Teilnahmevoraussetzungen	
Kompetenzziele	The students know the cells of pro- und eukaryotes and understand the basic mechanisms of microbial metabolism. Furthermore, students learn about the physiological and phylogenetic groups of prokaryotes, eukaryotic microorganisms and viruses and get an overview on applied aspects of microbiology.
Modulinhalte	<p>Module contents</p> <ul style="list-style-type: none"> Physiology and life modes of prokaryotes (lecture + exercises): Topics are cellular and subcellular organization, assimilation and dissimilation, energy metabolism, transport, microbial growth, chemiosmotic theory, fermentation, anaerobic respiration, lithotrophy, photosynthesis, metabolism of different Archaea, Bacteria, pathogenic prokaryotes, microbiological techniques. Microbial diversity (lecture + exercises): Topics are the eukaryotic cell, diversity, systematics and taxonomy of prokaryotes and eukaryotic microorganisms, algae, protozoa, molds, phagocytosis, symbioses, pathogenic eukaryotes, diversity of eukaryotic microbes, components of viruses, virus reproduction, bacteriophages, diversity of viruses, virus diseases. Broadening lectures, one out of the following: <ul style="list-style-type: none"> Biological significance of suspended matter: Lecturer: Simon; Form of study: 1 lecture a week, partially blocked for 2 lectures a week; 3 CP; summer term; Sediment Microbiology: Lecturer: Engelen; Form of study: 3 weeks block; 3 CP; summer term; This lecture presents state of the art knowledge about occurrence, life and activities of microorganisms in these environments. Further issues are addressed as well as evolutionary and applied aspects. Topics are: <ul style="list-style-type: none"> Formation, diagenesis and special features of sediments physico-chemical conditions and geological records interpretation of gradients microbes and biological processes in sediments methods for cultivation of sediment organisms molecular methods biogeochemical methods quantification of prokaryotes and viruses Scientific writing and presentation: Lecturer: Engelen; Form of study: weekly seminar; 3 CP; The students know the importance and structure of scientific publications. They learn to read papers critically and which require important for the different parts. Furthermore, students will train to give oral presentations as well as scientific reports and posters, how to use the library and how to find relevant literature and how to use citation programs. Topics are: <ul style="list-style-type: none"> Types and relevance of scientific publications Parts of scientific publications step by step: Abstract, Introduction, Results, Discussion University facilities for literature search Oral presentation How to prepare posters Tips for using Excel, PowerPoint, Word and Endnote Alternative lectures of the MSc "Marine environmental sciences" or "Biology" (see current online schedule) Excursions into the field, to companies and scientific institutions ICBM and microbiological colloquium (alternating weekly)

Workload	360 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Microbiology (Master) > Mastermodule 		
Zuständige Personen	der Mikrobiologie, Lehrende (Modulberatung) Rabus, Ralf Andreas (Modulverantwortung)		
Teilnahmevoraussetzungen			
Kompetenzziele	The students know the molecular mechanisms of metabolism, genetics and evolution. They know regulatory mechanisms on the molecular level and feedback mechanisms between organisms. They know the basics of microbial ecology and the biogeochemistry of important microbial habitats. They know molecular and chemical-analytical methods of microbiology. They have experience with the field study of microorganisms.		
Modulinhalte	Lecture + exercises: Molecular Microbiology Part I on DNA: structure, DNA-proteins, DNA-replication, recombination, transposition, mutation, repair, plasmids and DNA-exchange Part II on gene expression: transcription, regulation of transcription, translation Part III on enzymes: protein structures, basic concepts and kinetics, catalytic and regulatory strategies Part IV on regulatory networks: diauxie and catabolite repression, oxygen regulation, chemotaxis Lecture + exercises: Microbial Ecology Principles of biogeochemistry, global element cycles, mineralization of organic substances, chemotaxis, aquatic habitats, terrestrial habitats, deep subsurface biosphere, syntrophy and symbiosis, microbes in earth history, methods in microbial ecology, isotope fractionation, applied microbiology, bioremediation Broadening Lecture: Scientific writing and presentation Presentation and analysis of structure and style of scientific publications, presentation and discussion of own written elaborations Excursions into the field

mar520 - Main Module Proteomics

Modulbezeichnung	Main Module Proteomics		
Modulkürzel	mar520		
Kreditpunkte	12.0 KP		
Workload	360 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Microbiology (Master) > Mastermodule 		
Zuständige Personen	Rabus, Ralf Andreas (Modulverantwortung) Wöhlbrand, Lars (Modulberatung) N., N. (Modulberatung)		
Teilnahmevoraussetzungen	Lecture: Physiology and diversity of prokaryotes Lecture: Molecular Microbiology		
Kompetenzziele	The students are getting directly involved in actual scientific projects in the area of physiological and/or meta-proteomics (under guidance). They - get acquainted with state-of-the-art proteomic concepts and technologies, - know how to write concise scientific protocols, - know how to present/discuss their results in public.		
Modulinhalte	Daily lectures introduce the students to theory and concepts of modern proteomics: (i) separation of cellular compartments and protein extraction, (ii) gel-based and -free protein separation, (iii) gel-staining, protein detection and quantification by image analysis, (iv) integrative mass spectrometry-based protein identification, (v) meta-proteomics, and (vi) focused genomic analysis. Each student will prepare a seminar presentation on selected publications relevant for the actual scientific project. The following sequence of experiments will be conducted: - extraction and quantification of total protein from prepared cell samples (incl. separation of compartments), - protein separation by SDS-PAGE and staining with Coomassie, silver and/or fluorescent dyes, - digital image acquisition and analysis, - manual and/or automated band excision, - protein identification by nanoLC-ESI-MS/MS, - nanoLC-MALDI-coupling and protein identification by MALDI-TOF-MS/MS, - Physiological interpretation of predicted protein functions and relevant genomic context.

Teilnahmevoraussetzungen			
Kompetenzziele	The students can contribute to current scientific projects (under guidance). They know modern analytical techniques. They know and understand recent scientific literature. They can write scientific reports, present their results and discuss them in the public.		
Modulinhalte	"Ecophysiology of prokaryotes": Projects derived from current scientific programs are carried out, typically in groups of two students guided by a senior scientist or PhD student. Typical project deal with: - Anaerobic processes - Molecular analysis of microbial communities - Sediment microbiology - Physiological experiments and activity measurements - Impact of viruses - Microscopic analysis of chemotaxis In the accompanying seminar, recent scientific studies in international journals are presented by the students. The results are summarized and discussed in a protocol fulfilling scientific level requirements.

mar540 - Main Module Ecology of Marine Microbial communities

Modulbezeichnung	Main Module Ecology of Marine Microbial communities			
Modulkürzel	mar540			
Kreditpunkte	12.0 KP			
Workload	360 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Microbiology (Master) > Mastermodule 			
Zuständige Personen	<p>Simon, Meinhard (Modulverantwortung)</p> <p>Brinkhoff, Thorsten Henning (Modulberatung)</p>			
Teilnahmevoraussetzungen	Lecture: Biological significance of suspended matter			
Kompetenzziele	<p>The students learn how to address scientific questions and to carry out experimental and/or field work in scientific projects guided by experienced researchers and PhD students. The projects are designed in the context of ongoing research on the ecology of bacterial communities in the water column, oxic sediments and associated to eukaryotic organisms. The students learn to apply various state of the art methods and approaches in aquatic microbial ecology and how to interpret data and results of the projects. They learn to write protocols in the structure of scientific papers and to present own results and reference studies to an audience. The students gain competences in how to design experiments and address specific research questions in aquatic microbial ecology and to choose appropriate methods. They obtain practical experience in project-targeted application of state of the art methods. This enables them to obtain a more critical view on the application of these and other methods and on the validity of scientific investigations in aquatic microbial ecology.</p>			
Modulinhalte	<p>"Ecology of marine microbes": The students carry out small projects coming out of ongoing research of PhD Thesis work and other current research of the working group. Typically a group of two of three students is guided by a senior researcher and/or a PhD student. In the accompanying seminar, recent scientific studies published in international journals are presented by the students. The results are written down and discussed in a protocol fulfilling scientific level requirements.</p>

mar580 - Profile Module Microbial ecology of marine sediments

Modulbezeichnung	Profile Module Microbial ecology of marine sediments		
Modulkürzel	mar580		
Kreditpunkte	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master Microbiology (Master) > Mastermodule 		
Zuständige Personen	<p>Könneke, Martin (Modulverantwortung)</p> <p>Engelen, Bert (Modulberatung)</p>		
Teilnahmevoraussetzungen	Lecture: Microbial ecology and Lecture: Sediment microbiology		
Kompetenzziele	<p>The students know how to - sample marine sediments - characterize the cores sedimentologically and biogeochemically - collect and analyze porewater - determine total cell counts - quantify groups of organisms molecular biologically - cultivate different physiological groups of bacteria - present and discuss scientific results - write a scientific protocol</p>		
Modulinhalte	<p>"Microbial ecology of marine sediments": The physiological diversity of microorganisms and their spatial distribution within marine sediments are demonstrated according to chemical and physical parameters. Different physiological groups are analysed along the sediment column of intertidal sandflat or beach. Sediment sampling is performed at the back barrier area of the island "Spiekeroog" at the beginning of the course. Oxygen penetration, porewater sulfate and methane concentrations are measured down to a depth of app. 5 meters. As microbiological parameters, total cell numbers are counted and the numbers of archaea and bacteria are calculated after quantitative PCR (qPCR). More specifically, the relative amounts of sulfate reducers and methanogens are also determined by qPCR targeting key-genes for sulfate reduction and methanogenesis. Furthermore, every single group of students will specifically enrich one physiological type of microorganisms from distinctive sediment layers. Microbial growth and activity are monitored over the whole period of the course. Accompanying the course, all participants will give a talk to introduce "their" physiological group concerning its ecology, physiology, and strategies for a specific enrichment. All the data and observations of the single groups will be combined at the end of the course to draw an overall picture of microbial diversity and the occurrence of the different physiological groups corresponding to relevant geochemical gradients.</p>

Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Microbiology (Master) > Mastermodule 			
Zuständige Personen	<p>Könneke, Martin (Modulverantwortung)</p> <p>Engelen, Bert (Modulberatung)</p>			
Teilnahmevoraussetzungen				
Kompetenzziele	<p>In this course the students will isolate bacteria and other microorganisms. They will learn classical microbiological techniques as enrichment culture, aseptic work, preparation of liquid and solid media, cultivation under oxic and anoxic condition, on agar plates and in deep agar dilution, description of microbes by techniques as staining, microscopy, microphotography.</p>			
Modulinhalte	<p>Prior to the laboratory work the participants shall read literature about first isolation, description and current studies on their target organisms and present this and their isolation strategy in the seminar. During the course and at the end, results and a possible molecular identification of isolates will be presented and discussed.</p> <p>Practical work: Every student prepares media and agar plates required for the isolation of the different target organisms. If pure cultures have been isolated, they should be transferred to long-term storage on agar and in liquid nitrogen. Sampling sites and different stages of the enrichment and isolation are documented by macro- and microphotography and described in the report. Finally, tests to verify purity of the culture and its identification, as well as a phylogenetic analysis are requested.</p>

mar620 - Profile Module Marine Chemical Ecology

Modulbezeichnung	Profile Module Marine Chemical Ecology		
Modulkürzel	mar620		
Kreditpunkte	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master Microbiology (Master) > Mastermodule 		
Zuständige Personen	<p>Rohde, Sven (Modulberatung)</p> <p>Schupp, Peter (Modulverantwortung)</p>		
Teilnahmevoraussetzungen	Lecture: Organic chemistry		
Kompetenzziele	Students will learn about the chemical properties and major ecological roles of secondary metabolites, how to investigate the secondary metabolites of marine invertebrates and algae, how to analyze secondary metabolite profiles, how to isolate compounds of interest and how to conduct various bioassays to assess potential ecological roles of crude extracts and potentially isolated compounds. Students will also learn how to statistically evaluate their results.		
Modulinhalte	"Chemical Ecology": The course consists of lectures, followed by laboratory experiments. Students will research about various topics in marine chemical ecology. Laboratory work will include production of extracts from various invertebrates and algae. Extracts will be tested in various feeding assays to assess the chemical properties of extracts. Extracts will also be tested for antimicrobial activity with environmental strains. This includes the culture of test bacteria and antimicrobial assays. Final evaluation will be a laboratory report about the experiments. This will include statistical analysis of their experiments and discussion of their results in the framework of the lectures and seminars presented during the course.

mar621 - Profile Module Techniques in light microscopy and electron microscopy

Modulbezeichnung	Profile Module Techniques in light microscopy and electron microscopy			
Modulkürzel	mar621			
Kreditpunkte	6.0 KP			
Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master Microbiology (Master) > Mastermodule 			
Zuständige Personen	Rhiel, Erhard (Modulverantwortung)			
Teilnahmevoraussetzungen	none			
Kompetenzziele	<p>The students will learn</p> <ul style="list-style-type: none"> - the basics/theory of scanning electron microscopy (SEM) and transmission electron microscopy (TEM) - different sample preparation methods for SEM - to operate our scanning electron microscope - to operate our critical point drying device - to perform sputter coating - to perform negative staining TEM - to operate our transmission electron microscope - to perform immuno-labelling for light microscopy 			
Modulinhalte	<p>The profile module "Techniques in light microscopy and electron microscopy" runs over a period of 10 days, distributed over three weeks. On the first day, seminars will introduce into the theory, i.e. of SEM and TEM. The remaining 9 days are for practice. The main topics of the course are: basic principles and functioning of light and electron microscopes, sample preparation, fixation, low temperature SEM, low vacuum SEM, negative staining TEM, and immuno-labelling for light microscopy.</p>			
Literaturempfehlungen	will be announced

mar622 - Profile Module R programming for (meta)-genomic sequence analysis

Modulbezeichnung	Profile Module R programming for (meta)-genomic sequence analysis
Modulkürzel	mar622
Kreditpunkte	6.0 KP
Workload	180 h (Präsenzzeit: 54 Stunden, Selbststudium: 126 Stunden)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Marine Umweltwissenschaften (Master) > Mastermodule• Master Microbiology (Master) > Mastermodule
Zuständige Personen	Moraru, Liliana Cristina (Modulverantwortung)
Teilnahmevoraussetzungen	Participation in the course „Introduction in sequencing and sequence analysis“. Previous programming experience is not required.
Kompetenzziele	<p>DNA sequencing has become a routine method in microbiology research. Most of the times, sequence analysis requires knowledge of a programming language. One of the programming languages most used for this purpose is R.</p> <p>After successful participation the students will have the competence to understand, interpret and carry out simple genome sequence analyses. They will acquire transferable skills in using R</p>
Modulinhalte	<p>The course will cover the following topics:</p> <ol style="list-style-type: none">1. programming in R using an integrated development environment (RStudio)2. working with strings (stringr package)3. working with lists and data frames (readr and dplyr package)4. sequence analysis (seqinr, Bioconductor packages: Biostrings, GenomicRanges, Decipher)5. (meta)-genomic and data visualization (ggplot2, Gviz)6. Creating sequence / metadata databases7. Accessing and mining sequence / metadata databases through R based web applications (Shiny, DT and Shinyjs packages)8. reporting in R (Rmarkdown and Knitr packages)9. managing code (Roxygen2 package)10. microbial genome annotation using R. <p>A single, introductory lecture will be offered within the first day of the course. Then, the course will be structured in programming exercises which cover all topics listed. The exercises are designed to exemplify the use R programming within the framework of microbial (meta)-genome analysis.</p> <p>In addition to the teacher–student sessions, the students will work on individual projects. Each student will receive a short microbial genome (e.g. viral genome), and will analyze it by building custom, self-programmed pipelines. The output from the individual projects will consist in an analysis report prepared in Rmarkdown and Knitr packages. The report will include both the R code and the genome analysis results.</p>
Literaturempfehlungen	will be announced
