Grundlagen-/Basiscurriculum

mat990 - Mathematics for Economists

Module label	Mathematics for Economists
Modulkürzel	mat990
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Business Administration and Law (Bachelor) > Basiscurriculum Wirtschaftswissenschaften • Bachelor's Programme Business Informatics (Bachelor) > Aufbaucurriculum-Wahlbereich Mathematik • Bachelor's Programme Economics and Business Administration (Bachelor) > Basismodule • Bachelor's Programme Sustainability Economics (Bachelor) > Grundlagen-/Basiscurriculum • Dual-Subject Bachelor's Programme Economics and Business Administration (Bachelor) > Basismodule
Zuständige Personen	<ul style="list-style-type: none"> • Lehrenden, Die im Modul (Prüfungsberechtigt) • Modulverantwortlichen, Die (Prüfungsberechtigt) • May, Angelika (module responsibility)
Prerequisites	
Skills to be acquired in this module	<p>Students internalize basic mathematical concepts and methods from analysis and matrix calculation and their applications in economics.</p> <p>Professional competence The students:</p> <ul style="list-style-type: none"> • are proficient in the mathematical fundamentals relevant to economics • master methods for solving equations and inequalities • master differential calculus for one and two variables and can integrate • are able to reliably determine local and global extreme points for functions of one and two variables. <p>Methodological competence The students:</p> <ul style="list-style-type: none"> • analyse formal contexts • understand the formal mathematical language • structure problems from the economic sciences and justify their solutions. <p>Social competence The students:</p> <ul style="list-style-type: none"> • construct solutions to given problems in groups • accept criticism and see it as an aid. <p>Self-competence The students:</p> <ul style="list-style-type: none"> • reflect their actions in establishing solutions • deepen the presented mathematical concepts in exercises and add them to their actions.
Module contents	<p>Basics in real Arithmetic, Rules for Matrix Arithmetic Linear equations, linear inequalities and systems of those, quadratic equations, financial mathematics (interest rates and present values, pension calculation) Calculus for functions of one variable: derivation rules for power functions, exp and ln, indefinite integral, applications of integral calculus (density function, ordinary differential equations), single-variable optimization (stationary points, extreme-value theorem, local and global extreme points),</p>

Approximation methods (linear approximation, Taylor series with Lagrange remainder)
 Functions of two variables (partial derivatives, total differential), Tools for comparative statics : (elasticity of substitution, homogeneous and homothetic functions), multivariable optimization tasks (local and global extremes, extremes under constraints)

wir011 - Introduction to Business Administration

Module label	Introduction to Business Administration		
Modulkürzel	wir011		
Credit points	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Business Administration and Law (Bachelor) > Basiscurriculum Wirtschaftswissenschaften • Bachelor's Programme Business Informatics (Bachelor) > Basiscurriculum • Bachelor's Programme Comparative and European Law (Bachelor) > Module • Bachelor's Programme Economics and Business Administration (Bachelor) > Basismodule • Bachelor's Programme Mathematics (Bachelor) > Nebenfachmodule • Bachelor's Programme Sustainability Economics (Bachelor) > Grundlagen-/Basiscurriculum • Dual-Subject Bachelor's Programme Economics and Business Administration (Bachelor) > Basismodule 		
Zuständige Personen	<ul style="list-style-type: none"> • Hoppmann, Jörn (module responsibility) • Lehrenden, Die im Modul (Prüfungsberechtigt) 		
Prerequisites			
Skills to be acquired in this module	<p>The goal of the course is that students are able to...</p> <ul style="list-style-type: none"> - know and understand basic concepts and processes in the context of business administration - name important research streams and theoretical frameworks in the field - apply models and instruments of business administration to develop solutions for practical challenges in companies - critically question the application of common instruments and models and evaluate their advantages and disadvantages in specific decision making situation - put the newly acquired knowledge into a broader context, so it can be deepened in the further course of study and when working in a company 		
Module contents	<p>The course offers an introduction to the most important concepts, instruments, and frameworks of business administration. Toward this end, the course first introduces the core concepts and provides an overview of the history, goals, structure, and research traditions of business administration. Subsequently, students will gain insights into 11 important areas of business administration: (1) Entrepreneurship, (2) Strategic Management, (3) Logistics and Supply Chain Management, (4) Production Management, (5) Marketing and Sales, (6) Accounting and Controlling, (7) Finance and Investment, (8) Technology and Innovation Management, (9) Human Resource Management, (10) Information Management, and (10) Sustainability Management. Students deepen and apply the knowledge acquired in the lecture in tutorials. In addition, the course includes guest lectures by practitioners to clarify the practical relevance of the content.</p>

wir041 - Introduction to economics

Module label	Introduction to economics
Modulkürzel	wir041
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Bachelor's Programme Business Administration and Law (Bachelor) > Basiscurriculum Wirtschaftswissenschaften• Bachelor's Programme Business Informatics (Bachelor) > Akzentsetzungsbereich Wirtschaftswissenschaften• Bachelor's Programme Business Informatics (Bachelor) > Wahlbereich Informatik, Kultur und Gesellschaft• Bachelor's Programme Comparative and European Law (Bachelor) > Module• Bachelor's Programme Computing Science (Bachelor) > Wahlbereich Informatik, Kultur und Gesellschaft more...• Bachelor's Programme Economics and Business Administration (Bachelor) > Basismodule• Bachelor's Programme Mathematics (Bachelor) > Nebenfachmodule• Bachelor's Programme Sustainability Economics (Bachelor) > Grundlagen-/Basiscurriculum• Dual-Subject Bachelor's Programme Economics and Business Administration (Bachelor) > Basismodule• Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master)
Zuständige Personen	<ul style="list-style-type: none">• Rahmeier Seyffarth, Anelise (Module counselling)• Böhringer, Christoph (module responsibility)
Prerequisites	none
Skills to be acquired in this module	<p>Students: acquire a basic understanding of economics</p> <ul style="list-style-type: none">- know elementary economic terms and theories- learn to analyze economic problems graphically and/or mathematically- are able to grasp both micro- and macroeconomic relationships based on theory- understand basic economic models and are able to apply them to current economic problems- place current economic and political events and debates in economic contexts- understand under which conditions market interventions by policy makers are justified from an economic perspective- are able to assess possible effects of economic policy instruments (for example: taxes, subsidies, minimum and maximum prices, etc.).
Module contents	<p>The course introduces students to economic thinking and gives an elementary overview of the fundamental themes in economics. Key causal relationships will be verbally, analytically and graphically elucidated and underpinned with real-world examples. Main contents: - Introduction to economic thinking; - Explanation of basic concepts of economic theory; - Economic cycle and national product; - Interdependence and trade; - Functioning and efficiency of markets; - Market failures and government activity; - Firms behavior in markets with diverse structures; - Foundations of game theory.</p>

wir110 - Macroeconomic Theory

Module label	Macroeconomic Theory		
Modulkürzel	wir110		
Credit points	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Business Administration and Law (Bachelor) > Aufbaubereich Wirtschaftswissenschaften • Bachelor's Programme Economics and Business Administration (Bachelor) > Aufbaumodule • Bachelor's Programme Sustainability Economics (Bachelor) > Grundlagen-/Basiscurriculum • Dual-Subject Bachelor's Programme Economics and Business Administration (Bachelor) > Aufbaumodule 		
Zuständige Personen	<ul style="list-style-type: none"> • Rahmeier Seyffarth, Anelise (Module counselling) • Bitzer, Jürgen (Module counselling) • Lehrenden, Die im Modul (Prüfungsberechtigt) • Trautwein, Hans-Michael (module responsibility) 		
Prerequisites	-		
Skills to be acquired in this module	At the end of the course, successful students: • understand the interdependence of market processes and economic policy in the subsystems of the economy, • avoid fallacies of composition in the nexus of microeconomics and macroeconomics, • use macroeconomics as a tool to analyse current economic and political issues, • translate economic problems into models that describe macroeconomic causalities and interdependencies by reasonable reductions of complexity, • interpret selected data in the light of macroeconomic theories.		
Module contents	The course starts with an introduction to the principles of national accounting which serve as point of departure for the presentation of basic macroeconomic models in short-term, medium-term and long-term perspectives. Short-term: Consumption, saving, investment and finance in the closed-economy IS/LM framework. Medium-term: Labour supply & demand, production and inflation in the AS/AD framework and extensions to open-economy analysis. Long-term: capital accumulation, technical progress and economic growth in different approaches. The basic models are presented in words, algebra and diagrams with the aid of case studies and other exemplary material.		
Literatureempfehlungen	Blanchard, O. & Illing, G. (2017): Makroökonomie (7. Aufl.). München: Pearson. (or English versions: Blanchard, O.: Macroeconomics, 7th ed. Pearson 2017) Trautwein, H.-M. (2014): Makroökonomik (3rd ed.). Oldenburg: Verlag für Wirtschaft, Informatik und Recht.

wir250 - International Economics

Module label	International Economics			
Modulkürzel	wir250			
Credit points	6.0 KP			
Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Economics and Business Administration (Bachelor) > Studienrichtung Volkswirtschaftslehre • Bachelor's Programme Sustainability Economics (Bachelor) > Vertiefungsmodule 			
Zuständige Personen	<ul style="list-style-type: none"> • Trautwein, Hans-Michael (module responsibility) • Rahmeier Seyffarth, Anelise (Module counselling) • Lehrenden, Die im Modul (Prüfungsberechtigt) 			
Prerequisites	Keine			
Skills to be acquired in this module	<p>At the end of the course, successful students:</p> <ul style="list-style-type: none"> • understand the interdependence of markets in the world economy, • translate economic problems into models that describe macroeconomic causalities and interdependencies by reasonable reductions of complexity, in particular with regard to international trade, capital flows and migration as well as development and underdevelopment in different parts of the world economy, • derive analytical statements about trade and capital flows from balance of payments and exchange rate data, • know the historical backgrounds and assess the dynamic instabilities of current exchange rate regimes. 			
Module contents	<p>The course combines a series of lectures and a seminar, both of which are offered in English language. The lectures cover the following topics:</p> <ul style="list-style-type: none"> • globalization • international trade, inter- & intrasectoral • transnational production & factor mobility • balances of payments & exchange rates • macromodelling of the open economy • economic underdevelopment and strategies of sustainable development <p>Relevant models are presented in words, algebra and diagrams with the aid of case studies and other exemplary material.</p> <p>The seminar is organized as a two-days workshop towards the end of the semester, with an introductory kick-off meeting in the second week of the term. In the workshop, students present and discuss papers on current issues in international economics.</p> <p>Course materials are uploaded on the Stud.IP website of the module.</p>			
Literaturempfehlungen	Krugman, P., Obstfeld, M. & Melitz, M. (2017): International Economics – Theory and Policy (11th. ed.). Boston: Addison-Wesley. Lists of recommended additional reading on selected current issues are provided at short notice.

wir361 - Environment and inequality: socioeconomic linkages and policy instruments

Module label	Environment and inequality: socioeconomic linkages and policy instruments
Modulkürzel	wir361
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Bachelor's Programme Sustainability Economics (Bachelor) > Vertiefungsmodule
Zuständige Personen	<ul style="list-style-type: none">• Rahmeier Seyffarth, Anelise (module responsibility)• Lehrenden, Die im Modul (Prüfungsberechtigt)• Rahmeier Seyffarth, Anelise (Module counselling)
Prerequisites	Keine/none
Skills to be acquired in this module	After the course, students should be able to: <ul style="list-style-type: none">• understand the relevance of addressing inequality and environmental issues from an economic perspective• know the primary measurements and indicators for inequality and environmental issues• know the main policy instruments available to tackle inequality and environmental challenges• understand the multifaceted relationships between inequality and environmental policy• understand and apply state-of-the-art economic methods to analyze the implications of inequality and environmental policies• write their research paper on a topic of their choice
Module contents	<p>Inequality and environmental matters are multidimensional, intertwined, and complex. They might unfold self-enforcing effects on human welfare, affecting economic growth, development, environment, social and political stability, health, education, and other fields.</p> <p>The current trends of inequality within and between countries are worrisome. At the same time, global warming and climate change severely and unequally affect human well-being and economies. Reducing poverty and inequality and fighting climate change – as central elements of the sustainable development goals (2030 Agenda) – should, thus, rank high on policy agendas. However, while some policy measures designed to reduce poverty and inequality could negatively affect the environment, environmental policies often cause undesirable distributional effects. Indeed, the distributive effects ('incidence') are becoming increasingly relevant for the political feasibility of environmental policies addressing, for example, climate change or biodiversity loss. Against this background, a more holistic approach integrating climate actions with measures to reduce poverty and inequality is necessary. In this course, we study these issues by applying and extending state-of-the-art environmental economics methods to analyze, understand and manage the distributional implications of environmental policies.</p> <p>Structure of the course:</p> <ul style="list-style-type: none">• The lecture covers basic knowledge of inequality and environmental economics and policy• The lectures will also encompass interactive sections with discussion rounds and educational games• In the seminar, students will be encouraged and supported to stepwise develop their projects (e.g., analyzing the distributional impacts of the German carbon tax introduced in 2021 or addressing potential environmental impacts of fighting inequality in Latin America)• During the seminar, students present their research sketches and work in progress• Finally, in a block course, students present their final paper in the style of a scientific conference

Skills to be acquired in this module

Programming is one of the basic activities of computer scientists and a prerequisite for many other courses on the computer science degree programme. The aim of the '*Programming, Algorithms and Data Structures*' module is to learn the basic concepts of imperative, procedural and object-oriented programming using the Java programming language and to present known, efficient algorithms and data structures for various frequently occurring problems.

After completing the module, students should be able to independently develop imperative and simple object-oriented programmes based on Java to solve small problems and assess the efficiency of their programmes. They should also be able to apply important algorithms and select them based on their complexity.

Subject-related competences

The students

- describe basic concepts of imperative programming with Java
- recognise the terminology of imperative programming and use the corresponding terms precisely in discussions
- recognise basic terminology of object-oriented programming
- describe what programmes presented to them do
- develop programmes independently to solve small problems
- systematically examine their own and other people's programmes for errors
- use modern programme development environments to develop and test programmes
- create algorithms with general design concepts (e.g. greedy method, divide-and-conquer method)
- name algorithms and data structures for solving frequently occurring problems and evaluate their applicability
- name problems of the efficiency of algorithmic solutions to specific problems and evaluate them
- select an algorithm and a data structure to solve a specific problem in a well-founded manner
- apply the algorithms and data structures they have learnt in a meaningful way to given and concrete problems

Methodological competences

The students

- solve given problems from the point of view of imperative or object-

-
- orientated programming
 - transfer practical experience in programme development to new tasks

Social competences

The students

- communicate the structure and mode of operation of self-developed programmes to others
- present independently developed solutions to small tasks to groups

Self-competences

The students

- organise themselves when finding algorithmic solutions for small and medium-sized problems in computer science
- incorporate the concepts of general programme design into their work

Module contents

In the first part, general basic concepts of programming are introduced:

- Algorithm, programming languages, computer
- development tools, development phases
- compilers
- grammars
- Logic

The second part deals with basic programming concepts:

- data types
- variables
- expressions, statements
- control structures
- methods, parameters
- recursion
- reference data types, arrays
- classes, objects
- documentation
- testing

The third part contains an introduction to data structures and algorithms as well as a discussion of their efficiency, i.e. the computational effort and memory requirements depending on the amount of data to be processed. The module presents known, efficient algorithms and data structures for various frequently occurring problems. These include in particular

- methods for searching for keys, as well as insertion and deletion in dynamic data sets, e.g. lists, trees, AVL trees or hash methods,
- methods for searching for text patterns,
- methods for sorting data according to key values, e.g. QuickSort and HeapSort,
- graph-based applications, e.g. for determining the shortest paths in graphs.

The lecture section is supplemented by a comprehensive exercise section in which the programming content taught is implemented using practical examples.

Skills to be acquired in this module

Business informatics regards itself as an interdisciplinary subject. It connects business administration with computer science. Business informatics also includes information technologies as well as technical subjects and research topics. It is more than just an intersection of research fields and offers e.g. special methods to coordinate corporate strategies and information processing. The module introduces the entire scope of the field of business informatics.

Professional competence

The students:

- describe the key aspects of business informatics
- differentiate business informatics as an interdisciplinary subject from other subjects
- characterise the functionality of essential application systems and management structures, from the strategic to the tactical and operative level.
- consider and evaluate case studies and layout options for the conception, development, implementation, usage and maintenance of operational sociotechnical applications systems

Methodological competence

The students:

- model technical and sociotechnical processes using suitable tools
- analyse business processes and the demands on their modification and their technical assistance
- abstract from complex systems in a suitable way to improve the manageability of models

Social competence

The students:

- present their solutions in front of other groups
- discuss their outcomes

Self-competence

The students:

- develop solutions for case studies in groups
- construct an argument based on acquired knowledge

Module contents

The main topics of business informatics are the presentation and evaluation of configuration options to conceptualise, develop, implement, use and maintain operational sociotechnical application systems. The lecture focusses on information systems of the networked company. Technical, economic, organisational, and psychosocial aspects are considered. The understanding of these relations will be trained by means of case studies taken from Laudon et al. (cf. suggested reading).

The lecture gives an overview of the following business informatics fields:

- Information systems, (object of BI)
- Application systems
- E-Commerce and E-Business
- Ethical, social and political aspects
- Business process integration
- Knowledge management
- Support of decision making
- Reorganisation of companies
- Economic evaluation For a better understanding of each subject, it is recommended to take specific modules later in the course of studies.

Zuständige Personen	<ul style="list-style-type: none">• Marx Gómez, Jorge (module responsibility)• Bremer-Rapp, Barbara (module responsibility)• Solsbach, Andreas (module responsibility)• Lehrenden, Die im Modul (Prüfungsberechtigt)
Prerequisites	No participant requirements
Skills to be acquired in this module	<p>The module provides the fundamentals and tasks of information management to create an IT strategy. Tasks are especially considered from a strategic perspective and brought closer by methodological skills for each task.</p> <p>Professional competence The students:</p> <ul style="list-style-type: none">• name the strategic aspects of information management and identify their impact on technical and operational information management• examine the essential questions of enterprise reorganization in connection with an information system and recognize the influence of the Internet and its services on commercial processes and information systems by an exemplary system, e.g. SAP R/3• identify different approaches to information management (Information Resource Management, Management approach, management approach, personal information management) and understand why determining the value of information management is necessary and how it is done• specify the objectives of information management, differentiate and classify its tasks appropriately• recognize the methodological characteristics of information management• transfer the concept of architecture to the information infrastructure• assess the importance to plan features for strategic IT-design oriented on IT-architecture• schedule the procedures concerning the strategical situation analysis of the competition analysis, the information infrastructure and the environmental analysis with the objective to transfer them to simple problems• name the key contents of strategical IT objectives and are aware of difficulties in determining the measurement category• identify and learn the scope and central tasks of business process and environmental management (as excursion) and the significance for information management <p>Methodological competence</p> <ul style="list-style-type: none">• The students:• perform information management tasks using methods of Information Engineering and thereby learn how to transfer and employ the methods to other fields, e.g. economy• learn by practice advantages and disadvantages of different methods and can use them as part of the optimized IT strategy based on the acquired knowledge. <p>Social competence</p>

The students:

- construct solutions to case studies given in the group, i.e. the development of an IT strategy
- discuss the solutions on a technical level
- present the solutions to case studies as part of the exercises

Self-competences

The Students:

- accept criticism and understand it as a precondition for the further development of one's own actions

Module contents

The proportion of information technology in the investment budget of companies is rising continuously. For instance, banks spend 25% of all investments for their information systems. Information is not just a production factor, it is also an element of competition. Information is increasingly important for business. The business informatics deals with these economic tasks of information technology. Information systems in businesses and organisations are of central concern. The interdisciplinary nature of business informatics raises questions about proceedings, problems of models (modelling in a narrow sense) and the application in specific problem domains.

Contents of this module are:

- Information management principles and tasks
- IT architectures
- Infrastructure of information and communication technology
- Strategic, administrative and operative information engineering

Prerequisites		
Skills to be acquired in this module	<p>Nach Abschluss des Moduls sind die Studierenden mit grundlegenden Fragestellungen, Konzepten und Ansätzen der Soziologie vertraut. Das Modul vermittelt einen Einblick in die soziologische Denkweise sowie zentrale soziologische Konzepte. Das Modul ist ein Teil der sozialwissenschaftlichen Grundbildung und schafft die Voraussetzungen für das Verständnis und die Anwendung soziologischer Theorien. Die Studierenden lernen zentrale Grundbegriffe der Soziologie und ausgewählte Ansätze zur Erklärung sozialen Handelns und sozialer Ordnungen kennen und verstehen, wie aus dem Zusammenleben von Menschen soziale Tatbestände entstehen und wie soziale Ordnungen das Zusammenleben von Menschen mit eigenen Interessen regulieren und sich Gesellschaft bilden kann. Weiterhin werden die Studierenden in Grundzüge wissenschaftlichen Arbeitens eingeführt.</p>	
Module contents	<p>„Soziologie ist die Wissenschaft von den Bedingungen und Strukturen des sozialen Handelns und den verschiedenen, sich daraus ergebenden Formen der Vergemeinschaftung und Vergesellschaftung. Zu ihrem Gegenstandsbereich gehören auch die sozialen Prozesse, die sowohl die Kontinuität bestimmter sozialer Strukturen und Institutionen gewährleisten als auch ihren Wandel bewirken.“ (Korte/Schäfers 2006: 7)</p> <p>Die Vorlesung erläutert zentrale Konzepte der Soziologie (Soziologie, soziologische Fragestellungen und Erklärungsstrategien, soziales Handeln, soziale Rollen und Normen, Werte und soziale Kontrolle, Sozialisation, abweichendes Verhalten, soziale Ungleichheiten, soziale Strukturen und soziale Systeme, Macht und Herrschaft, sozialer Konflikt und sozialer Wandel, Organisationen, Institutionen und Gesellschaft). Diese Begriffe sollen im Kontext ausgewählter soziologischer Debatten und Theorien verortet werden.</p>	
Literaturempfehlungen	<p>Texte werden so weit wie möglich in StudIP bzw. Readerform bereitgestellt und sollen VOR und WÄHREND der Veranstaltungszeit gelesen werden. Diese Texte werden weitgehend den folgenden Einführungstexten entnommen:</p> <ul style="list-style-type: none"> • Abels, Heinz (2009a und b): Einführung in die Soziologie. 2Bde (4. Auflage). Wiesbaden: VS. • Bahrtdt, Hans Paul, 2003: Schlüsselbegriffe der Soziologie. Eine Einführung mit Lehrbeispielen (6. Auflage). München: Beck • Joas, Hans, 2007: Lehrbuch der Soziologie (3. Auflage). Prerequisites				
Skills to be acquired in this module	Students obtain an overview of the most important operational functions of an industrial or service company. These are procurement, production and logistics. Students will get to know typical operational challenges and familiarize themselves with established approaches and methods for analyzing and improving procurement, production and logistics operations.			
Module contents	The module comprises a lecture (course number 2.02.231) and an accompanying tutorial (course numbers 2.02.231a to 2.02.231j). The lecture is based on the text book "Grundzüge der Beschaffung, Produktion und Logistik" by Kummer, Grün und Jammernegg in the third edition of 2013 and the associated workbook, as well as partly on the text book "Operations Management: Konzepte, Methoden und Anwendungen" by Thonemann in the third edition of 2015. The purpose of the lecture is to explain the fundamental problems and their solutions theoretically. The tutorials focus on application and practice and offer time for questions. There are no formal or content-related participation or entrance requirements.			
Literatureempfehlungen	Kummer, S., Grün, O. und Jammernegg, W. (2013): Grundzüge der Beschaffung, Produktion und Logistik (3. Auflage), Pearson Thonemann, U. (2015): Operations Management (3. Auflage), Pearson.

Prerequisites	keine
Skills to be acquired in this module	<p>Upon completion of the module (two complementary lectures), students will be able to:</p> <ul style="list-style-type: none"> • understand the complex issues, challenges and fields of action in organisational Human Resource (HR) Management; • analyse, interpret and manage HR issues within heterogeneous fields of stakeholders and environments; • effectively analyse and apply HR instruments according to the specific practical context; • develop skills to self-reflection by dealing with theoretical as well as practical issues in HR Management and are able to press their point within the scientific discussion; • are able to locate a specific research question within the scientific discussion in the field of Human Resource Management and to interlink, reflect and evaluate it accordingly. <p>By attending the non-compulsory tutorials and participating in lecture discussions, students can develop their own position on the inter-linkages between theoretical approaches and practical courses of action. Students will thus be able to identify problems, analyse them critically, and develop solutions. As they have the opportunity to work in small groups within the tutorials and to participate during lecture discussions, students may also learn to handle different points of view and discuss constructively. Overall they will be prepared for the specific requirements faced in the field of HR Management.</p>
Module contents	<p>Students develop theoretical as well as practical insights into the backgrounds and specific characteristics of "Human Resource" Management, in particular the following:</p> <ul style="list-style-type: none"> - origins and theoretical basis - development and framework requirements - workforce planning - recruitment and selection - work organisation - working time organisation - leadership - performance reviews

- training and development
- compensation
- staff reduction

Prerequisites			
Skills to be acquired in this module	<p>The goal of the course is that students are able to</p> <ul style="list-style-type: none"> - know and understand basic concepts, instruments, and theories of strategic management - analyze company strategies by applying conceptual frameworks - understand the advantages and disadvantages of common instruments and models and critically evaluate their applicability - independently develop strategic options and derive recommendations for their implementation in real-life settings 		
Module contents	<p>The course offers a comprehensive overview of the models and instruments of strategic management. The first part of the course introduces important concept and models of strategic management and discusses their application using examples from corporate practice. Central topics that are being discussed in this context are the relation between firm strategies and competitive advantage, strategy analysis, strategy formulation, strategy implementation, and strategies in the context of internationalization and innovation. In the second part of the course, students apply and deepen their knowledge by writing a thesis that analyzes the strategy of a specific company.</p>

wir130 - Civil Law and Commercial Law

Module label	Civil Law and Commercial Law	
Modulkürzel	wir130	
Credit points	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Business Informatics (Bachelor) > Akzentsetzungsbereich Wirtschaftswissenschaften • Bachelor's Programme Economics and Business Administration (Bachelor) > Akzentsetzungsmodule • Bachelor's Programme Sustainability Economics (Bachelor) > Wahlpflichtbereich • Dual-Subject Bachelor's Programme Economics and Business Administration (Bachelor) > Schwerpunkt Berufliche Bildung • Dual-Subject Bachelor's Programme Economics and Business Administration (Bachelor) > Schwerpunkt Management und Ökonomie • Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master) 	
Zuständige Personen	<ul style="list-style-type: none"> • Rott, Peter (module responsibility) • Lehrenden, Die im Modul (Prüfungsberechtigt) 	
Prerequisites		
Skills to be acquired in this module	<p>The students:</p> <ul style="list-style-type: none"> - are familiar with the legal working methods, basic concepts of law in general and of civil law and commercial law in particular, - are familiar with the law of obligation and law of property, in particular with contract law, as well as with commercial law, which are the main fields of interest in the future professional practice, - are able to solve legal cases in a goal-oriented way, - are able to find approaches for legal problems as well as recognize liability risks and how to deal with them, - are in case of contract negotiations able to recognize the requirements for regulations and to evaluate consequences of regulation. 	
Module contents	<p>In this module students will learn the basic concepts of civil law, commercial law and company law. The main focus are the first two books and to some extent the third book of the BGB. After an introduction to the legal system and the legal sources of private law, the course will deal with the persons and objects of legal relations (legal subjects and objects). An introduction into general contract law (among others: transaction doctrine, representation, termination of obligations, arrears, defaults) follows then. Subsequently, the lecture will handle the main types of contracts of civil law, commitment and performance of transactions and ownership and possession. The focus of the commercial law will be the determination of traits of merchant, the company law, the commercial register and legal liability issues as well as cross-border trade. This is followed by an introduction into company law.</p> <p>Subjects of the module: Introduction into legal studies, basic principles of law, private law / public law, legal sources, general part of the civil code, law of obligations (without law of torts): contracts, type of contracts, defaults / breaches, law of terms and conditions; parts of property law. Traits of merchant, company; commercial register; Representation in commercial law (procuration, action and charging power of attorney); commercial transactions; forms and consequences of the change of the owner; commercial agents and brokers; customary law / trade terms; CISG; partnership / corporate law.</p> <p>The module will enable students to evaluate complex legal relationships in the economy discretely.</p>

Module label	Selected Topics in Business Administration		
Modulkürzel	wir410		
Credit points	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Bachelor's Programme Business Administration and Law (Bachelor) > Aufbaubereich Wirtschaftswissenschaften • Bachelor's Programme Economics and Business Administration (Bachelor) > Studienrichtung Betriebswirtschaftslehre • Bachelor's Programme Sustainability Economics (Bachelor) > Wahlpflichtbereich 		
Zuständige Personen	<ul style="list-style-type: none"> • Prokop, Jörg (module responsibility) • Lehrenden, Die im Modul (Prüfungsberechtigt) 		
Prerequisites	Students are required to actively participate in the course by preparing classes, by performing follow-up coursework, and/or by giving presentations according to the rules defined by the lecturer in the first session.		
Skills to be acquired in this module	Upon completion of the module students will have acquired in-depth knowledge regarding selected topics in a specific field of business studies. They will have a sound understanding of the current state of academic research, and/or of issues relevant to current business practice. In addition, they will be familiar with typical advanced methods of analysis in the respective focus area, they will be able to put these methods in the broader context of business research, and they will be able to assess these methods' strength and weaknesses.		
Module contents	The course covers in detail selected advanced topics in areas such as entrepreneurship, business management, marketing, organization, human resources, production management, sustainability management, taxation, finance, or accounting. Focus area, language of instruction, and type of examination will be announced in the first session.		
Literatureempfehlungen	Will be announced at the beginning of the course.

Prerequisites	
Skills to be acquired in this module	Students <ul style="list-style-type: none">• understand the role corporate finance plays in today's business environment,• are able to make consistent investment decisions based on established financial models both under certainty and under uncertainty,• are able to place these models in within the broader context of economic theory, including both neoclassical theory and principal-agent theory,• are able to assess the limitations of these models,• analyze firm's main sources of (long-term) financing.
Module contents	<p>Course outline:</p> <ol style="list-style-type: none">1. Introduction2. Valuation and Capital Budgeting3. Risk and Return4. Long-Term Financing <p>This course is an introduction to corporate finance. It covers typical tools and techniques used in making investment and financing decisions, and it provides insights into their theoretical foundations. The concept of time value of money and net present value is discussed in detail, first under certainty, and then in the presence of uncertainty. We will examine the relationship between an investment's risk and its return, and discuss ways to derive risk-adjusted cost of equity capital. In addition, the course provides insights into firms' main sources of (long-term) financing.</p> <p>The topics covered in this course are relevant for financial decision-making in various areas of business management, including operations management, marketing, and in particular corporate strategy.</p>
Literatureempfehlungen	<p>Main textbook: Hillier, Ross, Westerfield, Jaffe & Jordan, Corporate Finance, current edition, McGraw-Hill (especially chapters 1, 2, 4-10, 14).</p> <p>Supplementary readings: Berk & DeMarzo, Corporate Finance, current edition, Boston (Mass.). Brealey, Myers & Allen, Principles of Corporate Finance, current edition, Boston (Mass.). Schmidt und Terberger, Grundzüge der Investitions- und Finanzierungstheorie (4. Aufl.), 1997, Wiesbaden.</p>

Zuständige Personen	<ul style="list-style-type: none">• Wingerath, Wolfram (module responsibility)• Lehrenden, Die im Modul (Prüfungsberechtigt)
Prerequisites	Basics of databases, Python programming and statistics

Skills to be acquired in this module

The module teaches fundamentals from the field of Data Science, covering purposes, challenges, and common best practices.

Professional competences

The students

- have knowledge of basic concepts, problems and solution approaches from the field of Data Science.
- are able to justify the choice of specific data analysis methods for a given problem
- include possible imponderables in the analysis when evaluating analysis results

Methodological competences

The students

- are able to translate questions from a specific domain into a feasible analysis
- work on Data Science tasks to expand their understanding of the different approaches and methods.

Social competences

The students

- discuss approaches and problems encountered in smaller and larger groups

Self competences

The students

- reflect on their actions when identifying possible solutions and critically question their own results

Module contents

Data Science is an interdisciplinary science at the intersection of statistics, machine learning, data visualization, and mathematical modeling. This course is designed to provide a practical introduction to the field of Data Science by teaching theoretical principles while also applying them practically. Topics covered range from data collection and preparation (data sources & formats, data cleaning, data bias), mathematical foundations (statistical distributions, correlation analysis, significance) and methods for visualization (tables & plots, histograms, best practices) to the development of models for classifying or predicting values (linear regression, classification, clustering).

Zuständige Personen

- Vogel-Sonnenschein, Ute (module responsibility)
- Vogel-Sonnenschein, Ute (Prüfungsberechtigt)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Diese Modul wendet sich an Studierende in Studiengängen außerhalb der Informatik. Studierende des Departments für Informatik der Bachelor- und Master-Studiengänge Informatik und Wirtschaftsinformatik gehören nicht zur Zielgruppe.

Skills to be acquired in this module

Absolvent*innen des Moduls haben ein tiefergehendes Verständnis von grundlegenden Theorien und Techniken der Informatik erworben und können auftretende Probleme einordnen. Die Studenten werden damit befähigt, einfache Aufgabenstellungen aus ihrem Fachgebiet mit Mitteln der Informatik zu strukturieren, zu modellieren und Lösungsansätze zu entwerfen und den Lösungsaufwand abzuschätzen. Sie haben ein Grundverständnis für den Entwurf und den Einsatz von relationalen Datenbanken.

Module contents

- Introduction to Python programming
- Computer architecture
- Computer representation of information
- Formal languages, grammar and automata
- Basic data structures;

- problem solving paradigms, algorithms and complexity;
- basic concepts of data bases

Prerequisites	
Skills to be acquired in this module	

- Systematische Vertiefung und Erweiterung der im Bachelorstudium erlangten Kenntnisse und Fähigkeiten zur Mathematik
- Vernetzung des eigenen mathematischen Wissens durch Herstellung auch inhaltlich komplexer Bezüge zwischen den verschiedenen Bereichen der Mathematik
- Kennenlernen vertiefter Anwendungen der Mathematik, auch exemplarisch mit Projektcharakter
- Erwerb direkt berufsbezogener inhaltlicher und prozessorientierter Kompetenzen
- In dieser Vorlesung wird ein aktuelles, fortgeschrittenes Themengebiet der Angewandten Statistik behandelt. Die Studierenden erwerben damit über den üblichen Kanon statistischer Verfahren hinausgehendes Spezialwissen sowie die Fähigkeit, sich solches Wissen anzueignen und in praktischen Analysen einzusetzen.

Module contents

Es handelt sich um ein Modul, innerhalb dessen kurzfristig verschiedene, aktuelle Themen aus der Statistik angeboten werden können, immer jeweils im Rahmen der Modulvorgaben von 6KP/180h Workload mögliche solche Themen sind

- Angewandte Statistische Methoden in der Ökologie mit R (zuletzt SoSe 2017)
- Statistisches Lernen (zuletzt SoSe 2019)

Spezifikation eines konkreten Themas spätestens im Rahmen der rollierenden Vorlesungsplanung

Beispielhaft seien hier die Inhalte zu "Statistisches Lernen" genannt:

- Prädiktionsverfahren: lineare Regression, GLM in hochdimensionalen Modellen, regularisierte Regression, Least Absolute Shrinkage and Selection Operator (LASSO), Support Vector Regression
- Klassifikationsverfahren und Clustering: lineare und quadratische Diskriminanzanalyse (LDA/QD), Support Vector Classification, Klassifikationsbäume (CART), verschiedene Clusterverfahren
- Vapnik-Chervonenkis Komplexität von Problemen
- Resampling Verfahren/Ensemble Methoden: Bagging, Boosting, Random Forests, verschiedene Kreuzvalidierungsstrategien
- Ausblick auf Ranking-Verfahren und Online-Learning

Literaturempfehlungen

natürlich spezifisch für das jeweilige Thema
