# Mastermodule

## mar500 - Physiology and diversity of microorganisms

Module label	Physiology and diversity of microorganisms
Modulkürzel	mar500
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	Master's Programme Microbiology (Master) > Mastermodule
Zuständige Personen	<ul><li>Könneke, Martin (module responsibility)</li><li>der Mikrobiologie, Lehrende (Module counselling)</li></ul>
Prerequisites	
Skills to be acquired in this module	The students know the cells of pro- und eukaryotes and understand the basic mechanisms of microbial metabolism. Furthermore, students learn about the physiological and phylogenetic groups of prokaryotes, eukaryotic microorganisms and viruses and get an overview on applied aspects of microbiology.
Module contents	
	The module consists of 5 parts:
	1) Physiology and life modes of prokaryotes (lecture + exercises)
	Topics are cellular and subcellular organisation, assimilation and dissimilation, energy metabolism, transport, microbial growth, chemiosmotic theory, fermentation, anaerobic respiration, lithotrophy, photosynthesis, metabolism of different Archaea, Bacteria pathogenic prokaryotes, microbiological techniques.
	2) Microbial diversity (lecture + exercises)
	Topics are the eukaryotic cell, diversity, systematics and taxonomy of prokaryotes and eukaryotic microorganisms, algae, protozoa, molds, phagocytosis, symbioses, pathogenic eukaryotes, diversity of eukaryotic microbes, components of viruses, virus reproduction, bacteriophages, diversity of viruses, virus diseases.
	3) Broadening lectures, one out of the following
	<ul> <li>Biological significance of suspended matter: Lecturer: Simon; Form of study: 1 lecture a week, partially blocked for 2 lectures a week; 3 CP; summer term;</li> </ul>
	<ul> <li>Sediment Microbiology:</li> <li>Lecturer: Engelen; Form of study: 3 weeks block; 3 CP; summer term;</li> <li>This lecture presents state of the art knowledge about occurrence, life and activities of microorganisms in these environments. Physiological issues are addressed as well as evolutionary and applied aspects.</li> </ul>
	Topics are: formation, diagenesis and special features of sediments; physico- chemical conditions and geological records; interpretation of gradients; microbes and biological processes in sediments; methods for cultivation of sediment organisms; molecular methods; biogeochemical methods; quantification of prokaryotes and viruses
	- Scientific writing and presentation: Lecturer: Engelen; Form of study: weekly seminar; 3 CP; The students know the importance and structure of scientific publications. They learn to read papers critically and which require important for the different parts. Furthermore, students will train to give oral presentations as well as scientific reports and poste how to use the library and how to find relevant literature and how to use citation programs.
	Topics are: types and relevance of scientific publications; parts of scientific publications step by step: Abstract, Introduction, Results, Discussion; university facilities for literature search; oral presentation; how to prepare posters; tips for using Excel, PowerPoint, Word and Endnote
	<ul> <li>Alternative lectures of the MSc "Marine environmental sciences" or "Biology" (see current online schedule)</li> </ul>

#### mar510 - Molecular Mechanisms and Interactions

Module label	Molecular Mechanisms and Interactions	
Modulkürzel	mar510	
Credit points	12.0 KP	
Workload	360 h	
Verwendbarkeit des Moduls	<ul> <li>Master's Programme Microbiology (Master) &gt; Mastermodule</li> </ul>	
Zuständige Personen	<ul><li>Rabus, Ralf Andreas (module responsibility)</li><li>der Mikrobiologie, Lehrende (Module counselling)</li></ul>	
Prerequisites		
Skills to be acquired in this module	The students know the molecular mechanisms of metabolism, genetics and evolution. They know regulatory mechanisms on the molecular level and feedback mechanisms between organisms. They know the basics of microbial ecology and the biogeochemistry of important microbial habitats. They know molecular and chemical-analytical methods of microbiology. The have experience with the field study of microorganisms.	
Module contents		

#### The module consists of 5 parts:

## 1) Molecular Microbiology (lecture + exercise)

Topic I - DNA: structure, DNA-proteins, DNA-replication, recombination, transposition, mutation, repair, plasmids and DNA-exchange Topic II - gene expression: transcription, regulation of transcription, translation Topic III - enzymes: protein structures, basic concepts and kinetics, catalytic and regulatory strategies Topic IV - regulatory networks: diauxie and catabolite repression, oxygen

regulation, chemotaxis

#### 2) Microbial Ecology (lecture + exercise)

Principles of biogeochemistry, global element cycles, mineralisation of organic substances, chemotaxis, aquatic habitats, terrestrial habitats, deep subsurface biosphere, syntrophy and symbiosis, microbes in earth history, methods in microbial ecology, isotope fractionation, applied microbiology, bioremediation

#### 3) Broadening lectures, one out of the following

- Biological significance of suspended matter:

Lecturer: Simon; Form of study: 1 lecture a week, partially blocked for 2 lectures a week; 3 CP; summer term;

- Sediment Microbiology:

Lecturer: Engelen; Form of study: 3 weeks block; 3 CP; summer term; This lecture presents state of the art knowledge about occurrence, life and activities of microorganisms in these environments. Physiological issues are addressed as well as evolutionary and applied aspects.

Topics are: formation, diagenesis and special features of sediments; physicochemical conditions and geological records; interpretation of gradients; microbes and biological processes in sediments; methods for cultivation of sediment organisms; molecular methods; biogeochemical methods; quantification of prokaryotes and viruses

- Scientific writing and presentation:

Lecturer: Engelen; Form of study: weekly seminar; 3 CP; The students know the importance and structure of scientific publications. They learn to read papers critically and which require important for the different parts. Furthermore, students will train to give oral presentations as well as scientific reports and poste how to use the library and how to find relevant literature and how to use citation programs.

Topics are: types and relevance of scientific publications; parts of scientific publications step by step: Abstract, Introduction, Results, Discussion; university facilities for literature search; oral presentation; how to prepare posters; tips for using Excel, PowerPoint, Word and Endnote

 Alternative lectures of the MSc "Marine environmental sciences" or "Biology" (see current online schedule)

#### mar520 - Main Module Proteomics

Module label	Main Module Proteomics
Modulkürzel	mar520
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul> <li>Master's Programme Microbiology (Master) &gt; Mastermodule</li> </ul>
Zuständige Personen	<ul> <li>Rabus, Ralf Andreas (module responsibility)</li> <li>Feenders, Christoph (Module counselling)</li> <li>Wöhlbrand, Lars (Module counselling)</li> </ul>
Prerequisites	
Skills to be acquired in this module	The students are getting directly involved in actual scientific projects in the a of physiological and/or meta-proteomics (under guidance). They - get acquainted with state-of-the-art proteomic concepts and technologies, - know how to write concise scientific protocols, - know how to present/discuss their results in public.
Module contents	<ul> <li>Daily lectures introduce the students to theory and concepts of modern proteomics:</li> <li>(i) separation of cellular compartments and protein extraction,</li> <li>(ii) gel-based and -free protein separation,</li> <li>(iii) gel-staining, protein detection and quantification by image analysis,</li> <li>(iv) integrative mass spectrometry-based protein identification,</li> <li>(v) meta-proteomics,</li> <li>vi) focused genomic analysis.</li> <li>Each student will prepare a seminar presentation on selected publications relevant for the actual scientific project. The following sequence of experime will be conducted: <ul> <li>extraction and quantification of total protein from prepared cell samples (ir separation of compartments),</li> <li>protein separation by SDS-PAGE and staining with Coomassie, silver and fluorescent dyes,</li> <li>digital image acquisition and analysis,</li> <li>manual and/or automated band excision,</li> <li>protein identification by nanoLC-ESI-MS/MS,</li> <li>nanoLC-MALDI-coupling and protein identification by MALDI-TOF-MS/MS</li> <li>physiological interpretation of predicted protein functions and relevant genomic context.</li> </ul> </li> </ul>

## mar530 - Main Module Ecophysiology of prokaryotes

Module label	Main Module Ecophysiology of prokaryotes
Modulkürzel	mar530
Credit points	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	<ul> <li>Master's Programme Microbiology (Master) &gt; Mastermodule</li> </ul>
Zuständige Personen	<ul> <li>Könneke, Martin (module responsibility)</li> <li>Engelen, Bert (Module counselling)</li> <li>der Mikrobiologie, Lehrende (Prüfungsberechtigt)</li> </ul>
Prerequisites	
Skills to be acquired in this module	The aim of the module "Ecophysiology of prokaryotes" is to impart in- depth knowledge on the metabolism and physiology of microorganisms and train students in practical skills to measure physiological parameters. After completion of the module, students can - contribute to current scientific projects (under guidance) - know modern analytical techniques - know and understand recent scientific literature - can write scientific reports, present their results and discuss them
Module contents	<ul> <li>"Ecophysiology of prokaryotes": Projects derived from current scientific programs are carried out, typically in groups of two students guided by a senior scientist or PhD student.</li> <li>Typical project deal with: <ul> <li>Anaerobic processes</li> <li>Molecular analysis of microbial communities</li> <li>Sediment microbiology</li> <li>Physiological experiments and activity measurements</li> <li>Impact of viruses</li> <li>Microscopic analysis of chemotaxis</li> </ul> </li> <li>In the accompanying seminar, recent scientific studies in international journals are presented by the students. The results are summarized and discussed in a protocol fulfilling scientific level requirements.</li> </ul>
Literaturempfehlungen	will be announced

Design to the second	

Prerequisites

Skills to be acquired in this module

The students know how to

cultivate bacteria and generate pure cultures

· determine growth curves by photometry and counting

· prepare and use washed cell suspensions for experiments

measure bacterial activity

use a microscope and take digital microphotographs

 $\cdot$  quantify and analyse energy metabolism and fundamental physiological

processes • present and discuss scientific results

write a scientific protocol

Module contents		The course starts with an introductory seminar every morning. Then, severa experiments will be done over two day's round robin. Different physiological processes are analysed using various techniques, e.g. investigation of microbial growth under oxic and anoxic conditions, determination of protein contents and measurement of substrate turnover rates.

Workload	180 h
Verwendbarkeit des Moduls	Master's Programme Microbiology (Master) > Mastermodule
Zuständige Personen	Brinkhoff, Thorsten Henning (Module counselling)
Prerequisites	

Skills to be acquired in this module

#### Skills to be acquired in this module

The students learn to...

 analyse bacterial substrates at ambient concentrations such as dissolved amino acids and carbohydrates by high performance liquid chromatography (HPLC).

 $\cdot$  determine bacterial cell numbers by flow cytometry and epifluorescence microscopy and to analyse these data by image analysis.

- · extract bacterial DNA from water and sediment samples.
- · amplify bacterial genes by specific primers and PCR.

• assess bacterial communities by culture-independent methods such as denaturing gradient gel electrophoresis and next generation sequencing.

- · present and discuss scientific results.
- write a scientific protocol.

The students gain competences in:

 $\cdot$  Understanding how to analyse dissolved substrates of heterotrophic aquatic bacterial communities by state of the art approaches.

- How to assess the abundance of aquatic bacterial communities by state of the art approaches.

- Analysing the composition of bacterial communities by PCR-based cultureindependent approaches.

Module contents

The course starts with a lecture introducing basic issues of aquatic microbial ecology with an emphasis on methodological aspects. This lecture is completed before the practical work starts.

During the practical course of a block of two weeks the participants carry out analyses and experiments on:

determining the concentration of dissolved organic substrates (amino acids, carbohydrates),

the abundance of bacterial communities in aquatic systems

 the composition of bacterial communities in environmental samples by 16S rRNA gene fragments.

The main emphasis is on analyses and approaches of bacterial communities in the water column.

### mar610 - Profile Module Isolation and characterization of microorganisms

Module label	Profile Module Isolation and characterization of microorganisms
Modulkürzel	mar610
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul> <li>Master's Programme Microbiology (Master) &gt; Mastermodule</li> </ul>
Zuständige Personen	<ul><li>Könneke, Martin (module responsibility)</li><li>Engelen, Bert (Module counselling)</li></ul>
Prerequisites	
Skills to be acquired in this module	In this course the students will isolate bacteria and other microorganisms. They will learn classical microbiological techniques as enrichment culture, aseptic work, preparation of liquid and solid media, cultivation under oxic and anoxic condition, on agar plates and in deep agar dilution, description of microbes by techniques as staining, microscopy, microphotography.
Module contents	
	Prior to the laboratory work the participants shall read literature and current studies about their target group of microorganisms and develop an enrichment strategy isolation. They will present this and their enrichment strategy in the seminar. During the course and at the end, results and a possible molecular identification of isolates will be presented and discussed. Practical work: Student prepares media and agar plates required for the enrichment and isolation of the different target organisms in small groups. The enrichment cultures will be monitored over time by measuring various biological and chemical parameters. If pure cultures have been isolated, they will be analysed microscopically and identified using molecular methods.

## mar622 - Profile Module R programming for (meta)-genomic sequence analysis

Nodule label	Profile Module R programming for (meta)-genomic sequence analysis		
/odulkürzel	mar622		
Credit points	6.0 KP		
Vorkload	180 h (		
	Präsenzzeit: 54 Stunden, Selbststudium: 126 Stunden		
	)		
/erwendbarkeit des Moduls	<ul> <li>Master's Programme Marine Environmental Sciences (Master) &gt; Mastermodule</li> <li>Master's Programme Microbiology (Master) &gt; Mastermodule</li> </ul>		
Zuständige Personen			
Prerequisites	Participation in the course "Introduction in sequencing and sequence analysis". Previous programming experience is not required.		
Skills to be acquired in this module			
	DNA sequencing has become a routine method in microbiology research. Mos of the times, sequence analysis requires knowledge of a programming language. One of the programming languages most used for this purpose is R.		
	After successful participation the students will have the competence to understand, interpret and carry out simple genome sequence analyses. They will acquire transferable skills in using R		
Nodule contents			
	The course will cover the following topics:		
	<ol> <li>programming in R using an integrated development environment (RStudio)</li> </ol>		
	2. working with strings (stringr package)		
	3. working with lists and data frames (readr and dplyr package)		
	<ol> <li>sequence analysis (seqinr, Bioconductor packages: Biostrings, GenomicRanges, Decipher)</li> </ol>		
	5. (meta)-genomic and data visualization (ggplot2, Gviz)		
	6. Creating sequence / metadata dabases		
	<ol> <li>Accessing and mining sequence / metadata databases though R based web applications (Shiny, DT and Shinyjs packages)</li> </ol>		
	8. reporting in R (Rmarkdown and Knitr packages)		
	9. managing code (Roxygen2 package)		
	10. microbial genome annotation using R.		
	A single, introductory lecture will be offered within the first day of the course Then, the course will be structured in programming exercises which cover al topics listed. The exercises are designed to exemplify the use R programming within the framework of microbial (meta)-genome analysis.		
	In addition to the teacher-student sessions, the students will work on individua projects. Each student will receive a short microbial genome (e.g. viral genome), and will analyze it by building custom, self-programmed pipelines. The output from the individual projects will consist in an analysis report prepared in Rmarkdown and Knitr packages. The report will include both the R code and the genome analysis results.

## mam - Master's Thesis Module

Module label		Master's Thesis Module		
Modulkürzel		mam		
Credit points		30.0 KP		
Workload		900 h		
Verwendbarkeit des Moduls		Master's Programme Microbiology (Master) > Abschlussmodul		
Zuständige Personen		<ul> <li>Könneke, Martin (module responsibility)</li> <li>der Mikrobiologie, Lehrende (Module counselling)</li> <li>Haller, Melanie (Prüfungsberechtigt)</li> </ul>		
Prerequisites		1 research project		
Skills to be acquired in this module		The students are able to work (under guidance) on an extended research project. They understand recent scientific literature and can regard it for their own work. They can prepare, carry out, write down, present and defend their work in the public.		
Module contents		The contents concern variable recent scientific questions on a high scientific level		
Literaturempfehlungen		project-specific, will be announced		
Links				
Language of instruction		English		
Duration (semesters)		1 Semester		
Module frequency		semi-annual		
Module capacity		unlimited		
Type of module		Pflicht / Mandatory		
Module level		Abschlussmodul (Abschlussmodul / Conclude)		
Teaching/Learning method		Seminar (2 SPPW); Practical work (28 SPPW)		
Examination	Prüfungszeiten	Type of examination		
Final exam of module		Written English thesis, seminar with public discussion in English According to the examination regulations; quality of the scientific performance and thesis (83.3 %), final seminar and public defense (16.7 %)		
Lehrveranstaltungsform	Seminar			
sws	2			
Frequency	SoSe und WiSe			
Workload Präsenzzeit	28 h
