Modulhandbuch

Neuroscience - Master-Studiengang

im Sommersemester 2024

erstellt am 04.05.2024

Background Modules

neu210 - Neurosensory Science and Behaviour

Modulbezeichnung	Neurosensory Science and Behaviour
Modulkürzel	neu210
Kreditpunkte	9.0 KP
Workload	270 h (4 SWS Lecture (VO) "Neuroethology" and "Behavioural ecology" Total workload 180h: 56h contact/ 60h background reading/ 64h exam preparation 2 SWS Seminar (SE) "Current issues of ethology" Total workload 90h: 28h contact/ 30h literature reading/ 32h preparation of presentation)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Langemann, Ulrike (Modulverantwortung) • Langemann, Ulrike (Modulberatung) • Mouritsen, Henrik (Modulberatung) • Klump, Georg Martin (Prüfungsberechtigt) • Mouritsen, Henrik (Prüfungsberechtigt) • Langemann, Ulrike (Prüfungsberechtigt) • Albert, Jörg (Prüfungsberechtigt) • Clemens, Jan (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Fundamentals of Neurobiology, Bahavioural Biology, Evolution, Ecology
Kompetenzziele	++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills ++ Interdiscipl. knowlg. + Data present./disc. + Scientific English Upon successful completion of this course, students • know the fundamentals of behavioural ecology and neuroethology • are able to present and critically assess scientific data and approaches
Modulinhalte	The lecture "Neuroethology" provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation. The lecture "Behavioural ecology" provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication. In the seminar "Current issues of Ethology", current original literature relating to behavioural biology is reported and discussed.
Literaturempfehlungen	Carew TJ (2004) Behavioral Neurobiology: The Cellular Organization of Natural Behavior. Sinauer Davis NB, Krebs JR, West SA (2012) An Introduction to Behavioural Ecology. Wiley Blackwell

Unterrichtssprache	Englisch
Dauer in Semestern	1 Semester
Angebotsrhythmus Modul	annually
Aufnahmekapazität Modul	30 (Recommended in combination with: neu220 BM "Neurocognition and Psychopharmacology"

	Shared course components with (cannot be credited twice): bio610 (5.02.611 "Neuroethologie", 5,02,612 "Verhaltensökologie", 5.02.613 "Aktuelle Themen der Ethologie")
Hinweise	Course in the second half of the semester Regular active participation is required to pass the module.
Modulart	je nach Studiengang Pflicht oder Wahlpflicht
Vorkenntnisse	Fundamentals of Neurobiology, Bahavioural Biology, Evolution, Ecology

Prüfung	Prüfungszeiten	Prüfungsform
Gesamtmodul	as agreed, usually in the break after the winter term	80% written exam (content of the two lecture series), 20% presentation(s)

Lehrveranstaltungsform	Kommentar	SWS	Angebotsrhythmus	Workload Präsenz
Vorlesung		4		56
Seminar		2		28
Präsenzzeit Modul insgesamt				84 h

neu220 - Neurocognition and Psychopharmacology

Modulbezeichnung	Neurocognition and Psychopharmacology
Modulkürzel	neu220
Kreditpunkte	6.0 KP
Workload	180 h (3 SWS Lecture (VO) "Introd. to Cognitive Neuroscience" and "Psychopharmacol." Total workload 135h: 45h contact/ 45 background reading/ 45h exam preparation 1 SWS Supervised excercise (UE) Total workload 45h: 14h contact/ 31h paper reading)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	• Thiel, Christiane Margarete (Modulverantwortung) • Thiel, Christiane Margarete (Modulberatung) • Thiel, Christiane Margarete (Prüfungsberechtigt) • Gießing, Carsten (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	[nop] ++ Neurosci. knowlg. + Expt. methods + Scient. literature + Social skills ++ Interdiscipl. knowlg. + Data present./disc. + Scientific English [/nop] Upon successful completion of this course, students know the fundamentals of neurotransmission know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease know the principles of drug treatment for psychiatric disorders have in-depth knowledge in selected areas of these topics are able to understand, explain and critically assess neuroscientific approaches in animals and humans are able to understand and critically assess published work in the area of cognitive neurosciecne
Modulinhalte	The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: History of cognitive neuroscience Methods of cognitive neuroscience Attention Learning Emotion Language Executive functions. The supervised excersise either deepens that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week. The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease.The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: Introduction to Terms and Definitions in Drug Research Dopaminergic and Noradrenergic System Cholinergic and Serotonergic System GABAergic and Glutamatergic System Addiction Depression Schizophrenia Anxiety Alzheimer's Disease

Vorlesung		3	--	42
Übung		1	--	14
Präsenzzeit Modul insgesamt				56 h

neu250 - Computational Neuroscience - Statistical Learning

Modulbezeichnung	Computational Neuroscience - Statistical Learning
Modulkürzel	neu250
Kreditpunkte	6.0 KP
Workload	180 h (1 SWS Lecture (VL) Total workload 36 h: 14 h contact / 22 h individual revision of lecture contents, test preparation, and application to portfolio tasks 1 SWS Seminar (SE) Total workload 36 h: 14 h contact / 22 h individual reading and test preparation 3 SWS Supervised exercise Total workload 108 h: 42 h contact/ 66 h individual work on portfolio tasks (programming and interpretation of simulation or analysis results))
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Anemüller, Jörn (Modulverantwortung) • Anemüller, Jörn (Modulberatung) • Rieger, Jochem (Modulberatung) • Rieger, Jochem (Prüfungsberechtigt) • Anemüller, Jörn (Prüfungsberechtigt) • Kretzberg, Jutta (Prüfungsberechtigt)
Teilnahmevoraussetzungen	attendance in pre-meeting
Kompetenzziele	Upon successful completion of this course, students • have refined their programming skills (in Matlab) in order to efficiently analyze large-scale experimental data • are able to implement a processing chain of prefiltering, statistical analysis and results visualization • have acquired an understanding of the theoretical underpinnings of the most common statistical analysis methods and basic machine learning principles • have practised using existing toolbox functions for complex analysis tasks • know how to implement new analysis algorithms in software from a given mathematical formulation • can interpret analysis results in a neuroscientific context • have applied these techniques to both single channel and multi-channel neurophysiological data ++ Neurosci. knowlg. + Scient. literature + Social skills ++ Interdiscipl. knowlg. ++ Maths/Stats/Progr. + Data present./disc. + Scientific English
Modulinhalte	• data preprocessing, e.g., artifact detection and rejection, filtering, z-scoring, epoching • data handling for high-volume data in Matlab • introduction to relevant analysis toolbox software • theory of multi-dimensional statistical analysis approaches, such as multi-dimensional linear • regression, principal component analysis, independent component analysis, logistic regression, • gradient-based optimization • practical implementation from mathematical formulation to software code, debugging and unit testing • postprocessing and results visualization • consolidation during hands-on computer-based exercises (in Matlab) • introduction to selected specialized analysis approaches during the seminar

Literaturempfehlungen	Wallisch et al.: MATLAB for Neuroscientists, 2nd Ed. Academic Press. More text books will be suggested prior to the course. Scientific articles: Copies of scientific articles for the seminar will be provided prior to the course

Unterrichtssprache	Englisch
Dauer in Semestern	1 Semester
Angebotsrhythmus Modul	jährlich
Aufnahmekapazität Modul	18 (Recommended in combination with neu240 Computational Neuroscience - Introduction Shared course components with (cannot be credited twice): psy220 Human Computer Interaction)
Hinweise	Course in the first half of the semester Students without Matlab experience should take a Matlab course (e.g. neu710) first
Modulart	Wahlpflicht / Elective
Vorkenntnisse	Programming experience is highly recommended, preferably in Matlab

Prüfung	Prüfungszeiten	Prüfungsform
Gesamtmodul	during the course	Portfolio, consisting of daily short tests, programming exercises and short reports

Lehrveranstaltungsform	Kommentar	SWS	Angebotsrhythmus	Workload Präsenz
Vorlesung		1	--	14
Übung		3	--	42
Seminar		1	--	14
Präsenzzeit Modul insgesamt				70 h

neu241 - Computational Neuroscience - Introduction

Modulbezeichnung	Computational Neuroscience - Introduction
Modulkürzel	neu241
Kreditpunkte	12.0 KP
Workload	360 h (360 h 2 SWS Lecture Total workload 60h: 30h contact/30h individual revision of lecture contents, test preparation 1 SWS Seminar Total workload 45h: 15h contact/30h individual reading and test preparation 10.5 SWS Supervised exercise Total workload 255h: 145h contact/110h individual work on portfolio tasks (programming, interpretation of simulation results))
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Kretzberg, Jutta (Modulberatung) • Kretzberg, Jutta (Prüfungsberechtigt) • Greschner, Martin (Prüfungsberechtigt) • Ashida, Go (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Programming experience in Matlab (e.g. acquired by a 6 ECTS programming course)
Kompetenzziele	++ Neurosci. knowlg. + Scient. Literature + Social skills ++ Interdiscipl. knowlg ++ Maths/Stats/Progr. + Data present./disc. + Scientific EnglishUpon successful completion of this course, students • are able to implement and apply algorithms in Matlab • have learned to handle scientific data independently • have acquired theoretical and practical knowledge of advanced data analyis techniques • know about computational model approaches on different levels of abstraction • know how to perform model simulations for single cells and small neuronal networks • can interpret simulation results in a neuroscientific context
Modulinhalte	This course consists of six weeks with different topics, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab). Portfolio tasks, mainly interpretation of programming results are given every day. Weeks 1 and 2: Spike train analysis response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification Weeks 3 and 4: Neuron models Conductance-based single cell models using differerential equations (passive membrane equation, integrate and fire, Hodgkin Huxley, alpha synapses) Weeks 5 and 6: Small network models Feed-forward and feed-back networks, lateral inhibition, central pattern generator, spike-timing dependent plasticity, multi-compartment models
Literaturempfehlungen	

	Skripts for each course day will be provided prior to / during the course Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course Recommended textbooks or other literature: Dayan / Abbott: Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems. MIT Press (More text book chapters will be suggested prior to the course).

neu280 - Research Techniques in Neuroscience

Modulbezeichnung	Research Techniques in Neuroscience
Modulkürzel	neu280
Kreditpunkte	6.0 KP
Workload	180 h (2 SWS Lecture: 35 h contact / 45 h background reading / 10 h exam preparation 2 SWS Practical: 50 h contact / 30 h protocol preparation / 10 h exam preparation)
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Hartmann, Anna-Maria (Modulverantwortung) • Hartmann, Anna-Maria (Modulberatung) • Bantel, Carsten (Prüfungsberechtigt) • Greschner, Martin (Prüfungsberechtigt) • Hurlemann, René (Prüfungsberechtigt) • Hartmann, Anna-Maria (Prüfungsberechtigt) • Neidhardt, John (Prüfungsberechtigt) • Nothwang, Hans Gerd (Prüfungsberechtigt) • Thiel, Christiane Margarete (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. ++ Expt. Methods + Scient. Literature + Social skills + Interdiscipl. knowlg. + Maths/Stats/Progr. + Data present./disc. + Scientific English ++ Ethics 1. have basic knowledge of different techniques (see content of the module) used in neurosciences 2. have basic knowledge of realizing clinical studies, generating questionaires and their biostatistical data analyses 3. have aquired practical skills in whole brain imaging (fMRI) and molecular techniques 4. have aquired practical skills in performing clinical studies
Modulinhalte	Lecture topics: 1. Whole brain imaging (CT, MRI, fMRI, PET, EEG, MEG) 2. Animal Behaviour 3. Microscopy and Visualizing nervous system structure 4. Electrophysiology 5. Identifying Gene of Interest and Gene delivery strategies 6. Molecular Cloning, generation of transgenic organism, manipulating endogenous genes 7. Cell culture techniques 8. Biochemical assays and intracellular signalling 9. Clinical studies 10. questionaire and biostatistics 11. judical basics of scientific work laboratory course 1. molecular methods (site directed mutagenesis, PCR, midi preparation, sequencing, bioinformatics) 2. fMRI 3. clinical studies

neu310 - Psychophysics of Hearing

Modulbezeichnung	Psychophysics of Hearing
Modulkürzel	neu310
Kreditpunkte	12.0 KP
Workload	360 h (5 SWS Practical (PR) "Experiments in Hearing" Total workload 225h: 70h contact / 110h experimental work / 45h exam preparation 1 SWS Supervised excercise (UE) "Fundamentals in psychoacoustic data analysis" Total workload 45h: 15h contact / 30h practising data analysis (incl. SPSS) 2 SWS Seminar (SE) "Hearing" Total workload 90h: 30h contact / 60h background reading)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Klump, Georg Martin (Modulverantwortung) • Klump, Georg Martin (Prüfungsberechtigt) • Langemann, Ulrike (Prüfungsberechtigt) • Beutelmann, Rainer (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. ++ Expt. Methods + Social skills ++ Maths/Stats/Progr. + Data present./disc. + Scientific English Students will learn the basics about performing a psychoacoustic experiment. Based on an experiment in which they study their own hearing, they will learn how to conduct a behavioural study in hearing and analyze the data. In addition, they will be be provided with an overview of the mechanisms of auditory perception.
Modulinhalte	The modul comprises (i) a seminar “Hearing” [2 SWS] (ii) an exercise "Fundamentals in psychoacoustic data analysis" [1 SWS], and a (iii) practical course [7 SWS] including aspects of planning and conducting psychoacoustic experiments.
Literaturempfehlungen	Plack, Christopher J. (2005) The sense of hearing. Mahwah, NJ [u.a.] : Erlbaum (sufficient number of copies available in the university library)

neu320 - Introduction to Neurophysics

Modulbezeichnung	Introduction to Neurophysics
Modulkürzel	neu320
Kreditpunkte	6.0 KP
Workload	180 h (2 SWS Lecture total workload 90h: 28h contact / 62h background reading/exam preparation 2 SWS Supervised exercise total workload 90h: 28h contact / 62h self-conducted exercise work/literature reading)
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Anemüller, Jörn (Modulverantwortung) • Anemüller, Jörn (Prüfungsberechtigt) • Dietz, Mathias (Prüfungsberechtigt)
Teilnahmevoraussetzungen	recommended in semester: 3 (with Matlab prereq.: 1)
Kompetenzziele	++ Neurosci. knowlg. + Independent research + Scient. Literature ++ Interdiscipl. knowlg. ++ Maths/Stats/Progr. + Data present./disc. Students will learn to recognize the dynamics in neuronal networks as the result of an interplay of physical, chemical and biological processes. Overview over major physical measurement procedures for the quantification of structure and function in neuronal systems. Using the language of mathematics as a fundamental tool for the description of underlying biophysical processes with stochastics, linear algebra, differential equations. Information as represented on different length- and timescales: From microscopic processes to macroscopic functional models. Learning and adaptation as adjustment of a biophysical system to its environment.
Modulinhalte	• Biophysics of synaptic and neuronal transmission • Single neuron models: Hodgkin Huxley model, integrate and fire model, firing rate model • Biophysics of sensory systems in the auditory, visual and mechano-sensory modality • Description of neuronal dynamics: Theory of dynamical systems, from microscopic to macroscopic activity • Principles of neuronal activity measurments: from single-cell recordings to EEG, MEG and fMRI • Functional description of small neuronal networks: Receptive fields and their description with linear and non-linear models • The neuronal code: Spikes, spike trains, population coding, time- vs. rate-code • Decoding neuronal activity and its applications • Simulation of artificial neural networks as a functional model, Hopfield network, Boltzmann machine, Perceptron and deep networks • Informationtheoretic approaches, stimulus statistics, entropy, mutual information • Learning and plasticity, conditioning and reinforcement learning, Hebbian learning, long-term potentiation and long-term depression
Literaturempfehlungen	• Chow, Gutkin, Hansel, Meunier, Dalibard (Eds.): Methods and Models in Neurophysics (2003) • Dayan, Abbott: Theoretical Neuroscience (2005) • Galizia, Lledo (Eds.): Neurosciences, from molecule to behauvior (2013) • Gerstner, Kistler, Naud, Paninski: Neuronal Dynamics - From single neurons to networks and models of Cognition (2014) • Rieke, Warland, de Ruyter van Steveninck, Bialek: Spikes - Exploring the neural code (1999) • Schnupp, Nelken, King: Auditory Neuroscience (2010)

bio605 - Molecular Genetics and Cell Biology

Modulbezeichnung	Molecular Genetics and Cell Biology
Modulkürzel	bio605
Kreditpunkte	12.0 KP
Workload	360 h
Verwendbarkeit des Moduls	• Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	• Neidhardt, John (Modulverantwortung) • Neidhardt, John (Prüfungsberechtigt) • Koch, Karl-Wilhelm (Prüfungsberechtigt) • Jüschke, Christoph (Prüfungsberechtigt)
Teilnahmevoraussetzungen	BSc (Biologie, Biochemie)
Kompetenzziele	++ vertiefte biologische Fachkenntnisse ++ vertiefte Kenntnisse biologischer Arbeitstechniken + Fähigkeit zur Datenanalyse ++ fächerübergreifendes Denken + kritisches und analytisches Denken + eigenständige Recherche und Kenntnisse wissenschaftlicher Primärliteratur + Datenpräsentation und Diskussion in Wort und Schrift (E) + Teamfähigkeit + Ethik und professionelles Verhalten + Projekt- und Zeitmanagement Für Studierende mit Interesse an einem molekularbiologischen, molekulargenetischen, zellbiologischen und neurobiologischen Schwerpunkt.
Modulinhalte	Theorie: Vertiefung der Kenntnisse in der molekularen Genetik und Zellbiologie. Ein Bezug zu menschlichen Erkrankungen wird hergeleitet. Praxis: Überprüfung der theoretischen Kenntnisse im Experiment. Erwerb methodischer Kenntnisse der molekularen Genetik, Zellbiologie und Therapieentwicklung. Einblicke in die Durchführung von For-schungsvorhaben. Themen der Vorlesung und des Seminars: Molekulare Grundlagen neurodegenerativer Erkrankungen, Struktur und Funktion von DNA/RNA/Proteinen, Hochdurchsatz-Technologien, Struktur und Funktion von Membranen, Cytoskelett, Zellzyklus, programmierter Zelltod, Zellen im sozialen Verband Übungen: Vermittlung aktueller Methoden der Molekularbiologie und Humangenetik, Hochdurchsatztechnologien, Einführung in Zellkulturtechniken.

Workload	180 h
Verwendbarkeit des Moduls	• Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	• Sienknecht, Ulrike (Modulverantwortung) • Sienknecht, Ulrike (Modulberatung) • Sienknecht, Ulrike (Prüfungsberechtigt) • Claußen, Maike (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	Upon successful completion of this course, students · know the fundamental problems organisms share in development · know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates) · know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis · know the principles of gene regulatory networks in development and are able to explain examples · are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms · have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties skills: ++ deepened biological expertise + deepened knowledge of biological working methods ++ interdisciplinary thinking ++ critical and analytical thinking + independent searching and knowledge of scientific literature + ability to perform independent biological research + teamwork
Modulinhalte	Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics: · Introduction to Developmental Biology · Cell-Cell Communication · Differential Gene Expression (I and II) · Early Development of Vertebrates, Gastrulation

- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

Zuständige Personen	• Sienknecht, Ulrike (Modulverantwortung) • Sienknecht, Ulrike (Modulberatung) • Sienknecht, Ulrike (Prüfungsberechtigt) • Claußen, Maike (Prüfungsberechtigt) • Ebbers, Lena (Prüfungsberechtigt)
Teilnahmevoraussetzungen	**mandatory** prerequisite is the module bio845 (neu110) (Introduction to Development and Evolution)
Kompetenzziele	Upon successful completion of this course, students have skills in methods of developmental biology: • are capable of performing live embryo husbandry • are able to carry out in-ovo stainings • are familiar with the use of embryonic stage discrimination standards for model organisms • document the observed embryonic stages by drawings with anatomical labelling • are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods • microscopy, data analysis, and photographic data documentation • know the standards of proper documentation of research data and the universal format of a lab notebook • know how to carry out formal laboratory reports (and the structure of a scientific paper) • have basic knowledge in the field of auditory system development • have basic knowledge of the organisation of the auditory system across vertebrate groups • have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills: ++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills ++ critical and analytical thinking + independent searching and knowledge of scientific literature ++ ability to perform independent biological research + data presentation and discussion (written and spoken) + teamwork + ethics and professional behaviour + project and time management

Modulinhalte	Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature
Literaturempfehlungen	**textbooks:** Gilbert S.F., Development, Macmillan Publishers Ltd, 11th edition 2016; Mathews W.W & Schoenwolf G.C., Atlas of Descriptive Embryology, Prentice-Hall Inc., Simon & Schuster, 5th edition 1998; in addition, current research papers

Kreditpunkte	6.0 KP
Workload	180 h (2 SWS Seminar Total workload 72 h: 28 h contact / 15 h background literature reading, 14 h online science communication workshop, 15 h preparation for the presentation of results as scientific poster 3 SWS Supervised exercise Total workload 108 h: 42 h contact / 66 h independent lab-work, self-organized team work, data analysis, and preparation of results figures and texts))
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Kretzberg, Jutta (Prüfungsberechtigt) • Albert, Jörg (Prüfungsberechtigt) • Ashida, Go (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	Upon successful completion of this course, students • have planned and conducted a small, self-defined and self-organized project in a team • have knowledge on an invertebrate neuronal system • have knowledge on neural coding and corresponding data analysis techniques • have acquired skills in data analysis and / or experimental techniques and / or modeling • are able to critically evaluate and discuss experimental results • have prepared and presented a scientific poster + Neurosci. knowlg. + Expt. Methods ++ Independent research + Scient. Literature ++ Social Skills + Maths/Stats/Progr. ++ Data present./disc. + Scientific English + Ethics
Modulinhalte	This module builds up on the knowledge and methods acquired in the module neu340 Invertebrate Neuroscience. In the seminar, the knowledge on invertebrate systems and neural coding in general is deepened based on scientific literature. In the practical exercise of the module, students can choose one topic from a range of different research questions on computation in the leech nervous system (e.g. comparison of different cell types, electrical and chemical synaptic connections, exact measurement of spike threshold, phase locking). Small groups (2-3) of students plan, perform, and analyze experiments (intracellular

	recordings) or model simulations (model framework will be provided or can be self-written based on module neu241 computational neuroscience - Introduction) to tackle their topic. The portfolio consists of assignments covering the planning, analysis, interpretation, and presentation of the results with feedback given during the course on each project stage.
Literaturempfehlungen	Course scripts and background and seminar literature will be available in Stud.IP. Scientific literature discussed in the seminar depends on the project topics.

Zuständige Personen	• Köppl, Christine (Modulverantwortung) • Klump, Georg Martin (Prüfungsberechtigt) • Köppl, Christine (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Recommended previous knowledge/skills: Basics of Neurosensory Science and Behavioural Biology
Kompetenzziele	++ Neurosci. knowlg + Expt. methods ++ Scient. Literature + Social skills ++ Interdiscipl. knowlg ++ Data present./disc. ++ Scientific English + Ethics Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area. Upon successful completion of this course, students • have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing) • have basic knowledge of the large range of techniques used in auditory research • are able to read and critically report to others on an original research paper in auditory neuroscience • are able to research and review a specific topic in auditory neuroscience
Modulinhalte	One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion. Topics: Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions Auditory nerve: phase locking, rate coding. Excitation patterns Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations Sound localisation in birds and mammals Central auditory processing: imaging techniques, auditory streams, cortex, primates Relation between psychophysics and neurophysiology The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

Teilnahmevoraussetzungen	Enrolment in Master program Neuroscience or Biology, Students from other programs are welcome if space is available Attendance in pre-meeting
Kompetenzziele	**Goals of this module:** upon completion of this module, students… • have knowledge on the emergence of behavior from neurosensory activation • have learned about the interdependdces between signals and their receivers (keyword: matched filters) • have a basic understanding of the multiple determinants of behavior: molecular (e.g. genes), cellular (e.g. neurons), organismic (e.g. individuals), environmental (e.g. noise) and inter-individual (e.g. communication) • have acquired basic skills in data analysis • have acquired basic understanding of sensory signal processing • have acquired an intuitive understanding of the multi-causal nature of behavior and the corresponding multiple levels of investigation **Skills to be acquired/ competencies:** ++ Neuroscience knowledge ++ Experimental Methods + Scientific Literature + Social skills + Maths/Stats/Programming + Independent Research + Data presentation/discussion + Scientific English + Ethics
Modulinhalte	The module consists of three weeks of seminar and hands-on lab exercises on insect behavioral experiments and electrophysiology (extracellular recordings from Drosophila or mosquito neurons). The seminar covers the following topics: • Introduction to Dipteran courtship behaviour (fruit flies and mosquitoes): common mechanisms and principles • The cellular and molecular basis of Dipteran courtship: Between shared evolution and species-specific adaptation • Introduction to the neurophysiological and neurogenetic toolbox to dissect behaviour (optogenetic, biophysical, behavioural) • Introduction to data analysis methods In the practical exercises, portfolio assignments will be performed on: • Quantitative analysis of neural responses (electrophysiology, reporter imaging) from Dipteran insects

- Quantitative analysis of behavioural responses from Dipteran insects (e.g. courtship behaviour, flight tones)
- Design and Testing of different stimuli to probe neural and behavioural responses

Literaturempfehlungen	Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP Background and seminar literature will be available in Stud.IP

Modulbezeichnung	Recent Topics in Neuroscience
Modulkürzel	neu400
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Background Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Kretzberg, Jutta (Modulberatung) • Kretzberg, Jutta (Prüfungsberechtigt) • Clemens, Jan (Prüfungsberechtigt) • Albert, Jörg (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Enrolment in Master program Neuroscience *Students from other programs are welcome when space is available.*
Kompetenzziele	**Goals of this module:** upon completion of this module, students… know about a specific field in neuroscience and have applied hands-on experimental or data analysis methods to that field. **Skills to be acquired/ competencies:** ++ Neuroscience knowledge ++ Experimental Methods + Scientific Literature + Social skills + Maths/Stats/Programming + Independent Research + Data presentation/discussion + Scientific English + Ethics
Modulinhalte	The contents of this module can change every semester to serve as a flexible addition to the standard choice of modules that are offered yearly. Please check Stud.IP for more specific information.
Literaturempfehlungen	Journal papers will be selected based on the specific topic of the module in each semester

Research Modules

neu610 - External Research Project

Modulbezeichnung	External Research Project
Modulkürzel	neu610
Kreditpunkte	15.0 KP
Workload	450 h (240 h contact or individual lab work / 30 h data analysis / 40 h background reading / 50 h participation in seminar of host group and preparation of presentation/ 60 h preparation of written internship report / 30 science communication workshop with poster preparation and presentation))
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Research Modules
Zuständige Personen	• Köppl, Christine (Modulverantwortung) • der Neuroscience, Lehrende (Prüfungsberechtigt)
Weitere verantwortliche Personen	all MSc Neuroscience teachers, see list of examiners
Teilnahmevoraussetzungen	A learning agreement signed by the student, the supervisor at the host institution, and the Oldenburg supervisor (from the list of examiners), needs to be submitted to the examination office prior to the start of lab work. Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor)
Kompetenzziele	+ Neurosci. knowlg. ++ Expt. methods ++ Independent research ++ Scient. literature ++ Social skills + Interdiscipl. knowlg. ++ Data present./disc. + Scientific English + Ethics Students are introduced to independent research in a specific area of neuroscience by a scientifically working group outside of the regular MSc Neuroscience faculty at the University of Oldenburg (usually a university, research institute, clinics or scientifically working company in Germany or abroad) Students perform individual research projects to learn: • planning and organization of a research project in a group outside of University of Oldenburg • formulate a scientific hypothesis • planning, performing and analyzing experiments and / or simulations • working with scientific background literature on the specific context of the project • oral presentation and discussion of backgrounds and results in the lab seminar • write a scientific report • prepare and present a scientific poster

Modulinhalte	The External Research Module is carried out under the guidance and supervision of an experienced researcher who is not part of the regular Neuroscience faculty at the University of Oldenburg. It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time. After completion of the lab work, students will continue to be advised during the writing phase of the project report by the external supervisor and / or by a local Neuroscience faculty member. The timing of projects is by individual arrangement with the supervisor. Participation in the Stud.IP workshop on science communication (https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.
Literaturempfehlungen	Provided by external and / or local supervisor, depending on the project
Links	
Unterrichtssprache	Englisch
Dauer in Semestern	1 Semester
Angebotsrhythmus Modul	every semester
Aufnahmekapazität Modul	unbegrenzt (Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor))
Hinweise	All teachers from the list of MSc Neuroscience examiners at the University of Oldenburg can act as examiners, students should contact appropriate supervisors individually Prior to project start, external and local supervisors must fill the learning agreement form. The supervisor at the host institution is invited to submit a short, written statement of assessment, final grading is done by the supervisor from the list of examiners.
Modulart	Wahlpflicht / Elective
Modullevel	MM (Mastermodul / Master module)

neu600 - Neuroscience Research Project

Modulbezeichnung	Neuroscience Research Project
Modulkürzel	neu600
Kreditpunkte	15.0 KP
Workload	450 h (2 SWS Seminar (SE) 28 h contact / 62 h reading and presentation preparation 8 SWS Research Internship (IFP) 120 h contact / 120 h independent lab work / 30 h data analysis / 60 h preparation of written internship report / 30 h science communication workshop with poster preparation and presentation))
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Research Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • der Neuroscience, Lehrende (Prüfungsberechtigt) • Bräuer, Anja (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Özyurt, Jale Nur (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Milenkovic, Ivan (Prüfungsberechtigt) • Sörös, Peter (Prüfungsberechtigt) • Lücke, Jörg (Prüfungsberechtigt) • Ruigendijk, Esther (Prüfungsberechtigt)
Weitere verantwortliche Personen	all MSc Neuroscience teachers, see list of examinors
Teilnahmevoraussetzungen	Depending on project choice, please check Stud.IP and ask the supervisor. Module can be taken multiple times, however, supervision of individual projects is limited to 45 ECTS for the same combination of student and supervisor (1 research module + Master thesis OR up to 3 research modules, including external research projects)
Kompetenzziele	+ Neurosci. knowlg. ++ Expt. Methods ++ Independent research ++ Scient. Literature + Social skills + Interdiscipl. knowlg. + Maths/Stats/Progr. + Data present./disc. + Scientific English + Ethics Students perform individual research projects to learn: • planning and organization of a research project in a group outside of University of • Oldenburg • formulate a scientific hypothesis • planning, performing and analyzing experiments and / or simulations • working with scientific background literature on the specific context of the project • oral presentation and discussion of backgrounds and results in the lab seminar

- write a scientific report
- prepare and present a scientific poster

Module may serve as preparation for a Master's thesis.

Modulinhalte	The Research Module is carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners). It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and a regular seminar for training, reporting and feedback advice during that time. Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program. Research questions, methods and approaches differ between individual projects. Please refer to the list of options in Stud.IP and contact potential supervisors directly. The timing of projects is by individual arrangement with the supervisor. Many, but not all, project options can also be scheduled during semester breaks, and / or as part-time options (lasting more than 7 weeks). Note that, for some options, priority for admission to the project is given to students who passed a background module offered by the supervisor Participation in the Stud.IP workshop on science communication (https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.
Literaturempfehlungen	Provided by the supervisor, depending on the project.

neu650 - Neuroscience Team Project

Modulbezeichnung	Neuroscience Team Project
Modulkürzel	neu650
Kreditpunkte	9.0 KP
Workload	270 h
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Research Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Albert, Jörg (Prüfungsberechtigt) • Ashida, Go (Prüfungsberechtigt) • Clemens, Jan (Prüfungsberechtigt) • Kretzberg, Jutta (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Students from other programs are welcome when space is available. Dependent on the choice of the project, different modules are prerequisites: Current choices: neu340 (invertebrate neuroscience) neu245 (Computational Neuroscience – biophysical modeling)
Kompetenzziele	**Goals of this module:** upon completion of this module, students have experienced the full cycle of a research project in a small (4 weeks full time) team project (2-5 students): • Definition of an exact research question • Development of a teamwork project schedule • Literature search • Application of experimental or modeling methods they have learned in a preceding background module Data analysis • Frequent oral status reports and data discussion • Poster presentation **Skills to be acquired/ competencies:** + Neuroscience knowledge + Experimental Methods + Scientific Literature ++ Social skills + Maths/Stats/Programming ++ Independent Research ++ Data presentation/discussion + Scientific English ++ Ethics
Modulinhalte	The seminar will cover topics of (tools for) scientific team work, literature search, and science communication. The topics of the group projects for 2-5 students differ every year, because they are related to ongoing scientific projects (e.g. of PhD students). Current project choice: • Invertebrate electrophysiology (requires neu340) • Biophysical modeling (requires neu245)
Literaturempfehlungen	Journal papers will be selected based on the topic of the project
Links	
Unterrichtssprache	Englisch

Dauer in Semestern	1 Semester
Angebotsrhythmus Modul	Last 4 weeks of summer term. Plus poster presentation at next student poster symposium (beginning of winter term)
Aufnahmekapazität Modul	12
Modulart	Wahlpflicht / Elective
Modullevel	EB (Ergänzungsbereich / Complementary)
Vorkenntnisse	Each of the teamwork projects from which one can be chosen requires the methods from a specific background module: Invertebrate electrophysiology: neu340 Biophyical modeling: neu245

Prüfung	Prüfungszeiten	Prüfungsform
Gesamtmodul	Portfolio tasks are performed during the module. The poster must be submitted and presented 1 week after completion of the practical work. The poster must be presented additionally at the student poster symposium (orientation week before winter semester).	Portfolio, consisting of • Project plan • Practical experimental or modeling work, discussed in frequent oral status reports • Poster

Skills Modules

neu710 - Neuroscientific Data Analysis in Matlab

Modulbezeichnung	Neuroscientific Data Analysis in Matlab
Modulkürzel	neu710
Kreditpunkte	6.0 KP
Workload	180 h (180 h 2 SWS Lecture (VL) and Seminar (SE) Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments 2 SWS Supervised exercise (UE) Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments)
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Kretzberg, Jutta (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. + Social skills + Interdiscipl. knowlg. ++ Maths/Stats/Progr. + Scientific English +Ethics Upon successful completion of this course, students • understand basic programming concepts. • have good knowledge about the most important aspects of the programming language Matlab and are able to write their own programs. • have basic knowledge in statistical testing. • have developed and applied a programs for the analysis of electrophysiological data. • have practiced the interpretation of data analysis results in a neuroscience context
Modulinhalte	In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task: Matlab basics: Matlab windows, work space, vectors & matrices, saving & loading, graphics, scripts, functions • Data types: numbers, logicals, text, categorical • Control flow: if statements, loops (for, while) • Software development: Flow charts, testing, debugging • Working with data: Searching & sorting, logical indexing • Advanced data types: sparse matrices, 3D matrices, cell arrays, structures, tables • Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics • Application data analysis: Implementation of spike train analysis methods and graphics, function handles • Application Modelling: curve fitting, simulation of time series With completing the seven tasks, each participant develops a toolbox of the

most common analysis methods for electrophysiological (spike and continuous) data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results.

Hence, the goal of this module is two-fold: Learning the programming language Matlab and analysis methods for electrophysiological data.

neu730 - Biosciences in the Public Eye and in our Laws

Modulbezeichnung	Biosciences in the Public Eye and in our Laws
Modulkürzel	neu730
Kreditpunkte	6.0 KP
Workload	180 h (56h contact / 84h research for presentations / 40h term paper)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Skills Modules • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Köppl, Christine (Modulverantwortung) • Sienknecht, Ulrike (Modulberatung) • Köppl, Christine (Prüfungsberechtigt) • Sienknecht, Ulrike (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Expt. methods + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Data present./disc. + Scientific English ++ Ethics Upon completion of this course, students • know basic rules of good scientific practise • are aware of the legal framework that is relevant to biological research, e.g. on animal welfare or genetically modified organisms • have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources • are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation • are able to prepare and give a coherent presentation in a team • have practised to lead a group discussion
Modulinhalte	In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module. Example topics: Good scientific practise and fraud Neuroenhancement Artificial intelligence Animal welfare, Animal experiments Overfishing, Nature conservation State-of-the-art genetic tools and their implications Genetically modified organisms, e.g., in food production, chimeras Stem cells Humans as experimental subjects A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

neu760 - Scientific English

Modulbezeichnung	Scientific English
Modulkürzel	neu760
Kreditpunkte	6.0 KP
Workload	180 h (0,5 SWS Lecture (VO) Total workload 23h: 8h contact / 15h research for term paper 3,5 SWS Supervised exercise (UE) Total workload 158h: 46h contact / 46h preparation of texts and presentations / 66h term paper)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Skills Modules • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules • Master's Programme Molecular Biomedicine (Master) > Skills Modules
Zuständige Personen	• Köppl, Christine (Modulverantwortung) • Köppl, Christine (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. ++ Social skills ++ Data present./disc. ++ Scientific English Upon completion of this course, students • have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience • are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronounciation • are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone) • are able to recognize and avoid common errors of non-native speakers.
Modulinhalte	Lectures cover - characteristics of the different forms of scientific presentations - sentence structure using the passive voice - scientific vocabulary and terminology as contrasted to common speech - appropriate language for communication with scientific editors and referees Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronounciation and language use errors.

neu780 - Biological Data Analysis with Python

Modulbezeichnung	Biological Data Analysis with Python
Modulkürzel	neu780
Kreditpunkte	6.0 KP
Workload	180 h (2 SWS Lecture total workload 90h: 30h contact / 60h individual reading 2 SWS Supervised exercise total workload 90h: 45h contact / 45h solving programming exercises)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Skills Modules • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Winklhofer, Michael (Modulverantwortung) • Winklhofer, Michael (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. ++ Maths/Stats/Progr. + Data present./disc. The ojective of the module is the acquistion of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/. Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis). Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.
Modulinhalte	Data types and data structures, control structures, functions, modules, file input/output Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

Teilnahmevoraussetzungen	none
Kompetenzziele	++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics Upon successful completion of this course, students • know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language • understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint. • have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish) • are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation • have practical skills in handling small rodents or birds or fish • have profound knowledge of anaesthesia, analgesia and basic principles of surgery. • have practised invasive procedures and euthanasia. NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals”.
Modulinhalte	Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are: • Legislation, ethics and the 3Rs • Scientific integrity • Data collection " • Basic biology of rodents, birds and fish • Husbandry, and nutrition of rodents, birds and fish • Animal Welfare • Health monitoring • Pain and distress • Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every partipant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

neu790 - Communicating Neuroscience

Modulbezeichnung	Communicating Neuroscience
Modulkürzel	neu790
Kreditpunkte	3.0 KP
Workload	90 h (90 h (28 h contact / 62 h individual reading and preparing discussion questions))
Verwendbarkeit des Moduls	• Master Biologie (Master) > Skills Modules • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Kretzberg, Jutta (Prüfungsberechtigt) • Köppl, Christine (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. ++ Scient. Literature ++ Social skills + Interdiscipl. knowlg. ++ Data present./disc. + Scientific English ++ Ethics Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscience literature, learn about the scientific publication process and discuss science communication to the general public.
Modulinhalte	The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover: • How to find literature? • How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers? • Publication process, Authorship and impact metrics • Alternative publication paths and data sharing in neuroscience • Science communication for the general public and on social media • Face-to-face scientific communication
Literaturempfehlungen	List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP. Background neuroscience textbooks, e.g.: Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer Kandel et al. 'Principles of Neural Science', 5th Edition 2013, McGraw-Hill Comp.

neu810 - International Meeting Contribution

Modulbezeichnung	International Meeting Contribution
Modulkürzel	neu810
Kreditpunkte	3.0 KP
Workload	90 h
Verwendbarkeit des Moduls	• Master Biologie (Master) > Skills Modules • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • Kretzberg, Jutta (Prüfungsberechtigt) • Köppl, Christine (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. ++ Independent research + Scient. Literature ++ Social skills + Interdiscipl. knowlg. ++ Data present./disc. + Scientific English + Ethics Preparation, presentation and critical discussion of own studies for an international audience: • participate in an international meeting • prepare a poster or talk for an international meeting • present own results in a way that is appropriate for the target audience • put own studies into the context of scientific literature • acquire additional knowledge about a broader field of research
Modulinhalte	Active participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days. Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis. It is mandatory to present the poster or talk to Christine Köppl or Jutta Kretzberg prior to the meeting and incorporate the feedback on the presentation.

neu725 - Multivariate Statistics and Applications in R

Modulbezeichnung	Multivariate Statistics and Applications in R
Modulkürzel	neu725
Kreditpunkte	6.0 KP
Workload	180 h (2 SWS Lecture: 30h contact / 60h self-studies and exam preparation 2 SWS Seminar: (30h contact / 60h statistical data analysis in R)
Verwendbarkeit des Moduls	• Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Hildebrandt, Andrea (Modulverantwortung) • Hildebrandt, Andrea (Prüfungsberechtigt)
Teilnahmevoraussetzungen	recommended in semester 1/3 weeks 11-13 of summer semester
Kompetenzziele	Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them. + Independent research + Scient. Literature + Social skills ++ Interdiscipl. knowledge ++ Maths/Stats/Progr. ++ Data preset./disc. + Scient. English ++ Ethics
Modulinhalte	Part 1: Multivariate Statistics I (lecture): Graphical representation of multivariate data The Generalized Linear Modeling (GLM) framework Multiple and moderated linear regression with quantitative and qualitative predictors Logistic regression Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM) Non-linear regression models Path modeling Factor analysis (exploratory & confirmatory) (Multilevel) Structural equation modeling (SEM linear and non-linear) Part 2: Analysis Methods with R (seminar) Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

neu820 - Neuroscience Journal Club

Modulbezeichnung	Neuroscience Journal Club
Modulkürzel	neu820
Kreditpunkte	3.0 KP
Workload	90 h (30h contact / 60h reading and preparation of oral and poster presentation)
Verwendbarkeit des Moduls	• Master Biologie (Master) > Skills Modules • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Mertsch, Sonja (Modulverantwortung) • Mertsch, Sonja (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	Students will learn to read, interpret, present and discuss neuroscientific literature. ++ Neurosci. knowledge + Expt. Methods ++ Scient. Literature ++ Social skills + Interdiscipl. knowledge ++ Data present./disc. + Scientific English + Ehtics
Modulinhalte	Week 1: How to read and present a scientific paper and how to generate a scientific poster? Distribution of papers to participants Week 2: Example presentation of a scientific paper by the teacher with discussion Week 3-13: Oral presentation / moderation of discussion of one scientific paper per week by one or two student(s) Week 14: Short poster presentations of all students The focus topic of the scientific literature will change between semesters.
Literaturempfehlungen	Scientific literature will be available in Stud.IP

gsw200 - Microscopic Imaging in Biomedical Sciences

Modulbezeichnung	Microscopic Imaging in Biomedical Sciences
Modulkürzel	gsw200
Kreditpunkte	3.0 KP
Workload	90 h
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Skills Modules • Master's Programme Molecular Biomedicine (Master) > Skills Modules
Zuständige Personen	• Dedek, Karin (Modulverantwortung) • Groß, Petra (Prüfungsberechtigt) • Dedek, Karin (Prüfungsberechtigt) • Solovyeva, Vita (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Enrolment in Master´s programmes Molecular Biomedicine and Neuroscience.
Kompetenzziele	**Competencies:** + deepened biological expertise ++ deepened knowledge of biological working methods + data analysis skills ++ interdisciplinary thinking ++ critical and analytical thinking ++ data presentation and discussion (written and spoken) + team work
Modulinhalte	The module focuses on microscopy, imaging and methods of microscopy. **Lecture:** Basics in optics, microscopy methods, image processing, biomedical applications **Seminar:** Examples for selected microscopy methods and their application. Different microscopical methods and their applications are discussed and compared. Students will understand the basics and limitations of microscopy methods and learn to evaluate them. Selected methods are demonstrated.
Literaturempfehlungen	Literature will be provided during the lecture/seminar

neu830 - Introduction to the Neuroanatomy of the Brain

Modulbezeichnung	Introduction to the Neuroanatomy of the Brain
Modulkürzel	neu830
Kreditpunkte	3.0 KP
Workload	90 h (30h contact / 60h reading and preparation of presentation)
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Maier, Esther Christine (Modulverantwortung) • Maier, Esther Christine (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	++ Neurosci. knowlg. + Social skills + Interdiscipl. knowlg. + Data present./disc. + Scientific English + Ethics Students should be able to correctly identify the anatomical structures of the brain and describe the major pathways connecting the different parts of the nervous system. They also should acquire an understanding of the functional brain anatomy and brain circuitry and use this knowledge to analyse clinical symptoms and understand the basis of the neurological exam carried out to evaluate patients in the clinic. Competencies: Developmental origin of the brain Anatomical knowledge of brain structure Functional anatomical knowledge of the brain Understanding the basis of the neurological exam Find and name anatomical structures during virtual dissections and annotations Group work
Modulinhalte	This block course offers an introduction to neuroanatomy with a focus on the brain. The course combines lectures on the development and the anatomy of the brain with virtual dissection classes, 3D brain models, annotation exercises and clinical case studies.

neu715 - Neuroscientific Data Analysis in Python

Modulbezeichnung	Neuroscientific Data Analysis in Python
Modulkürzel	neu715
Kreditpunkte	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	• Clemens, Jan (Modulverantwortung) • Clemens, Jan (Prüfungsberechtigt) • Clemens, Jan (Modulberatung)
Teilnahmevoraussetzungen	Enrolment in Master program Neuroscience
Kompetenzziele	**Goals of this module:** upon completion of this module, students… • understand basic programming concepts. • have good knowledge about the most important aspects of the programming language Python and are able to write their own programs. • have basic knowledge in statistical testing. • have developed and applied programs for the analysis of neuroscientific data. • have practiced the interpretation of data analysis results in a neuroscience context. • have learned about and practiced data sharing and version control. **Skills to be acquired/ competencies:** + Neuroscience knowledge + Social skills ++ Maths/Stats/Programming + Data presentation/discussion + Scientific English + Ethics
Modulinhalte	In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task: • Python basics: jupyter notebooks; code environments; scripts and functions; loading and saving data; plotting • Data types: numerical, logical, text, lists, dictionaries, tuples • Control flow: if statements, loops (for, while) • Software development: Testing, debugging, version control, sharing code and data, reproducibility • Working with data: Searching & sorting, logical indexing • Advanced data structures: Tables; image and video data • Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics • Application data analysis: Implementation of spike train analysis methods and graphics, function handles • Application Modelling: curve fitting, simulation of time series With completing the seven tasks, each participant programs a set of common analysis methods for neuroscientific data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results. Hence, the goal of this module is two-fold: Learning the programming language Python and analysis methods for neuroscientific data.

Abschlussmodul

mam - Master Thesis

Modulbezeichnung	Master Thesis
Modulkürzel	mam
Kreditpunkte	30.0 KP
Workload	900 h (2 SWS Seminar (SE): 28 h contact, 62 h individual preparation (reading, preparation of presentations) 18 SWS Thesis project: total 810 h.Percentages of contact (individual supervision) and independent work (independent lab work, data analysis, reading, thesis writing) depend on the topic an methods of the thesis project)
Verwendbarkeit des Moduls	• Master Neuroscience (Master) > Abschlussmodul
Zuständige Personen	• Kretzberg, Jutta (Modulverantwortung) • der Neuroscience, Lehrende (Prüfungsberechtigt) • Bräuer, Anja (Prüfungsberechtigt) • Debener, Stefan (Prüfungsberechtigt) • Herrmann, Christoph Siegfried (Prüfungsberechtigt) • Kranczioch-Debener, Cornelia (Prüfungsberechtigt) • Lücke, Jörg (Prüfungsberechtigt) • Milenkovic, Ivan (Prüfungsberechtigt) • Puschmann, Sebastian (Prüfungsberechtigt) • Ruigendijk, Esther (Prüfungsberechtigt) • Sörös, Peter (Prüfungsberechtigt) • Özyurt, Jale Nur (Prüfungsberechtigt) • Albert, Jörg (Modulberatung)
Teilnahmevoraussetzungen	The start of the master thesis requires prior completion of at least 60 ECTS. Prior to the start of the thesis project, the form for application for the final thesis and final oral examination needs to be submitted to the examination office and approved by the examination committee. External examiners (not listed on the list of neuroscience examiners) need to apply for the status of an official examiner prior to the start of the project. Depending on project choice, please ask the supervisor for additional requirements.
Kompetenzziele	++ Neurosci. knowlg. ++ Expt. Methods ++ Independent research ++ Scient. Literature ++ Social skills + Interdiscipl. knowlg. + Maths/Stats/Progr. ++ Data present./disc. + Scientific English + Ethics In their Master thesis, students perform individual research projects in the

limited time of 6 month. Learning goals:

- planning and organization of a research project
- teamwork in a research group
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- optional: Prepare and present a scientific poster

Modulinhalte

The master thesis comprises 6 months of experimental or theoretical work and thesis writing, and a regular seminar for training, reporting and feedback advice during that time. The aim, methods and results of the thesis are presented in a final oral presentation and exam (Master's colloquium).

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program. Research questions, methods and approaches differ between individual projects. The timing of projects is by individual arrangement with the supervisor. Note that, for some options, priority for admission to the project is given to students who passed a background and / or research module offered by the supervisor

Please refer to the Stud.IP MSc Neuroscience information community forum for information on the groups and contact potential supervisors directly.

The master thesis project is generally carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners) and additionally evaluated by a second examiner. External master thesis projects and / or evaluation by persons who are not on the list of examiners need prior approval by the examination committee.

Participation in the Stud.IP workshop on science communication (https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Literaturempfehlungen
