Applicability of the module
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons
- Janssen-Bienhold, Ulrike (module responsibility)
- Dedek, Karin (Module counselling)
- Janssen-Bienhold, Ulrike (authorised to take exams)
- Dedek, Karin (authorised to take exams)
- Ahlers, Malte (authorised to take exams)

Prerequisites
- attendance in pre-meeting

Skills to be acquired in this module
- Neurosci. knowlg. Expt. methods Independent research + Scient. literature + Social skills
- Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics
- Theory: Improved theoretical and methodological knowledge in neurobiology. Discussion of scientific work and presentation of own results. Practice: Performing neuroanatomical experiments. Gaining modern methodological skills.

Module contents
- Lecture: 14 h Introduction to current neurobiological approaches and results.
- Seminar: 14 h Discussion of background literature and results of own experiments.
- Lab course: 3 weeks, each 24 h neuroanatomical experiments in small groups on vertebrate retina and brain.

Recommended reading
- Background and seminar literature will be available in Stud.IP

Language of instruction
- English

Duration (semesters)
- 1 Semester

Module frequency
- jährlich

Module capacity
- unlimited

Reference text
- Course in the first half of the semester
  Regular active participation and presentation(s) within the scope of the seminar are required to pass the module

**Prerequisites**
- Fundamentals of Neurobiology, Behavioural Biology, Evolution, Ecology

**Skills to be acquired in this module**
- ++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills
- ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of behavioural ecology and neuroethology
- are able to present and critically assess scientific data and approaches

**Module contents**
The lecture "Neuroethology" provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.
The lecture "Behavioural ecology" provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.
In the seminar "Current issues of Ethology", current original literature relating to behavioural biology is reported and discussed.

Total module attendance time: 84 h
neu220 - Neurocognition and Psychopharmacology

Module label: Neurocognition and Psychopharmacology
Module abbreviation: neu220
Credit points: 6.0 KP
Workload: 180 h
- 3 SWS Lecture (VO) "Introd. to Cognitive Neuroscience" and "Psychopharmacol." Total workload 135h: 45h contact/ 45h background reading/ 45h exam preparation
- 1 SWS Supervised exercise (UE) Total workload 45h: 14h contact/ 31h paper reading

Applicability of the module:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons:
- Thiel, Christiane Margarete (module responsibility)
- Thiel, Christiane Margarete (Module counselling)
- Thiel, Christiane Margarete (authorised to take exams)
- Gießing, Carsten (authorised to take exams)

Prerequisites:
Skills to be acquired in this module:
++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students:
- know the fundamentals of neurotransmission
- know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions
- understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease
- know the principles of drug treatment for psychiatric disorders
- have in-depth knowledge in selected areas of these topics
- are able to understand, explain and critically assess neuropsychiatric approaches in animals and humans
- are able to understand and critically assess published work in the area of cognitive neuroscience

Module contents:
The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions.
Lecture topics:
- History of cognitive neuroscience
- Methods of cognitive neuroscience
- Attention
- Learning
- Emotion
- Language
- Executive functions.

The supervised exercise either deepens that knowledge by excercises or discussions of recent papers/ talks on the respective topic covered during that week.

The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease.
The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge.
Lecture topics:
- Introduction to Terms and Definitions in Drug Research
- Dopaminergic and Noradrenergic System
- Cholinergic and Serotonergic System
- GABAergic and Glutamatergic System
- Addiction
- Depression
- Schizophrenia
- Anxiety
- Alzheimer's Disease

1 SWS Lecture (VL)
Total workload 36 h: 14 h contact / 22 h individual revision of lecture contents, test preparation, and application to portfolio tasks

1 SWS Seminar (SE)
Total workload 36 h: 14 h contact / 22 h individual reading and test preparation

3 SWS Supervised exercise
Total workload 108 h: 42 h contact / 66 h individual work on portfolio tasks (programming and interpretation of simulation or analysis results)

Applicability of the module

- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons

- Anemüller, Jörn (module responsibility)
- Anemüller, Jörn (Module counselling)
- Rieger, Jochem (Module counselling)
- Rieger, Jochem (authorised to take exams)
- Anemüller, Jörn (authorised to take exams)
- Kretzberg, Jutta (authorised to take exams)

Prerequisites

- attendance in pre-meeting

Skills to be acquired in this module

- have refined their programming skills (in Matlab) in order to efficiently analyze large-scale experimental data
- are able to implement a processing chain of prefiltering, statistical analysis and results visualization
- have acquired an understanding of the theoretical underpinnings of the most common statistical analysis methods and basic machine learning principles
- have practised using existing toolbox functions for complex analysis tasks
- know how to implement new analysis algorithms in software from a given mathematical formulation
- can interpret analysis results in a neuroscientific context
- have applied these techniques to both single channel and multi-channel neurophysiological data

++ Neurosci. knowlg.
+ Scient. literature
+ Social skills
++ Interdiscipl. knowlg.
++ Maths/Stats/Progr.
+ Data present./disc.
+ Scientific English

Module contents

- data preprocessing, e.g., artifact detection and rejection, filtering, z-scoring, epoching
- data handling for high-volume data in Matlab
- introduction to relevant analysis toolbox software
- theory of multi-dimensional statistical analysis approaches, such as multi-dimensional linear regression, principal component analysis, independent component analysis, logistic regression,
- gradient-based optimization
- practical implementation from mathematical formulation to software code, debugging and unit testing
- postprocessing and results visualization
- consolidation during hands-on computer-based exercises (in Matlab)
- introduction to selected specialized analysis approaches during the seminar
**Recommended reading**

Wallisch et al.: MATLAB for Neuroscientists, 2nd Ed. Academic Press. More text books will be suggested prior to the course. Scientific articles: Copies of scientific articles for the seminar will be provided prior to the course.

2 SWS Lecture
Total workload 60h: 30h contact/30h individual revision of lecture contents, test preparation

1 SWS Seminar
Total workload 45h: 15h contact/30h individual reading and test preparation

10.5 SWS Supervised exercise
Total workload 255h: 145h contact/110h individual work on portfolio tasks (programming, interpretation of simulation results)

Applicability of the module

• Master's Programme Neuroscience (Master) > Background Modules

Responsible persons

• Kretzberg, Jutta (module responsibility)
• Kretzberg, Jutta (Module counselling)
• Kretzberg, Jutta (authorised to take exams)
• Greschner, Martin (authorised to take exams)
• Ashida, Go (authorised to take exams)

Prerequisites

Programming experience in Matlab (e.g. acquired by a 6 ECTS programming course)

Skills to be acquired in this module

++ Neurosci. knowlg.
+ Scient. Literature
+ Social skills
++ Interdiscipl. knowlg
++ Maths/Stats/Progr.
+ Data present./disc.
+ Scientific English
Upon successful completion of this course, students
• are able to implement and apply algorithms in Matlab
• have learned to handle scientific data independently
• have acquired theoretical and practical knowledge of advanced data analysis techniques
• know about computational model approaches on different levels of abstraction
• know how to perform model simulations for single cells and small neuronal networks
• can interpret simulation results in a neuroscientific context

Module contents

This course consists of six weeks with different topics, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab). Portfolio tasks, mainly interpretation of programming results are given every day.

Weeks 1 and 2: Spike train analysis
response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification

Weeks 3 and 4: Neuron models
Conductance-based single cell models using differential equations (passive membrane equation, integrate and fire, Hodgkin Huxley, alpha synapses)

Weeks 5 and 6: Small network models
Feed-forward and feed-back networks, lateral inhibition, central pattern generator, spike-timing dependent plasticity, multi-compartment models

Recommended reading

11 / 76
Skripts for each course day will be provided prior to / during the course.

Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course.

Recommended textbooks or other literature:

- Hurlemann, René (authorised to take exams)
- Hartmann, Anna-Maria (authorised to take exams)
- Neidhardt, John (authorised to take exams)
- Nothwang, Hans Gerd (authorised to take exams)
- Thiel, Christine Margarete (authorised to take exams)

Prerequisites

Skills to be acquired in this module
- Neurosci. knowlg.
- ++ Expt. Methods
- + Scient. Literature
- + Social skills
- + Interdiscipl. knowlg.
- + Maths/Stats/Progr.
- + Data present./disc.
- + Scientific English
- ++ Ethics

1. have basic knowledge of different techniques (see content of the module) used in neurosciences
2. have basic knowledge of realizing clinical studies, generating questionnaires and their biostatistical data analyses
3. have acquired practical skills in whole brain imaging (fMRI) and molecular techniques
4. have acquired practical skills in performing clinical studies

Module contents

Lecture topics:
1. Whole brain imaging (CT, MRI, fMRI, PET, EEG, MEG)
2. Animal Behaviour
3. Microscopy and Visualizing nervous system structure
4. Electrophysiology
5. Identifying Gene of Interest and Gene delivery strategies
6. Molecular Cloning, generation of transgenic organism, manipulating endogenous genes
7. Cell culture techniques
8. Biochemical assays and intracellular signalling
9. Clinical studies
10. questionnaire and biostatistics
11. judicial basics of scientific work

Laboratory course
- molecular methods (site directed mutagenesis, PCR, midi preparation, sequencing, bioinformatics)
- fMRI
- clinical studies

neu320 - Introduction to Neurophysics

Module label | Introduction to Neurophysics
---|---
Module abbreviation | neu320
Credit points | 6.0 KP
Workload | 180 h

Applicability of the module
- Master's Programme Neuroscience (Master) > Background Modules

 Responsible persons
- Anemüller, Jörn (module responsibility)
- Anemüller, Jörn (authorised to take exams)
- Dietz, Mathias (authorised to take exams)

Prerequisites
- recommended in semester: 3 (with Matlab prereq.: 1)

Skills to be acquired in this module
- ++ Neurosci. knowlg.
- + Independent research
- + Scient. Literature
- ++ Interdiscipl. knowlg.
- ++ Maths/Stats/Progr.
- + Data present./disc.

Students will learn to recognize the dynamics in neuronal networks as the result of an interplay of physical, chemical and biological processes. Overview over major physical measurement procedures for the quantification of structure and function in neuronal systems. Using the language of mathematics as a fundamental tool for the description of underlying biophysical processes with stochastics, linear algebra, differential equations. Information as represented on different length- and timescales: From microscopic processes to macroscopic functional models. Learning and adaptation as adjustment of a biophysical system to its environment.

Module contents
- Biophysics of synaptic and neuronal transmission
- Single neuron models: Hodgkin Huxley model, integrate and fire model, firing rate model
- Biophysics of sensory systems in the auditory, visual and mechano-sensory modality
- Description of neuronal dynamics: Theory of dynamical systems, from microscopic to macroscopic activity - Principles of neuronal activity measurements: from single-cell recordings to EEG, MEG and fMRI
- Functional description of small neuronal networks: Recceptive fields and their description with linear and non-linear models - The neuronal code: Spikes, spike trains, population coding, time- vs. rate-code - Decoding neuronal activity and its applications
- Simulation of artificial neural networks as a functional model, Hopfield network, Boltzmann machine, Perceptron and deep networks - Informationtheoretic approaches, stimulus statistics, entropy, mutual information
- Learning and plasticity, conditioning and reinforcement learning, Hebbian learning, long-term potentiation and long-term depression

Recommended reading
- Chow, Gutkin, Hansel, Meunier, Dalibard (Eds.): Methods and Models in Neurophysics (2003)
- Galizia, Liedo (Eds.): Neurosciences, from molecule to behauvor (2013)
- Gerstner, Kistler, Naud, Paninski: Neuronal Dynamics - From single neurons to networks and models of Cognition (2014)

### Examination times

- Type of examination: Final exam of module
  - end of winter term
  - 80% oral exam or written exam, 20% exercise work and presentation

### Total module attendance time

- 0 h
bio605 - Molecular Genetics and Cell Biology

Module label: Molecular Genetics and Cell Biology

Module abbreviation: bio605

Credit points: 12.0 KP

Workload: 360 h

Applicability of the module:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons:
- Neidhardt, John (module responsibility)
- Neidhardt, John (authorised to take exams)
- Koch, Karl-Wilhelm (authorised to take exams)
- Jüschke, Christoph (authorised to take exams)

Prerequisites: BSc (Biologie, Biochemie)

Skills to be acquired in this module:
++ deepened biological expertise
++ deepened knowledge of biological working methods
+ data analysis skills
++ interdisciplinary thinking
+ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ data presentation and discussion (E) (written and spoken)
+ teamwork
+ ethics and professional behaviour
+ project and time management

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

Module contents:
Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases. Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

Recommended reading:
Textbooks of Cell Biology

Links:
http://www.uni-oldenburg.de/humangenetik/

Language of instruction: English

Duration (semesters): 1 Semester

Module frequency: winter term

Module capacity: 15

Reference text:
associated with bio900

Module level: MM (Mastermodul / Master module)

Type of module: Wahlpflicht / Elective

Teaching/Learning method:
Lecture, seminar, exercise

Previous knowledge:
Basic knowledge in cell biology, genetics, biochemistry

Examination:
Examination times:

Final exam of module:
written examination (70 %), paper(s) presentation 30 %; not graded: signed lab protocols, regular active participation is required for the module to be passed.

Type of course:

Total module attendance time: 112 h
bio695 - Biochemical concepts in signal transduction

Module label: Biochemical concepts in signal transduction
Module abbreviation: bio695
Credit points: 12.0 KP
Workload: 360 h

Applicability of the module:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons:
- Koch, Karl-Wilhelm (module responsibility)
- Koch, Karl-Wilhelm (authorised to take exams)
- Scholten, Alexander (authorised to take exams)
- Scholten, Alexander (Module counselling)

Prerequisites:
none

Skills to be acquired in this module:
++ deepened knowledge of biological working methods
++ methods: protein expression and purification, functional assays, enzyme kinetics, spectroscopic techniques
++ data analysis skills
+ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
++ teamwork
+ project and time management

Module contents:
Lecture: Molecular fundamentals of cellular signal processes
Seminar: Signal transduction
Exercises: Experiments on cellular signal transduction and enzymology
Mechanisms of biochemical signal transduction are imparted theoretically and experimentally

Recommended reading:
Textbooks of cell biology and biochemistry. Current literature on topics of signal transduction (as announced in the preparatory meeting).

bio845 - Introduction to Development and Evolution

Module label: Introduction to Development and Evolution

Module abbreviation: bio845

Credit points: 6.0 KP

Workload: 180 h

Applicability of the module:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons:
- Sienknecht, Ulrike (module responsibility)
- Sienknecht, Ulrike (Module counselling)
- Sienknecht, Ulrike (authorised to take exams)
- Claußen, Maike (authorised to take exams)

Prerequisites:

Skills to be acquired in this module:
Upon successful completion of this course, students will:
- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

Skills:
- ++ deepened biological expertise
- + deepened knowledge of biological working methods
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + teamwork

Module contents:
Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:
- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology
Recommended reading

**textbook:** Gilbert S.F.: Developmental Biology, Macmillan Publishers Ltd, 11th edition 2016 (current edition); and current literature on course topics

### Applicability of the module
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

### Responsible persons
- Sienknecht, Ulrike (module responsibility)
- Sienknecht, Ulrike (Module counselling)
- Sienknecht, Ulrike (authorised to take exams)
- Claußen, Maike (authorised to take exams)
- Ebbers, Lena (authorised to take exams)

### Prerequisites
**Mandatory prerequisite is the module bio845 (neu110) (Introduction to Development and Evolution)**

### Skills to be acquired in this module
Upon successful completion of this course, students have skills in methods of developmental biology:

- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab notebook
- know how to carry out formal laboratory reports (and the structure of a scientific paper)
- have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres

are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills:

- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- + data presentation and discussion (written and spoken)
- + teamwork
- + ethics and professional behaviour
- + project and time management

### Module contents
Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature

neu141 - Visual Neuroscience - Physiology and Anatomy

Module label: Visual Neuroscience - Physiology and Anatomy

Module abbreviation: neu141

Credit points: 12.0 KP

Workload: 360 h
- 3 SWS Lecture (VO)
  Total workload 90 h: 30h contact / 60h background literature reading and preparation for sh
- 1 SWS Seminar (SE)
  Total workload 30h: 10h contact / 20h literature reading and preparation of result presentation
- 8 SWS Supervised exercise (UE)
  Total workload 240h: 200h contact / 40h results analysis, writing of short reports for portfolio

Applicability of the module
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons
- Greschner, Martin (module responsibility)
- Greschner, Martin (authorised to take exams)
- Ahlers, Malte (authorised to take exams)
- Dedek, Karin (authorised to take exams)
- Dömer, Patrick (authorised to take exams)

Prerequisites
- Basic knowledge of neurobiology

Skills to be acquired in this module
- ++ Neurosci. knowlg.
- ++ Expt. Methods
- + Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Upon successful completion of this course, students
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

Module contents
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

Recommended reading
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP.
Background and seminar literature will be available in Stud.IP.

Upon successful completion of this course, students
- have knowledge on invertebrate neuronal systems in comparison to vertebrate systems
- have discussed an overview of experimental and theoretical methods of invertebrate neuroscience
- have acquired first practical skills in intracellular recordings from invertebrate neurons
- have acquired basic skills in data analysis
- have acquired an intuitive understanding of membrane potential and action potential generation based on computer simulations

Module contents
The module consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation.

The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments
Planning a small individual team-work project based on the techniques taught in this module, that can be used as basis for the module neu345

Recommended reading
Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

Responsible persons

- Kretzberg, Jutta (module responsibility)
- Kretzberg, Jutta (authorised to take exams)
- Albert, Jörg (authorised to take exams)
- Ashida, Go (authorised to take exams)

Prerequisites

Skills to be acquired in this module

- have planned and conducted a small, self-defined and self-organized project in a team
- have knowledge on an invertebrate neuronal system
- have knowledge on neural coding and corresponding data analysis techniques
- have acquired skills in data analysis and / or experimental techniques and / or modeling
- are able to critically evaluate and discuss experimental results
- have prepared and presented a scientific poster

+ Neurosci. knowlg.
+ Expt. Methods
++ Independent research
+ Scient. Literature
++ Social Skills
+ Maths/Stats/Progr.
++ Data present./disc.
+ Scientific English
+ Ethics

Module contents

This module builds up on the knowledge and methods acquired in the module neu340 Invertebrate Neuroscience.

In the seminar, the knowledge on invertebrate systems and neural coding in general is deepened based on scientific literature.

In the practical exercise of the module, students can choose one topic from a range of different research questions on computation in the leech nervous system (e.g. comparison of different cell types, electrical and chemical synaptic connections, exact measurement of spike threshold, phase locking). Small groups (2-3) of students plan, perform, and analyze experiments (intracellular
recordings) or model simulations (model framework will be provided or can be self-written based on module neu241 computational neuroscience - Introduction) to tackle their topic. The portfolio consists of assignments covering the planning, analysis, interpretation, and presentation of the results with feedback given during the course on each project stage.

Recommended reading

Course scripts and background and seminar literature will be available in Stud.IP. Scientific literature discussed in the seminar depends on the project topics.

  Klump, Georg Martin (authorised to take exams)
  Owczarek-Lipska, Marta (authorised to take exams)

Prerequisites
  Recommended in combination with "Research Techniques in Neuroscience"

Skills to be acquired in this module
  Upon successful completion of this course, students have acquired basic knowledge of fundamental principles of neurobiology. The aim of this background module is to provide a solid biological knowledge base required for studying advanced neuroscientific topics. It is designed in particular, but not exclusively, for students joining the local M.Sc. Neuroscience program from previous study paths with little (neuro)biological background.

++ Neurosci. knowlg.

- Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students
- have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)
- have basic knowledge of the large range of techniques used in auditory research
- are able to read and critically report to others on an original research paper in auditory neuroscience
- are able to research and review a specific topic in auditory neuroscience

Module contents
One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.

Topics:
- Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission
-Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions
- Auditory nerve: phase locking, rate coding. Excitation patterns
- Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations
- Sound localisation in birds and mammals
- Central auditory processing: imaging techniques, auditory streams, cortex, primates
- Relation between psychophysics and neurophysiology

The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

psy270 - Functional MRI Data Analysis

Module label | Functional MRI Data Analysis
---|---
Module abbreviation | psy270
Credit points | 9.0 KP
Workload | 270 h

Applicability of the module
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons
- Gießing, Carsten (module responsibility)
- Gießing, Carsten (authorised to take exams)

Prerequisites
- Enrolment in Master's programme Neurocognitive Psychology, Neuroscience, or Biology.

Skills to be acquired in this module

**Goals of module:**
Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

**Competencies:**
++ experimental methods
++ statistics & scientific programming
+ data presentation & discussion
++ group work

Module contents

**Theoretical knowledge on functional MRI data analysis**

**Planning, performance and analysis of functional neuroimaging studies using MATLAB-based software**

**Hands-on fMRI data analysis with SPM**

Recommended reading

Language of instruction | English
Duration (semesters) | 1 Semester
Module frequency | The module will be offered every summer term.
Module capacity | 15 (The remaining places are reserved for Biology and Neuroscience students.)
Reference text

Since the module is primarily offered for the Master's programme Biology it has to be offered as a blocked course. Please contact us if you are interested in the module but have problems with interfering other courses.

PLEASE NOTE:
We strongly recommend to take either psy170, psy270, psy280, or psy220 to gain
methodological competencies (EEG, fMRI, TBS, HCI) that are needed for most practical projects and Master's theses!

neu242 - Computational Neuroscience - Encoding and Decoding

Module label: Computational Neuroscience - Encoding and Decoding

Module abbreviation: neu242

Credit points: 6.0 KP

Workload: 180 h

Applicability of the module:
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons:
- Greschner, Martin (module responsibility)
- Clemens, Jan (authorised to take exams)
- Greschner, Martin (authorised to take exams)
- Greschner, Martin (Module counselling)

Prerequisites:
Enrolment in Master program Neuroscience; Students from other study programs are welcome if space is available. This module requires good programming skills! (As taught in neu710 or neu715.)

Skills to be acquired in this module:
Upon completion of this module, students will be able to:
- implement and apply algorithms in Matlab or Python
- handle scientific data independently
- acquire theoretical and practical knowledge of advanced data analysis techniques
- interpret simulation results in a neuroscientific context

Skills to be acquired/ competencies:

- Neuroscience knowledge
- Scientific Literature
- Social skills
- Maths/Stats/Programming
- Data presentation/discussion
- Scientific English

Module contents:
This course consists of three weeks full-time work on the topics encoding and decoding of spike trains, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab or Python). Portfolio tasks consist of programming and the interpretation of the analyses.

Specific topics: response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification

Recommended reading:
Scripts for each course day will be provided prior to / during the course. Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course. Recommended textbooks or other literature:

neu246 - Computational Neuroscience - Biophysical Modeling

Module label | Computational Neuroscience - Biophysical Modeling
Module abbreviation | neu246
Credit points | 6.0 KP
Workload | 180 h

Applicability of the module
- Master's Programme Neuroscience (Master) > Background Modules

Responsible persons
- Kretzberg, Jutta (module responsibility)
- Kretzberg, Jutta (authorised to take exams)
- Ashida, Go (authorised to take exams)

Prerequisites
Enrolment in Master program Neuroscience
Students from other study programs are welcome if space is available
This module requires good programming skills! (As taught in neu710 or neu715.)

Skills to be acquired in this module

Goals of this module:
upon completion of this module, students...
- are able to implement and apply algorithms in Matlab
- have programmed and applied simulation techniques
- know about computational model approaches on different levels of abstraction
- know how to perform model simulations for single cells and small neuronal networks
- can interpret simulation results in a neuroscientific context

Skills to be acquired/ competencies:
++ Neuroscience knowledge
+ Scientific Literature
+ Social skills
++ Maths/Stats/Programming
+ Data presentation/discussion
+ Scientific English

Module contents
This course consists of three weeks full-time work on the topic Biophysical modeling, which is introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab or Python). Portfolio tasks consists of programming and the interpretation of programming.
Specific topics:
- Conductance-based single cell models using differential equations (passive membrane equation, integrate-and-fire, Hodgkin-Huxley)
- Synaptic interaction in small network models (alpha synapses, spike-timing dependent plasticity, feed-forward and feed-back networks, lateral inhibition, central pattern generator)

Recommended reading
Skripts for each course day will be provided prior to the course
Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course.
Recommended textbooks or other literature:

- Albert, Jörg (authorised to take exams)
- Albert, Jörg (Module counselling)
- Clemens, Jan (Module counselling)

**Enrolment in Master program Neuroscience or Biology.**

**Skills to be acquired in this module**

**Goals of this module:**

Upon completion of this module, students…

- have knowledge on the emergence of behavior from neurosensory activation
- have learned about the interdependencies between signals and their receivers (keyword: matched filters)
- have a basic understanding of the multiple determinants of behavior: molecular (e.g. genes), cellular (e.g. neurons), organismic (e.g. individuals), environmental (e.g. noise) and inter-individual (e.g. communication)
- have acquired basic skills in data analysis
- have acquired basic understanding of sensory signal processing
- have acquired an intuitive understanding of the multi-causal nature of behavior and the corresponding multiple levels of investigation

**Skills to be acquired/ competencies:**

++ Neuroscience knowledge
++ Experimental Methods
+ Scientific Literature
+ Social skills
+ Maths/Stats/Programming
+ Independent Research
+ Data presentation/discussion
+ Scientific English
+ Ethics

**Module contents**

The module consists of three weeks of seminar and hands-on lab exercises on insect behavioral experiments and electrophysiology (extracellular recordings from Drosophila or mosquito neurons).

The seminar covers the following topics:

- Introduction to Dipteran courtship behaviour (fruit flies and mosquitoes): common mechanisms and principles
- The cellular and molecular basis of Dipteran courtship: Between shared evolution and species-specific adaptation
- Introduction to the neurophysiological and neurogenetic toolbox to dissect behaviour (optogenetic, biophysical, behavioural)
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:

- Quantitative analysis of neural responses (electrophysiology, reporter imaging) from Dipteran insects
Quantitative analysis of behavioural responses from Dipteran insects (e.g. courtship behaviour, flight tones)
Design and Testing of different stimuli to probe neural and behavioural responses

| Recommended reading | Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP
| Background and seminar literature will be available in Stud.IP |

</tr>
</tbody>
</table>

Applicability of the module
- Master's Programme Neuroscience (Master) > Research Modules

Responsible persons
- Köppl, Christine (module responsibility)
- der Neuroscience, Lehrende (authorised to take exams)

Further responsible persons
- all MSc Neuroscience teachers, see list of examiners

Prerequisites
A learning agreement signed by the student, the supervisor at the host institution, and the Oldenburg supervisor (from the list of examiners), needs to be submitted to the examination office prior to the start of lab work.

Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor)

Skills to be acquired in this module
- Neurosci. knowlg.
- Expt. methods
- Independent research
- Scient. literature
- Social skills
- Interdiscipl. knowlg.
- Data present./disc.
- Scientific English
- Ethics

Students are introduced to independent research in a specific area of neuroscience by a scientifically working group outside of the regular MSc Neuroscience faculty at the University of Oldenburg (usually a university, research institute, clinics or scientifically working company in Germany or abroad)

Students perform individual research projects to learn:
- planning and organization of a research project in a group outside of University of Oldenburg
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- prepare and present a scientific poster
**Module contents**

The External Research Module is carried out under the guidance and supervision of an experienced researcher who is not part of the regular Neuroscience faculty at the University of Oldenburg. It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time.

After completion of the lab work, students will continue to be advised during the writing phase of the project report by the external supervisor and/or by a local Neuroscience faculty member.

The timing of projects is by individual arrangement with the supervisor.

Participation in the Stud.IP workshop on science communication ([https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf a53d7b3f5e3680f52ac7d0f7](https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf a53d7b3f5e3680f52ac7d0f7)) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

**Reference text**

All teachers from the list of MSc Neuroscience examiners at the University of Oldenburg can act as examiners, students should contact appropriate supervisors individually.

Prior to project start, external and local supervisors must fill the learning agreement form. The supervisor at the host institution is invited to submit a short, written statement of assessment, final grading is done by the supervisor from the list of examiners.

- Sörsös, Peter (authorised to take exams)  
- Lücke, Jörg (authorised to take exams)  
- Ruigendijk, Esther (authorised to take exams)

**Further responsible persons**  
all MSC Neuroscience teachers, see list of examiners

**Prerequisites**  
Depending on project choice, please check Stud.IP and ask the supervisor. Module can be taken multiple times, however, supervision of individual projects is limited to 45 ECTS for the same combination of student and supervisor (1 research module + Master thesis OR up to 3 research modules, including external research projects)

**Skills to be acquired in this module**

+ Neurosci. knowlg.  
++ Expt. Methods  
++ Independent research  
++ Scient. Literature  
+ Social skills  
+ Interdiscipl. knowlg.  
+ Maths/Stats/Progr.  
+ Data present./disc.  
+ Scientific English  
+ Ethics

Students perform individual research projects to learn:

- planning and organization of a research project in a group outside of University of Oldenburg  
- formulate a scientific hypothesis  
- planning, performing and analyzing experiments and / or simulations  
- working with scientific background literature on the specific context of the project  
- oral presentation and discussion of backgrounds and results in the lab seminar
write a scientific report
prepare and present a scientific poster

Module may serve as preparation for a Master's thesis.

Module contents

The Research Module is carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners). It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and a regular seminar for training, reporting and feedback advice during that time. Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program.

Research questions, methods and approaches differ between individual projects. Please refer to the list of options in Stud.IP and contact potential supervisors directly.

The timing of projects is by individual arrangement with the supervisor. Many, but not all, project options can also be scheduled during semester breaks, and / or as part-time options (lasting more than 7 weeks).

Note that, for some options, priority for admission to the project is given to students who passed a background module offered by the supervisor.

Participation in the Stud.IP workshop on science communication ([https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbf53d7b3f5e36805f52ac7d0f7](https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbf53d7b3f5e36805f52ac7d0f7)) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Recommended reading

Provided by the supervisor, depending on the project.

**Applicability of the module**
- Master's Programme Neuroscience (Master) > Research Modules

**Responsible persons**
- Kretzberg, Jutta (module responsibility)
- Albert, Jörg (authorised to take exams)
- Ashida, Go (authorised to take exams)
- Clemens, Jan (authorised to take exams)
- Kretzberg, Jutta (authorised to take exams)

**Prerequisites**
Students from other programs are welcome when space is available. Dependent on the choice of the project, different modules are prerequisites:
Current choices:
- neu340 (invertebrate neuroscience)
- neu245 (Computational Neuroscience – biophysical modeling)

**Skills to be acquired in this module**

**Goals of this module:**

upon completion of this module, students have experienced the full cycle of a research project in a small (4 weeks full time) team project (2-5 students):
- Definition of an exact research question
- Development of a teamwork project schedule
- Literature search
- Application of experimental or modeling methods they have learned in a preceding background module
- Data analysis
  - Frequent oral status reports and data discussion
  - Poster presentation

**Skills to be acquired/ competencies:**

- Neuroscience knowledge
- Experimental Methods
- Scientific Literature
- Social skills
- Maths/Stats/Programming
- Independent Research
- Data presentation/discussion
- Scientific English
- Ethics

**Module contents**

The seminar will cover topics of (tools for) scientific team work, literature search, and science communication.
The topics of the group projects for 2-5 students differ every year, because they are related to ongoing scientific projects (e.g. of PhD students). Current project choice:
- Invertebrate electrophysiology (requires neu340)
- Biophysical modeling (requires neu245)

**Recommended reading**
Journal papers will be selected based on the topic of the project

2 SWS Supervised exercise (UE)
Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments

Applicability of the module
- Master's Programme Neuroscience (Master) > Skills Modules

Responsible persons
- Kretzberg, Jutta (module responsibility)
- Kretzberg, Jutta (authorised to take exams)

Prerequisites

Skills to be acquired in this module

- Neurosci. knowlg.
- Social skills
- Interdiscipl. knowlg.
- Maths/Stats/Progr.
- Scientific English
- Ethics

Upon successful completion of this course, students
- understand basic programming concepts.
- have good knowledge about the most important aspects of the programming language Matlab and are able to write their own programs.
- have basic knowledge in statistical testing.
- have developed and applied a programs for the analysis of electrophysiological data.
- have practiced the interpretation of data analysis results in a neuroscience context

Module contents

In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task:

Matlab basics: Matlab windows, work space, vectors & matrices, saving & loading, graphics, scripts, functions
- Data types: numbers, logicals, text, categorical
- Control flow: if statements, loops (for, while)
- Software development: Flow charts, testing, debugging
- Working with data: Searching & sorting, logical indexing
- Advanced data types: sparse matrices, 3D matrices, cell arrays, structures, tables
- Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics
- Application data analysis: Implementation of spike train analysis methods and graphics, function handles
- Application Modelling: curve fitting, simulation of time series

With completing the seven tasks, each participant develops a toolbox of the
most common analysis methods for electrophysiological (spike and continuous) data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results.

Hence, the goal of this module is two-fold: Learning the programming language Matlab and analysis methods for electrophysiological data.

**Prerequisites**
- non-native speakers

**Skills to be acquired in this module**
- ++ Neurosci. knowlg.
- ++ Social skills
- ++ Data present./disc.
- ++ Scientific English

Upon completion of this course, students
- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

**Module contents**
Lectures cover
- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/.

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data.

Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.

**Prerequisites**
- none

**Skills to be acquired in this module**
- ++ Expt. Methods
- + Independent Research
- + Scient. Literature
- ++ Social skills
- ++ Interdiscipl. knowlg
- + Scientific English
- ++ Ethics

Upon successful completion of this course, students
- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
- have practised invasive procedures and euthanasia.

**NOTE:** These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.

**Module contents**
- Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:
  - Legislation, ethics and the 3Rs
  - Scientific integrity
  - Data collection
  - Basic biology of rodents, birds and fish
  - Husbandry, and nutrition of rodents, birds and fish
  - Animal Welfare
  - Health monitoring
  - Pain and distress
  - Euthanasia
Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

Applicability of the module
- Master's Programme Biology (Master) > Skills Modules
- Master's Programme Neuroscience (Master) > Skills Modules

Responsible persons
- Kretzberg, Jutta (module responsibility)
- Kretzberg, Jutta (authorised to take exams)
- Köppl, Christine (authorised to take exams)

Prerequisites
- Skills to be acquired in this module
  + Neurosci. knowlg.
  ++ Scient. Literature
  ++ Social skills
  + Interdiscipl. knowlg.
  ++ Data present./disc.
  ++ Scientific English
  ++ Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscientific literature, learn about the scientific publication process and discuss science communication to the general public.

Module contents

The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover:

- How to find literature?
- How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers?
- Publication process, Authorship and impact metrics
- Alternative publication paths and data sharing in neuroscience
- Science communication for the general public and on social media
- Face-to-face scientific communication

Recommended reading

List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP.

Background neuroscience textbooks, e.g.:
- Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer
- Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer

- ++ Independent research
- + Scient. Literature
- ++ Social skills
- + Interdiscipl. knowlg.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Preparation, presentation and critical discussion of own studies for an international audience:

- participate in an international meeting
- prepare a poster or talk for an international meeting
- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

## Module contents

Active participation in a scientific conference, workshop, summer school etc., lasting a minimum of 3 full days. Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis.

It is mandatory to present the poster or talk to Christine Köppl or Jutta Kretzberg prior to the meeting and incorporate the feedback on the presentation.

neu830 - Introduction to the Neuroanatomy of the Brain

Module label: Introduction to the Neuroanatomy of the Brain
Module abbreviation: neu830
Credit points: 3.0 KP
Workload: 90 h
(Approximately 30h contact / 60h reading and preparation of presentation)

Applicability of the module:
- Master's Programme Neuroscience (Master) > Skills Modules

Responsible persons:
- Maier, Esther Christine (module responsibility)
- Maier, Esther Christine (authorised to take exams)

Prerequisites

Skills to be acquired in this module:
- **++ Neurosci. knowlg.
- + Social skills
- + Interdiscipl. knowlg.
- + Data present./disc.
- + Scientific English
- + Ethics

Students should be able to correctly identify the anatomical structures of the brain and describe the major pathways connecting the different parts of the nervous system. They also should acquire an understanding of the functional brain anatomy and brain circuitry and use this knowledge to analyse clinical symptoms and understand the basis of the neurological exam carried out to evaluate patients in the clinic.

Competencies:
- Developmental origin of the brain
- Anatomical knowledge of brain structure
- Functional anatomical knowledge of the brain
- Understanding the basis of the neurological exam
- Find and name anatomical structures during virtual dissections and annotations

Group work

Module contents:
This block course offers an introduction to neuroanatomy with a focus on the brain. The course combines lectures on the development and the anatomy of the brain with virtual dissection classes, 3D brain models, annotation exercises and clinical case studies.

Recommended reading:
Scientific literature will be available in Stud.IP

neu715 - Neuroscientific Data Analysis in Python

Module label: Neuroscientific Data Analysis in Python
Module abbreviation: neu715
Credit points: 6.0 KP
Workload: 180 h
Applicability of the module: Master's Programme Neuroscience (Master) > Skills Modules

Responsible persons:
- Clemens, Jan (module responsibility)
- Clemens, Jan (authorised to take exams)
- Clemens, Jan (Module counselling)

Prerequisites:
Enrolment in Master program Neuroscience

Skills to be acquired in this module:

Goals of this module:
Upon completion of this module, students:
- Understand basic programming concepts.
- Have good knowledge about the most important aspects of the programming language Python and are able to write their own programs.
- Have basic knowledge in statistical testing.
- Have developed and applied programs for the analysis of neuroscientific data.
- Have practiced the interpretation of data analysis results in a neuroscience context.
- Have learned about and practiced data sharing and version control.

Skills to be acquired/competencies:

- Neuroscience knowledge
- Social skills
++ Maths/Stats/Programming
++ Data presentation/discussion
++ Scientific English
++ Ethics

Module contents:
In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task:

- Python basics: jupyter notebooks; code environments; scripts and functions; loading and saving data; plotting
- Data types: numerical, logical, text, lists, dictionaries, tuples
- Control flow: if statements, loops (for, while)
- Software development: Testing, debugging, version control, sharing code and data, reproducibility
- Working with data: Searching & sorting, logical indexing
- Advanced data structures: Tables; image and video data
- Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics
- Application data analysis: Implementation of spike train analysis methods and graphics, function handles
- Application Modeling: curve fitting, simulation of time series

With completing the seven tasks, each participant programs a set of common analysis methods for neuroscientific data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results.

Hence, the goal of this module is two-fold: Learning the programming language Python and analysis methods for neuroscientific data.

Prerequisites

Skills to be acquired in this module

Upon completion of this module, students know about a specific field of skills and its application in neuroscience. (Topics are subject to change)

Skills to be acquired/ competencies:

+ Neuroscience knowledge
+ Experimental Methods
+ Scientific Literature
+ Social skills
+ Maths/Stats/Programming
+ Data presentation/discussion
+ Scientific English
+ Ethics

Module contents

The contents of this module can change every semester to serve as a flexible addition to the standard choice of modules that are offered yearly.

Please check Stud.IP for more specific information.

Recommended reading

Journal papers will be selected based on the specific topic of the module in each semester.

2 SWS Seminar (SE): 28 h contact, 62 h individual preparation (reading, preparation of presentations)

18 SWS Thesis project: total 810 h. Percentages of contact (individual supervision) and independent work (independent lab work, data analysis, reading, thesis writing) depend on the topic and methods of the thesis project.

Applicability of the module

- Master's Programme Neuroscience (Master) > Abschlussmodul

Responsible persons

- Kretzberg, Jutta (module responsibility)
- Bräuer, Anja (authorised to take exams)
- Deben, Stefan (authorised to take exams)
- Herrmann, Christoph Siegfried (authorised to take exams)
- Kranczioch-Deben, Cornelia (authorised to take exams)
- Lütke, Jörg (authorised to take exams)
- Milenkovic, Ivan (authorised to take exams)
- Puschmann, Sebastian (authorised to take exams)
- Ruigendijk, Esther (authorised to take exams)
- Sörös, Peter (authorised to take exams)
- Özyurt, Jale Nur (authorised to take exams)
- Albert, Jörg (Module counselling)

Prerequisites

The start of the master thesis requires prior completion of at least 60 ECTS.

Prior to the start of the thesis project, the form for application for the final thesis and final oral examination needs to be submitted to the examination office and approved by the examination committee. External examiners (not listed on the list of neuroscience examiners) need to apply for the status of an official examiner prior to the start of the project.

Depending on project choice, please ask the supervisor for additional requirements.

Skills to be acquired in this module

++ Neurosci. knowlg.
++ Expt. Methods
++ Independent research
++ Scient. Literature
++ Social skills
+ Intercdiscipl. knowlg.
+ Maths/Stats/Progr.
++ Data present./disc.
+ Scientific English
+ Ethics

In their Master thesis, students perform individual research projects in the...
limited time of 6 months. Learning goals:

- planning and organization of a research project
- teamwork in a research group
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and/or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- optional: Prepare and present a scientific poster

Module contents

The master thesis comprises 6 months of experimental or theoretical work and thesis writing, and a regular seminar for training, reporting and feedback advice during that time. The aim, methods and results of the thesis are presented in a final oral presentation and exam (Master’s colloquium).

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program. Research questions, methods and approaches differ between individual projects. The timing of projects is by individual arrangement with the supervisor. Note that, for some options, priority for admission to the project is given to students who passed a background and/or research module offered by the supervisor.

Please refer to the Stud.IP MSc Neuroscience information community forum for information on the groups and contact potential supervisors directly.

The master thesis project is generally carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners) and additionally evaluated by a second examiner. External master thesis projects and/or evaluation by persons who are not on the list of examiners need prior approval by the examination committee.

Participation in the Stud.IP workshop on science communication ([https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf a53d7b3f5e3b80f52ac7d0f7](https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbf a53d7b3f5e3b80f52ac7d0f7)) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Recommended reading

Provided by the supervisor, depending on the project.
