- Bitzer, Jürgen (Prüfungsberechtigt)
- Poppitz, Philipp (Prüfungsberechtigt)
- Trautwein, Hans-Michael (Module counselling)

**Prerequisites**
- keine

**Skills to be acquired in this module**
- Understanding of trade relations, international factor movements and corresponding balance-of-payments mechanisms.
- Capability to discuss structural change in global trade and productions in terms of formal models and case studies.
- Understanding of the causes and alternative strategies of economic integration in regional blocs.
- Understanding of the causes and alternative strategies of economic transformation in emerging markets.
- Ability to research data and evaluate the literature on specific aspects of international trade, production and structural change.

**Module contents**
The lectures and seminar papers address issues in the following subfields:
- international trade,
- international trade policies and regimes,
- geographical economics,
- foreign direct investment,
- labour migration,
- fragmentation of production,
- regulations of international trade and factor movements,
- development strategies,
- regional integration.

**Literaturempfehlungen**
Further references to specific topics and current literature will be given in the events.

  • Trautwein, Hans-Michael (Module counselling) |
| Prerequisites                              | • Understanding of exchange rates as strategic prices in open economies.  
  • Understanding of the interdependence of balance-of-payments constraints and exchange rates.  
  • Capability to discuss different models of exchange rate determination.  
  • Ability to research data and evaluate the literature on specific aspects of financial market globalization and strategies of exchange-rate policy.  
  • Understanding of the history of fixed-exchange-rate systems.  
  • Ability to relate the importance of historical experience in international monetary and financial economics. |
| Skills to be acquired in this module       | The lectures address the following issues:  
  • exchange rates and the balance of payments,  
  • open-economy macroeconomics,  
  • exchange rate determination,  
  • international financial markets,  
  • fixed-exchange-rate systems,  
  • currency crises,  
  • optimum currency areas and monetary integration,  
  • choice of exchange rate regime,  
  • financial market regulation. |

In the seminar students will present papers on general and topical issues (theoretical models, policy strategies, case studies) in the fields of financial market globalization and exchange-rate policy.

- Master Applied Economics and Data Science (Master) > Economics
- Master's Programme Sustainability Economics and Management (Master) > Additional Modules

### Zuständige Personen
- Bitzer, Jürgen (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

### Prerequisites
- The students are able to:
  - develop an empirical research project,
  - collect the required data,
  - carry out an econometric analysis,
  - interpret, discuss and present the results.

### Module contents
- The module consists of a lecture and a seminar. In the lecture, the students develop their research project and present their work process. In the bloc seminar, the students present their results and discuss them.

Prerequisites
- keine

Skills to be acquired in this module
- Students understand the importance of incentive systems for economic processes and can analyze the effects of incentive systems;
- have a firm knowledge in game theory and contract theory, and can address questions in the context of scientific discussion;
- are able to apply methods from game theory and contract theory largely independently to the analysis of situations in which agents interact strategically;
- are able to design incentive schemes – on their own and in teams – and to acquire knowledge on their own for this purpose and, to present their results, and to defend them in the scientific discourse.

Module contents
The first part of the module covers game theory. Game theory is an important method in economics to analyze strategic interactions of agents, e.g., on markets, in organizations or in bargaining situations. The second part of the module covers contract theory that – according to the Nobel laureate Kenneth Arrow – has been „the most important development in economics in the last forty years“. We work out the fundamentals of screenings, signaling and moral hazard and apply them to different topics, e.g., from labor economics, economic organization and management, law and economics as well as industrial economics.

In both parts, there is a tutorial. Here students largely independently apply the acquired knowledge to different situations of strategic interaction in economics and present their results.

**Prerequisites**

**Skills to be acquired in this module**

Students have the opportunity to take an economics module of their choice (worth 6 CP) at the master's level. This can also take place at another university or during studies abroad.

Students are required to:

- independently engage with a topic using scientific methods,
- independently research and make use of current academic literature,
- integrate their topic into an academic discussion.

**Module contents**

This is dependent upon the module chosen.

**Prerequisites**
- none

**Skills to be acquired in this module**
The students are able
- to understand sources of market failures and government failures
- understand taxing and spending activities of governments
- understand the distinction between normative and positive perspectives in the evaluation of government policy
- to apply economic methods to current issues in public economics
- present their research result in the form of written papers and oral presentations

**Module contents**
The course covers key concepts of public economics, which studies how government taxing and spending activities affect the economy – economic efficiency and the distribution of income and wealth.

Lecture: After introducing the theory and methodology of public economics, we discuss a historical and theoretical overview of the public sector. We then focus on departures from efficiency (especially asymmetric information), taxation issues (including tax evasion, fiscal federalism and tax competition among independent jurisdictions), and the intertemporal issue of social security (especially pension system).

Seminar: covers current issues in public economics, e.g. reform of health care or pension system.

Skills to be acquired in this module
Know and be able to apply fundamental concepts and figures of thought in environmental economics; be able to analyse and evaluate environmental problems and solution approaches; practice scientific methods and the ability to discuss; be able to classify environmental economics in the context of interdisciplinary sustainability research.

Module contents
Economic analysis of environmental impacts (property rights, external effects, market failure); ethical aspects of environmental economics, instruments of environmental policy (tradable permits, taxes, subsidies, liability law); innovation and adaptation of new technologies; international environmental problems.

wir890 - Climate Economics

Module label: Climate Economics
Modulkürzel: wir890
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Economics
- Master's Programme Environmental Modelling (Master) > Mastermodule
- Master's Programme Sustainability Economics and Management (Master) > Additional Modules

Zuständige Personen
- Böhringer, Christoph (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)
- Riesenbeck, Lukas (Module counselling)

Prerequisites

Skills to be acquired in this module
This course aims at giving students an understanding of reasons, objectives and economic instruments for climate policy. Students first get acquainted with the natural science of the climate where anthropogenic greenhouse gas emissions constitute the source of man-made climate change. The latter is then explained from an economic perspective as a global environmental externality calling for environmental regulation to avoid substantial market failures. Game theoretic analysis of international negotiations and agreements provides key insights about the fundamental problems of free-riding and efficient climate policy design. Beyond theoretical propositions, the lecture will critically discuss past and contemporary climate policies such as the Kyoto Protocol, the Paris Agreement, or the EU Emissions Trading System.

Module contents
- Natural science of climate change; environmental externalities and market failures; environmental regulation (emission taxes, standards, tradable permits, etc.); international environmental agreements; critical appraisal of climate policy implementation.

**Prerequisites**

Skills to be acquired in this module

The students are able:

- to identify an discuss empirical challenges in research on developing countries
- to understand, summarize, and discuss recent research studies in development economics
- evaluate strategies to reach sustainable economic development discussed in the public and politics
- participate in a discussion on the topic, developing a well-grounded position and problem solving strategy
- to present current research to and discuss it verbally and in written form
- to identify gaps in the literature on developing countries

**Module contents**

The module introduces the students to the current challenges of developing countries and the strategies to overcome them. The module will focus on the empirical research on developing countries, addressing the reasons for the sluggish development as well as the applied approaches to foster economic development. In the lecture the empirical methods used in development economics will be discussed. In the seminar current research papers on topics like poverty, conflicts, foreign aid, health, human capital and institutions in developing countries will be discussed.

wir922 - Topics in Industrial Organization

Module label | Topics in Industrial Organization
---|---
Modulkürzel | wir922
Credit points | 6.0 KP
Workload | 180 h

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Economics

Zuständige Personen
- Asane-Otoo, Emmanuel (module responsibility)
- Blitzer, Jürgen (module responsibility)
- Böhninger, Christoph (module responsibility)
- Gören, Erkan (module responsibility)
- Helm, Carsten (module responsibility)
- Huse, Cristian (module responsibility)
- Trautwein, Hans-Michael (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Students have the opportunity to take an economics module of their choice (worth 6 CP) at the master's level. This can also take place at another university or during studies abroad. Students are required to:
- independently engage with a topic using scientific methods
- independently research and make use of current academic literature
- integrate their topic into an academic discussion

Module contents
This is dependent upon the module chosen.

**Prerequisites**
None

**Skills to be acquired in this module**
During the course work students will learn how to set up computable general equilibrium (CGE) models step-by-step using the GAMS software (General Algebraic Modeling System) and apply them to actual policy issues of broader interest.

**Module contents**
This course provides a practical guideline to CGE modeling. We start with the formulation of a simple stylized CGE model for open economies and lay out how such a model can be matched (calibrated) to empirical data. We will then discuss several refinements of our prototype model to investigate contemporary policy issues such as environmental tax reforms or trade restrictions (e.g. the implementation of import tariffs and quotas). The single country model will be subsequently extended towards a multi-region model framework which accommodates to investigate in appropriate detail the economic impacts of multilateral policy initiatives such as trade policy reforms or international climate agreements.

**Präsenzzeit Modul insgesamt**: 56 h
This course provides an introduction to some fundamental geo-processing operations using ArcGIS that are most relevant for economics research. The broad term GIS encompasses a set of tools (both software and hardware) to collect, store, visualize and analyze spatial data from the real world. GIS techniques allow economists to use data on geography and weather as sources of exogenous variation for estimating the causal impact of a wide range of treatments (e.g., infrastructure, mass media, slave trade, land suitability for agriculture, and terrain ruggedness). Satellite images from the earth's surface, which can be analyzed with geo-processing tools in GIS, allow economists to construct geo-spatial indicators (e.g., temporal changes in the intensity of night-time light and patterns of deforestation) that more closely reflect the local actors and underlying mechanisms of interest.

Module contents

- Gain practical experience with the implementation of geo-processing tools using ArcGIS.
- Application of GIS programming tools that are most relevant for economics research through replication of various pieces of empirical economics research papers.
- A non-exhaustive list of geo-processing tools using ArcGIS includes performing mathematical functions on spatial data, the calculation of geographic distances between various forms of spatial units, aggregating geospatial data within polygons, and drawing maps.
- Introduction to map projection and geographic coordinate systems.
- Introduction to programming in Python for the purpose of automation and replication of geo-processed spatial datasets.
- Acquire the necessary data management skills to export spatial data in a suitable file format that can be directly imported into standard econometric software packages such as Stata.

**Prerequisites**
Skills to be acquired in this module
With successful completion of the course, students shall be able to analyze complex empirical data sets, like aggregated data, privacy constrained data, distance information, distributions, tables, symbolic or granular data. Students will also learn to handle issues of big data challenges: large number of cases or variables, unknown dependencies, redundancy, missing values, small or no variance. In this course students will learn theoretical aspects of complex data analysis, as well as practical applications for real data sets with statistical software packages.

#### Skills to be acquired in this module
Computer-based simulations play a key role for quantifying the economic impacts of policy reforms. Among numerical simulation methods, computable partial equilibrium (CPE) models are widely used in applied economic analysis. These models build on microeconomic theory for describing supply and demand behavior of economic agents on markets. Students will learn how to program such models and apply them to the impact assessment of trade, fiscal, or environmental policies.

#### Module contents
In the course, we start from basic microeconomic theory to describe the supply-side and demand-side responses on economic markets triggered by regulatory policy measures such as taxes or subsidies. We then translate simple theoretical models into computable partial equilibrium (CPE) models and use empirical data for model parametrization. Subsequently, the CPE models are used to quantify the economic efficiency impacts and the economic incidence of policy instruments such as taxes, subsidies, standards or quotas. For the implementation of the simulation models on the students' PC we will learn a powerful state-of-the-art modeling language called GAMS (Generic Algebraic Modeling System) which initially had been developed for World Bank economists. The fundamental strength of GAMS lies in the ease with which algebraic models in economics and management (or other sciences) can be formulated and solved. Students enrolled to the course will receive a free GAMS license. For the examination, the students will be requested to adapt a basic market model towards a policy issue of their choice and provide a small written essay (max. 10 pages) on their applied analysis. For this, the students can team up in groups with 2 people and hand in their essay until the end of the summer semester.

This course provides an introduction to spatial econometrics modelling that are particularly appropriate to analyse real-world phenomena of spatial dependence among geographically proximate units. With successful completion of the course, students shall be able to identify spatial diffusion processes across various empirical settings and to have a thorough understanding in the application, estimation, and interpretation of the relevant spatial regression models.

**Module contents**

- The formal expression of spatial dependence.
- Modelling, estimation, and interpretation of spatial econometric models for cross-sectional, panel, and dynamic spatial panel data.
- Gain practical experience with the implementation of spatial econometric models using appropriate econometrics software packages.

**Literature recommendations**

Zuständige Personen

- Kramer, Oliver (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

- Basics of statistics

Skills to be acquired in this module

**Professional competence**

The students:

- recognise optimisation problems
- implement simple algorithms of heuristic optimisation
- critically discuss solutions and selection of methods
- deepen previous knowledge of analysis and linear algebra

**Methodological competence**

The students:

- deepen programming skills
- apply modelling skills
- learn about the relation between problem class and method selection

**Social competence**

The students:

- cooperatively implement content introduced in lecture
- evaluate own solutions and compare them with those of their peers

**Self-competence**

The students:

- evaluate own skills with reference to peers
- realize personal limitations
- adapt own problem solving approaches with reference to required method competences

Module contents

Computational Intelligence comprises intelligent and adaptive methods for optimisation and learning. The module "Computational Intelligence I" concentrates on methods for evolutionary optimisation and heuristic approaches. The exercises introduce and deepen practical aspects of the implementation and algorithmic design, also taking into account application aspects.

**Overview of Content:**

- foundations of optimisation
- genetic algorithms and evolution strategies
- parameter control and self-adaptation
- runtime analysis
- swarm algorithms
- constrained optimisation
- multi-objective optimisation
- meta-modeling

Zuständige Personen

- Kramer, Oliver (module responsibility)
- Lehrende, die im Modul (Prüfungsberechtigt)

Prerequisites

useful previous knowledge: Linear Algebra, Stochastics

Skills to be acquired in this module

In the lecture "Convolutional Neural Networks" you will learn the basics of Convolutional Neural Networks, from methodological understanding to implementation.

Professional competence

The Students:

- will learn Deep Learning expertise, which are essential qualifications as AI experts and Data Scientists.

Methodological competence

The Students:

- learn the methods mentioned as well as the implementation in Python, NymPy and Keras.

Social competence

The Students:

- are encouraged to discuss the taught content in groups and work together to implement the programming tasks in the exercises

Self-competence

The Students:

- are guided to conduct independent research on advanced methods as the teaching field changes dynamically

Module contents

Students learn the basics of machine learning and in particular the topics of dense layers, cross-entropy, backpropagation, SGD, momentum, Adam, batch normalization, regularization, convolution, pooling, ResNet, DenseNet, and convolutional SOMs

**Skills to be acquired in this module**

*Objective of the module/skills:*
Current module provides basics of business intelligence with focus on enterprises and strong emphasis on data warehousing technologies. Students of the course are provided with knowledge, which reflects current research and development in a data analytic domain.

**Professional competence**
The students:
- name and recognize the role of business intelligence as part of daily business process
- being able to analyse advantages and disadvantages of different approaches and methods of the data analytics and being able to apply them in simple case studies
- obtain theoretical knowledge about data collection and modelling processes, including most applicable approaches and best practices

**Methodological competence**
The students:
- being able to execute typical tasks of business intelligence, and also being able to deepen knowledge on different approaches and methods
- gain a hands on experience and being able to understand advantages and disadvantages of different methods and being able to use obtained knowledge in most efficient ways

**Social competence**
The students:
- build solutions based on case studies given to the group, for example solving the issue of a factless fact table
- discuss solutions on a technical level
- present obtained case studies solutions as part of the exercises

**Self-competence**
The students:
- critically review provided data and information

**Module contents**
Data warehouse technology together with business intelligence are increasingly being used by business in order to get better decision support and enrich ongoing processes with data-rich decisions. Data warehouse technology enables an integration of data from heterogeneous sources, whether business intelligence builds data processing on top of it. For instance, business intelligence allows to build reporting on very large volumes of data (including historical) coming primary from data warehouse.

*As past of the current module following contents are taught:*
• Definition and scope of business intelligence.
• Procedures and objectives of data warehousing.
• Process of extracting, transforming and loading (ETL) of data.
• Phases of data modelling, data capturing and reporting in conjunction with a plausible case studies/scenarios.
• Prospects for further and evolving topics for business intelligence (e.g. Adaptive Business Intelligence, In-MemoryComputing, etc.)
• Introduction to Data Mining.
• Case studies based practical exercises and assessments in order to impart practical knowledge.

Literaturempfehlungen

Prerequisites

- No participant requirement

Skills to be acquired in this module

Current module provides advanced business intelligence, data science with focus on enterprises and strong emphasis on big data and data analytics. Students of the course are provided with knowledge, which reflects current research and development in a data analytics domain.

Professional competence

The students:

- name and recognize the role of data analytics / data science as past of a daily business process in a particular company
- able to organize from management perspective data analysis project
- being able to analyse advantages and disadvantages of different approaches and methods of the data analytics and being able to apply them in simple case studies
- obtain theoretical knowledge about data collection and modelling processes, including state of the art approaches and available best practices

Methodological competence

The students:

- being able to execute typical tasks of data analysis, and also being able to proceed deeper with respect to different approaches and methods
- gain a hands on experience and being able to understand advantages and disadvantages of different methods and being able to use obtained knowledge

Social competence

The students:

- build solutions based on case studies given to the group, for example design of regression model based on provided dataset
- discuss solutions on a technical level
- present obtained case studies solutions as part of the exercises

Self-competence

The students:

- critically review provided offered information

Module contents

After current course students will get advanced knowledge in the domains such as business intelligence and data analytics. Besides that, students will have a chance to have a deeper look into related technical fields such as InMemory Computing, Data Mining and Machine Learning, Big Data Processing with Distributed Systems (e.g. Apache Hadoop / Spark) from both, research and practical, perspectives. Students will be provided with real-world experience gather from business intelligence and data science related projects. Materials of the course are believed to be justified with current demands of data analytics market. Thus, providing students with relevant knowledge in order to give them advantages in future job.

Prerequisites

Diese Modul wendet sich an Studierende in Studiengängen außerhalb der Informatik. Studierende des Departments für Informatik der Bachelor- und Master-Studiengänge Informatik und Wirtschaftsinformatik gehören nicht zur Zielgruppe.

Skills to be acquired in this module

Module contents

- Computer representation of information
- formal languages, grammar and automata
- basic data structures;
- problem solving paradigms, algorithms and complexity;
- programming in the small (Language: Python)
- basic concepts of data bases

Zuständige Personen

- Wingerath, Wolfram (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Basics of databases, Python programming and statistics

Skills to be acquired in this module

The module teaches fundamentals from the field of Data Science, covering purposes, challenges, and common best practices.

Professional competences

- The students have knowledge of basic concepts, problems and solution approaches from the field of Data Science.
- They are able to justify the choice of specific data analysis methods for a given problem.
- They include possible imponderables in the analysis when evaluating analysis results.

Methodological competences

- The students are able to translate questions from a specific domain into a feasible analysis.
- They work on Data Science tasks to expand their understanding of the different approaches and methods.

Social competences

- The students discuss approaches and problems encountered in smaller and larger groups.

Self competences

- The students reflect on their actions when identifying possible solutions and critically question their own results.

Module contents

Data Science is an interdisciplinary science at the intersection of statistics,
This course is designed to provide a practical introduction to the field of Data Science by teaching theoretical principles while also applying them practically. Topics covered range from data collection and preparation (data sources & formats, data cleaning, data bias), mathematical foundations (statistical distributions, correlation analysis, significance) and methods for visualization (tables & plots, histograms, best practices) to the development of models for classifying or predicting values (linear regression, classification, clustering).

**inf962 - Fundamental Competencies in Computing Science III: Algorithms and Computational Problem Solving**

- **Module label**: Fundamental Competencies in Computing Science III: Algorithms and Computational Problem Solving
- **Modulkürzel**: inf962
- **Credit points**: 6.0 KP
- **Workload**: 180 h

**Verwendbarkeit des Moduls**
- Master Applied Economics and Data Science (Master) > Data Science
- Master's Programme Engineering of Socio-Technical Systems (Master) > Fundamentals/Foundations
- Master's Programme Environmental Modelling (Master) > Mastermodule

**Zuständige Personen**
- Vogel-Sonnenschein, Ute (module responsibility)

**Prerequisites**
- No participant requirement

**Skills to be acquired in this module**

The students acquire a thorough understanding of the fundamental methods of computer science in general and the use of algorithms for computational problem solving in particular. They learn how structure problems, model problems and solutions, and develop and implement computational solutions. Within the curriculum of the MSc EngSTS, this course provides students featuring a BSc in psychology or related subjects with fundamental skills in computational problem solving that are necessary for mastering subsequent courses in computer science.

**Professional competences**

The student:
- understand concepts for representing information computationally, they know pertinent data structures and algorithms and can argue about their complexity
- are acquainted with formal concepts like automata and formal languages as a means of modeling

**Methodological competences**

The student:
- are able to analyze problems from their application domain, to conceive computational solutions, and to estimate the effort involved in their realization and execution
- are able to evaluate alternative computational representations of data and problems and to draw informed conclusions for subsequent decisions in design and implementation

**Social competences**

The students:
- are able to present and discuss their solutions in an interdisciplinary team

**Self-competences**

The students:
- are able to critically reflect fundamental design decisions in algorithms and data structures

**Module contents**

- computer representation of information
- formal languages, grammar and automata
- basic data structures
- algorithms and complexity
- programming in the small

**Literaturempfehlungen**

**Links**

- **Language of instruction**: English
- **Duration (semesters)**: 1 Semester

Reference text
This course is part of the base curriculum of the MSc program “Engineering of Socio-Technical Systems”. It provides students featuring a background in psychology with skills in computational problem solving as necessary for mastering subsequent courses in computer science. This course is not intended for students with a background in computer science.

- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
No participant requirement

Skills to be acquired in this module
This module introduces the core concepts, languages and architectures of databases. In software systems these concepts are important.

Professional competence
The students:
- name the core concepts of the languages and architectures of databases (especially)
- select data models
- integrate structuring concepts of information systems in their designs

Methodological competence
The students:
- design database systems appropriately
- analyse problems from the field of database-supported information systems and solve them appropriately

Social competence
The students:
- enhance their ability to work in a team

Self-competence
The students:
- reflect their problem-solving behaviour with regard to the information processing concepts

Module contents
- Relational data models
- Relational algebra and its implementation in SQL (the standard of databases)
- Database design on different abstractions (conceptual and logical design)
- Normalisation - Data base architectures
- Distributed and active databases
- Object-oriented, object-related and XML-based database systems

- Master of Education Programme (Gymnasium) Computing Science (Master of Education) > Wahlpflichtmodule (Praktische Informatik)
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodulle der Informatik

Zuständige Personen
- Grawunder, Marco (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
- No participant requirement

Skills to be acquired in this module
The Module Information Systems II enhances the knowledge and the concepts of Information Systems I. Professional competence
The students:
- know further concepts, languages and architectures of databases
- analyse advanced information processing tasks
- analyse complex requirements of information systems appropriately
- realize information requirements and gather relevant information

Methodological competence
The students:
- propose concrete processing principles for special application classes
- reflect specific technologies' consequences and proceedings

Social competence
The students:
- improve their ability to work in a team

Self-competence
The students:
- reflect their problem-solving behaviour with regard to extended information processing concepts

Module contents
- Implementation of databases (architecture, index structures, query processing and optimization)
- Data integration and data analysis (data integration, data warehouses, data mining)
- Information retrieval
- Parallel databases

Literaturempfehlungen

**Präsenzzeit Modul insgesamt** 56 h
inf109 - Information Systems III

Module label: Information Systems III
Modulkürzel: inf109
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Specialization
- Master's Programme Business Informatics (Master) > Akzentsetzungsmoduls der Informatik
- Master's Programme Computing Science (Master) > Praktische Informatik

Zuständige Personen
- Grawunder, Marco (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
- Information Systems I
- Information Systems II
- JAVA

Skills to be acquired in this module

Professional competence
The students:
- describe concepts, languages and architectures of database systems
- discuss state-of-the-art database research topics
- analyse information processing tasks and implement solutions appropriately

Methodological competence
The students:
- propose concrete processing requirements for special application classes
- assess the consequences of techniques and approaches
- perform supervised research in the field of information systems
- analyse and reflect complex information system requirements
- realize information demands and accordingly gather aim-oriented information

Social Competencies
The students:
- solve problems partially in small groups
- present solution proposals in front of the exercise group
- discuss their different solution proposals within the exercise group

Self-competences
The students:
- accept constructive criticism
- reflect on their proposed solution considering the taught methods

Module contents
This module is a continuation of the content of information systems I and of information systems II. It deepens and extends the contents of the preceding modules and focuses mainly on current research questions. A special focus lies on concept of distributed data management.

Literaturempfehlungen
- Özsu, M. Tamer; Valduriez, Patrick, Principles of distributed database systems
- Rahm/Saake/Sattler: Verteiltes und Paralleles Datenmanagement, Springer
- Paper from SIGMOD, VLDB or ICDE

inf510 - Energy Information Systems

Module label
Energy Information Systems

Modulkürzel
inf510

Credit points
6.0 KP

Workload
180 h

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Specialization
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Environmental Modelling (Master) > Mastermodule

Zuständige Personen
- Lehnhoff, Sebastian (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
No participant requirements

Skills to be acquired in this module
The students will learn different approaches to integrate distributed facilities, the regulatory framework, relevant standards and architecture concepts of energy management systems and will be able to apply this knowledge.

Professional competence
The students:
- develop and evaluate IT-architectures for energy management systems
- model objects of this domain appropriately
- model energy information systems
- realise and differentiate advanced tasks of decentralised energy management systems

Methodological competence
The students:
- identify problems of energy management, analyse these problems systematically and provide solutions
- apply different simulation approaches of decentralised plants and consumers

Social competence
The students:
- discuss solutions for energy management systems in the group
- develop use cases in teams
- present self-developed solutions

Self-competence
The students:
- reflect their actions with regard to structuring and decomposing systems
- reflect their own use of power as a limited resource

Module contents
This module provides the computer science basics for energy management. It provides the requirements of energy supply information systems with the focus on technical components and the requirements of decentralised and renewable energy plants. These are:

- Architectures for energy information systems, e.g. SOA, Seamless Integration Architecture (IEC TC 57), OPC-UA
- Norms and standards of energy industry data models (CIM, 61850)
- Systematisation of energy information system requirements based on ontologies
- Development, analysis and adaption of energy industry reference models and processes
- Methods and technologies to support energy industry processes
- Methods and algorithms to support decision processes of the decentralised energy plants control
- Smart Grid plant communication, particularly for load management
- Methods for modelling and simulation of power supply system dynamics

Prerequisites

Skills to be acquired in this module
Upon completion of the module students will be able to explain the role financial institutions play in financial markets based on economic theory. They will have a sound knowledge of institutional and regulatory conditions under which financial institutions operate today, and they will be able to critically assess respective developments in the financial sector. Moreover, they will have developed a sound understanding of how banks are managed in a competitive environment.

Module contents
We will discuss theoretical foundations of financial intermediation in general, and of banking in particular as well as the economic, institutional, and regulatory context in which financial institutions operate today. Moreover, we will cover selected topics in the area of bank management and bank accounting.

Literaturempfehlungen
- Berger / Molyneux / Wilson (Eds.): The Oxford Handbook of Banking, latest edition, Oxford University Press
- Tolkmitt: Neue Bankbetriebslehre, latest edition, Gabler

Further readings may be announced during the course.

- Prokop, Jörg (module responsibility)

**Prerequisites**

The aim of the course is to provide students with a thorough knowledge of how to identify, classify, measure, and manage different types of financial business risks. In particular, we will discuss the properties and potential applications of derivatives in financial risk management. Upon completion of this module, students
- will have a sound understanding of the concept of risk management, and will be able to distinguish different types of financial risks and risk management approaches;
- will be able to devise hedging strategies, arbitrage strategies, and speculative strategies using financial derivatives such as futures contracts, forward contracts, options, and swaps;
- will be able to consistently apply valuation models to determine theoretical prices of financial derivatives.
- will be able to assess limitations of financial derivatives in risk management.

**Module contents**
The course provides insights into the theory and practice of modern financial business risk management, including:
- the concept of risk, types of financial risks, and approaches to risk measurement;
- the mechanics of financial markets, including derivatives markets;
- the properties of selected financial instruments, including financial derivatives such as forwards, futures, options, and swaps;
- tools and techniques for managing financial risks.

**Literaturempfehlungen**

Highly recommended readings:

Optional readings:

Further readings may be announced during the course.

wir886 - Digital Transformation: Strategies and Sustainability

Module label: Digital Transformation: Strategies and Sustainability

Modulkürzel: wir886

Credit points: 6.0 KP

Workload: 180 h
- 4 SWS (56h)

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Specialization
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule NM-BWL
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule RdW - BWL
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule UF - BWL
- Master's Programme Sustainability Economics and Management (Master) > Additional Modules

Zuständige Personen
- Lehrenden, Die im Modul (Prüfungsberechtigt)
- Hoppmann, Jörn (module responsibility)

Prerequisites
Skills to be acquired in this module
- The students should:
  - know basic definitions, trends and application areas of digitalization
  - be able to assess the economic effects of digitalization
  - understand corporate strategies and business models in the context of digital transformation
  - know how companies should design processes and structures to promote digitalization in organizations
  - have an overview of social, legal and ethical aspects of digitalization
  - assess the environmental impact of digitalization
  - evaluate digital products, services and business models using ethical and sustainable guidelines
  - independently develop proposals for the integration of ethical, social and ecological criteria in digitalization projects and processes

Module contents
- The module "Digital Strategy and Sustainability" provides insights into the role digitalization for companies and the associated social discourse. The digital transformation leads to the emergence of new business models, markets and forms of interaction. This requires comprehensive changes in strategic orientation as well as in business processes and structures. In addition, new regulations and standards are required at the societal level in order to meet the ethical, ecological, and societal challenges posed by digitalization.
- In the first part of the seminar, students are familiarized with the basics and application areas of digitalization as well as the economic, social, and ecological implications. Toward this end, important questions in the context of digital transformation will be raised and discussed drawing on company case studies. Exemplary questions that will be dealt with in this context are:
  - What are the technological drivers of digitalization and what trends can be observed?
  - What is the impact of digital transformation on industries and companies?
  - How can companies design strategies, business models, processes and structures to address the digital transformation?
  - What are the consequences of digitalization on a societal and legal level?
  - How does the digital transformation affect the natural environment?
  - How can social, ethical, and ecological aspects be integrated into digital products, services and business models?
- In the second part of the course, students will develop digital business models in teams under the guidance of experienced coaches, taking into account economic, ecological and social/ethical criteria. The results are presented to the other students and company representatives and will be summarized in a term paper. An important part of the term paper is the critical reflection of current methods used to develop digital business models with regard to sustainability criteria.

#### Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Specialization
- Master's programme Business Administration: Management and Law (Master) > Kernmodule CHI
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule NM-BWL
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule RdW - BWL
- Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master)
- Master's Programme Sustainability Economics and Management (Master) > Akzentmodule

#### Zuständige Personen
- Hoppmann, Jörn (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)
- Hoppmann, Jörn (Module counselling)

#### Prerequisites
**Skills to be acquired in this module**
The students should...
- know and understand basic concepts, instruments and theories in the context of corporate sustainability and corporate social responsibility
- be able to apply conceptual frameworks to analyze and critically question the sustainability of companies
- develop options to improve the sustainability of companies and derive recommendations for their implementation in practice

#### Module contents
The module "Strategic Sustainability Management" provides an overview of the debates on the role of firms for sustainable development from a strategic perspective. The first session will briefly introduce the historical debate on Corporate Sustainability and Corporate Social Responsibility and delineate important concepts. The following sessions will use concrete company case studies as a basis for a critical discussion of questions in the context of corporate sustainability that are of strategic importance for firms. Questions that will be discussed are, amongst others:

- How can one determine whether a firm acts in a socially and ecologically sustainable way?
- Which factors drive and hinder the diffusion of socially and ecologically superior solutions and companies in the market?
- To which extent is there a conflict between firm and market growth on the one hand and sustainability on the other hand?
- Which possibilities does a company have to deal with conflicts between social/ ecological and economic goals?
- How can existing firms and value chains be transformed toward sustainability?
- What is the role of managers and boards of directors for organizational change toward sustainability?
- How does the ownership and financial structure of firms influence their strategy toward sustainability?
- In how far can cooperation and partnerships between organizations help integrate social and ecological aspects in 53 firms?

In addition to discussing these questions by drawing on company case studies, students will be introduced to the corresponding theoretical concepts and frameworks in the academic literature. Also, students will be given the opportunity to test different strategies for implementing sustainability in organizations during a simulation, which allows them to gain first-hand insights into the emerging challenges. Toward the end of the course, students will apply and deepen the knowledge they have gathered over the semester by writing a seminar thesis.

wir899 - Supply Chain Management

Module label | Supply Chain Management
---|---
Modulkürzel | wir899
Credit points | 6.0 KP
Workload | 180 h

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Specialization
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule RdW - BWL
- Master's programme Business Administration: Management and Law (Master) > Schwerpunktmodule UF - BWL
- Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master)

Zuständige Personen
- Busse, Christian (module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
In der zum Modul gehörigen Vorlesung werden vor allem formalanalytische Modelle erarbeitet, mit denen Probleme in Wertschöpfungsketten beschrieben und im Rahmen der Modellannahmen optimiert werden können. Hiermit sollen die Studierenden eine Kompetenz zur unternehmensübergreifenden Analyse der gesamten Wertschöpfungskette (Supply Chain) erwerben, mit Hilfe derer sie diese nicht nur verstehen, sondern idealerweise auch verbessern können. Im begleitenden Seminar werden mithilfe von in Gruppen verfassten Hausarbeiten aktuelle Fragestellungen und Diskussionen im Supply Chain Management aufgearbeitet und bewertet. Das Seminar baut ergänzend zur Vorlesung auf konzeptioneller und empirischer Forschung auf. Hiermit lernen die Studierenden wissenschaftliche Diskurse zu praktisch relevanten und nur schwer modellierbaren Herausforderungen des Supply Chain Managements kennen. Ferner werden die Fähigkeiten zum wissenschaftlichen Arbeiten, zur Teamarbeit und zum Präsentieren vor großen Gruppen trainiert.

Module contents
Die Vorlesung behandelt voraussichtlich folgende Themen: Grundlagen der Supply Chain, Strategischer Fit, Netzwerk- und Standortplanung, Bestandsmanagement, Produkt- und Prozessdesign, Supply-Chain-Koordination, Vertragsdesign, Transport in der Supply Chain, Nachhaltiges Supply Chain Management

**Prerequisites**

**Skills to be acquired in this module**

By focusing on sustainability from an intra-, and inter-organizational perspective, this module aims to equip students with an in-depth knowledge of the sustainability-related challenges and problems within supply chain management and suggests some tools for managing the same. It further seeks to capacitate students to understand and analyze the trade-offs and conflicts of targets within sustainable supply chain management. The content is closely linked to the latest research in the field, providing a theoretical understanding (within the lecture) while using real-world case examples (within the seminar) to develop a practical understanding simultaneously. Students will be able to connect theory with practice and get a taste of real-life corporate scenarios or lay a foundation for possible master theses. Further, working in groups will help students brush up their team management skills, and the final report shall accustom them to the intricacies of scientific writing.

**Module contents**

This masters-level module focuses on how firms could practically manage sustainability in its supply chains. Two broader perspectives, as detailed below, guide the coursework:

1) The material flow perspective approaches SSCM with sustainably managing physical flows and processes within a firm’s operations and upstream (and downstream) supply chain links. Individual (lecture) sessions are built around the following topics:
   - Introduction to Sustainability and Supply Chain Management
   - Introduction to Sustainable Supply Chain Management
   - Sustainable Product Development & Lean and Green
   - Workplace Health and Safety
   - Sustainable Transportation
   - Sustainable Warehousing & Sustainable Packaging
   - Closed-Loop Supply Chain Management

2) The relationship perspective further adopts a more direct managerial viewpoint on inter-firm relations. Individual (lecture) sessions discuss the following topics:
   - Stakeholder Management
   - Legitimacy, Decoupling & Greenwashing
   - Supply Chain Sustainability Risks
   - Sustainable Supplier Management
   - Supply Chain Sustainability Dilemmas

Some of the theoretical perspectives discussed within the lecture sessions will be prepared by case studies of well-known companies such as Walmart, DHL, HP, Volkswagen, Lidl, and Apple.

**Literaturempfehlungen**

The lecture content has been developed from various research publications, rather than a textbook. Students are encouraged to read some of the original publications as amendments to the lecture. The case studies will mostly be based on professionally written cases. Scholarly publications/articles, as well as the case study documents, will be provided and discussed throughout the sessions.

#### Prerequisites

#### Skills to be acquired in this module
- Upon completion of the module, students will be able to:
  - deal with all legal questions arising from the use of information and communication technology in all sectors of society,
  - identify legal issues arising from the use of information and communication technology,
  - draft solutions for these legal questions.
