Entry requirements

Skills to be acquired in this module
Communicating deeper knowledge in ecology, phylogeny, evolution and genetics of plants
Communicating scale- and method-overarching thinking
Communicating deeper theoretic concepts of ecology, evolution and genetics of plants
++ deepened biological expertise
+ deepened knowledge of biological working methods
+ data analysis skills
+ interdisciplinary thinking
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
++ ethics and professional behaviour

Module contents
V: Biodiversity of plants (2 SWS)
V: Resource acquisition and use by plants (1 SWS)
V: Gene expression in plants (1 SWS)
S: Phylogeny of plants (2 SWS)
S: Interactions of plants with environmental parameters (2SWS)

  - Ulrike Langemann
  - Henrik Mouritsen
  - Heiko Schmaljohann
  - Franz Bairlein

### Entry requirements

### Skills to be acquired in this module

- The module imparts advanced knowledge on different aspects of ornithology. The students acquire:
  - An extended knowledge of morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds
  - Knowledge, presentation and discussion of relevant English literature from various fields of ornithology
  - **Deepened biological expertise**
  - Deepened knowledge of biological working methods
  - Critical and analytical thinking
  - Independent searching and knowledge of scientific literature
  - **Data presentation and discussion in German and English (written and spoken)**

### Module contents

- **Lecture “Ecology and Physiology of Birds”:**
  This lecture consolidates special aspects of systematics, morphology, physiology, migration, orientation, population biology, communication and behavioural ecology in birds.

- **Seminar “Current Questions of Ornithology”:**
  In this seminar, original English publications are presented and discussed which deal with current research results from various fields treated in the lecture. Every student reads a paper on one scientific article and discusses the results of that article with the other participants.

- **Seminar “Behavioural Ecology of Birds” (option 1):**
  In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

- **Seminar “Methods in Field Ornithology” (option 2):**
  The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

Entry requirements
Skills to be acquired in this module
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
+ data presentation and discussion in German and English (written and spoken)
++ project and time management
++ statistics & scientific programming
The module aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).
Module contents
S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a “mini symposium” subsequent to the field studies.
E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication

Knowledge of fundamentals, topical subjects and methods in Marine Biology and Marine Geology. Studies and critical assessment of the scientific literature.

**Module contents**

- L: (AW) General Marine Geology
- E: Biogenic sedimentation, Interaction benthos-sediment; (SS) Plankton of the oceans; (MH) unicellular plankton; (IK) benthos of the North-Sea; (PM) biodiversity in the deep sea and on sea-mountains; (JG) conceptions and hypotheses of marine biodiversity, biodiversity of marine vertebrates; (GG) animal migrations and dispersal behaviour.

A lecture comprises the above-mentioned subjects and imparts marine biological theories, research results and methods. In the seminar, research is presented and discussed. In the laboratory course/exercises, subjects are treated in coordination with the contents of the lecture. With the aid of a computer, data are analysed and interpreted statistically.

bio780 - Biodiversity of Littoral Communities

Module label: Biodiversity of Littoral Communities

Module code: bio780

Credit points: 15.0 KP

Workload: 450 h

Used in course of study: Master Biologie > Background Modules

Contact person:
- Module responsibility: Thomas Glatzel
- Authorized examiners:
  - Thomas Glatzel
  - Pedro-Miguel Martinez-Arbizu
- Module counseling: Pedro-Miguel Martinez-Arbizu

Entry requirements: Safe apnoediving with aptitude test and medical fitness certificate

Skills to be acquired in this module:
- Deepened knowledge of biological working methods
- Ability to perform independent biological research
- Teamwork
- Ethics and professional behaviour
- Project and time management

By actively participating in this module students acquire qualifications in the following fields:

Biological oceanography, marine biology and marine ecology:
- Geological formation history of the Mediterranean Sea and Atlantic Ocean, respectively, or the Red Sea and adjacent seas
- Oceanography and hydrology
- Development of the faunal and floral composition of the Atlantic Ocean, the Mediterranean Sea and the Mediterranean region or the Red Sea (biogeography)
- Commercial utilization of the seas and its impacts
- Biotopes and biotic communities
- Evolution, systematics, morphology, modes of life, and ecology of selected animal groups
- Applying theoretical knowledge to real-world organisms/systems
- Improved and specialized knowledge of species
- Adaptation of life cycles
- Interaction between organisms and environment
- Dynamics of reef-building and reef-degrading processes
- Threat to coral reefs/protection of marine environments

Methods:
- Formulation and definition of scientific approaches and selection of methods
- Observation and investigation of organisms and their habitats (snorkelling/diving)
- Documentation of small research projects in groups in the style of a scientific publication
- Editorial work to prepare a module report
- Popular presentation of results to be published by the media and to be presented at the University

Further skills:
- Social engagement in groups/teamwork in projects
- Independent scientific work in groups
- Improvement of scientific discussion culture
- Consciousness of the threat to coral reefs
- Practising English
- Dealing with the culture of the visited region

Culture:
- History, culture, politics, and religion

Additionally:
- Physiological aspects of apnoediving
- Measures in case of accidents (also caused by "poisonous" organisms)
Module contents: Biodiversity of littoral biotic communities – topographical field research

- ++ data analysis skills; ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- ++ data presentation and discussion in English (written and spoken)
- ++ statistics & scientific programming

**Module contents**

- **Lecture:** Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses.

- **Exercise:** We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.

#### Contact person
- Module responsibility
  - Arne Nolte
- Authorized examiners
  - Arne Nolte
  - Gabriele Gerlach
- Module counseling
  - Gabriele Gerlach

#### Entry requirements
- B.Sc. (Biologie, Umweltwissenschaften)
- M.Sc. (Biologie, Marine Umweltwissenschaften, Landschaftsökologie)

#### Skills to be acquired in this module
- The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.

  **++ deepened biological expertise**
  **++ deepened knowledge of biological working methods**
  **++ data analysis skills**
  **+ interdisciplinary thinking**
  **+ critical and analytical thinking**
  **+ independent searching and knowledge of scientific literature**
  **++ ability to perform independent biological research**
  **++ data presentation and discussion in German and English (written and spoken)**
  **+ statistics & scientific programming**

#### Module contents
- Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical.
- Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.

#### Reader's advisory
will be announced during the course

#### Links
- Languages of instruction: German, English
- Duration (semesters): 1 Semester

#### Examination
- Time of examination: during the module
- Type of examination: Präsentationen (50%), Portfolio (50%).

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

**Module contents**

- **Lecture**: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.
- **Exercise**: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.
- **Subjects of the lecture and seminar**: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.
- **Exercises**: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

**Entry requirements**

**Skills to be acquired in this module**
Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organo genesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

**skills:**

++ deepened biological expertise
+ deepened knowledge of biological working methods
++ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ ability to perform independent biological research
+ teamwork

**Module contents**
Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion.

Lecture topics:
- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Limb Development
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

bio846 - Lab Exercises in Development and Evolution

Module label: Lab Exercises in Development and Evolution
Module code: bio846
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master Biologie > Background Modules
- Master Neuroscience > Background Modules

Contact person:
- Module responsibility: Ulrike Sienknecht
- Authorized examiners:
  - Ulrike Sienknecht
  - Hans Gerd Nothwang
- Module counseling:
  - Hans Gerd Nothwang

Entry requirements:

Skills to be acquired in this module:
Upon successful completion of this course, students have skills in methods of developmental biology:
- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with embryo handling, tissue preparation (including cryosectioning), dissection of inner ears, and the use of different histological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab note-book
- know how to carry out formal laboratory reports (and the anatomy of a scientific paper)

and in addition, have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres
- are able to summarize current hypotheses about the evolution of the auditory system in vertebrates

skills:

- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- ability to perform independent biological research
- data presentation and discussion in German and English (written and spoken)
- teamwork
- ethics and professional behaviour
- project and time management

Module contents:
Lab exercises in comparative developmental biology on chicken and mouse embryos.

Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses.

Lectures in the field of auditory system development, such as:
- Development of the Inner Ear
- Development of the Middle Ear
- Evolution of the Central and Peripheral Auditory System
- Development and Layout of the Central Auditory System

Entry requirements

Skills to be acquired in this module

++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills  
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students

- know the fundamentals of behavioural ecology and neuroethology  
- are able to present and critically assess scientific data and approaches

Module contents

The lecture “Neuroethology” provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.  
The lecture “Behavioural ecology” provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.  
In the seminar “Current issues of Ethology”, current original literature relating to behavioural biology is reported and discussed.

The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics:

- History of cognitive neuroscience
- Methods of cognitive neuroscience
- Attention
- Learning
- Emotion
- Language
- Executive functions.

The supervised exercises either deepen that knowledge by exercises or discussions of recent papers/talks on the respective topic covered during that week.

The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics:

- Introduction to Terms and Definitions in Drug Research
- Dopaminergic and Noradrenergic System
- Cholinergic and Serotonergic System
- GABAergic and Glutamatergic System
- Addiction
- Depression
- Schizophrenia
- Anxiety
- Alzheimer's Disease

Upon successful completion of this course, students know the fundamentals of neurotransmission and the basic neural mechanisms underlying attention, learning, emotion, language, and executive functions. They understand the relationship between disturbances in neurotransmitter systems, cognitive functions, and psychiatric disease. They know the principles of drug treatment for psychiatric disorders and have in-depth knowledge in selected areas of these topics. They are able to understand, explain, and critically assess neuroscientific approaches in animals and humans and are able to understand and critically assess published work in the area of cognitive neuroscience.

attendance in pre-meeting

Skills to be acquired in this module:
++ Neurosci. knowlg.
++ Exp. Methods
+ Scient. Literature
+ Social skills
+ Maths/Stats/Progr.
+ Data present./disc.
+ Scientific English
+ Ethics

Upon successful completion of this course, students
• have knowledge on invertebrate neuronal systems in comparison to vertebrate systems
• have discussed an overview of experimental and theoretical methods of invertebrate neuroscience
• have acquired first practical skills in intracellular recordings from invertebrate neurons
• have acquired basic skills in data analysis
• have acquired an intuitive understanding of membrane potential and action potential generation based on computer simulations

Module contents:
The background module Neurophysiology consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation. The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods
In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments

Reader's advisory:
Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP
Background and seminar literature will be available in Stud.IP

Language of instruction: English
Duration (semesters): 1 Semester
Module frequency: annually, summer term, second half
Module capacity: 12 (this module provides the background for neu345 "Neural Computation in invertebrate systems"

Entry requirements

Skills to be acquired in this module
Students will learn to plan, perform and analyse a study in a biological field. Topics will be chosen in close coordination with teaching staff. Depending on the particular project, knowledge in statistics, molecular biology, physiology, modelling, or ethology will be necessary. Results will be related to the current biological literature in a written report and be presented in the seminar of the hosting working group.

- Deepened knowledge of biological working methods
  ++ Data analysis skills
  ++ Critical and analytical thinking
  ++ Independent searching and knowledge of scientific literature
  ++ Ability to perform independent biological research
  ++ Data presentation and discussion in German and English (written and spoken)
  ++ Teamwork
  ++ Project and time management
  ++ Statistics & scientific programming

Module contents
The students develop an empirical investigation, carry it out and analyse the results. The students present and discuss their project both orally and in writing

Entry requirements:
Skills to be acquired in this module:
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
++ teamwork
++ project and time management
++ statistics & scientific programming

Most modules in the MSc Biologie at Oldenburg are still rather rigorously structured course work and lectures and provide relatively little opportunity for independent research. Some students do not want to wait until starting their master thesis to get first-hand experience in actual research in their field of interest. This module opens the possibility to students to practice both geographical flexibility and gain important experience by active participation in on-going research in a working group from Oldenburg or any other place before starting their master thesis. “Learning on the job” is the basic motto.

Module contents:
The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. The course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (University Oldenburg, other national or international universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.

bio880 - Skills in Plant Systematics

Module label: Skills in Plant Systematics
Module code: bio880
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master Biologie > Skills Modules

Contact person:
- Module responsibility: Dirk Carl Albach
- Authorized examiners:
  - Dirk Carl Albach
  - Klaus Bernhard von Hagen
  - Thijs Janzen
- Module counseling: Klaus Bernhard von Hagen

Entry requirements:

Skills to be acquired in this module:
In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.

- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- ability to perform independent biological research
- data presentation and discussion in German and English (written and spoken)
- teamwork
- statistics & scientific programming

Module contents:
In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa.
In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.

Entry requirements

Skills to be acquired in this module
+ biological knowledge
+ biologically relevant, natural / mathematical scientific basic knowledge
++ interdisciplinary knowledge and thinking
++ abstract, logical, and analytical thinking
++ expanded knowledge in a specific biological field
++ presentation of results and factual discussion, both written and spoken
++ (scientific) communication skills

To develop skills in the critical analysis and interpretation of results and themes in diverse areas of modern biology, including (but not limited to) evolutionary biology, population genetics, biodiversity, ecology, genomics, ornithology, and neurobiology.

Module contents
Discussion and interpretations of one or more themes in modern biology. The themes and exact content will be provided by the instructor(s) at the beginning of the course.

Reader's advisory
Varies with chosen topic (will be provided by the instructor(s) at the beginning of the course)

Entry requirements

Skills to be acquired in this module
• Social skills
• Interdiscipl. knowl.
•++ Maths/Stats/Progr.
• Scientific English

Upon successful completion of this course, students
have basic statistical competencies for understanding data
understand the main statistical methods and their practical use through application
can evaluate statistical methods regarding the qualities and their limits

Module contents
• populations and samples; exploratory data analysis through describing statistics
• elementary probabilities and random variables
• important discrete and continuous distributions
• estimating parameters through the method of maximum likelihood
• confidence intervals and classical significance testing
• pairs of random variables; distribution and dependence
• classical regression analysis
• basic use of the software R to apply those methods

- Social skills  
- Interdiscipl. knowlg.  
- + Maths/Stats/Progr.  
- Scientific English

- students learn the use of the software R in application scenarios  
- students learn to actively "speak" the programming language R  
- students practice statistical data analysis with R

**Module contents**  
The lecture gives an intuitive introduction into the use of the statistics software R. We start by introducing the basic handling of R and the syntax of its programming language. We use those to obtain the first statistical analyses from R. The next important step is to create informative graphics to represent the statistical results. Finally, we look into programming concepts that allow for more complex statistical analyses.

- Authorized examiners
  - Christine Köppl
  - Ulrike Sienknecht
- Module counseling
  - Ulrike Sienknecht

**Entry requirements**

**Skills to be acquired in this module**

- + Scient. Literature
- ++ Social skills
Upon completion of this course, students

- have basic knowledge of non-biological aspects of professional life (e.g., law, management, languages)
- know the basic safety and environmental concerns in bioscientific workplaces
- are able to critically define and discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
- have the ability to communicate scientific concepts, both orally and in writing
- are able to prepare and give a coherent presentation in a team
- have practised to lead a group discussion

### Module contents

Lectures introduce the legal framework and the application procedures for experimental work with animals, humans and genetically modified organisms. In supervised exercises, students research the ethical aspects and controversial issues of about 10 particular topics in the biosciences. They take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
- Good scientific practise and fraud
- Neuroenhancement
- Artificial intelligence
- Animal welfare, Animal experiments
- Overfishing, Nature conservation
- State-of-the-art genetic tools and their implications
- Genetically modified organisms, e.g., in food production, chimeras
- Stem cells
- Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

### Reader's advisory

Current law and interpretative commentaries, e.g., by the German Research Council (DFG) or the German Ethics Panel. Introductory papers aimed at lay persons, e.g. from “The Scientist” or widely respected newspapers. Problem-based, independent search for relevant scientific literature is an integral part of this module.

- + Interdiscipl. knowlg.
In this module the participants gain an overview of arguments and experimental strategies in ageing research. We will focus on the fields of medicine/epidemiology, biochemistry/cell biology, physiology, and genetics. In addition, the main ageing theories will be covered. The participants work throughout the semester in project groups and present their results at a conference at the end of the course. Ethicists and philosophers from Germany and The Netherlands accompany the course, and chair at the conference a session on ethical aspects of ageing research. Under their moderation, the participants derive joint standpoints and policy recommendations.

At the end of this course the participants can

- understand, analyse, and present scientific articles from ageing research
- present the results of their studies and analyses using different presentation techniques
- apply the learned contents in novel contexts (ethics in ageing research)

**Topics**

Major ageing theories

- arguments and experimental strategies in the fields of medicine/epidemiology, biochemistry/cell biology, physiology, genetics in ageing research
- application of the learned contents in novel contexts (ethics in ageing research)
- understanding, analysing, and presentation of scientific articles
- presentation of results with different presentation techniques

**Module contents**

Lecture: major ageing theories and methods in ageing research are presented and discussed

Exercise: project work

1) Students: Choice of research focus
2) Independent work on the chosen research paper
3) Writing a 1 page thesis paper
4) Presentation in own expert group
5) Expert groups: research strategies, approaches, methods in chosen focus area
6) Development of a group presentation and group poster
7) Presentation at 1 day conference
8) Dutch and German ethics experts present bioethics and lobby work in German and Dutch political gremia
9) The students develop a comparative view on medical ethics in different countries and derive own standpoints and policy recommendations for the ethical assessment of metabolic and ageing research. The project work runs independently in the different expert groups throughout the semester and is organised via StudIP. The students and groups receive regular feedback and guidance in presence meetings.

The days for presence meetings and final conference are determined with the participants during the first meeting. The students organize their own work in groups according to the jigsaw concept. Their work is structured by a weekly schedule, tasks to be handed in at fixed deadlines across the semester, lectures and presence meetings.

**Reader's advisory**

Primary and secondary literature will be provided and introduced at the first meeting

Recommended textbook(s) or other literature:
Roger B. McDonald, Biology of aging, Garland Science

Altern: Zelluläre und molekulare Grundlagen, körperliche Veränderungen und Erkrankungen, Therapieansätze
Ludger Rensing; Volkhard Rippe

- Arne Nolte

Entry requirements
Skills to be acquired in this module
++ Expt. Methods
+ Independent research
+ Scient. Literature
++ Social skills
++ Interdiscipl. knowlg.
+ Scientific English
++ Ethics

Upon successful completion of this course, students
- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
- have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments” and EU directive D „Persons killing animals”. We aim to obtain accreditation by the Federation of European Laboratory Animal Science Associations (FeLaSa) by 2018.

Module contents
Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:
- Legislation, ethics and the 3Rs
- Scientific integrity
- Data collection
- Basic biology of rodents, birds and fish
- Husbandry, and nutrition of rodents, birds and fish
- Animal Welfare
- Health monitoring
- Pain and distress
- Euthanasia Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):
- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

Reader’s advisory
"LAS interactive” internet-based learning platform

Contact person:
Module responsibility
- Jannis Hildebrandt
Authorized examiners
- Jannis Hildebrandt

Entry requirements:
non-native speakers

Skills to be acquired in this module:
- Neurosci. knowlg.
- Social skills
- Data present./disc.
- Scientific English

Upon completion of this course, students have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience.

- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation.
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone).
- are able to recognize and avoid common errors of non-native speakers.

Module contents:
Lectures cover:
- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

neu790 - Communicating Neuroscience

Module label: Communicating Neuroscience
Module code: neu790
Credit points: 3.0 KP
Workload: 90 h (28 h contact / 62 h individual reading and preparing discussion questions)

Used in course of study:
- Master Biologie > Skills Modules
- Master Neuroscience > Skills Modules

Contact person:
Module responsibility
- Jutta Kretzberg

Authorized examiners
- Jutta Kretzberg
- Jannis Hildebrandt
- Christine Köppl

Entry requirements

Skills to be acquired in this module:
- Neurosci. knowlg.
- Independent research
++ Scient. Literature
++ Social skills
- Interdiscipl. knowlg.
++ Data present./disc.
- Scientific English
++ Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of neuroscience.

Critical reading of neuroscience literature:

- identify article type and audience
- summarize scientific contents
- identify strengths and weaknesses of methods, conclusions etc.
- put into scientific context
- discuss manuscript style
- discuss social and ethical context and implications of the study

Critical discussion of own studies:

- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

Module contents:
The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context can be achieved by different options:
- Option 1: Seminar 'Neuroscience Journal Club': All students read and discuss 12 published papers (one each week). Different fields of neuroscience (e.g. molecular, cellular, behavioral, computational) will be covered with one classical and one recent paper each. Papers and questions about each paper will be provided prior to the start of the seminar. Students prepare answers to these questions independently and discuss their answers during the seminar. The module is passed when a student actively participated in the discussion of at least 10 papers.
- Option 2: Written report on a neuroscientific topic of the student's choice, based on scientific literature, e.g. in the context of an independent student study group. The report should discuss scientific results in a scientific and a social/ethical context.
- Option 3: Active participation in a scientific conference, workshop, summer school etc.: Participation in a scientific conference, workshop, summer school etc. lasting a minimum of 3 full days can be credited with 3 ECTS, if the student presents own scientific results (poster, talk) obtained, e.g., in a research module or Master thesis.
- Option 4: Participation in at least 20 scientific presentations (e.g. IBU/DfN colloquium, Hanse lecture neuroscience) and submission of a short (1 page) written summary of each talk.

Other individual options (e.g. teaching in neuroscience) ask the module organizer.

Reader's advisory:
Option 1 (seminar): List of 12 published papers will be provided prior to the course. All students are required to read at least 10 of those.
Other options: dependent on the scientific topic
Background neuroscience textbooks, e.g.:
Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer
Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer

Entry requirements

Skills to be acquired in this module
Successful completion of the Master module demonstrates that students are able to work on a problem in the field of Biology within a fixed period applying scientific methods.

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
+ ethics and professional behaviour
++ project and time management

Module contents
Preparing the Master thesis
Active participation in the seminar of the research group, in which the Master thesis is written

Reader's advisory
Supervisors may supply an initial reading list with important literature. The students are expected to find and use further literature as needed.
