Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele
Goals of module:
Students will acquire basic knowledge in planning empirical investigations, setting up computer controlled experiments, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.

Competencies:
++ interdisciplinary knowledge & thinking
++ statistics & scientific programming
++ data presentation & discussion
* independent research
* scientific literature
++ ethics / good scientific practice / professional behavior
++ critical & analytical thinking
++ scientific communication skills
* group work

Modulinhalte

Part 1: Multivariate Statistics I (lecture)

- Graphical representation of data
- Basic concepts of probability
- Frequentist and Bayesian statistical inference
- The Generalized Linear Modeling framework (Simple, multiple and moderated linear regression, Analyses of variance as a specific case of the General Linear Model, Logistic regression)
- Multilevel regression
- Path modeling
- Factor analysis (exploratory & confirmatory)
- Structural equation modeling

Part 2: Computer-controlled experimentation (seminar)

- Computer hardware basics
- Scripting and programming in Presentation
- Combining stimulus delivery with EEG
- Temporal precision

Part 3: Multivariate Statistics II (lecture)

- Supervised and unsupervised statistical learning and prediction
- Regularized regression and non-linear models
- Resampling methods
- Tree-based methods and Support Vector Machines
- Principal components and clustering

Part 4: Evaluation research (seminar)

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
• Research synthesis and meta-analysis

**Literaturempfehlungen**

Kompetenzziele

<table>
<thead>
<tr>
<th>Goals of module:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases (“case conceptualization”), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.</td>

Modulinhalte

**Part 1: Introduction to Psychological Assessment (lecture)**

- Psychological assessment as a decision process – descriptive and prescriptive models
- Theories of reliability (classical and modern approaches)
- Theories of validity (classical and modern approaches)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Psychometrics to single cases
- Summarizing results and writing reports

**Part 2: Psychological Testing (seminar)**

- Psychometric bases of tests and questionnaires
- Types of tests and questionnaires
- Challenges in psychological testing (for example faking good vs. bad)
- Examples of published tests and questionnaires
- Exercising test applications, scoring and result interpretations

**Part 3: Assessment in Clinical Neuropsychology (seminar)**

- Specific knowledge
- Exercises in testing / practising tests

**Ansprechpartner/-in**

- Modulverantwortung: Christoph Siegfried Herrmann
- Modulberatung: Daniel Strüber

**Teilnahmevoraussetzungen**

Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**

Goals of module:

Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically.

Competencies:

++ data presentation & discussion  
++ scientific literature  
++ scientific English / writing  
++ scientific communication skills  
+ group work

**Modulinhalte**

**Part 1: Communication of scientific results (seminar)**

- Literature search  
- Presentation skills  
- Writing skills  

**Part 2: Psychological colloquium**

Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite.

**Literaturempfehlungen**

**Links**

- Englisch

**Unterrichtssprache**

- 1-2 Semester

**Angebotsrhythmus Modul**

Part 1 will be offered every winter term. Part 2 will be offered every semester.

**Aufnahmekapazität Modul**

unbegrenzt

**Hinweise**

- Students can chose whether they want to attend the colloquium in the first, second or both semesters.

- If you want to earn the bonus, you need to use the official bonus sheet to prove your attendance which will be handed to you in the beginning of the winter term.

**Modullevel**

MM (Mastermodul / Master module)

**Modulart**

Pflicht / Mandatory

**Lern-/Lehrform / Type of program**

Communication of scientific results: seminar; Psychological colloquium: colloquium

**Vorkenntnisse / Previous knowledge**

**Prüfung**

- Prüfungszeit: during winter term
- Prüfungsform: The module requires an oral presentation that will be evaluated. Bonus for active participation (contribution to discussion, e.g. questions or comments) during the colloquium and attendance of at least 8 colloquium sessions.

**Lehrveranstaltungsform**

- Seminar: 2.00 SWS, WiSe: 28 h

psy140 - Minor

Modulbezeichnung | Minor
---|---
Modulcode | psy140
Kreditpunkte | 9.0 KP
Workload | 270 h
Verwendet in Studiengängen | Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in
- Kerstin Bleichner
- Jochem Rieger

Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele
Goals of module:
Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile.

Competencies:
++ interdisciplinary knowledge & thinking

Modulinhalte
Students can take Master modules and courses from the fields
- Biology
- Neurosciences
- Computer Science
- Physics
- Mathematics
- Pedagogy
- Philosophy
- related fields

The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules.

A list of approved courses/modules can be found on our website.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module).

Students whose first language is not German, may take German classes.
We recommend taking modules/courses that strengthen your own professional profile.

unbegrenzt

Hinweise
PLEASE NOTE:
- If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website)
- Bachelor courses/modules (that are also offered in Master of Education programmes) are NOT acceptable!
Please check in StudIP
- It is your responsibility to ask the teacher whether you can take part.

psy150 - Clinical Psychology

Modulbezeichnung: Clinical Psychology
Modulcode: psy150
Kreditpunkte: 9.0 KP
Workload: 270 h

Verwendet in Studiengängen:
- Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in:
- Modulverantwortung: Christiane Margarete Thiel

Teilnahmevoraussetzungen:
Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele:
Goals of the Module:
Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ experimental methods
+ data presentation & discussion
+ scientific literature
+ critical & analytical thinking
+ knowledge transfer

Modulinhalte:
The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.

Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar)

- Basics of neurotransmitter systems and psychopharmacology
- Substance Abuse (e.g. psychostimulants, hallucinogens)
- Depression
- Anxiety Disorders
- Alzheimer’s Disease
- Schizophrenia
- psychopathological assessment

Part 2: Psychological interventions within the framework of evidence-based medicine (seminar)

- (partly in German): Concepts of evidence based treatment and treatment of acquired dysfunctions of the brain
- Treatment of ADHD

Literaturempfehlungen:
- Selected papers (part 2)

Links:
Unterrichtsprachen: Englisch, Deutsch
Dauer in Semestern: 2 Semester

psy170 - Neurophysiology

Modulbezeichnung | Neurophysiology
--- | ---
Modulcode | psy170
Kreditpunkte | 6.0 KP
Workload | 180 h
Verwendet in Studiengängen | Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in

- Modulverantwortung
  - Stefan Debener

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele

Goals of module:
Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
++ statistics & scientific programming
++ ethics / good scientific practice / professional behavior
+ group work
+ project & time management

Modulinhalte

Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in using EEGLAB, an open-source software toolbox for advanced EEG analysis.

Part 1: Neurophysiology and neuroanatomy (lecture)

- Neurophysiology, EEG, EMG, ECG
- Neuroanatomy
- Time-domain and frequency-domain analysis methods

Part 2: EEG recording and analysis (theoretical-practical seminar)

- Recording and analysis of biomedical signals
- Averaging, filtering, signal-to-noise
- Topographical EEG analysis

Part 3: EEG analysis with Matlab (theoretical-practical seminar)

- EEGLAB file I/O, data structure and scripting
- Preprocessing, artefact rejection and artefact correction
- Statistical decomposition
- Event-related potentials, topographical mapping and power spectra
- Illustration of results

psy181 - Neurocognition

Modulbezeichnung: Neurocognition
Modulcode: psy181
Kreditpunkte: 6.0 KP
Workload: 180 h
Verwendet in Studiengängen: Master Neurocognitive Psychology > Mastermodule
Ansprechpartner/-in: Modulverantwortung
  - Christiane Margarete Thiel

Teilnahmevoraussetzungen: Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele: Goals of module:
Students should be able to recognize and critically evaluate the value of considering neuroscience in the study of psychological topics.

Competencies:
++ neuropsychological / neurophysiological knowledge
++ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ scientific communication skills
+ group work

Modulinhalte: Students will first acquire a general understanding of the brain mechanisms of different cognitive functions and the methods used to study these functions. They will then apply this knowledge by discussing current research topics (part 1). General knowledge will be focused on the relation between the development of the human brain and the cognitive processes it supports (part 2).

Part 1: Introduction to cognitive neuroscience (lecture and seminar)

- Brain and cognition, methods of cognitive neuroscience
- Attention, learning and memory
- Emotional and social behaviour
- Language, executive functions

Part 2: Neurocognitive development (seminar)

- Brain development and cortical plasticity
- Effects of early-life stress on brain development
- Development of object recognition, social cognition, memory, and executive functions

Literaturempfehlungen:

psy190 - Sex and Cognition

Modulbezeichnung | Sex and Cognition
---|---
Modulcode | psy190
Kreditpunkte | 6.0 KP
Workload | 180 h
Verwendet in Studiengängen | • Master Neurocognitive Psychology > Mastermodule
Ansprechpartner/-in | Modulverantwortung
  • Daniel Strüber
Teilnahmevoraussetzungen | Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.
Kompetenzziele | Goals of module:
  Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain’s control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.
  Competencies:
  ++ neuropsychological / neurophysiological knowledge
  + interdisciplinary knowledge & thinking
  ++ data presentation & discussion
  ++ scientific literature
  + critical & analytical thinking
  ++ scientific communication skills
  + group work
  + project & time management

Modulinhalte | Part 1: Introduction to the study of sex differences (lecture)
  • The measurement of sex differences
  • Sex differences in emotion
  • Sex differences in aggression
  • Sex differences in cognitive abilities
  • Hormones, sexual differentiation, and gender identity
  • Sex hormones and play preferences
  • Sex differences in hemispheric organization
  • Brain size and intelligence

  Part 2: Sex, brain, and behaviour (seminar)
  • Sex differences in empathy
  • The extreme male brain theory of autism (S. Baron-Cohen)
  • Sex differences in neuropsychiatric disorders
  • Sex differences in stress response
  • Social implications of sex differences

  • Melissa Hines (2004) Brain Gender, Oxford University Press

psy200 - Neuropsychology

Modulbezeichnung | Neuropsychology
---|---
Modulcode | psy200
Kreditpunkte | 9.0 KP
Workload | 270 h

Verwendet in Studiengängen
- Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in
- Modulverantwortung
  - Stefan Debener

Teilnahmevoraussetzungen
- Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele
- Goals of module:
  - Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 4), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3, 4).

  Competencies:
  - ++ neuropsychological / neurophysiological knowledge
  - + interdisciplinary knowledge & thinking
  - ++ experimental methods
  - + data presentation & discussion
  - ++ scientific literature
  - + critical & analytical thinking
  - + scientific communication skills

Modulinhalte

Part 1: Introduction to Clinical Neuropsychology (lecture)
- Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
- Higher functions (learning & memory, language, emotion, spatial behavior attention)
- Plasticity and disorders (development, learning and reading disabilities, recovery)

Part 2: Cognitive Neurorehabilitation (seminar)
- Behavioural and neuropsychological approaches
- Neurofeedback in neurorehabilitation and ADHD
- Memory rehabilitation
- Effects of physical activity on cognition
- Motor recovery

Part 3: Research Colloquium Clinical and Experimental Neuropsychology (colloquium)
- Presentations covering recent advances in the field of Experimental and Clinical Neuropsychology

Part 4: Topics in Clinical Neuropsychology (seminar; taught partly in German)
- Clinical neuroanatomy
- Neurodegenerative diseases
- Dementia

Literaturempfehlungen

### Kompetenzziele
Goals of the module:
Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for application. On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation.

Competencies:
- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Experimental methods
- Scientific literature
- Ethical / good scientific practice / professional behavior
- Critical / analytical thinking
- Scientific communication skills
- Knowledge transfer

### Modulinhalte
The module will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science into practice. Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature which will be presented, critically analyzed and discussed.

#### Part 1: (Neuro)Cognitive Psychology in the wild I (lecture)
- Neurocognitive Psychology with emphasis in real world context
- Methodological considerations: Generalization, validity of theories and research methods
- Information uptake and representation: Sensation, perception, categorization
- Selection of information and capacity: Attention and memory enhancement and failure
- Generation and communication: Language, reading, dyslexia
- Pursuing goals: Thinking, problem solving and acting

#### Part 2: (Neuro)Cognitive Psychology in the wild II (seminar)
In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

Präsenzzeit Modul insgesamt 56 h
psy220 - Human Computer Interaction

Modulbezeichnung: Human Computer Interaction
Modulcode: psy220
Kreditpunkte: 6.0 KP
Workload: 180 h

Verwendet in Studiengängen:
- Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in: Modulverantwortung
- Jochem Rieger

Teilnahmevoraussetzungen:
Enrolment in Master's programme Neurocognitive Psychology or other programs related to the field (e.g. neuroscience, computer science, physics etc.).

Kompetenzziele:
Goals of module:
The goal of the module is to provide students with basic skills required to plan, implement and evaluate devices for human computer interaction. As a specific goal the module works toward the implementation of a brain computer interface (BCI). BCIs are ideal showcases as they fully span the interdisciplinary field of HCI design, implementation and evaluation.

Competencies:
- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Experimental methods
- Statistics & scientific programming
- Critical & analytical thinking
- Scientific communication skills
- Knowledge transfer
- Group work
- Project & time management

Modulinhalte:

In this module we will address human computer interaction (HCI) in its interdisciplinary requirements focusing on the perspective from neurocognitive psychology. The students learn core concepts in Human Computer Interaction plus data recording and analysis techniques related to Brain Machine Interfacing.

Part 1: Foundations of HCI and BCI (lecture)
- Human information processing and models of human cognition (Perception, attention, memory, emotion and individual differences)
- Computer interfaces for interaction
- Data analysis techniques for brain machine interfacing (time series analysis, feature selection, classification)
- Evaluation techniques

Part 2: HCI and BCI in practice (practical course)
The second part of the module builds upon the theoretical concepts elaborated in the first. We will work through recent applications published in the literature and, where applicable, implement parts of a BCI-system and conduct experiments.

Literaturrempfehlungen:
- Additional literature and material will be provided on the course website.

Links:
Unterrichtssprache: Englisch
Dauer in Semestern: 2 Semester
Angebotsrhythmus Modul: The module will be offered every summer term.
Aufnahmekapazität Modul: 15

Hinweise:
We strongly recommend to take either psy170, psy270, psy275, psy280, or psy220 to gain methodological competencies (EEG, fMRI, TBS, HCI) that are needed for most practical projects and Master's theses!

Modullevel: MM (Mastermodul / Master module)
Modulart: Wahlpflicht / Elective
Lern-/Lehrform / Type of program: Part 1: lecture; Part 2: practical course
Vorkenntnisse / Previous knowledge:
The module will be evaluated with an oral exam (20 min). Bonus for a presentation and participation in discussions on other presentations in the seminar.

psy230 - Neuromodulation of Cognition

Modulbezeichnung: Neuromodulation of Cognition
Modulcode: psy230
Kreditpunkte: 6.0 KP
Workload: 180 h

Verwendet in Studiengängen: Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in: Modulverantwortung
○ Jochem Rieger

Teilnahmevoraussetzungen: Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Kompetenzziele: Goals of module:
The aim of this module is to provide students with a theoretical background on how cognitive functions can be altered via neuromodulation.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ experimental methods
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills

Modulinhalte: Students will be introduced to the concepts of neuromodulation and the application of theoretical knowledge of neurophysiology to the modulation of cognitive functions.

Part 1: Neuromodulation of cognition (lecture)
- Neurotransmitter systems of cognition
- Neuropharmacological intervention
- Neuroenhancement
- Neurofeedback
- Neurostimulation

Part 2: Neurofeedback (seminar)
- Neurofeedback in control and therapy
- EEG-Neurofeedback
- EMG-Neurofeedback
- Transcranial magnetic stimulation
- Deep brain stimulation
- Patient safety

### Ansprechpartner/-in
- Modulverantwortung
  - Cornelia Kranczioch-Debener

### Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.

### Kompetenzziele
**Goals of module:**
Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.

**Competencies:**
- ++ expert neuropsychological/neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- + experimental methods
- ++ ethics / good scientific practice / professional behavior
- ++ knowledge transfer
- + project & time management

### Modulinhalte
The students will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

### Links
Information on internships and necessary forms: [https://uol.de/en/psychology/master/course-overview/](https://uol.de/en/psychology/master/course-overview/)

### Unterrichtsprachen
English, Deutsch

### Dauer in Semestern
1 Semester

### Angebotsrhythmus Modul
unregelmäßig

### Aufnahmekapazität Modul
unbegrenzt

### Hinweise
The internship lasts 450 hours (12 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part. Your supervisor must be a psychologist.

Please note that details are regulated in the exam regulations.

A blank internship certificate and the report form can be found on the programme website.

To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kranczioch.

### Modullevel
MM (Mastermodul / Master module)

### Modulart
Pflicht / Mandatory

### Lern-/Lehrform / Type of program
internship at (external) institution

### Vorkenntnisse / Previous knowledge

### Prüfung / Prüfungszeiten / Prüfungsform
**Gesammodul**
Individual; 2-3 possibilities per semester to present the internship to other students
The students have to hand in a written report (2-3 pages) and give a short presentation about their internship. They have to show a certificate from the institution at which they performed the internship. The internship is evaluated as pass/fail.

### Lehrveranstaltungsform
Praktikum

### SWS
0.00

**Teilnahmevereinspräzisezung**
Enrolment in Master's programme Neurocognitive Psychology.

Students who start their practical projects in the summer term 2019 or later: You can only start the practical project if you have passed the exam of psy241 Computation in Neuroscience!

Students who start their practical project in the winter term 2018/19: You will only receive credits for the practical project once you have passed your psy241 exam!

Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

**Kompetenzziele**

Goals of module:
Students will learn to plan, perform and analyse a study in the field of neurocognition. They will need to apply statistical knowledge and programming competencies to the data acquisition and analysis of data. Results will be related to the current neurocognitive literature and presented in a student poster symposium at the end of the module. Additionally, students should gain experience as participants in studies.

Competencies:
++ experimental methods
+ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ scientific communication skills
+ knowledge transfer
+ group work
++ project & time management

**Modulinhalte**

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

**Literaturrempfehlungen**

Unterrichtssprache
Englisch

Dauer in Semestern
1 Semester

Angebotsrhythmus Modul
The module will be offered every winter term.

Aufnahmekapazität Modul
unbegrenzt

**Hinweise**

Topics for projects will be presented in a colloquium at the end of the summer term.

Students can chose to perform the practical work in either of the research groups of the Department of Psychology. External projects are possible upon approval (information and approval form can be found on the programme website).
Module level: MM (Mastermodul / Master module)
Modulart: Pflicht / Mandatory
Lern-/Lehrform / Type of program: practical work and regular seminar meetings in the group where the project is performed
Vorkenntnisse / Previous knowledge: PLEASE NOTE:

Many projects require knowledge of either EEG, fMRI, TBS, or HCI analysis! We strongly recommend to take either psy170: Neurophysiology, psy270/275: fMRI Data Analysis, psy280: Transcranial Brain Stimulation, or psy220 Human Computer Interaction prior to the practical project.

It is expected that students show basic knowledge of Matlab programming before starting the practical project.

This module offers a concise introduction to the basic principles of functional magnetic resonance imaging (fMRI). Students will gain essential knowledge about experimental design, data collection and analysis. Special emphasis will be laid on the statistical background of fMRI data analysis and a hands-on introduction to SPM and FSL, two widely-used and free software packages for fMRI data analysis and results visualisation.

**Modulinhalte**

1. Methodological basics of functional magnetic resonance imaging (fMRI)
2. Basic principles of fMRI experimental design and data collection
3. Statistical background of fMRI data analysis
4. Hands-on training in fMRI data analysis and results visualisation with SPM and FSL

**Präsenzzeit Modul insgesamt**

56 h
psy280 - Transcranial Brain Stimulation

Goals of module:
Students will gain theoretical and practical knowledge on various non-invasive brain stimulation techniques.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
+ statistics & scientific programming
+ scientific literature
+ ethics / good scientific practice / professional behaviour

In this module, we will introduce the theoretical concepts, neurophysiological underpinnings and neurocognitive as well as clinical applications of various non-invasive brain stimulation techniques such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), and transcranial random noise stimulation (tRNS). A focus will be tACS, because it is especially suited to modulate brain oscillations which have been shown to correlate with cognitive processes.

Part 1: Introduction to transcranial brain stimulation (lecture)
- Historical overview of brain stimulation
- Different techniques (TMS, IDCS, IACS, tRNS)
- Physiological mechanisms (entrainment, after-effects etc.)
- The use of transcranial brain stimulation in cognitive neuroscience
- Experimental parameters (intensity, electrode montage, etc.)
- Pros and cons of TMS vs. tACS
- Technical aspects (artefact correction, modelling current flow, etc.)
- Safety issues
- Ethical considerations of brain stimulation

Part 2: Effects of tACS on physiology and cognition (seminar)
- Physiology of tACS (on-line and after-effects)
- Modulating cognitive functions (e.g. memory, attention, and perception)
- Clinical applications of tACS
- Hands-on experience in the lab

<tr>
<td>Modulinhalte</td>
<td>Part 1: Master's thesis The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.</td>
</tr>
<tr>
<td></td>
<td>Part 2: Master's colloquium The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.</td>
