<tr>
<td>Workload</td>
<td>360 h</td>
</tr>
<tr>
<td>Used in course of study</td>
<td>Master Neurocognitive Psychology &gt; Mastermodule</td>
</tr>
</tbody>
</table>

**Skills to be acquired in this module**

**Goals of module:**

Students will acquire basic knowledge in planning empirical investigations, setting up computer controlled experiments, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.

**Competencies:**

- **interdisciplinary knowledge & thinking**
- **statistic & scientific programming**
- **data presentation & discussion**
- **independent research**
- **scientific literature**
- **ethics / good scientific practice / professional behavior**
- **critical & analytical thinking**
- **scientific communication skills**
- **group work**

**Module contents**

**Part 1: Multivariate Statistics I (lecture)**

- Graphical representation of data
- Basic concepts of probability
- Frequentist and Bayesian statistical inference
- The Generalized Linear Modeling framework (Simple, multiple and moderated linear regression, Analyses of variance as a specific case of the General Linear Model, Logistic regression)
- Multilevel regression
- Path modeling
- Factor analysis (exploratory & confirmatory)
- Structural equation modeling

**Part 2: Computer-controlled experimentation (seminar)**

- Computer hardware basics
- Scripting and programming in Presentation
- Combining stimulus delivery with EEG
- Temporal precision

**Part 3: Multivariate Statistics II (lecture)**

- Supervised and unsupervised statistical learning and prediction
- Regularized regression and non-linear models
- Resampling methods
- Tree-based methods and Support Vector Machines
- Principal components and clustering

**Part 4: Evaluation research (seminar)**

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
- Research synthesis and meta-analysis

**Reader's advisory**

**Language of instruction** English

**Duration (semesters)** 2 Semester

**Module frequency** The module will be offered every winter term.

**Module capacity** unlimited

**Modullevel** MM (Mastermodul / Master module)

**Modulart** Pflicht / Mandatory

**Lern-Lehrform / Type of program** Parts 1 and 3: lectures; Parts 2 and 4: seminars; additional tutorials are offered.

**Vorkenntnisse / Previous knowledge** basic statistics; otherwise please attend Introductory Course Statistics

Module counseling
- Stefan Debener

**Entry requirements**
Enrolment in Master's programme Neurocognitive Psychology.

**Skills to be acquired in this module**
Goals of module:
Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases (“case conceptualization”), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:
- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Ethics / good scientific practice / professional behavior
- Critical & analytical thinking

**Module contents**

**Part 1: Introduction to Psychological Assessment (lecture)**
- Psychological assessment as a decision process – descriptive and prescriptive models
- Theories of reliability (classical and modern approaches)
- Theories of validity (classical and modern approaches)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Psychometrics to single cases
- Summarizing results and writing reports

**Part 2: Psychological Testing (seminar)**
- Psychometric bases of tests and questionnaires
- Types of tests and questionnaires
- Challenges in psychological testing (for example faking good vs. bad)
- Examples of published tests and questionnaires
- Exercising test applications, scoring and result interpretations

**Part 3: Assessment in Clinical Neuropsychology (seminar)**
- specific knowledge
- exercises in testing / practising tests

**Reader's advisory**
Will be specified in the courses.

psy130 - Communication of scientific results

Module label: Communication of scientific results
Module code: psy130
Credit points: 6.0 KP
Workload: 180 h
Used in course of study: Master Neurocognitive Psychology > Mastermodule

Contact person:
- Christoph Siegfried Herrmann
- Daniel Ströber

Entry requirements: Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:
Goals of module:
Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically.

Competencies:
++ data presentation & discussion
++ scientific literature
++ scientific English / writing
++ scientific communication skills
+ group work

Module contents:
Part 1: Communication of scientific results (seminar)
- Literature search
- Presentation skills
- Writing skills

Part 2: Psychological colloquium
Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite.

Reader's advisory:

Links:
- Language of instruction: English
- Duration (semesters): 1-2 Semester
- Module frequency: Part 1 will be offered every winter term. Part 2 will be offered every semester.
- Module capacity: unlimited
- Reference text: Students can chose whether they want to attend the colloquium in the first, second or both semesters.
- If you want to earn the bonus, you need to use the official bonus sheet to prove your attendance which will be handed to you in the beginning of the winter term.

Modullevel: MM (Mastermodul / Master module)
Modulart: Pflicht / Mandatory
Lern-Lehrform / Type of program: Communication of scientific results: seminar; Psychological colloquium: colloquium

Vorkenntnisse / Previous knowledge:

Examination:
Time of examination: during winter term
Type of examination: The module requires an oral presentation that will be evaluated. Bonus for active participation (contribution to discussion, e.g. questions or comments) during the colloquium and attendance of at least 8 colloquium sessions.

Course type:
Seminar: 2.00  WiSe  28 h

psy140 - Minor

Module label          Minor
Module code           psy140
Credit points         9.0 KP
Workload              270 h
Used in course of study
• Master Neurocognitive Psychology > Mastermodule

Contact person
Module counseling
  • Kerstin Bleichner
  • Jochem Rieger

Entry requirements
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module
Goals of module:
Students will gain an overview of non-psychological topics related to cognitive neuroscience and
neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their
own professional profile.

Competencies
++ interdisciplinary knowledge & thinking

Module contents
Students can take Master modules and courses from the fields

• Biology
• Neurosciences
• Computer Science
• Physics
• Mathematics
• Pedagogy
• Philosophy
• related fields

The content of the courses/modules taken as Minor needs to be clearly different from the contents of the
Neurocognitive Psychology modules.

A list of approved courses/modules can be found on our website.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for
internship, practical project or Master's thesis; maximum of 6 CP for this module).

Students whose first language is not German, may take German classes.

We recommend taking modules/courses that strengthen your own professional profile.

psy150 - Clinical Psychology

Module label Clinical Psychology
Module code psy150
Credit points 9.0 KP
Workload 270 h
Used in course of study Master Neurocognitive Psychology > Mastermodule
Contact person Module responsibility
  • Christiane Margarete Thiel
Entry requirements Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of the Module:
Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ experimental methods
+ data presentation & discussion
+ scientific literature
+ critical & analytical thinking
+ knowledge transfer

Module contents

The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.

Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar)

- Basics of neurotransmitter systems and psychopharmacology
- Substance Abuse (e.g. psychostimulants, hallucinogens)
- Depression
- Anxiety Disorders
- Alzheimer's Disease
- Schizophrenia
- psychopathological assessment

Part 2: Psychological interventions within the framework of evidence-based medicine (seminar)

- (partly in German): Concepts of evidence based treatment and treatment of acquired dysfunctions of the brain
- Treatment of ADHD

Reader's advisory

- Selected papers (part 2)

psy170 - Neurophysiology

Module label: Neurophysiology
Module code: psy170
Credit points: 6.0 KP
Workload: 180 h
Used in course of study: Master Neurocognitive Psychology > Mastermodule

Contact person:
- Module responsibility: Stefan Debener

Entry requirements: Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:

Goals of module:
Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology.

Competencies:
+ Neuropsychological / neurophysiological knowledge
+ experimental methods
+ statistics & scientific programming
+ ethics / good scientific practice / professional behavior
+ group work
+ project & time management

Module contents:
Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in using EEGLAB, an open-source software toolbox for advanced EEG analysis.

Part 1: Neurophysiology and neuroanatomy (lecture)

- Neurophysiology, EEG, EMG, ECG
- Neuroanatomy
- Time-domain and frequency-domain analysis methods

Part 2: EEG recording and analysis (theoretical-practical seminar)

- Recording and analysis of biomedical signals
- Averaging, filtering, signal-to-noise
- Topographical EEG analysis

Part 3: EEG analysis with Matlab (theoretical-practical seminar)

- EEGLAB file I/O, data structure and scripting
- Preprocessing, artefact rejection and artefact correction
- Statistical decomposition
- Event-related potentials, topographical mapping and power spectra
- Illustration of results

Skills to be acquired in this module

Goals of module:
Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain's control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
++ scientific communication skills
+ group work
+ project & time management

Module contents

Part 1: Introduction to the study of sex differences (lecture)

- The measurement of sex differences
- Sex differences in emotion
- Sex differences in aggression
- Sex differences in cognitive abilities
- Hormones, sexual differentiation, and gender identity
- Sex hormones and play preferences
- Sex differences in hemispheric organization
- Brain size and intelligence

Part 2: Sex, brain, and behaviour (seminar)

- Sex differences in empathy
- The extreme male brain theory of autism (S. Baron-Cohen)
- Sex differences in neuropsychiatric disorders
- Sex differences in stress response
- Social implications of sex differences

psy200 - Neuropsychology

Module label: Neuropsychology
Module code: psy200
Credit points: 9.0 KP
Workload: 270 h
Used in course of study: Master Neurocognitive Psychology > Mastermodule

Contact person:
Module responsibility
  - Stefan Debener

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:
Goals of module:
Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 4), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3, 4).

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ experimental methods
+ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
+ scientific communication skills

Module contents:
Part 1: Introduction to Clinical Neuropsychology (lecture)
- Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
- Higher functions (learning & memory, language, emotion, spatial behavior attention)
- Plasticity and disorders (development, learning and reading disabilities, recovery)

Part 2: Cognitive Neurorehabilitation (seminar)
- Behavioural and neuropsychological approaches
- neurofeedback in neurorehabilitation and ADHD
- memory rehabilitation
- effects of physical activity on cognition
- motor recovery

Part 3: Research Colloquium Clinical and Experimental Neuropsychology (colloquium)
- Presentations covering recent advances in the field of Experimental and Clinical Neuropsychology

Part 4: Topics in Clinical Neuropsychology (seminar; taught partly in German)
- Clinical neuroanatomy
- Neurodegenerative diseases
- Dementia

psy210 - Applied Cognitive Psychology

Module label Applied Cognitive Psychology
Module code psy210
Credit points 6.0 KP
Workload 180 h
Used in course of study • Master Neurocognitive Psychology > Mastermodule

Contact person Module responsibility
  • Jochem Rieger

Entry requirements Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Skills to be acquired in this module Goals of the module:
The module aims to provide an overview of theories of (Neuro)Cognitive Psychology with potential for application. It will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science in to practice. Examples of successful transfers will be analyzed. Parts 1 (lecture) and 2 (seminar) will run in parallel. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature will be presented and critically analyzed and discussed.

Competencies: On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation.
  ➲ Neuropsychological / neurophysiological knowledge
  ➲ interdisciplinary knowledge & thinking
  ➲ experimental methods
  ➲ scientific literature
  ➲ ethics / good scientific practice / professional behavior
  ➲ critical & analytical thinking
  ➲ scientific communication skills
  ➲ knowledge transfer

Module contents Part 1: (Neuro)Cognitive Psychology in the wild I (lecture)
  • Neurocognitive Psychology with emphasis in real world context
  • Methodological considerations: Generalization, validity of theories and research methods
  • Information uptake and representation: Sensation, perception, categorization
  • Selection of information and capacity: Attention and memory enhancement and failure
  • Generation and communication: Language, reading, dyslexia
  • Pursuing goals: Thinking, problem solving and acting

Part 2: (Neuro)Cognitive Psychology in the wild II (seminar)
  • In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

**Used in course of study**
- Master Neurocognitive Psychology > Mastermodule

**Contact person**
- Module responsibility
  - Jochem Rieger

**Entry requirements**

**Skills to be acquired in this module**

**Goals of module:**
The goal of the module is to provide students with basic skills required to plan, implement and evaluate devices for human computer interaction. As a specific goal the module works toward the implementation of a brain computer interface (BCI). BCI is an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation.

**Competencies:**
- ++ Neuropsychological / neurophysiological knowledge
- ++ interdisciplinary knowledge & thinking
- * experimental methods
- ++ statistics & scientific programming
- ++ critical & analytical thinking
- + scientific communication skills
- + knowledge transfer
- + group work
- + project & time management

**Module contents**

In this module we will address human computer interaction (HCI) in its interdisciplinary requirements focusing on the perspective from neurocognitive psychology. The students learn core concepts in Human Computer Interaction plus data recording and analysis techniques related to Brain Machine Interfacing.

**Part 1: Foundations of HCI and BCI (lecture)**

- Human information processing and models of human cognition (Perception, attention, memory, emotion and individual differences)
- Computer interfaces for interaction
- Data analysis techniques for brain machine interfacing (time series analysis, feature selection, classification)
- Evaluation techniques

**Part 2: HCI and BCI in practice (practical course)**
The second part of the module builds upon the theoretical concepts elaborated in the first. We will work through recent applications published in the literature and, where applicable, implement parts of a BCI-system and conduct experiments.

**Reader's advisory**
- Additional literature and material will be provided on the course website.

**Links**

**Language of instruction**
- English

**Duration (semesters)**
- 2 Semester

**Module frequency**
- The module will be offered every summer term.

**Module capacity**
- 15

**Reference text**
- We strongly recommend to take either psy170, psy270, psy275, psy280, or psy220 to gain methodological competencies (EEG, fMRI, TBS, HCI) that are needed for most practical projects and Master's theses!

psy241 - Computation in Neuroscience

Module label: Computation in Neuroscience

Module code: psy241

Credit points: 6.0 KP

Workload: 180 h

Used in course of study: Master Neurocognitive Psychology > Mastermodule

Contact person: Module responsibility
  - Johannes Voßkuhl

Entry requirements: Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will acquire scientific programming skills as well as specific knowledge of computational methods in neuroscience and cognition. They will learn to judge the appropriateness and complexity of computational problems and solutions.

Competencies:
+ Neuropsychological / neurophysiological knowledge
+ experimental methods
++ statistics & scientific programming
+ critical & analytical thinking
+ knowledge transfer
+ group work

Module contents

Part 1: Introduction to scientific programming I (theoretical-practical seminar)
- Basic data types and structures
- Flow control (conditions, loops, errors)
- Testing and debugging
- Functions

Part 2: Introduction to scientific programming II (theoretical-practical seminar)
- Classes and objects
- Parallel processing
- Frequency analysis methods
- EEG processing

Part 3: Scientific programming I (exercise)
- Implementation of examples from part 1

Part 4: Scientific programming II (exercise)
- Implementation of examples from part 2

Reader's advisory

psy250 - Internship

Module label: Internship
Module code: psy250
Credit points: 15.0 KP
Workload: 450 h

Used in course of study:
- Master Neurocognitive Psychology > Mastermodule

Contact person:
- Module responsibility
  - Cornelia Kranczioch-Debener

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:
**Goals of module:**
Students will obtain provide direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.

**Competencies:**
++ expert neuropsychological/neurophysiological knowledge
+ interdisciplinary knowledge & thinking
+ experimental methods
++ ethics / good scientific practice / professional behavior
++ knowledge transfer
+ project & time management

Module contents:
The student will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

Reader's advisory:

psy260 - Practical project

Module label: Practical project

Module code: psy260

Credit points: 9.0 KP

Workload: 270 h (attendance in the lab as necessary for your project (~ 200h))

Used in course of study:
- Master Neurocognitive Psychology > Mastermodule

Contact person

Module responsibility
- Jochem Rieger
- Christoph Siegfried Herrmann
- Stefan Debener
- Jalenur Özyurt
- Andrea Hildebrandt

Module counseling
- Riklef Weerda

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Students who start their practical projects in the summer term 2019 or later: You can only start the practical project if you have passed the exam of psy241 Computation in Neuroscience!

Students who start their practical project in the winter term 2018/19: You will only receive credits for the practical project once you have passed your psy241 exam!

Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

Skills to be acquired in this module

Goals of module:
Students will learn to plan, perform and analyse a study in the field of neurocognition. They will need to apply statistical knowledge and programming competencies to the data acquisition and analysis of data. Results will be related to the current neurocognitive literature and presented in a student poster symposium at the end of the module. Additionally, students should gain experience as participants in studies.

Competencies:
- ++ experimental methods
- + statistics & scientific programming
- ++ data presentation & discussion
- + independent research
- + scientific literature
- + ethics / good scientific practice / professional behavior
- + scientific communication skills
- + knowledge transfer
- + group work
- ++ project & time management

Module contents:

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master’s thesis.
- As part of the practical project, students should participate in studies of other practical projects!

Reader's advisory

Links: http://uol.de/en/psychology/study-programme/master/course-overview/

Language of instruction: English

Duration (semesters): 1 Semester

Module frequency: The module will be offered every winter term.

Module capacity: unlimited

Reference text:
Topics for projects will be presented in a colloquium at the end of the summer term.

Students can chose to perform the practical work in either of the research groups of the Department of Psychology. External projects are possible upon approval (information and approval form can be found on the programme website).
### Module Level
- **MM (Mastermodul / Master module)**

### Modulart
- **Pflicht / Mandatory**

### Lern-/Lehrform / Type of program
- practical work and regular seminar meetings in the group where the project is performed

### Vorkenntnisse / Previous knowledge
- **PLEASE NOTE:**
  
  Many projects require knowledge of either EEG, fMRI, TBS, or HCI analysis! We strongly recommend to take either psy170: Neurophysiology, psy270/275: fMRI Data Analysis, psy280: Transcranial Brain Stimulation, or psy220 Human Computer Interaction prior to the practical project.

  It is expected that students show basic knowledge of Matlab programming before starting the practical project.

### Examination
- **Time of examination**: usually end of April
- **Type of examination**: Poster presentation in a student symposium (30% of the grade) and daily project work (70% of the grade).

+ independent research
+ scientific literature
+ ethics / good scientific practice / professional behaviour
+ critical & analytical thinking
+ group work

This module offers a concise introduction to the basic principles of functional magnetic resonance imaging (fMRI). Students will gain essential knowledge about experimental design, data collection and analysis. Special emphasis will be laid on the statistical background of fMRI data analysis and a hands-on introduction to SPM and FSL, two widely-used and free software packages for fMRI data analysis and results visualisation.

Module contents
1. Methodological basics of functional magnetic resonance imaging (fMRI)
2. Basic principles of fMRI experimental design and data collection
3. Statistical background of fMRI data analysis
4. Hands-on training in fMRI data analysis and results visualisation with SPM and FSL

Contact person

Entry requirements

Enrolment in Master's programme Neurocognitive Psychology.
Completion of at least 60 credit points in other modules including module psy241.
Assignment of a topic by thesis supervisor and official application with the examination office.

Skills to be acquired in this module

Goals of module:
Students will demonstrate that they are able to perform a psychological experiment according to scientific standards. In addition, they will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

Competencies:
++ experimental methods
+ statistics & scientific programming
+ data presentation & discussion
++ independent research
+ scientific literature
++ scientific English / writing
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
++ project & time management

Module contents

Part 1: Master's thesis
The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.

Part 2: Master's colloquium
The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
