#### Entry requirements

**Skills to be acquired in this module**

- ++ biological knowledge
- + knowledge of biological working methods
- ++ biologically relevant knowledge in the natural sciences and mathematics
- + statistics & scientific programming
- + interdisciplinary knowledge & thinking
- + abstract, logical, analytical thinking
- ++ deepened expertise in biological specialist field
- + independent learning and (research-based) working
- ++ data presentation and evidence-based discussion (written and spoken)
- + teamwork
- ++ (scientific) communication skills
- + project and time management

- Introduction to both microevolution (speciation and species concepts, adaptation and selection, behavioural ecology, reproduction systems) and macroevolution.
- Introduction to phylogenetics (phyloinformatics, molecular systematics, phylogeography).

#### Module contents

The lecture imparts basic knowledge in areas including population biology, phylogenetic systematics, phyloinformatics, behavioural and reproduction ecology. These fundamentals are extended in the seminar and exercises.

- Biological knowledge
- Knowledge of biological working methods
- Abstract, logical, analytical thinking
- Deepened expertise in biological specialist field
- Independent learning and (research-based) working
- Data presentation and evidence-based discussion (written and spoken)
- Teamwork
- Scientific communication skills
- Project and time management
- Knowledge of safety and environmental issues

Extended knowledge of biodiversity and evolution of plants focusing on reproduction, dispersal, germination and establishment of plants

**Module contents**

| L: Pollination, dispersal, germination of plants, plant breeding |
| S: Pollination and dispersal biology of plants in a systematic context |
| LC: Pollination, fertilisation, dispersal and germination biological experiments in regard of adaptation to environmental factors |

**Reader's advisory**

The course does not follow a special textbook. The following German literature is recommended to students interested in the course: Dieter Heß – Die Blüte, Eugen Ulmer Verlag as well as Leins & Erbar -Blüte und Frucht, Schweizerbart'sche Verlagsbuchhandlung.

  - Helmut Hillebrand
  - Stefanie Moorthi
- Module counseling
  - Stefanie Moorthi

**Entry requirements**
- **Skills to be acquired in this module**
  ++ biological knowledge
  ++ knowledge of biological working methods
  ++ biologically relevant knowledge in the natural sciences and mathematics
  + statistics & scientific programming
  + interdisciplinary knowledge & thinking
  ++ abstract, logical, analytical thinking
  ++ deepened expertise in biological specialist field
  ++ independent learning and (research-based) working
  ++ data presentation and evidence-based discussion (written and spoken)
  + teamwork
  ++ (scientific) communication skills
  + project and time management

  Basic knowledge and practical experience in biological oceanography
  Apply theoretical concepts from different fields in marine ecology
  Analyse, present, and interpret results from the marine ecological literature and own investigations
  Acknowledge the importance of general ecological concepts for ecosystem management
  Gain experience in the application of field and lab methods in ecology

**Module contents**
- **Lecture Biological Oceanography**
  2 SWS = 3 CP. Presence time 24 h, additional study time 66h, winter-term
  Abiotic environmental conditions in marine systems (light, temperature, chemical and physical proper-ties of the water, waves, tides, global distribution of water masses and currents. Pelagic communities, plankton (phyt-, zoo-, bacterio-, viroplankton), microbial loop, sedimentation, C-and N cycling, Nekton, Fisheries, El Nino, Benthic communities, estuaries.

- **Exercise Concepts in marine ecology**
  6 SWS = 9 CP. Presence time 70 h, additional study time 200h, winter-term
  Practical and theoretical exercises on marine ecology, including field studies, experiments and working with case studies from the literature. The focus is on concepts here, pinpointing at general ecological frameworks.

- **Lecture Marine Ecology**
  2 SWS = 3 CP. Presence time 24 h, additional study time 66h, winter-term
  Ecology of marine systems: estuaries, rocky and sediment coasts, pelagial, shelves, mangroves, seagrass meadows, coral reefs, deep sea, polar regions. The focus is on ecological specifics and interactions in the biotic communities of these systems. The second half of the lecture will focus on importance and consequences of overfishing, habitat destruction, pollution, climate change and bioinvasion on marine systems.

**Reader's advisory**

### bio340 - Morphology, Phylogeny, and Evolution of Metazoa

**Module label**  
Morphology, Phylogeny, and Evolution of Metazoa

**Module code**  
bio340

**Credit points**  
15.0 KP

**Workload**  
450 h

**Used in course of study**
- Fach-Bachelor Biologie > Akzentsetzungsmodule
- Master of Education (Gymnasium) Biologie > Mastermodule
- Zwei-Fächer-Bachelor Biologie > Akzentsetzungsmodule

**Contact person**
Module responsibility
- Olaf Bininda-Emonds

Authorized examiners
- Olaf Bininda-Emonds
- Wilko Ahlrichs

Module counseling
- Wilko Ahlrichs

**Entry requirements**

**Skills to be acquired in this module**
++ biological knowledge
+ knowledge of biological working methods
++ biologically relevant knowledge in the natural sciences and mathematics
+ statistics & scientific programming
+ interdisciplinary knowledge & thinking
+ abstract, logical, analytical thinking
++ deepened expertise in biological specialist field
+ independent learning and (research-based) working
++ data presentation and evidence-based discussion (written and spoken)
+ teamwork
++ (scientific) communication skills
+ project and time management

Upon successful completion of the module the students will gain:
1. a survey of topical subjects relating to the morphology and phylogeny of animals,
2. a thorough knowledge of the development of morphological characteristics,
3. technical skills in studying morphological structures, and
4. knowledge into recent hypotheses on the phylogeny of animals.

**Module contents**
- Lecture: Details regarding the morphology and evolution of Metazoa from an explicit phylogenetic framework
- Seminar: Presentation and discussion of recent subjects and issues relating to the evolution of Metazoa; presentation of individual metazoan taxa
- Exercise: Preparation and documentation of exemplary species of Metazoa; various field studies (e.g. visit to the Dierenpark Emmen or to the Zoo am Meer (Bremerhaven), sampling aquatic micrometazoans, observing birds)

**Reader's advisory**
Relevant literature will be announced during the first seminar and is contingent on the latest developments in the research field.

**Entry requirements**

**Skills to be acquired in this module**
++ biological knowledge  
++ knowledge of biological working methods  
+ interdisciplinary knowledge & thinking  
+ abstract, logical, analytical thinking  
++ deepened expertise in biological specialist field  
++ independent learning and (research-based) working  
++ data presentation and evidence-based discussion (written and spoken)  
+ teamwork  
+ (scientific) communication skills  
+ project and time management  

By active participation the students acquire the following knowledge/abilities/qualification:

* Preparation and organization of sampling  
* Keeping organisms – field study  
* Marine deposits, development of marine sediments and their effects on the fauna  
* Methods of meiofauna and macrofauna sampling, also plankton sampling  
* Methods of quantitative community analysis  
* Diversity comparison of various sites applying statistical methods  
* Multivariate statistics for correlation of biocenoses and environmental variables  
* Biocenoses of marine habitats  
* Biology, morphology, systematics, behaviour and ecology of selected taxa in marine water systems  
* Formulation and definition of scientific questions and selection of methods  
* Habitat and biocenoses, interstitial, littoral (lotic, lentic), diversity  
* Planning behavioural experiments  
* Presentation and discussion of scientific results  
* Independent scientific work in groups and presentation of results  

**Module contents**
The module gives an introduction to marine biodiversity research demonstrated by various animal groups from the Wadden Sea and the North Sea including independent sampling on the coast and on the islands. The students will collect the organisms in the field or on board using sampling equipment. In the laboratory course, the biology and morphology as well as the ecology and behaviour of certain species are investigated and documented. The morphology of marine sediments and their development are further aspects of this module.

**Reader's advisory**
HIGGINS, R.P. & H., THIEL, 1988: Introduction to the Study of Meiofauna. Smithsonian Institution Press,
The literature listed above is available in the university library. More reading will be recommended in the course of the lecture.

- deepened expertise in biological specialist field
- independent learning and (research-based) working
- data presentation and evidence-based discussion (written and spoken)
- (scientific) communication skills
- knowledge of safety and environmental issues

The module is intended to give students in-depth knowledge on plant determination and the diversity of plants. Students shall increase their knowledge on species and learn and improve their abilities in plant determination and plant conservation.

Module contents
The module comprises a lecture in the Botanical Garden, where plants will be observed and investigated. This includes algae, bryophytes, ferns, gymnosperms and various families of angiosperms. The seminar is intended to let students study in-depth additional plant families with their typical characters. The exercises will be used to apply the abilities to plant species in the vicinity of Oldenburg and to practice methods in mapping and surveying plant species.

Entry requirements:

Skills to be acquired in this module:
++ biological knowledge
++ knowledge of biological working methods
++ biologically relevant knowledge in the natural sciences and mathematics
++ interdisciplinary knowledge & thinking
++ abstract, logical, analytical thinking
++ deepened expertise in biological specialist field
++ independent learning and (research-based) working
++ data presentation and evidence-based discussion (written and spoken)
++ teamwork
++ project and time management
++ knowledge of safety and environmental issues

Emphasis on:
Theory: Different cultivation strategies (batch, fed-batch, continuous) and physiological interpretation of measuring parameters (growth rates, respiration rates, yield)
Practice: Knowledge of device and handling of bioreactors including sensor systems

Module contents:
Fundamentals of process-controlled cultivation in bioreactors
Part A: Handling of bioreactors, determination of the kLa??? value (oxygen yield rate)
Part B: Cultivation of marine bacteria under controlled conditions in a bioreactor, balance of metabolic activities

Imparting basic knowledge and relations of neurobiology. Transfer achievement: Preparing scientific records from the results of independent experiments.

Module contents:
In its first part, the lecture (4 H/W) covers the molecular and cellular fundamentals of neurobiology, the electrical processes in nervous cells, the organization and development of the nervous system, its function explained by simple circuits as well as the sensorimotor integration underlying any behaviour.

In the seminar (1 H/W), individual subjects of the lecture are consolidated. In the subsequent block laboratory course (6 H/W), this theoretical knowledge is verified under real-world conditions by simple experiments related to the subjects dealt with in the lecture. Unobjectionable scientific minutes are to be prepared of the experiments and the individual results are to be presented in a seminar paper.

Basic knowledge and relations of sensory science, cognition, and motor functions are imparted. Transfer achievement: Presentation of personal experimental results.

**Module contents**
The lecture covers the anatomy and function of simple sensory and motory systems as well as higher cognitive functions. Selected subjects are treated in more detail in the seminar. In the subsequent block practical course, this theoretical knowledge is verified under real-world conditions by simple experiments related to the subjects dealt with in the lecture including data analysis and presentation of results.

This course is designed for students to learn about the basic light and electron optical methods. Students will be able to work with preparative techniques for scanning electron microscopy, transmission electron microscopy, and light microscopy, and confocal scanning laser microscopy. Students completing this course will have learned basic principles for fixing and embedding biological materials for electron microscopy. Students will have learned how to operate a transmission electron microscope, a scanning electron microscope, several ultramicrotomes, a vacuum evaporator, a critical point dryer, and a sputter coater. Digital imaging techniques that will be learned include print making, design and assembly of materials for publication, PowerPoint presentations, and poster design. Students will be introduced to the principles of light microscopy utilizing different optical systems and will have the opportunity to have hands-on experience with a Leica photomicroscope as well as the Leica SP5 confocal laser scanning.

Module contents
Microscopy of protists and micro metazoans. Students are required plan and carry out a research project that exposes them to some of the challenges and problems encountered by microscopical anatomy - and some of the techniques that are used to solve these problems. Students have to present a scientific poster, a short oral presentation and a scientific paper.

Reader's advisory
Will be announced in the course.

#### Skills to be acquired in this module
- + biological knowledge
- + knowledge of biological working methods
- + deepened expertise in biological specialist field
- + independent learning and (research-based) working
- + data presentation and evidence-based discussion (written and spoken)
- + (scientific) communication skills
- + knowledge of safety and environmental issues

The module is intended to give students in-depth knowledge on plant determination and the diversity of plants. Students shall increase their knowledge on species and learn and improve their abilities in plant determination and plant conservation. Subjects and methods relevant for nature conservation are emphasized. Along with these, students shall improve their systemic thinking with relation to nature in northwestern Germany and its flora. Students learn about plants and how to group them according to their phylogeny and evolutionary adaptations, so they can pass this knowledge on to others. Competence in assessment is conveyed in the areas of diversity and nature conservation to sensibilize students for a respectful treatment of nature and passing on this ability to others. Finally, we will discuss sustainable use of plants and habitats and their restoration.

#### Module contents
The module comprises a lecture in the Botanical Garden, where plants will be observed and investigated. This includes algae, bryophytes, ferns, gymnosperms and various families of angiosperms. The seminar is intended to let students study in-depth additional plant families with their typical characters.

### Entry requirements
- **Skills to be acquired in this module**
  - ++ biological knowledge
  - ++ knowledge of biological working methods
  - + biologically relevant knowledge in the natural sciences and mathematics
  - + statistics & scientific programming
  - ++ interdisciplinary knowledge & thinking
  - ++ abstract, logical, analytical thinking
  - ++ deepened expertise in biological specialist field
  - ++ independent learning and (research-based) working
  - ++ data presentation and evidence-based discussion (written and spoken)
  - ++ teamwork
  - ++ (scientific) communication skills
  - ++ project and time management
  - + knowledge of safety and environmental issues

The module serves the in-depth study of state-of-the-art techniques and problems in the field of molecular plant biology and plant genetics.

Specialist competencies: basic knowledge in plant genetics, plant developmental genetics, plant/environment interactions and molecular basis of gene regulation

General competencies: Presentation of scientific papers, presentation techniques, teamwork, problem solving competencies

### Module contents
Part of this module is a lecture that adresses several topics of modern plant molecular biology. The main focus is on plant developmental genetics, plant/environment interactions and the underlying molecular mechanisms of gene regulation in plants. At the beginning of the module, the students will present diverse molecular biology techniques and the latest developments in the field in a "method and techniques" seminar. In a "literature" seminar, the students will present and discuss a recent publication on one of the above-mentioned topics.

### Reader's advisory
- Literature will be handed out at the beginning of the course.

bio396 - Plant Molecular Biology and Genetics II

Module label: Plant Molecular Biology and Genetics II

Module code: bio396

Credit points: 6.0 KP

Workload: 180 h

Used in course of study:
- Fach-Bachelor Biologie > Akzentsetzungsmodule
- Fach-Bachelor Mathematik > Nebenfachmodule
- Master of Education (Gymnasium) Biologie > Mastermodule
- Zwei-Fächer-Bachelor Biologie > Akzentsetzungsmodule

Contact person:
Module responsibility: Sascha Laubinger
Authorized examiners:
- Sascha Laubinger
- Udo Gowik

Module counseling: Udo Gowik

Entry requirements:
- bio395 Plant molecular biology and genetics I

Skills to be acquired in this module:
++ biological knowledge
++ knowledge of biological working methods
+ biologically relevant knowledge in the natural sciences and mathematics
+ statistics & scientific programming
++ interdisciplinary knowledge & thinking
++ abstract, logical, analytical thinking
++ deepened expertise in biological specialist field
++ independent learning and (research-based) working
++ data presentation and evidence-based discussion (written and spoken)
++ teamwork
++ (scientific) communication skills
++ project and time management
+ knowledge of safety and environmental issues

The module serves the in-depth study of state-of-the-art techniques and problems in the field of molecular plant biology and plant genetics.

Specialist competencies: Acquiring basic skill in plant molecular biology, genetics and plant biochemistry
Methodological competencies: molecular biology techniques, conducted independently
General competencies: Presentation of scientific results, presentation techniques, teamwork, problem solving competencies

Module contents:
Part of this module is a lecture that addresses several topics of modern plant molecular biology. The main focus is on plant developmental genetics, plant/environment interactions and the underlying molecular mechanisms of gene regulation in plants. At the beginning of the module, the students will present diverse molecular biology techniques and the latest developments in the field in a "method and techniques" seminar. In a "literature" seminar, the students will present and discuss a recent publication on one of the above-mentioned topics.

Reader's advisory:
Literature will be handed out at the beginning of the course.

# Module Information

**Module Code:** bio405  
**Credit Points:** 12.0 KP  
**Workload:** 360 h  
**Used in course of study:**  
- Fach-Bachelor Biologie > Akzentsetzungsmodule  
- Fach-Bachelor Mathematik > Nebenfachmodule  
- Master of Education (Gymnasium) Biologie > Mastermodule  
- Zwei-Fächer-Bachelor Biologie > Akzentsetzungsmodule  

**Contact Person:**  
- Module responsibility: Martin Greschner  
- Authorized examiners:  
  - Martin Greschner  
  - Ulrike Janssen-Bienhold  
  - Georg Martin Klump  
- Module counseling:  
  - Karl-Wilhelm Koch  
  - Ulrike Janssen-Bienhold  
  - Georg Martin Klump  

**Entry Requirements:**  
- Skills to be acquired in this module:  
  ++ deepened biological expertise  
  ++ deepened knowledge of biological working methods  
  * scientific/mathematical basic knowledge relevant for biology  
  * critical and analytical thinking  
  ++ data presentation and discussion in German (written and spoken)  
  * teamwork  

**Module Contents:**  
The lecture covers the molecular and cellular basis of neurobiology, the electrical properties of nerve cells, the organization and development of the nervous system and the function of the motor system. In the seminar, topics related to the lectures of the week are covered in more depth. In the exercises, the theoretical knowledge from the lectures will be tested in small experiments.

**Reader's Advisory:**

| Module contents            | The exercise immediately follows the module "Introduction to Neurobiology II". By experimenting with each other, the students deepen their knowledge in the fields of cognitive neuroscience and hearing science. The students analyze their own data (incl. statistics) and present these in a written report. |

### Entry requirements

- ++ biological knowledge
- ++ knowledge of biological working methods
- ++ biologically relevant knowledge in the natural sciences and mathematics
- + statistics & scientific programming
- ++ interdisciplinary knowledge & thinking
- abstract, logical, analytical thinking
- ++ deepened expertise in biological specialist field
- ++ independent learning and (research-based) working
- ++ data presentation and evidence-based discussion (written and spoken)
- + teamwork
- ++ (scientific) communication skills
- + project and time management

The objectives of the module are the teaching and learning of methods in the field of taxonomy, systematics, morphology, ecology, and evolution. Competences for finding, identifying, preparing, micro-copying, illustrating, describing, and publishing species are taught. It learns how a scientific collection is created and managed. Another goal is the teaching of basics of molecular systematics and barcoding. The focus is on taxa of the microfauna and protists of limnic and marine habitats. The goal is the knowledge of biotic and abiotic properties of aquatic habitats, their formation and biodiversity. The students should learn to hypothesize structural adaptations of organisms to aquatic habitats.

### Module contents

We study microfauna and protists of limnic and marine habitats. Microfauna refers to microscopic animals. They live together with protists aquatic habitats in high diversity. Animals of the microfauna and protists usually belong to groups that developed early in evolution. The study of communities of these groups gives a unique insight into the evolution of animals and protists. The microfauna and the protists are little studied compared to other groups of animals and offer great potential. But they must be examined under the optical microscope. This requires special techniques and knowledge. Fortunately, through digital techniques, the investigation and publications have been greatly simplified.

We will make excursions to ponds, ponds, lakes, rivers, bogs, sea beaches, etc. It teaches where, when, and how to find species of microfauna and protists. The collected organisms are determined, prepared, microscoped, photographed, drawn, and digitally illustrated. Art descriptions are produced. Attention is paid to the correct application of nomenclature rules. We show how a scientific collection is built and managed. For this purpose, basic knowledge in SQL database technology is taught. Dichotomous, synoptic, and digital identification keys are presented and developed.

In addition to the classical morphological methods, it will be shown how species for molecular barcoding and phylogenetic analyses are investigated. The students will create art portraits. The results are communicated in the form of posters, short lectures, and scientific publications.

### Reader's advisory

Will be announced in the course.

- (scientific) communication skills
- project and time management

Practical experience with four forms of scientific presentation: papers, presentations, scientific drawings, and posters. The students will learn / gain: 1) the logical and structural form of a scientific paper (or protocol or thesis) so as to communicate their results more effectively; 2) the distillation of the key information out of a project and its focused presentation in a lecture or poster; 3) experience with constructive criticism in a group setting as well as the critical assessment of scientific studies; 4) experience with scientific English; and 5) the art of scientific drawing, including the making of high-quality photo montages for papers or posters through microphotography and digital editing.

Module contents
Theoretical part: General tips regarding the logical and structural form of a scientific paper, presentation, or posters, including how to avoid making the most common mistakes.

Practical part: Critical analysis of selected papers from the (evolutionary biological) literature. Writing of a scientific paper using pre-given results. Construction and presentation of a lecture and poster in front of the group based on a recent paper from the literature. Through the feedback obtained in this process, improvements will be made in both cases. Microscopic photography of selected zoological specimens that will then be transferred to / drawn on transparent paper before being rescanned for digital editing. High-quality photo montages of both the photos themselves and the drawings derived from them will be obtained through diverse software (e.g., Adobe Illustrator or InDesign).

Reader's advisory
None. The relevant scientific literature will be distributed during the course.

Entry requirements
- Skills to be acquired in this module
  - ++ biological knowledge
  - + knowledge of biological working methods
  - + interdisciplinary knowledge & thinking
  - ++ deepened expertise in biological specialist field
  - ++ independent learning and (research-based) working
  - ++ data presentation and evidence-based discussion (written and spoken)
  - + teamwork
  - ++ (scientific) communication skills
  - ++ project and time management
  - + knowledge of safety and environmental issues

By actively participating in this module the students acquire qualifications in the fields stated below:
- Survey of recent subjects concerning the biology and morphology of aquatic organisms
- Extended knowledge of how morphological characteristics have developed
- Technical skills in preparing and documenting morphological structures
- Knowledge of organizational principles of these structures

Module contents
The module serves an extended examination of selected aquatic animals from a functional morphological point of view. Living and fixed animals are investigated and histological preparations are analysed. Thus, the morphology, anatomy, and histology are studied in detail. The biology and ecology of these animals are also considered, which enables the organisms to be studied very intensively and provides an illustrative basis for theoretical discussions.

Reader's advisory
GRUNER, H.-E., 1993: „Der Kaestner“, A., Lehrbuch der speziellen Zoologie. All volumes, Gustav Fischer/Spektrum Akademischer Verlag, Jena, Stuttgart. Many interesting details are found only in these volumes!
GRÜTER, W., 2001: Leben im Meer – Vielfalt und Zusammenhänge. Dr. Friedrich Pfeil Verlag, München. This book arouses your curiosity about the underwater world.
HAYWARD, P. NELSON-SMITH, T., SHIELDS, C. & M. KREMER, 2008: Der neue Kosmos Strandführer - 1500 Arten der Küsten Europas. Franckh-Kosmos Verlag. This coastal guide provides excellent and clearly arranged colour tables for individual groups.

bio480 - Functional Morphology of Plants

Module label: Functional Morphology of Plants

Module code: bio480

Credit points: 6.0 KP

Workload: 180 h

Used in course of study:
- Fach-Bachelor Biologie > Akzentsetzungsmodule
- Master of Education (Gymnasium) Biologie > Mastermodule
- Zwei-Fächer-Bachelor Biologie > Akzentsetzungsmodul

Contact person:
- Module responsibility: Gerhard Wolfgang Zotz
- Authorized examiners: Gerhard Wolfgang Zotz, Helena Einzmann
- Module counseling: Helena Einzmann

Entry requirements:
- Skills to be acquired in this module:
  ++ biological knowledge
  + knowledge of biological working methods
  + biologically relevant knowledge in the natural sciences and mathematics
  + interdisciplinary knowledge & thinking
  + abstract, logical, analytical thinking
  ++ deepened expertise in biological specialist field
  + independent learning and (research-based) working

  Students acquire knowledge in macroscopic and microscopic morphology of plants, always putting form in the context of function
  Students understand the concepts of allometry and scaling
  Students put this knowledge in the context of theoretical concepts of ecology and evolution
  Students learn experimental techniques in diverse topics, e.g. biomechanics or water relations

Module contents:
- V: Functional Morphology of Plants (1 SWS)
- E: Mikroskopy, biomechanical Experiments, Form/Function Experiments regarding water uptake, storage and loss (2 SWS)
- S new studies in the field of functional morphology (1 SWS)

Reader's advisory:
