

Modules for Sustainability Economics and Management

Date 04/07/20

Basic and Accentuation Modules

wir812 - Environmental Law

Module label	Environmental Law	
Module code	wir812	
Credit points	6.0 KP	
Workload	180 h	
Used in course of study	<ul style="list-style-type: none"> • Master's Programme Business Administration, Economics and Law (Master) > Mantelmodule • Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master) • Master's Programme Sustainability Economics and Management (Master) > Basic and Accentuation Modules 	
Contact person	<p>Module responsibility</p> <ul style="list-style-type: none"> ◦ Christine Godt <p>Authorized examiners</p> <ul style="list-style-type: none"> ◦ Die im Modul Lehrenden <p>Module counseling</p> <ul style="list-style-type: none"> ◦ Ulrich Meyerholt 	
Entry requirements		
Skills to be acquired in this module	<p>Building on the existing knowledge of the participants, the course will deepen knowledge of European and international law, whereby emphasis will be laid on those areas in which the dividing line between state intervention (public law) and market rights (private law) has become blurred. Students will be able to analyze contemporary regulatory techniques inherent in the multilevel system of governance and to assess them from an interdisciplinary (economic and legal) perspective.</p>	
Module contents	<p>The module comprises two courses, one of which will be taught by PD Dr. Meyerholt, and the other together with Prof. Godt.</p> <p>The first course deals with selected issues in environmental law. With the general structure of environmental law as a point of departure, the course content will be taught in a holistic manner that will also incorporate the leading decisions of the higher courts.</p> <p>The second course takes into consideration intra-disciplinary environmental law as situated between public and private economic law, whereby special focus will be laid on the European and international dimensions.</p>

wir831 - Corporate Social Responsibility

Module label	Corporate Social Responsibility
Module code	wir831
Credit points	6.0 KP
Workload	180 h
Used in course of study	<ul style="list-style-type: none"> • Master's Programme Business Administration, Economics and Law (Master) > Schwerpunkt "Führung von Unternehmen und gesellschaftliche Organisationen" (FUGO) • Master's Programme Business Administration, Economics and Law (Master) > Schwerpunkt "Transnational Economics and Law" (TEL) • Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master) • Master's Programme Sustainability Economics and Management (Master) > Basic and Accentuation Modules
Contact person	<p>Module responsibility</p> <ul style="list-style-type: none"> ◦ Jörn Hoppmann <p>Authorized examiners</p> <ul style="list-style-type: none"> ◦ Die im Modul Lehrenden
Entry requirements	
Skills to be acquired in this module	<p>The students should...</p> <ul style="list-style-type: none"> • know and understand basic concepts, instruments and theories in the context of corporate social responsibility and corporate sustainability • be able to apply conceptual frameworks to analyze and critically question the sustainability of companies • develop options to improve the sustainability of companies and derive recommendations for their implementation in practice
Module contents	<p>The module "CSR" provides an overview of the debates on the social responsibility of firms. The first session will briefly introduce the historical debate on Corporate Social Responsibility and Corporate Sustainability and delineate important concepts. The following sessions will use concrete company case studies as a basis for a critical discussion of central questions in the context of corporate social responsibility and sustainability. Questions that will be discussed are, amongst others:</p> <ul style="list-style-type: none"> • How can one determine whether a firm acts in a socially and ecologically sustainable way • Which factors drive and hinder the diffusion of socially and ecologically superior solutions and companies in the market? • In how far is there a conflict between firm and market growth on the one hand and sustainability on the other hand? • Which possibilities does a company have to deal with conflicts between social/ecological and economic goals? • How can existing firms and value chains be transformed toward sustainability? • What is the role of managers and boards of directors for organizational change toward sustainability? • How does the ownership and financial structure of firms influence their strategy toward sustainability? • In how far can cooperation and partnerships between organizations help integrate social and ecological aspects in firms? <p>In addition to discussing these questions by drawing on company case studies, students will be introduced to the corresponding theoretical concepts and frameworks in the academic literature. Also, students will be given the opportunity to test different strategies for implementing sustainability in organizations during a simulation, which allows them to gain first-hand insights into the emerging challenges. Toward the end of the course, students will apply and deepen the knowledge they have gathered over the semester by writing a seminar thesis.</p>

Entry requirements	No
Skills to be acquired in this module	<p>- Knowledge on the basic concepts and strategies of sustainability management related to corporate practice:</p> <ul style="list-style-type: none"> * Sustainability: Basic concepts, strategies, * Domestic and international challenges for business, * Business case for sustainable development, * Integrative concepts of sustainable corporations, * Sustainable strategies, * Management instruments <p>- Discussing topics of international sustainability management with students from different scientific disciplines.</p> <p>- Ability to present and evaluate different concepts and instruments of international sustainability management</p>
Module contents	<p>This module consists of a one lecture and one seminar (2 weekly contact hours per lecture/seminar) dealing with basic concepts and strategies of sustainability management within corporations. Both, lecture and seminar give an overview of current sustainability strategies for companies and present a variety of instruments to integrate and initiate sustainable development within corporations. While the lecture focuses more on theoretical approaches and introduces basic concepts of corporate sustainability management, the seminar provides a variety of case studies and business cases to demonstrate different concepts and instruments of sustainability management. The seminar provides the possibilities for inter- and transdisciplinary exchange and discussions.</p>

Entry requirements				
Skills to be acquired in this module	<p>The Introduction to processes and systems of the dynamic Earth constituting the foundation for sustainable management is presented to produce:</p> <ul style="list-style-type: none"> • Knowledge about processes and systems relevant for sustainable management using knowledge and methodologies from all science disciplines in an integrated way. • Skills in elaborating on complex tasks of environmental management using an interdisciplinary science based approach and to present related findings to non-expert audiences. • Lecture room presentations and discussions based on slides and black/white board usage. <p>Short films will be presented to endorse the intended achievements.</p>			
Module contents	<p>Lecture: Understanding the Bioplanet Earth (2 contact hours/week) (Vorlesung, 2 LVS: Aufbau und Entwicklungsgeschichte der Erde; Dynamik der Erde: Kreisläufe und Evolutionsprozesse; Lebensraum Boden; Wasser; Klima; Biodiversität; Lagerstätten und Ressourcenerschließung; Ökosysteme der Erde.) Seminar: Cases in Understanding the Bioplanet Earth (2 contact hours/week)</p> <p>Introduction to key processes and to systems dynamics of the Earth representing a planet being alive driven by external and internal forces interacting with biological activities. Topics of the lecture comprise introductions to the evolution of the universe and solar systems, the differentiation and sub-systems of the Earth's interior, minerals and rock cycle, soils, ocean and climate, evolution and biodiversity, organisms and physiology, water and element cycling plus insights into ecosystems under different climate conditions. The cases are selected in order to (i) highlight certain principles and theories in geo- and biosciences and (ii) exemplify critical objects and phenomena in modern practice of resource and environmental management. This module consists of topical programmes of the Master Cluster Environment and Sustainability.</p>			
Reader's advisory	A 'foundation material pool' will be made available online for students and lecturers providing paper books, reports and media covering the topics of the lecture and the cases

Entry requirements	none			
Skills to be acquired in this module	<p>This course aims at giving students an understanding of reasons, goals and instruments for climate policy, as well as implied complications due to the long term characteristics and the international dimension of climate change. Students first learn basics about the natural science of climate change and the main statements of climate research about the anthropogenic contribution to climate change. The economic interpretation of high pollution as a symptom of a market failure then leads to the treatment of policy instruments, and the understanding of economic efficiency as a prerequisite for effective climate policy. Game theoretic analysis of international negotiations and agreements provides key insights about the international dimension of the problem. By means of practical examples students then see in detail the functionality and pitfalls of selected implemented (or currently discussed) policies, e.g. the EU-ETS. With successful completion of the course, students shall be able to judge climate policy issues on an informed scientific basis (natural science and economics).</p>			
Module contents	<p>Natural science of climate change: greenhouse effect; measures, causes and impacts of climate change. Economics of climate change: market failures (public goods, externalities); game theory of international agreements (prisoner's dilemma, chicken game, assurance game, repeated games, continuous choice); environmental policy instruments (especially taxes, tradable permits). Climate policy in practice: EU-ETS (pitfalls: market segmentation, conditional grandfathering, lobbying); emission taxes and the EU-ETS; interaction between black and green quotas; embodied carbon tariffs.</p>			
Reader's advisory	<p>Perman et al (2003), Natural resource and Environmental Economics, Pearson, 3rd edition or Perman et al (2011), Natural resource and Environmental Economics, Pearson, 4th edition</p>

Skills to be acquired in this module	<p>Methods of project management</p> <p>Introduction into the methods of qualitative empirical research</p> <p>Introduction into approaches to time management</p> <p>Identification of individual or team projects in sustainability management (case studies, empirical studies, marketing concepts)</p> <p>Self organized work on individual or team projects</p> <p>Mid-term and final presentation of project results</p>	
Module contents	<p>This module consists of two seminars (2 weekly contact hours per seminar) dealing with several topics from the broad field of sustainability, economics and management during term.</p> <p>The module's intention is to integrate current research activities of the University from the research areas of sustainability, economics and management into teaching activities. The Module provides students the possibility to actively participate in current research at Oldenburg University. The module's seminars each year deal with different projects and are thus designed each year by a different group of Oldenburg located researchers.</p> <p>This teaching concept provides the interface between theory and application of scientific theories into research practise. Thus, this module also introduces research work at universities in general.</p>

Entry requirements				
Skills to be acquired in this module	<p>This module provides students with the opportunity to scrutinize firms' sustainability management from a strategic perspective. Specifically, students learn to evaluate sustainability-related management practices critically, and they are enabled to relate corporate sustainability to a firm's conventional performance objectives. To this aim, students also familiarize themselves with the scholarly discourse on sustainability that is published in leading management journals.</p> <p>In addition to broader strategic considerations students become acquainted with the specific sustainability-related challenges in global supply chains and begin looking at sustainability from an inter-organizational perspective. Furthermore, students will be enabled to frame sustainability aspects as springboards for more innovative and entrepreneurial firm behavior. The theoretical foundations of the module will be supplemented by practical examples. Students will also refine their reading, writing, presentation, and discussion skills in the module. Moreover, the exposition to some major theoretical developments and to empirical research methods applied in academic studies can prepare students for their master thesis.</p>			
Module contents	Firms' motivation for sustainable business conduct; Conception of sustainability; Stakeholder theory; Legitimacy; Decoupling; Agency; Sustainable innovation and entrepreneurship; Sustainability and supply chain management: A brief introduction; Closed-loop supply chain management; Supply chain sustainability risks; Supplier management for sustainability; Standards for fostering sustainability in the supply chain			
Reader's advisory	We will work with various academic paper publications, rather than a text book.

-----------------------	--

Entry requirements

Skills to be acquired in this module This module completes the knowledge and abilities gained in the field of Environmental Informatics and it creates a strong reference to up to date topics in the field of sustainability. The content taught in this module can directly be applied in an upcoming study and professional career.

Professional competence

The students:

- are able to classify and explain the sustainability paradigm
- are aware of the current status of sustainability reporting
- are able to define and to model material flows
- have obtained know-how in the field of corporate environmental management information systems (CEMIS)

Methodological competence

The students:

- implement CEMIS
- apply different techniques and methods to case studies
- develop new case studies in teams

Social competence

The students:

- are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them
- present and discuss their own results with the team and the other members of the course

Self-competence

The students:

- learn about their own limitations and learn to accept criticism in order to strengthen their own abilities

Module contents This course teaches methods, approaches and techniques in the field of information processing in order to support solutions to problems that arise from companies' impact on the environment. In particular, ICT supported approaches of production-integrated environmental protection, environmental controlling and reporting are introduced and discussed. In order to enable the integration of such approaches into environmental protection, environmental management and its systems are taught as well.

The content in detail:

- environmental management as a basis for sustainability
- sustainability and material flow management
- strategic environmental management

- eco-controlling life cycle
- characteristics and system architectures of CEMIS
- standard software systems
- environmental accounting systems

Entry requirements	
Skills to be acquired in this module	<p>This course aims at examining emerging research questions in the field of corporate environmental management information systems (CEMIS). After finishing this course, the students will have extensive knowledge regarding Business Environmental Informatics. In addition, they will be aware of recent research topics and challenges as well as relevant software solutions and practical projects.</p> <p>Professional competence The students:</p> <ul style="list-style-type: none"> • will obtain extensive knowledge in the field of CEMIS • know emerging research questions and challenges as well as software solutions and projects <p>Methodological competence The students:</p> <ul style="list-style-type: none"> • find their own solutions or apply already existing approaches to new and unsolved questions in the field of CEMIS • capture required data, analyse it and present it to their team or the whole group <p>Social competence The students:</p> <ul style="list-style-type: none"> • are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them • present and discuss their own results with the team and the other members of the course <p>Self-competence The students:</p> <ul style="list-style-type: none"> • learn about their own limitations and learn to accept criticism in order to strengthen their own abilities
Module contents	<p>A strong social pressure forces enterprises to question their current way of implementing their business and to include different aspects of sustainability into their strategies and operational actions. Such a rethinking of one's business is supported by corporate environmental management information systems. Such systems aim at optimising the energy and resource usage, emission and waste minimisation as well as production integrated environmental protection. Of course they support the fulfillment of legal requirements such as waste management or hazardous material handling.</p> <p>The module will cover:</p> <ul style="list-style-type: none"> • recent and emerging research questions and topics related to the field of CEMIS as well as Business Environmental Informatics. • discussion and hands-on experience of standard software systems and newly established solutions. • applying the knowledge obtained to the definition of new as well as on solving new case studies.

Entry requirements	Completed ecology-oriented Bachelor course	
Skills to be acquired in this module	<p>With the successful completion of the module the students will gain a general and advanced knowledge of crucial approaches and instruments of nature conservation in Germany and Europe, especially of the implementation of large protected areas (NSG, biosphere reserve, national park etc.), of maintenance/management projects and measures as well as of approaches to their integration into nature conservation and regional development strategies (via agriculture, tourism etc.) in co-operation with national park administrative authorities and other relevant actors. Additionally, the module gives basic skills in developing ecological connectivity systems (example dragonflies) as well as in developing and implementing approaches to ecological planning inside and outside the nature reserves.</p> <p>Ranking/position of the module within the course of studies: The module focuses on problems, methods, results, and analyses relevant to nature conservation and refers to corresponding issues of modules in Bachelor courses as well as of basic modules in Master courses of Landscape Ecology.</p>	
Module contents	<p>a) Seminar "Protected areas and regional development": Survey of the most important types of large protected areas in Europe as well as current concepts of integrating the purposes of conservation with the tasks of regional development especially in peripheral rural areas</p> <p>b) Seminar "Introduction to the German Nature Conservation Law": This course deals with some parts of the Nature Conservation Law of Germany and Lower Saxony and discusses their relevance to the actual Nature Conservation policy in Northwest-Germany. this seminar takes place in the winter term</p> <p>c) Field course "Habitat connectivity": Theory of ecological connectivity including causes and impacts of fragmentation and isolation in nature-near biotopes; investigation of migration and dispersal behaviour in selected dragonfly species of ditch systems</p> <p>d) Excursion "Protected areas": Presentation of a selected large protected area in Germany or Europe especially considering geographical, floristic, faunistic, historical, agricultural, and nature conservation aspects as well as aspects of landscape and economics</p>

wir826 - Sectoral, Functional and Institutional Approaches to Marketing

Module label	Sectoral, Functional and Institutional Approaches to Marketing			
Module code	wir826			
Credit points	6.0 KP			
Workload	180 h			
Used in course of study	<ul style="list-style-type: none"> • Master's Programme Business Administration, Economics and Law (Master) > Schwerpunkt "Führung von Unternehmen und gesellschaftliche Organisationen" (FUGO) • Master's Programme Sustainability Economics and Management (Master) > Additional Modules 			
Contact person	<p>Module responsibility</p> <ul style="list-style-type: none"> ◦ Thorsten Raabe <p>Authorized examiners</p> <ul style="list-style-type: none"> ◦ Die im Modul Lehrenden 			
Entry requirements				
Skills to be acquired in this module	<p>The students should be enabled</p> <ul style="list-style-type: none"> • to adapt the marketing concept to sectoral, functional and institutional specifics, • to apply specific concepts and methods of marketing in a problem-oriented way and to be able to reflect their conditions and limitations, • to develop and present your own conceptual designs in a team. 			
Module contents	<p>Marketing initially started as a producer-oriented concept and in recent years has developed as universal approach to influence market transactions. Against this background institutional, functional and sectoral fields of application inspired the formulation of sophisticated marketing approaches, like e.g. marketing of non-profit-organisations, strategic marketing, or service marketing. The course presents the specific nature of the different fields of application and relevant consequences for marketing planning. Given the recent inflation of "hyphenated conceptions" of marketing, a reasoned diagnosis as to marketing's core identity is put forth. To this end, perspectives of transfer and integration between the approaches will be developed, that measure up to state-of-the-art theoretical as well as practical demands towards marketing as a universal market-oriented way of managing businesses. This course is divided into a preparatory seminar and an educational workshop towards the end of the term. The latter unit allows case study and role play as well as the presentation student work and boosts social competences irrespective of subject matter.</p>

Entry requirements	Successful completion of the entrance examination
Skills to be acquired in this module	<p>Upon completion of the module, students will be able to:</p> <ul style="list-style-type: none"> • apply specific competences to strategic research in marketing • classify research strategies in marketing according to their meta-theoretical considerations • estimate research strategies' claims to knowledge and their limitations • formulate interdisciplinary research strategies aligning competences of empirical methods with the application of theory • develop own conceptual sketches within teams and to present them
Module contents	<p>How is knowledge generated within the scholarly discipline of marketing? This question confronts the field of marketing with central paradigmatic assumptions. The course begins to solve this puzzle on the basis of a historical analysis of the marketing concept's development. Different scientific standpoints in marketing theory and empirical investigation are evaluated against the light of recent developments in markets and society. The current paradigms of consumption research and marketing research's basic standing in the philosophy of science are intensely treated. This also entails reflecting on the opportunities that alternative trends, e.g. a humanistic paradigm, hold in store for marketing research. The course is divided into a preparatory seminar and an educational workshop towards the end of the term. The latter unit allows case study and role play as well as the presentation student work and boosts social competences irrespective of subject matter.</p>

Skills to be acquired in this module	<p>The students are able</p> <ul style="list-style-type: none"> • to understand sources of market failures and government failures • understand taxing and spending activities of governments • understand the distinction between normative and positive perspectives in the evaluation of government policy • to apply economic methods to current issues in public economics • present their research result in the form of written papers and oral presentations 			
Module contents	<ul style="list-style-type: none"> • The course covers key concepts of public economics, which studies how government taxing and spending activities affect the economy – economic efficiency and the distribution of income and wealth. <p>Lecture: After introducing the theory and methodology of public economics, we discuss a historical and theoretical overview of the public sector. We then focus on departures from efficiency (especially asymmetric information), taxation issues (including tax evasion, fiscal federalism and tax competition among independent jurisdictions), and the intertemporal issue of social security (especially pension system). Seminar: covers current issues in public economics, e.g. reform of health care or pension system.</p>

Skills to be acquired in this module	<p>Learning about sustainability, economics and management in different scientific contexts.</p> <p>Understanding the complexity of sustainability, economics and management.</p> <p>Discussing topics of sustainability, economics and management with students from different scientific disciplines.</p> <p>Ability to present and evaluate different concepts of sustainability, economics and management</p>	
Module contents	<p>This module consists of two seminars (2 weekly contact hours per seminar) dealing with selected topics from the broad field of sustainability, economics and management. Out of a variety of several seminars the student can choose two most suitable seminars depending on individual choices. The seminars and the seminar contents vary each semester to provide topics relevant for current discussions within the broad field of sustainability, economics and management. Intentionally seminars from several research fields and faculties are offered to also combine different point of views and to bring students from different scientific backgrounds together. The seminars provide the possibilities for inter- and transdisciplinary exchange and discussions.</p>

Skills to be acquired in this module	The aim of the course is to acquire an understanding of key issues of competition theory and competition policy. This comprises the fundamentals of industrial economics, the tradeoff between market power and efficiency, and the practice of competition policy in Europe.			
Module contents	The module consists of two courses. Course A deals with the theory of monopoly, the theory of oligopoly, cartels and market entry and the welfare analysis of market structure. Course B deals with topics in international regulatory and competition policy, especially monopoly regulation, economies of scale vs. market power in transnational markets, aims and instruments of European regulatory and competition policy.

Skills to be acquired in this module	<p>The main target of the "Eco-Venturing" module is to develop entrepreneurial skills for the development and implementation of environmental innovations and sustainable business ideas. These include:</p> <ul style="list-style-type: none"> • the ability to identify new solution needs in the context of sustainable development and the sustainable development goals set by the United Nations, • Knowledge and skills for the entrepreneurial development and implementation of innovative solutions, • Knowledge and skills for systematically combining economic (Eco-nomical) and ecological (Eco-logical) objectives and • the ability to strategically develop "green" business areas and markets. • The entrepreneurial development and implementation of environmental innovations can relate both to the establishment of new companies and organisations and to the development of new solutions and business ideas within the framework of established companies and organisations (corporate venturing). 			
Module contents	<p>The main focus of the Eco-Venturing module is the development of new or established business start-up concepts. Under of guidance of their lecturer, participants will work together with selected regional business partners who are both economically successful and contribute to the protection of the environment and the climate, to promote such start-up concepts. What these concepts have in common is that they address the issue of sustainability.</p>

Skills to be acquired in this module	<p>Learning about sustainability, economics and management in different scientific contexts.</p> <p>Understanding the complexity of sustainability, economics and management.</p> <p>Discussing advanced topics of sustainability, economics and management with students from different scientific disciplines.</p> <p>Ability to present and evaluate different concepts of sustainability, economics and management.</p>	
Module contents	<p>This module consists of two seminars (2 weekly contact hours per seminar) dealing with selected topics from the broad field of sustainability, economics and management. Out of a variety of several seminars the student can choose two most suitable seminars depending on individual choices. The seminars and the seminar contents vary each semester to provide topics relevant for current discussions within the broad field of sustainability, economics and management. Intentionally seminars from several research fields and faculties are offered to also combine different point of views and to bring students from different scientific backgrounds together. The seminars provide the possibilities for inter- and transdisciplinary exchange and discussions.</p>

Entry requirements	none
Skills to be acquired in this module	<p>By the end of the course students should have answers to the following questions:</p> <ul style="list-style-type: none"> • How are fundamental values (or "intrinsic values") estimated? • How are business strategies analyzed in order to understand the value they create? • What business activities determine value? • How is "value created for shareholders" identified? • How does one pull apart the financial statements to get at the relevant information for valuing equities? • What is the relevance of cash-flows? Of dividends? Of earnings? Of book values? • How does ratio analysis help in valuation? • How does profitability tie into valuation? • What is growth? How does one analyze growth? How does one value a growth firm? • How does one analyze the quality of financial reports? • How does one deal with the accounting methods used in financial statements? • How is financial analysis developed for strategy and planning? • What determines a firm's P/E ratio? How does one calculate what the P/E should be? • What determines a firm's market-to-book (P/B) ratio? How does one calculate what the P/B should be? • How does one evaluate risk? For equity? For debt? • How does one evaluate an equity research report? • How does one trade on fundamental information?
Module contents	<p>With a stock market bubble and a financial crisis in our recent history, there have been increasing calls to "return to fundamentals." This is a course on fundamental analysis. The primary emphasis is on equity (share) valuation, with a focus on developing and applying methods for valuing firms using financial statement analysis.</p> <p>The course has a very practical focus. The methods of fundamental analysis will be examined in detail and applied in cases and projects involving listed companies. Topics include models of shareholder value, a comparison of accrual accounting and discounted cash flow approaches to valuation, the analysis of profitability, growth and valuation generation in a firm, diagnosing accounting quality, forecasting earnings and cash flows, pro-forma analysis for strategy and planning, and the determination of price/earnings (P/E) and market-to-book (P/B) ratios.</p> <p>The course does not assume "market efficiency". Rather, it develops the techniques for challenging traded prices in order to assess whether investments are appropriately priced. It adopts the philosophy that one of the risks in investing is the risk of paying too much. The course is one for the active investor.</p> <p>Most importantly, we learn how to handle accounting and financial reports in valuation. We see that valuation is really a matter of appropriate accounting for value. The course combines accounting principles and investment principles to answer the question: How do I account for value so that I can challenge stock prices with some confidence?</p> <p>The course will be taught from the perspective of designing techniques to be used in an (independent) equity research department or firm. Accordingly, the material is pertinent to the security analyst – particularly the equity analyst – who must issue a buy, hold or sell recommendations on stocks. However, much of the material covered in the course is also relevant to the corporate financial analyst for evaluating acquisitions, restructurings and other investments, and for calculating the value generated by strategic scenarios. By the end of the course, the student should feel competent in writing a thorough, credible equity research report or investment analysis that meets the highest standards of professionalism.</p> <p>The course is of interest to those contemplating careers in investment banking (particularly in equity research), security analysis, consulting, public accounting, and corporate finance. And it will also help with personal investing.</p>

Skills to be acquired in this module	The students will learn the fundamentals of the topic Entrepreneurship, including the challenges of founding enterprises and entrepreneurial action in established companies.			
Module contents	This module deals with the development of business ideas and its realization in business models as well as its perception and evaluation. The content of the lecture further includes issues relating to team-building, resources, and finance, as well as establishing a business plan, the question of the appropriate legal form of an organization, and the specific challenges in the growth stage. Particular aspects will be amplified by guest lecturers from companies.

Skills to be acquired in this module	<p>Die Studierenden</p> <ul style="list-style-type: none"> • verstehen internationale, europäische und nationale themenbezogene Rechtsnormen und Rechtsfragen. • wenden internationale, nationale und europäische themenbezogene Rechtsnormen an. • erlernen die englische Rechtsterminologie.
Module contents	<p>Das Modul richtet sich an Studierende, die bereits eine wissenschaftliche Vorbildung haben. Studierende sollen in das neue Recht der Forschung und Nutzung von Pflanzen eingeführt werden, das sie sowohl als angehende Wissenschaftler als auch als Mitarbeiter in der Industrie oder Verwaltung brauchen. Im Prinzip hatte bereits die Konvention über die Biologische Vielfalt (1992) den Grundsatz zum freien Zugang zu biologischen und genetischen Ressourcen völkerrechtlich aufgehoben. Durch die Umsetzung in Europa (2014) und den Ressourcenstaaten sind diese Regeln nun aber bindend geworden. Das hat weitreichende Konsequenzen für den Forschungsalltag und die Produktentwicklung. Diese neuartigen Regeln, in denen die internationale Kooperation schon zu Beginn der akademischen und kommerziellen Forschung zur Pflicht geworden ist, werden den Studierenden nahegebracht. Inhaltlich sind die folgenden Themengebiete für die Lehrveranstaltungen relevant:</p> <ul style="list-style-type: none"> • Internationale Rahmenbedingungen für den Zugang zu genetischen Ressourcen und Vorteilsausgleich • EU-Recht und ausfüllende mitgliedstaatliche Regeln zur biologischen Forschung an und Nutzung von genetischen Ressourcen, Traditionellem Wissen und Technologietransfer • Nationale Vorschriften der Ressourcenstaaten für das Aufsuchen genetischer Ressourcen bei wissenschaftlichen Feldstudien und kommerzieller Bioprospektion (z.B. Genehmigungspflichten; Prior Informed Consent; Mutually Agreed Terms; Due Diligence) • Recht der verschiedenen kommerziellen, gesetzlichen und akademischen Ex-situ-Sammlungen genetischer Ressourcen (Practices of databases / Prinzipien und Praktiken der Datenbanken) • Code of Conduct der deutschen Forschungseinrichtungen (vor allem DFG) • Genetische Ressourcen und Geistiges Eigentum • Good practices / Bewährte Verfahren (selected ex situ collections) • ABS agreements ("Mutual Agreed Terms")/ Verträge • Legislative options / Legislative Optionen

Entry requirements				
Skills to be acquired in this module	<p>In today's highly dynamic business environment, innovation is the key to the success of most firms. Moreover, technological and organizational innovations represent valuable instruments for achieving progress toward sustainable development. Against this background, this module familiarizes students with the tools and processes for managing innovation and for developing overall more innovative firms. The module comprises a lecture and a seminar. In the lecture, students become acquainted with the drivers to and role of innovation; they learn about designing innovative firms and developing innovation strategies; they get to know the different sources of innovation; they familiarize themselves with the methods for choosing between alternative planned innovations; they learn how innovation is implemented; and they understand how innovation benefits are exploited. The accompanying seminar is supposed to familiarize the students with select advanced topics surrounding the management of innovation. Moreover, the students train their skills in working in teams, in working with scientific literature, in academic writing, and in presenting in front of a large audience.</p>			
Module contents	<p>Organizational change, creative destruction, ambidexterity, exploration, exploitation, absorptive capacity, sustainability transitions, innovation models, innovation networks, innovation strategy, innovation ecosystems, diffusion of innovations, organizational routines, entrepreneurship, new ventures, etc.</p>

Entry requirements				
Skills to be acquired in this module	<p>The module gives an overview of the phases and important aspects of the environmental information processing. **Professional competence** The students: - apply basic processing algorithms to classify and process data - compare, evaluate and design data structures to store spatial data efficiently - apply basic functions of a geo-information system - describe, evaluate and apply basic processes of data mining - describe, evaluate and apply basic geostatistics processes - evaluate and apply multicriteria decision making processes **Methodological competence** The students: - use geoinformation systems for environmental application - use data mining tools for data analysis **Social competence** The students: - solve tasks in teams of 2-3 students - present and discuss their solutions in class **Self-competence** The students: - reflect their own behaviour with regard to the methods of environmental informatics</p>			
Module contents	<p>Content of the Module: Environmental information systems make information about the general environmental state available for public management and public facilities, enterprises or interested citizens. The collection, storage and evaluation of this information is interesting for computer science. Within the scope of the lecture we will examine the processing of environmental information step-by-step, this means: - problems of data acquisition and data processing, - data structures and database concepts for an efficient access to (usually) spatial data, - introduction of data analysis (in particular from geostatistics and data mining), - introduction of multicriteria decision processes, as well as - the supply of data supported by meta data. The module "Umweltinformationssysteme" is accompanied by the module "Modellbildung in Simulation ökologischer Systeme". The subjects of "Modellbildung in Simulation ökologischer Systeme" represent the dynamic aspects of environmental systems (mainly of ecological systems). Nevertheless, the modules can be taken independently from each other.</p>

Entry requirements

gute bis sehr gute Französischkenntnisse; Teilnahme am Einstufungstest des Sprachenzentrums

Skills to be acquired in this module

Sprachliche Kompetenzvertiefung im Bereich Wirtschaftsfranzösisch zur Vorbereitung von längeren fachbezogenen Studien- und Forschungsaufenthalten sowie Praktika oder Berufsaufnahme im französischsprachigen Ausland. Dieses Modul richtet sich vor allem an Studierende von deutsch-französischen Doppelbachelorprogrammen.

Module contents

Vermittlung von Lese-, Hör-, Sprech- und Schreibkompetenzen in französischer Sprache im Kontext von Wirtschaft und Umwelt. Folgende Themen werden behandelt:
 Mechanismen der globalen Wirtschaft
 Stärken und Schwächen der französischen Wirtschaft
 Strategien wie Produktionsverlagerung, Fusionen etc
 Grundlagen der Volkswirtschaft
 Wirtschaft und Umwelt

Reference text

Ce cours prépare à des séjours d'études ou de recherche de longue durée, à des stages qualifiés en France et/ou en Francophonie. Il s'adresse tout particulièrement aux étudiant(e)s des programmes de double diplômes franco-allemand (Bachelor et master), qui dans le cadre de leurs études ou/et D'ERASMUS+ devront pendant leur séjour communiquer uniquement en Français et/ou souhaitent après leurs études travailler en France, en Francophonie ou dans des organisations internationales.
