<tr>
<td></td>
<td>Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.</td>

Module contents

Part 1: Multivariate Statistics I (lecture): winter

- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models
- Path modeling
- Factor analysis (exploratory & confirmatory)
- (Multilevel) Structural equation modeling (SEM linear and non-linear)

Part 2: Analysis Methods with R (seminar): winter and summer

- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

Part 3: Multivariate Statistics II (lecture): summer

- Supervised and unsupervised statistical learning and prediction
- Regularized regression
- Resampling methods
- Tree-based methods
- Support Vector Machines
• Neural Networks (basics)
• Principal components and clustering

Part 4: Evaluation research (seminar); summer
• Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
• Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
• Specific statistical tools (e.g., Propensity score matching)
• Research synthesis and meta-analysis

  - Christoph Siegfried Herrmann
  - Florian Kasten
  - Daniel Strüber
- Module counseling
  - Daniel Strüber

### Entry requirements

- Enrolment in Master's programme Neurocognitive Psychology.

### Skills to be acquired in this module

**Goals of module:**

Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically.

**Competencies:**

- ++ data presentation & discussion
- ++ scientific literature
- ++ scientific English / writing
- ++ scientific communication skills
- + group work

### Module contents

**Part 1: Communication of scientific results (seminar)**

- Literature search
- Presentation skills
- Writing skills

**Part 2: Psychological colloquium**

Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite.

</table>
| **Reference text** | PLEASE NOTE: If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website) If you want to take an additional elective module for your Minor, you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as
approved for the Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor.

Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g., Master of Education). This does not qualify a Bachelor level course for the Minor module.

It is your responsibility to ask the teacher whether you can take part.

**Used in course of study**
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

**Contact person**
- Module responsibility
  - Christiane Margarete Thiel
- Authorized examiners
  - Christiane Margarete Thiel

**Entry requirements**
- Enrolment in Master's programme Neurocognitive Psychology.

**Skills to be acquired in this module**

**Goals of the Module:**
Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.

**Competencies:**
- ++ Neuropsychological / neurophysiological knowledge
- + experimental methods
- + data presentation & discussion
- + scientific literature
- + critical & analytical thinking
- + knowledge transfer

**Module contents**

The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.

### Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar): winter
- Basics of neurotransmitter systems and psychopharmacology
- Substance Abuse (e.g. psychostimulants, hallucinogens)
- Depression
- Anxiety Disorders
- Alzheimer's Disease
- Schizophrenia
- psychopathological assessment

### Part 2: Psychological interventions within the framework of evidence-based medicine (seminar): summer
- (partly in German): Concepts of evidence based treatment and treatment of acquired dysfunctions of the brain
- Treatment of ADHD

**Reader's advisory**

- Selected papers (part 2)

psy170 - Neurophysiology

Module label: Neurophysiology
Module code: psy170
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
- Module responsibility: Stefan Debener
- Authorized examiners:
  - Stefan Debener

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:

Goals of module:
Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology.

Competencies:
- ++ Neuropsychological / neurophysiological knowledge
- ++ experimental methods
- ++ statistics & scientific programming
- ++ ethics / good scientific practice / professional behavior
- + group work
- + project & time management

Module contents:

Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in using EEGLAB, an open-source software toolbox for advanced EEG analysis.

Part 1: Neurophysiology and neuroanatomy (lecture): winter
Neurophysiology, EEG, EMG, ECG
Neuroanatomy
Time-domain and frequency-domain analysis methods

Part 2: EEG recording and analysis (seminar): winter
Recording and analysis of biomedical signals
Averaging, filtering, signal-to-noise
Topographical EEG analysis

Part 3: EEG analysis with Matlab (seminar): summer
EEGLAB file I/O, data structure and scripting
Preprocessing, artefact rejection and artefact correction
Statistical decomposition
Event-related potentials, topographical mapping and power spectra
Illustration of results

Reader's advisory:

psy181 - Neurocognition

Module label: Neurocognition
Module code: psy181
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
Module responsibility:
- Christiane Margarete Thiel

Authorized examiners:
- Christiane Margarete Thiel

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:

Goals of module:
Students should be able to recognize and critically evaluate the value of considering neuroscience in the study of psychological topics.

Competencies:
++ neuropsychological / neurophysiological knowledge
++ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ scientific communication skills
+ group work

Module contents:

Students will first acquire a general understanding of the brain mechanisms of different cognitive functions and the methods used to study these functions. They will then apply this knowledge by discussing current research topics (part 1). General knowledge will be focused on the relation between the development of the human brain and the cognitive processes it supports (part 2).

Part 1: Introduction to cognitive neuroscience (lecture and seminar): winter
Brain and cognition, methods of cognitive neuroscience
Attention, learning and memory
Emotional and social behaviour
Language, executive functions

Part 2: Neurocognitive development (seminar): winter
Brain development and cortical plasticity
Effects of early-life stress on brain development
Development of object recognition, social cognition, memory, and executive functions

Reader's advisory:

psy190 - Sex and Cognition

Module label | Sex and Cognition
---|---
Module code | psy190
Credit points | 6.0 KP
Workload | 180 h

Used in course of study
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person
- Module responsibility
  - Daniel Strüber
- Authorized examiners
  - Daniel Strüber

Entry requirements
Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Skills to be acquired in this module

Goals of module:
Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain's control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
++ scientific communication skills
+ group work
+ project & time management

Inhalte

Module contents

Part 1: Introduction to the study of sex differences (lecture): winter
The measurement of sex differences
Sex differences in emotion
Sex differences in aggression
Sex differences in cognitive abilities
Hormones, sexual differentiation, and gender identity
Sex hormones and play preferences
Sex differences in hemispheric organization
Brain size and intelligence

Part 2: Sex, brain, and behaviour (seminar): winter
Sex differences in empathy
The extreme male brain theory of autism (S. Baron-Cohen)
Sex differences in neuropsychiatric disorders
Sex differences in stress response
Social implications of sex differences

psy201 - Neuropsychology

Module label: Neuropsychology
Module code: psy201
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
- Module responsibility
  - Stefan Debener
- Authorized examiners
  - Stefan Debener

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:

Goals of module:
Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 3), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3).

Competencies:
- ++ neuropsychological / neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- ++ experimental methods
- + data presentation & discussion
- ++ scientific literature
- + critical & analytical thinking
- + scientific communication skills

Module contents:

Part 1: Introduction to Clinical Neuropsychology (lecture): winter
Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
Higher functions (learning & memory, language, emotion, spatial behavior, attention)
Plasticity and disorders (development, learning and reading disabilities, recovery)

Part 2: Cognitive Neurorehabilitation (seminar): summer
Behavioural and neuropsychological approaches
Neurofeedback in neurorehabilitation and ADHD
cognition
Motor recovery

Part 3: Topics in Clinical Neuropsychology (seminar; taught partly in German): winter
Clinical neuroanatomy
Neurodegenerative diseases
Dementia

Reader's advisory:

Language of instruction: English
Duration (semesters): 1-2 Semester
Module frequency: The module will start every winter term.
Module capacity: 30 (Part 3 is not restricted.)

Reference text:
Part 1 (lecture) is mandatory. Choose either part 2 or part 3 (seminars).

psy210 - Applied Cognitive Psychology

Module label: Applied Cognitive Psychology
Module code: psy210
Credit points: 6.0 KP
Workload: 180 h

Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
Module responsibility
- Jochem Rieger
Authorized examiners
- Jochem Rieger

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Skills to be acquired in this module:

Goals of the module:
Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for application. On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation.

Competencies:
+ Neuropsychological / neurophysiological knowledge
+ interdisciplinarry knowledge & thinking
+ experimental methods
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer

Module contents:
The module will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science in to practice. Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature which will be presented, critically analyzed and discussed.

Part 1: (Neuro)Cognitive Psychology in the wild I (lecture): summer
- Neurocognitive Psychology with emphasis in real world context
- Methodological considerations: Generalization, validity of theories and research methods
- Information uptake and representation: Sensation, perception, categorization
- Selection of information and capacity: Attention and memory enhancement and failure
- Generation and communication: Language, reading, dyslexia
- Pursuing goals: Thinking, problem solving and acting

Part 2: (Neuro)Cognitive Psychology in the wild II (seminar): winter
In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

**Entry requirements**
- Enrolment in Master's programme Neurocognitive Psychology.

**Skills to be acquired in this module**

**Goals of module:**
Students will acquire scientific programming skills as well as specific knowledge of computational methods in neuroscience and cognition. They will learn to judge the appropriateness and complexity of computational problems and solutions.

**Competencies:**
- + Neuropsychological / neurophysiological knowledge
- + experimental methods
- ++ statistics & scientific programming
- ++ critical & analytical thinking
- + knowledge transfer
- + group work

**Module contents**

**Part 1:** Introduction to scientific programming I (lecture): winter
- Basic data types and structures
- Flow control (conditions, loops, errors)
- Testing and debugging
- Functions

**Part 2:** Introduction to scientific programming II (lecture): summer
- Classes and objects
- Parallel processing
- Frequency analysis methods
- EEG processing

**Part 3:** Scientific programming I (exercise): winter
- Implementation of examples from part 1

**Part 4:** Scientific programming II (exercise): summer
- Implementation of examples from part 2

**Part 5:** Computer-controlled experimentation (seminar): summer
- Computer hardware basics
- Scripting and programming in Presentation
- Combining stimulus delivery with EEG
- Temporal precision

**Reader's advisory**

- Mathworks (2009): MATLAB online documentation

- Jochem Rieger
- Stephanie Rosemann
- Helko Stecher
- Daniel Strüber
- Christiane Margarete Thiel
- Anirudh Unni

Module counseling:
- Riklef Weerda

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.
You can only start the practical project if you have passed the exam of psy241 / psy240 Computation in Neuroscience!
Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

Skills to be acquired in this module

Goals of module:
Students will learn to plan, perform and analyse a study in the field of neurocognition. They will need to apply statistical knowledge and programming competencies to the data acquisition and analysis of data. Results will be related to the current neurocognitive literature and presented in a student poster symposium at the end of the module. Additionally, students should gain experience as participants in studies.

Competencies:
++ experimental methods
+ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ scientific communication skills
+ knowledge transfer
+ group work
++ project & time management
Module contents

- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

Reader's advisory

psy270 - Functional MRI Data Analysis

Module label: Functional MRI Data Analysis
Module code: psy270
Credit points: 9.0 KP
Workload: 270 h

Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
Module responsibility:
- Carsten Gießing

Authorized examiners:
- Carsten Gießing

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:

Goals of module:
Students will learn the basics about planning and performing a neuroimaging study. They will
focus on the statistical and methodological background of functional neuroimaging data analysis
and analyse a sample functional MRI data set.

Competencies:
++ experimental methods
++ statistics & scientific programming
+ data presentation & discussion
++ group work

Module contents:

Part 1: Functional MRI data analysis (lecture): summer

Part 2: Planning, performance and analysis of functional neuroimaging studies using
MATLAB-based software (seminar): summer

Part 3: Hands-on fMRI data analysis with SPM (exercise): summer

Reader's advisory:

  Sinauer Associates. Sunderland, MA, USA.
  Cambridge University Press. New York, USA.

Links:

Language of instruction: English
Duration (semesters): 1 Semester
Module frequency: The module will be offered every summer term.
Module capacity: 15 (The remaining places are reserved for Biology and Neuroscience students.)

Reference text:
Since the module is primarily offered for the Master's programme Biology it has to be offered as
a blocked course. Please contact us if you are interested in the module but have problems with
interfering other courses.

PLEASE NOTE:
We strongly recommend to take either psy170, psy270, psy276, psy280, or psy220 to gain
methodological competencies (EEG, fMRI, TBS, HCI) that are needed for most practical projects
and Master's theses!

You can take either psy270 or psy276 due to overlapping content.

- Authorized examiners
  - Riklef Weerda

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology, 3rd semester or higher.

Skills to be acquired in this module:

Goals of this module:
This module offers a concise introduction to the basic principles of functional magnetic resonance imaging (fMRI). Students will gain essential knowledge about experimental design, data collection and analysis. Special emphasis will be laid on the statistical background of fMRI data analysis and a hands-on introduction to SPM and FSL, two widely-used and free software packages for fMRI data analysis and results visualisation.

Competencies:
- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Experimental methods
- Statistics & scientific programming
- Data presentation & discussion
- Independent research
- Scientific literature
- Ethics / good scientific practice / professional behaviour
- Critical & analytical thinking
- Group work

Module contents:

- Methodological basics of functional magnetic resonance imaging (fMRI)
- Basic principles of fMRI experimental design and data collection
- Statistical background of fMRI data analysis
- Hands-on training in fMRI data analysis and results visualisation with SPM and FSL

Reader's advisory:

psy280 - Transcranial Brain Stimulation

Module label: Transcranial Brain Stimulation
Module code: psy280
Credit points: 6.0 KP
Workload: 180 h
Used in course of study: Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person
Module responsibility
  • Christoph Siegfried Herrmann

Authorized examiners
  • Christoph Siegfried Herrmann
  • Daniel Strüber

Entry requirements
Enrolment in Master’s programme Neurocognitive Psychology.

Skills to be acquired in this module

Goals of module:
Students will gain theoretical and practical knowledge on various non-invasive brain stimulation techniques.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
+ statistics & scientific programming
+ scientific literature
+ ethics / good scientific practice / professional behaviour

Module contents

In this module, we will introduce the theoretical concepts, neurophysiological underpinnings and neurocognitive as well as clinical applications of various non-invasive brain stimulation techniques such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), and transcranial random noise stimulation (tRNS). A focus will be tACS, because it is especially suited to modulate brain oscillations which have been shown to correlate with cognitive processes.

Part 1: Introduction to transcranial brain stimulation (lecture): summer
  • Historical overview of brain stimulation
  • Different techniques (TMS, tDCS, tACS, tRNS)
  • Physiological mechanisms (entrainment, after-effects etc.)
  • The use of transcranial brain stimulation in cognitive neuroscience - Experimental parameters (intensity, electrode montage, etc.)
  • Pros and cons of TMS vs. tACS
  • Technical aspects (artefact correction, modelling current flow, etc.)
  • Safety issues
  • Ethical considerations of brain stimulation

Part 2: Effects of tACS on physiology and cognition (seminar): summer
  • Physiology of tACS (on-line and after-effects)
  • Modulating cognitive functions (e.g. memory, attention, and perception)
  • Clinical applications of tACS
  • Hands-on experience in the lab

Skills to be acquired in this module

Goals of module:
- Students will acquire scientific programming skills as well as specific knowledge of computational methods in neuroscience and cognition. They will learn to judge the appropriateness and complexity of computational problems and solutions.

Competencies:
- Neuropsychological / neurophysiological knowledge
- Experimental methods
- Statistics & scientific programming
- Critical & analytical thinking
- Knowledge transfer
- Group work

Module contents

Part 1: Introduction to scientific programming I (theoretical-practical seminar)
- Basic data types and structures
- Flow control (conditions, loops, errors)
- Testing and debugging
- Functions

Part 2: Introduction to scientific programming II (theoretical-practical seminar)
- Classes and objects
- Parallel processing
- Frequency analysis methods
- EEG processing

Part 3: Scientific programming I (exercise)
- Implementation of examples from part 1

Part 4: Scientific programming II (exercise)
- Implementation of examples from part 2

Reader's advisory

psy250 - Internship

Module label: Internship
Module code: psy250
Credit points: 15.0 KP
Workload: 450 h
Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
- Module responsibility: Cornelia Kranczioch-Debener
- Authorized examiners: Cornelia Kranczioch-Debener

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:
Goals of module:
Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.

Competencies:
++ expert neuropsychological/neurophysiological knowledge
+ interdisciplinary knowledge & thinking
+ experimental methods
++ ethics / good scientific practice / professional behavior
++ knowledge transfer
+ project & time management

Module contents:
The student will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

Reader's advisory:

Information on internships and necessary forms: https://uol.de/en/psychology/master/course-overview/

Languages of instruction:
English, German

Duration (semesters):
1 Semester

Module frequency:
irregular

Module capacity:
unlimited

Reference text:
The internship lasts 450 hours (12 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part. Your supervisor must be a psychologist.

Please note that details are regulated in the exam regulations.
A blank internship certificate and the report form can be found on the programme website.
To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kranczioch.

Modullevel:
MM (Mastermodul / Master module)

Modulart:

0.00

Frequency:
SuSe and WiSe

Workload attendance:
0 h /
450 h attendance at internship institution
psy120 - Psychological diagnostics

Module label: Psychological diagnostics
Module code: psy120
Credit points: 9.0 KP
Workload: 270 h

Used in course of study:
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
Module responsibility:
- Andrea Hildebrandt
- Andreas Hellmann
Authorized examiners:
- Andrea Hildebrandt
- Andreas Hellmann
Module counseling:
- Stefan Debener

Entry requirements:
Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:

Goals of module:
Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases (“case conceptualization”), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:
- neuropsychological / neurophysiological knowledge
- interdisciplinary knowledge & thinking
- ethics / good scientific practice / professional behavior
- critical & analytical thinking

Module contents:

Part 1: Introduction to Psychological Assessment (lecture)
- Psychological assessment as a decision process – descriptive and prescriptive models
- Theories of reliability (classical and modern approaches)
- Theories of validity (classical and modern approaches)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Psychometrics to single cases
- Summarizing results and writing reports

Part 2: Psychological Testing (seminar)
- Psychometric bases of tests and questionnaires
- Types of tests and questionnaires
- Challenges in psychological testing (for example faking good vs. bad)
- Examples of published tests and questionnaires
- Exercising test applications, scoring and result interpretations

Part 3: Assessment in Clinical Neuropsychology (seminar)
- specific knowledge
- exercises in testing / practising tests

Reader's advisory:
Will be specified in the courses.

Credit points: 9.0 KP
Workload: 270 h
Used in course of study: Master's Programme Neurocognitive Psychology (Master) > Mastermodule

Contact person:
- Module responsibility
  - Stefan Debener
- Authorized examiners
  - Stefan Debener

Entry requirements: Enrolment in Master's programme Neurocognitive Psychology.

Skills to be acquired in this module:
Goals of module:
Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 4), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3, 4).

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ experimental methods
+ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
+ scientific communication skills

Module contents:
Part 1: Introduction to Clinical Neuropsychology (lecture)
- Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
- Higher functions (learning & memory, language, emotion, spatial behavior attention)
- Plasticity and disorders (development, learning and reading disabilities, recovery)

Part 2: Cognitive Neurorehabilitation (seminar)
- Behavioural and neuropsychological approaches
- Neurofeedback in neurorehabilitation and ADHD
- Memory rehabilitation
- Effects of physical activity on cognition
- Motor recovery

Part 3: Research Colloquium Clinical and Experimental Neuropsychology (colloquium)
- Presentations covering recent advances in the field of Experimental and Clinical Neuropsychology

Part 4: Topics in Clinical Neuropsychology (seminar; taught partly in German)
- Clinical neuroanatomy
- Neurodegenerative diseases
- Dementia

Reader's advisory

The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules.

A list of approved courses/modules can be found on our website.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module).

Students whose first language is not German, may take German classes.

We recommend taking modules/courses that strengthen your own professional profile.

PLEASE NOTE:  
• If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website)  
• Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.  
• It is your responsibility to ask the teacher whether you can take part.

**Modullevel**
MM (Mastermodul / Master module)

**Modulart**
Pflicht / Mandatory

**Lern-/Lehrform / Type of program**
Lectures and seminars (depends on the chosen modules)

**Vorkenntnisse / Previous knowledge**

**Examination**
Time of examination

**Final exam of module**
If grades are earned in the minor, those are counted as pass/fail. Certificates for grades can be separately requested from the examination office.

**Course type**
Course or seminar
(Please refer to the module description for information on the courses you can have counted towards psy140 Minor.)

**Used in course of study**
- Master’s Programme Neurocognitive Psychology (Master) > Abschlussmodul

**Contact person**
- Authorized examiners
  - Arkan Al-Zubaidi
  - Martin Georg Bleichner
  - Stefan Debenner
  - Carsten Gießing
  - Andreas Hellmann
  - Christoph Siegfried Herrmann
  - Andrea Hildebrandt
  - Helmut Hildebrandt
  - Florian Kasten
  - Cornelia Kranczioch-Debener
  - Xinyang Liu
  - Josef Meekes
  - Bojana Mirkovic
  - Jalenur Özuyurt
  - Jochem Rieger
  - Stephanie Rosemann
  - Heiko Stecher
  - Daniel Strüber
  - Christiane Margarete Thiel
  - Anirudh Unni

**Entry requirements**
- Enrolment in Master’s programme Neurocognitive Psychology.
- Completion of at least 60 credit points in other modules including module psy241 or psy240 (Computation in Neuroscience).
- Assignment of a topic by thesis supervisor and official application with the examination office.

**Skills to be acquired in this module**

**Goals of module:**
Students will demonstrate that they are able to perform a psychological experiment according to scientific standards. In addition, they will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

**Competencies:**
- ++ experimental methods
- + statistics & scientific programming
- + data presentation & discussion
- ++ independent research
- + scientific literature
- ++ scientific English / writing
- + ethics / good scientific practice / professional behavior
- + critical & analytical thinking
- + scientific communication skills
- + knowledge transfer
- ++ project & time management

**Module contents**

**Part 1: Master’s thesis**
The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.

**Part 2: Master’s colloquium**
The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
### Reader's advisory
