neu140 - Neurophysiology

Module label | Neurophysiology
Module code | neu140
Credit points | 9.0 KP
Workload | 270 h
Used in course of study | Master's Programme Neuroscience (Master) > Background Modules

Contact person
- Module responsibility
  - Martin Greschner
- Module counseling
  - Karin Dedek
  - Jutta Kretzberg

Entry requirements | attendance in pre-meeting

Skills to be acquired in this module
- Neurosci. knowlg. + Expl. methods Independent research + Scient. literature + Social skills
- Interdiscipl. knowlg. + Matha/Stats/Progr. + Data present./disc. + Scientific English + Ethics
- Theory: Improved theoretical and methodological knowledge in neurobiology. Discussion of scientific work and presentation of own results.
- Practice: Performing electrophysiological experiments. Gaining modern methodological skills.

Module contents
- Lecture: first week, 5*4 h introduction to current neurophysiology.
- Seminar: weeks 2-4, each 4 h discussion of background literature and results of own experiments.
- Lab course: weeks 2-4, each 25 h electrophysiological experiments with introduction to at least two of the techniques extracellular recording / intracellular recording / patch clamp

Reader's advisory | Background and seminar literature will be available in Stud.IP

neu170 - Molecular Genetics and Cell Biology

Module label: Molecular Genetics and Cell Biology
Module code: neu170
Credit points: 15.0 KP
Workload: 450 h
Used in course of study: Master's Programme Neuroscience (Master) > Background Modules

Contact person
Module responsibility
  - John Neidhardt
Module counseling
  - Karl-Wilhelm Koch
  - Kathrin Thiedeck

Entry requirements
Skills to be acquired in this module
- Neurosci. knowlg.
- Expt. methods
- Independent research
- Scient. literature
- Social skills
- Interdiscipl. knowlg.
- Maths/Stats/Progr.
- Data present./disc.
- Scientific English
- Ethics

Students interested in molecular genetics, cell biology, molecular biology, and neurobiology will achieve the knowledge after completion of the course:

- Genetic basis of diseases, inheritance patterns of diseases and gene therapeutic approaches
- Cell nucleus and genomic DNA, Nucleic acid structure and function
- Signaling and Cancer
- Gene expression
- RNA Processing
- Translation
- structures of proteins and protein functions
- Membranes and membran proteins
- Energie metabolism in the cell
- sequencing techniques and knowledge of several other selected lab techniques
- Basic knowledge of how to perform research projects.

Module contents
Subjects of the lecture and seminar:

- Storing and processing of genetic information
- mutation analysis
- genetic high throughput techniques
- structure and function of proteins/membranes, cytoskeleton, meta-bolic signaling, molecular basis of neurodegenerative diseases.

Exercises: Learning current methods of human genetics, cellular and molecular neurobiology; introduction to cell cultivation techniques.

- DNA extraction and agarose gel analysis
- Sanger sequencing and sequence analysis
- PCR-based techniques
- bioinformatic analysis of high throughput data
- cell culture
- gene therapy of dominant diseases

Reader's advisory
Several selected scientific papers for the seminar (selection may vary)
Textbooks of Molecular Cell Biology; Alberts, Molecular biology of the cell

### Entry requirements

Skills to be acquired in this module

- Neurosci. knowlg. Expt. methods Independent research + Scient. literature + Social skills  
  ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English + Ethics

Upon successful completion of this course, students will:

- Know fundamental principles of molecular mechanisms of signal processing in cells
- Know the properties and functional roles of proteins involved in signaling pathways
- Have a basic understanding of structure-function relationships of receptor molecules (e.g. G-protein-coupled receptors) and their down-stream targets
- Know the main hypotheses and their experimental confirmation in selected signal transduction pathways
- Are able to discuss and present current concepts and knowledge of cellular signaling
- Learn by selected experiments, how to study experimentally protein function in signaling
- Are able to assess experimentally prepared data sets and have a good command of how to present them scientifically
- Have a basic knowledge how to plan and perform a sequential set of experiments in molecular life sciences
- Have a basic knowledge how to operate and use scientific equipment like spectrophotometer, fluorescence spectrophotometer, clean benches in cell culture and chromatographic systems (HPLC)

### Module contents

Lecture on the molecular fundamentals of cellular signal processes

Lecture topics:

- Introduction to the concept of signal transduction
- G protein-coupled receptors
- G proteins and effector molecules
- Biochemical properties of secondary messenger molecules
- Down-stream targets of secondary messengers and physiological responses
- Calcium and signaling networks
- Nitric Oxide and nitric oxide synthases
- Tyrosine-Kinase-receptors
- Signaling cascades of monomeric G proteins
- Molecular regulation of the cell cycle
- Biochemical aspects of sensory cells, their receptors and signaling pathways

Seminar:

Signal transduction

Students prepare presentations and discussions on current reviews written by leading experts in the fields; topics include: structural basis of G-protein coupled receptors, G proteins, adenylyl cyclases, cyclic nucleotide research, calcium signaling, signal transduction in vision, ion channel function, nitric oxide synthase function.

Exercises:

Students perform experiments on cellular signal transduction and enzymology; they learn to express proteins in heterologous cell systems; they learn how to purify proteins and characterize them in subsequent assay systems.

### Reader's advisory

Current reviews on topics of signal transduction as preparation for the presentation in the Seminar; list of reviews will be adjusted every year; Textbooks of cell biology and biochemistry; Alberts et al., Molecular Biology of the Cell, 5th edition or later; Stryer, Biochemistry, 7th edition or later; these textbooks are updated almost every 3 or 4 years. Current literature on topics of signal transduction (as announced in the preparatory meeting).

Entry requirements:
Fundamentals of Neurobiology, Behavioural Biology, Evolution, Ecology

Skills to be acquired in this module:
++ Neurosci. knowlg. + Expt. methods + Independent research + Sient. literature + Social skills
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students:
- know the fundamentals of behavioural ecology and neuroethology
- are able to present and critically assess scientific data and approaches

Module contents:
The lecture "Neuroethology" provides an introduction to the mechanisms underlying the behaviour of animals.
Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning,
orientation and navigation.
The lecture "Behavioural ecology" provides an introduction to topics such as predator-prey interactions, optimal
food utilization, spatial and temporal distribution of animals, social
relations and group formation, mating systems and reproductive strategies, sexual selection, investment of
parents in offspring, and communication.
In the seminar "Current issues of Ethology", current original literature relating to behavioural biology is reported
and discussed.

- Christiane Margarete Thiel
Module counseling
- Carsten Gießing

Entry requirements:
Skills to be acquired in this module:
- ++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills
- ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of neurotransmission
- know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions
- understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease
- know the principles of drug treatment for psychiatric disorders
- have in-depth knowledge in selected areas of these topics
- are able to understand, explain and critically assess neuroscientific approaches in animals and humans
- are able to understand and critically assess published work in the area of cognitive neuroscience

Module contents:
The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics:
- History of cognitive neuroscience
- Methods of cognitive neuroscience
- Attention
- Learning
- Emotion
- Language
- Executive functions.
The supervised excercises either deepens that knowledge by excercises or discussions of recent papers/ talks on the respective topic covered during that week.
The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics:
- Introduction to Terms and Definitions in Drug Research
- Dopaminergic and Noradrenergic System
- Cholinergic and Serotonergic System
- GABAergic and Glutamatergic System
- Addiction
- Depression
- Schizophrenia
- Anxiety
- Alzheimer's Disease

- Independent research  
- Scient. literature  
- Social skills  
- Interdiscipl. knowlg.  
- Maths/Stats/Progr.  
- Data present./disc.  
- Scientific English  
- Ethics  
- Upon successful completion of this course, students
  - have acquired good programming skills (in Matlab)  
  - are able to implement and apply algorithms  
  - have learned to handle scientific data independently  
  - have acquired theoretical and practical knowledge of advanced data analysis techniques  
  - know about computational model approaches on different levels of abstraction  
  - know how to perform model simulations for single cells and small neuronal networks  
  - can interpret simulation results in a neuroscientific context

**Module contents**
- This course consists of four weeks with different topics, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab). Portfolio tasks, mainly interpretation of programming results are given every day.
- **Week 1:** Background and Matlab preparation week  
  - practice of programming principles (functions, scripts, if, loops, structures, cell arrays)  
  - revision of neuroscience backgrounds (neuron, membrane, spike)
- **Week 2:** Spike train analysis  
  - response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification
- **Week 3:** Neuron models  
  - Conductance-based single cell models using differential equations (passive membrane equation, integrate and fire, Hodgkin Huxley, alpha synapses)
- **Week 4:** Network models  
  - small networks (lateral inhibition, central pattern generator)  
  - larger networks (integrate and fire networks, rate models, inhibition-excitation balance, learning)

**Reader's advisory**
- Dayan / Abbott: Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems. MIT Press (More text books will be suggested prior to the course).

neu270 - Neurocognition & Psychophysics

Module label: Neurocognition & Psychophysics
Module code: neu270
Credit points: 15.0 KP
Workload: 450 h
Used in course of study: Master's Programme Neuroscience (Master) > Background Modules

Contact person
Module responsibility
- Georg Martin Klump
Module counseling
- Christiane Margarete Thiel
- Ulrike Langemann
- Carsten Gießing

Entry requirements
Skills to be acquired in this module
Neurosci. knowlg. Expt. methods + Independent research + Scient. literature + Social skills
Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics
The aim of the module is the study of different aspects of psychophysics or neurocognition. Students participate in ongoing projects and gain a first insight into topical research.

Module contents
Students have the choice of two basic streams:
Stream 1: “Neurocognition” comprises (i) an exercise “Introduction to MATLAB” [2 SWS], (ii) a lecture “Functional MRI data analysis” [2 SWS], and (3) a practical course [5 SWS] and a seminar “Experiments on Neurocognition” [1 SWS] including aspects of planning, performance and analysis of functional neuro-imaging studies using MATLAB based software.
Stream 2 "Psychophysics of Hearing" comprises (i) exercise "Introduction to MATLAB", (ii) lecture and seminar “The sense of hearing”, and (iii) a laboratory project in which psychoacoustical experiments into the function of the auditory system are performed.

| Module contents               | This course consists of six weeks with different topics, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab). Portfolio tasks, mainly interpretation of programming results are given every day. |
|                               | Weeks 1 and 2: Spike train analysis                         |
|                               | response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification |
|                               | Weeks 3 and 4: Neuron models                                |
|                               | Conductance-based single cell models using differential equations (passive membrane equation, integrate and fire, Hodgkin Huxley, alpha synapses) |
|                               | Weeks 5 and 6: Network models                               |
|                               | small networks (lateral inhibition, central pattern generator) |
|                               | larger networks (Integrate and fire networks, rate models, inhibition-excitation balance, learning) |

| Reader's advisory             | Skripts for each course day will be provided prior to / during the course |
|                               | Copies of scientific articles for the seminar will be provided prior to the course |

Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

Module contents
The modul comprises (i) a lecture "Functional MRI data analysis" [2 SWS], and (ii) a practical course [5 SWS] and (iii) a seminar "Experiments on Neurocognition" [1 SWS] including aspects of planning, performance and analysis of functional neuro-imaging studies using MATLAB based software.

This module offers a concise introduction to the basic principles of functional magnetic resonance imaging (fMRI). Students will gain essential knowledge about experimental design, data collection and analysis. Special emphasis will be laid on the statistical background of fMRI data analysis and a hands-on introduction to SPM and FSL, two widely-used and free software packages for fMRI data analysis and results visualisation.

Module contents:
1. Methodological basics of functional magnetic resonance imaging (fMRI)
2. Basic principles of fMRI experimental design and data collection
3. Statistical background of fMRI data analysis
4. Hands-on training in fMRI data analysis and results visualisation with SPM and FSL

Students will learn the basics about performing a psychoacoustic experiment. Based on an experiment in which they study their own hearing, they will learn how to conduct a behavioural study in hearing and analyze the data. In addition, they will be be provided with an overview of the mechanisms of auditory perception.

Module contents:
The module comprises (i) a seminar "Hearing" [2 SWS] (ii) an exercise "Fundamentals in psychoacoustic data analysis" [1 SWS], and a (iii) practical course [7 SWS] including aspects of planning and conducting psychoacoustic experiments.

### Used in course of study
- Master's Programme Neuroscience (Master) > Background Modules

### Contact person
- Module responsibility
  - Jörn Anemüller
- Authorized examiners
  - Jörn Anemüller

### Entry requirements
Recommended in semester: 3 (with Matlab prereq.: 1)

### Skills to be acquired in this module
- ++ Neurosci. knowlg.
- + Independent research
- + Scient. Literature
- ++ Interdiscipl. knowlg.
- ++ Maths/Stats/Progr.
- + Data present./disc.

Students will learn to recognize the dynamics in neuronal networks as the result of an interplay of physical, chemical and biological processes. Overview over major physical measurement procedures for the quantification of structure and function in neuronal systems. Using the language of mathematics as a fundamental tool for the description of underlying biophysical processes with stochastics, linear algebra, differential equations. Information as represented on different length- and timescales: From microscopic processes to macroscopic functional models. Learning and adaptation as adjustment of a biophysical system to its environment.

### Module contents
- Biophysics of synaptic and neuronal transmission
- Single neuron models: Hodgkin Huxley model, integrate and fire model, firing rate model
- Biophysics of sensory systems in the auditory, visual and mechano-sensory modality
- Description of neuronal dynamics: Theory of dynamical systems, from microscopic to macroscopic activity - Principles of neuronal activity measurements: from single-cell recordings to EEG, MEG and MRI
- Functional description of small neuronal networks: Receptive fields and their description with linear and non-linear models - The neuronal code: Spikes, spike trains, population coding, time- vs. rate-code - Decoding neuronal activity and its applications
- Simulation of artificial neural networks as a functional model, Hopfield network, Boltzmann machine, Perceptron and deep networks - Informationtheoretic approaches, stimulus statistics, entropy, mutual information
- Learning and plasticity, conditioning and reinforcement learning, Hebbian learning, long-term potentiation and long-term depression

### Reader's advisory
- Chow, Gutkin, Hansel, Meunier, Dalibard (Eds.): Methods and Models in Neurophysics (2003)
- Galizia, Lledo (Eds.): Neurosciences, from molecule to behauvior (2013)
- Gerstner, Kistler, Naud, Paninski: Neuronal Dynamics - From single neurons to networks and models of Cognition (2014)

**Skills to be acquired in this module**
- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- interdisciplinary thinking
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- data presentation and discussion in German and English (written and spoken)
- teamwork
- ethics and professional behaviour
- project and time management

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

**Module contents**
- Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.
- Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.
- Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.
- Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

Entry requirements
Skills to be acquired in this module
Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

skills:
++ deepened biological expertise
+ deepened knowledge of biological working methods
++ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ ability to perform independent biological research
+ teamwork

Module contents
Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion.

Lecture topics:
- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Limb Development
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

- Independent research
- ++ Scient. Literature
- Social skills
- Maths/Stats/Progr.
- ++ Data present./disc.
- Scientific English
- Ethics

Upon successful completion of this course, students:
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

Module contents:
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

Reader's advisory:
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

Upon successful completion of this course, students:
- have knowledge on invertebrate neuronal systems in comparison to vertebrate systems
- have discussed an overview of experimental and theoretical methods of invertebrate neuroscience
- have acquired first practical skills in intracellular recordings from invertebrate neurons
- have acquired basic skills in data analysis
- have acquired an intuitive understanding of membrane potential and action potential generation based on computer simulations

Module contents:
The background module Neurophysiology consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation. The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods
In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments

Reader's advisory:
Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP
Background and seminar literature will be available in Stud.IP

Entry requirements:

Skills to be acquired in this module:
Upon successful completion of this course, students
- have knowledge on some examples of invertebrate neuronal system
- have knowledge on neural coding and corresponding data analysis techniques
- have acquired skills in data analysis
- have practiced to generate a scientific hypothesis and choose suitable experimental or modeling methods
- are able to critically evaluate and discuss experimental results

+ Neurosci. knowlg.
++ Expt. Methods
+ Independent research
+ Scient. Literature
+ Social Skills
++ Maths/Stats/Progr.
+ Data present./disc.
+ Scientific English
+ Ethics

Module contents:
This module builds on the knowledge and methods acquired in the module neu340 Invertebrate Neuroscience.
In the seminar, the knowledge on invertebrate systems and neural coding in general is deepened based on scientific literature.
In the practical exercise of the module, students can choose one topic from a list of different research questions on computation in the leech nervous system (e.g. comparison of different cell types, electrical and chemical synaptic connections, exact measurement of spike threshold, phase locking). Small groups (2-3) of students plan, perform, and analyze experiments (intracellular recordings) or model simulations (model framework will be provided or can be self-written based on module neu241 computational neuroscience - Introduction) to tackle their topic.
The portfolio consists of assignments covering the planning, analysis, interpretation and presentation of the results with feedback given during the course on each project stage.

Reader's advisory:
Course scripts and mandatory scientific literature (3 articles) discussed in the seminar will be available in Stud.IP
Background and seminar literature will be available in Stud.IP

  - John Neidhardt
  - Karl-Wilhelm Koch
  - Anna-Maria Hartmann
  - Martin Greschner
  - Georg Martin Klump
  - Marta Owczarek-Lipska

Entry requirements:
Recommended in combination with “Research Techniques in Neuroscience”

Skills to be acquired in this module:
Upon successful completion of this course, students have acquired basic knowledge of fundamental principles of neurobiology. The aim of this background module is to provide a solid biological knowledge base required for studying advanced neuroscientific topics. It is designed in particular, but not exclusively, for students joining the local M.Sc. Neuroscience program from previous study paths with little (neuro)biological background.

Skills:
- ++ Neurosci. knowlg.
- + Scient. Literature
- + Social skills
- + Interdiscipl. knowlg.
- + Scientific English

Module contents:
The background module consists of a lecture series and an associated seminar.
The following topics are covered:
- Biochemistry
- Genetics
- Electrophysiology
- Cell biology
- Systems Neuroscience

Reader's advisory:
Neuroscience, newest edition; Purves; Sinauer Associates
Stryer Biochemistry and Alberts et al. Molecular Biology of the Cell, several editions
Molecular Biology of the Gene, Watson (Pearson Verlag)

Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students

• have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)

• have basic knowledge of the large range of techniques used in auditory research

• are able to read and critically report to others on an original research paper in auditory neuroscience

• are able to research and review a specific topic in auditory neuroscience

+ Neurosci. knowlg. Expt. methods Independent research Scient. literature + Social skills
+ Interdiscipl. knowlg. Maths/Stats/Progr. Data present./disc. + Scientific English + Ethics

Introduction to independent, experimental research in auditory sensory physiology. May serve as preparation for a Master thesis.

- Upon successful completion of this course, students
  - have profound knowledge on auditory sensory processing, including cochlear transduction mechanisms, central auditory processing and auditory psychophysics
  - have basic knowledge of the large range of techniques used in auditory research
  - are able to read and critically report to others on an original research paper in auditory neuroscience
  - have in-depth knowledge on a specific research question in auditory neuroscience
  - are able to discuss current hypotheses and controversies regarding their research question
  - are able to perform experiments addressing their research topic and can describe the principles and the pros and cons of the experimental technique used
  - are able to critically evaluate and discuss experimental results

**Module contents**

One week introductory block course "Fundamentals of Auditory Physiology", comprised of a lecture series and matching seminar that emphasizes discussion.

**Topics:**
- Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission
- Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions
- Auditory nerve: phase locking, rate coding. Excitation patterns
- Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations
- Sound localisation in birds and mammals
- Central auditory processing: imaging techniques, auditory streams, cortex, primates
- Relation between psychophysics and neurophysiology

The introductory course is followed by 6 weeks of small-group laboratory-based projects, participating in the supervisor's ongoing research. This includes experimental work, data analysis, literature study, participation in the group seminar and in a poster presentation of concurrent Research Modules.

There are three options for the lab projects:
- **Option 1:** Cochlea and auditory brainstem (Köppl)
- **Option 2:** Auditory cortex (Hildebrandt)
- **Option 3:** Central auditory mechanisms (Klump)

**Reader's advisory**

About 20 selected original papers (selection varies)

**Links**

**Language of instruction**

- Social skills  
- Interdiscipl. knowlg.  
- Maths/Stats/Progr.  
- Data present./disc.  
- Scientific English  
- Ethics  
- During the module the students acquire advanced theoretical knowledge of the molecular and cellular characteristics of retinal circuits and physiology.  
- Students learn to plan and perform a research project independently (includes: literature research and usage of data banks (PUBMED, Gene Bank, Expasy etc.)  
- Students are introduced to scientific writing / have to write a scientific report.  
- Students acquire advanced skills in data analysis (including statistics, computational neuroscience, image analysis)  
- The module can serve the purpose of preparing for a Master's thesis.  
**Module contents**  
1. Independent performance of an individual research project in small groups. Dates are individually arranged with the respective supervisor. Available project topics will be presented in the pre-meeting. Methods include:  
   - Option 1: Molecular Neuroscience  
   - Option 2: Neuroanatomy  
   - Option 3: Neurophysiology  
2. Participation in the "Journal club" seminar, including presentation of the project and the results obtained.  
**Reader's advisory**  
- [http://webvision.med.utah.edu/](http://webvision.med.utah.edu/) (H. Holb et al. (2016) The organization of the retina and visual system)  
- 20 to 30 selected original papers on vision research (depending on individual project)

neu470 - Molecular Sensory Neuroscience

Module label: Molecular Sensory Neuroscience
Module code: neu470
Credit points: 15.0 KP
Workload: 450 h

Used in course of study: Master's Programme Neuroscience (Master) > Research Modules

Contact person:
- Module responsibility: Karl-Wilhelm Koch
- Module counseling: Hans Gerd Nothwang, Kathrin Thedieck, John Neidhardt, Anna-Maria Hartmann

Entry requirements:
- Skills to be acquired in this module:
  - + Neurosci. knowlg. Expt. methods
  - + Independent research
  - + Scient. literature
  - + Social skills
  - + Interdiscipl. knowlg. Maths/Stats/Progr.
  - + Data present./disc.
  - + Scientific English
  - + Ethics
  - For students putting emphasis on cell biological, molecular biological, genetic, biochemical and/or neurobiological fields. The module can serve the purpose of preparing for a Master's thesis.
  - Upon successful completion of this course, students have an advanced knowledge in molecular cell biology.
  - have acquired methodological and experimental skills in molecular cell biology.
  - have an advanced knowledge of how to perform research projects.
  - have advanced skills in presenting and discussing scientific data they have obtained, analysed and put in a wider framework of a current scientific topic.

Module contents:
- Theory and practice of topics related to issues in molecular sensory neuroscience; independent treatment of an individual project; acquiring an advanced theoretical knowledge in selected fields of the molecular biology of the cell (points of emphasis: genetics, biochemistry, cell biology; topics depending on working groups).
- There are several options for the lab projects, in the broad categories of:
  1. Protein function in neurosensory signaling (Koch)
  2. Neurosensory genetics (Nothwang)
  3. Metabolic signalling networks (Thedieck)
  4. Human genetics: mutation identification, pathogenic processes and therapy development (Neidhardt)

Reader's advisory:
- Specific literature of the topics indicated above; original papers related to the current research question; will be different for every student and every year.
- Textbooks of Cell Biology, Biochemistry, Genetics:
  - Alberts et al. Molecular Biology of the Cell (5 th Edition or later);
  - Stryer Biochemistry (7th Edition or later);
  - Lehninger Biochemistry (4th Edition or later). These textbooks are updated almost every 3 or 4 years.

Links:

#### Contact person
- Module responsibility
  - Jutta Kretzberg
- Module counseling
  - Georg Martin Klump
  - Henrik Mouritsen
  - Michael Winkhofer

#### Entry requirements
- attendance in pre-meeting, priority is given to students who attended at least one of the background modules listed as "recommended in combination with"

#### Skills to be acquired in this module
- + Neurosci. knowlg. Expt. methods Independent research Scient. literature + Social skills
- + Interdiscipl. knowlg. + Maths/Stats/Progr. Data present./disc. + Scientific English + Ethics

Students perform individual research projects to learn:
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report
- prepare and present a scientific poster

Module can serve as preparation for a Master's thesis.

#### Module contents
- Introductory lecture and seminar (either blocked or parallel to lab work) plus 6 weeks of small-group lab projects, participating in the supervisor's ongoing research, and in the respective group seminar. There are four options for the lab projects:
  - Option 1: Navigation mechanisms in nocturnal bird migration (Mouritsen) comprises (i) lecture "Bird migration", (ii) participation in group seminar, and (iii) a laboratory project "Navigation mechanisms in nocturnal bird migration" (flexible timing); including participation in investigations of navigation mechanisms in migratory birds (project focussing on behavioural biology, molecular biology or neuroanatomy).
  - Option 2: Invertebrate somatosensory system (Kretzberg), includes participation in group seminar, journal club and laboratory project (all flexible timing).
  - Option 3: Central auditory mechanisms (Klump), includes introductory block course "Fundamentals of Auditory Physiology" (one week at start of winter semester), participation in group seminar and a laboratory project (flexible timing).
  - Option 4: Magnetic field perception (Winkhofer), includes participation in group seminar, journal club and laboratory project (all flexible timing).
  - Option 2: Invertebrate somatosensory system (Kretzberg), includes participation in group seminar, journal club and laboratory project (all flexible timing, at some times additional topics are available in the group, e.g. visual behaviour of mice).
  - Option 3: Central auditory mechanisms (Klump), includes introductory block course "Fundamentals of Auditory Physiology" (one week at start of winter semester), participation in group seminar and a laboratory project (flexible timing).

Introduction to experimental research in the field of development and evolution of the auditory system.

Module contents
Two-week introductory course into current research questions and techniques of the field; followed by 5 weeks of small-group lab projects, participating in the supervisor’s ongoing research, and in the group seminar. There are several options for the lab projects, in the broad categories of:
1. Molecular development and evolution of the peripheral auditory system (Sienknecht)
2. Molecular development and evolution of the central auditory system (Nothwang)
3. Comparative studies of the peripheral or central auditory system (Köppl)
4. Regenerative medicine of the auditory system (Löwenheim, Müller)

Reader's advisory

- Data present./disc.
- Scientific English

Students are introduced to independent research in a specific area of neuroscience by a scientifically working group outside of the regular Neuroscience faculty at the University of Oldenburg (usually a university, research institute, clinics or scientifically working company in Germany or abroad).

Students perform individual research projects to learn:
- planning and organization of a research project in a group outside of University of Oldenburg
- formulate a scientific hypothesis
- planning, performing and analyzing experiments and / or simulations
- working with scientific background literature on the specific context of the project
- oral presentation and discussion of backgrounds and results in the lab seminar
- write a scientific report in publication format
- prepare and present a scientific poster

Module contents:
The External Research Module is carried out under the guidance and supervision of an experienced researcher who is not part of the regular Neuroscience faculty at the University of Oldenburg.
It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time.
After completion of the lab work, students will continue to be advised during the writing phase of the project report by the external supervisor and / or by a local Neuroscience faculty member.

Reader's advisory:
Provided by external and / or local supervisor, depending on the project

Links:
Language of instruction: English
Duration (semesters): 1 Semester
Module frequency:
every semester
Module capacity:
unlimited (Module can be taken multiple times, if project options are sufficiently different (decision of the examination board needed)
Supervision of individual projects is limited to 15 ECTS for the same combination of student and supervisor (1 research module + Master thesis OR up to 3 research modules, including external research module)

Reference text:
- all members of the regular Neuroscience faculty at the University of Oldenburg can act as local supervisor, students should contact appropriate supervisors individually
prior to project start, external and local supervisors must fill the learning agreement form
the supervisor at the host institution is invited to submit a short written statement of assessment,
final grading is done by the local supervisor

- participation in a joint poster presentation of concurrent research modules is highly
recommended.

**Module contents**  
The Research Module is carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg. It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time.

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program.

Research questions, methods and approaches differ between individual projects

Please refer to the list of options in Stud.IP and contact potential supervisors directly.

The timing of projects is by individual arrangement with the supervisor. Many, but not all, project options can also be scheduled during semester breaks, and / or as part-time options (lasting more than 7 weeks).

Note that, for some options, priority for admission to the project is given to students who passed a background module offered by the supervisor.

Participation in a poster presentation at the neuroscience career day (in March) is not mandatory but highly recommended.

**Reader's advisory**  
Provided by the supervisor, depending on the project

Entry requirements

Skills to be acquired in this module
- Neurosci. knowlg.
- Social skills
- Interdiscl. knowlg.
- Maths/Stats/Progr.
- Scientific English

Upon successful completion of this course, students
- understand basic programming concepts.
- have good knowledge about the most important aspects of the programming language Matlab.
- are able to use the programming environment for Matlab.
- are able to write their own programs in Matlab.
- know how to use Matlab to specifically analyze neuroscientific data, including:
  - electrophysiogical data (continuous and spike trains)
  - basic image processing
  - basic statistical testing.

Module contents
Lecture topics:
- Basic programming concepts: data types, variables, loops, scripts, functions, linear and object-oriented programming
- Good practice: documenting your own code, back-up and version control
- Introduction to the programming environment Matlab including the documentation
- Introduction to the programming language Matlab
- Efficient programming: memory use
- Working with continuous data: basic time series analysis (i.e. LFP and EEG data)
- Fourier transformation
- Short introduction of spike-extraction and spike-sorting
- Representation and processing of spike train data
- Basic image and image series processing for imaging data (i.e. Ca2+ imaging, fMRI)
- Statistical testing with Matlab
- Plotting and visualization.

During the seminar, we will discuss strategies for analysis and coding for specific relevant examples of neuroscientific data. The examples are prepared and presented by the students. Students will also present some of the work they did during the exercises. If students bring their own data or plan experiments for a research modul or their thesis project, there will be the opportunity to discuss both analysis strategies and possible implementation in Matlab.

Exercise:
- Students will get coding exercises, where they will use the knowledge gained from the lecture.
- The exercises are a mix of short exercises and longer projects.
- The students are encouraged to bring examples of data from experiments they have been involved in or are planning to do.

students learn the use of the software R in application scenarios
students learn to actively "speak" the programming language R
students practice statistical data analysis with R

Module contents
The lecture gives an intuitive introduction into the use of the statistics software R. We start by introducing the basic handling of R and the syntax of its programming language. We use those to obtain the first statistical analyses from R. The next important step is to create informative graphics to represent the statistical results. Finally, we look into programming concepts that allow for more complex statistical analyses.

Entry requirements

keine

Skills to be acquired in this module

+ Scient. Literature
++ Social skills
+ Data present./disc.
++ Ethics

Upon completion of this course, students

- have basic knowledge of non-biological aspects of professional life (e.g., law, management, languages)
- know the basic safety and environmental concerns in bioscientific workplaces
- are able to critically define and discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
- have the ability to communicate scientific concepts, both orally and in writing
- are able to prepare and give a coherent presentation in a team
- have practised to lead a group discussion

Module contents

Lectures introduce the legal framework and the application procedures for experimental work with animals, humans and genetically modified organisms. In supervised exercises, students research the ethical aspects and controversial issues of about 10 particular topics in the biosciences. They take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
- Good scientific practise and fraud
- Neuroenhancement
- Artificial intelligence
- Animal welfare, Animal experiments
- Overfishing, Nature conservation
- State-of-the-art genetic tools and their implications
- Genetically modified organisms, e.g., in food production, chimeras
- Stem cells
- Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

Reader's advisory

Current law and interpretative commentaries, e.g., by the German Research Council (DFG) or the German Ethics Panel
Introductory papers aimed at lay persons, e.g. from "The Scientist" or widely respected newspapers
Problem-based, independent search for relevant scientific literature is an integral part of this module

### Entry requirements

**Skills to be acquired in this module**

- Neurosci. knowlg.
  - + Expl. methods
  - ++ Scient. literature
  - ++ Social skills
- Interdiscipl. knowlg.
  - ++ Data present./disc.
  - + Scientific English
  - ++ Ethics

In this module the participants gain an overview of arguments and experimental strategies in ageing research. We will focus on the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, and genetics. In addition, the main ageing theories will be covered. The participants work throughout the semester in project groups and present their results at a conference at the end of the course. Ethicists and philosophers from Germany and The Netherlands accompany the course, and chair at the conference a session on ethical aspects of ageing research. Under their moderation, the participants derive joint standpoints and policy recommendations.

At the end of this course the participants can

- understand, analyse, and present scientific articles from ageing research
- present the results of their studies and analyses using different presentation techniques
- apply the learned contents in novel contexts (ethics in ageing research)

### Topics

**Major ageing theories**

- arguments and experimental strategies in the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, genetics in ageing research
- application of the learned contents in novel contexts (ethics in ageing research)
- understanding, analysing, and presentation of scientific articles
- presentation of results with different presentation techniques

### Module contents

| Lecture: major ageing theories and methods in ageing research are presented and discussed |
| Exercise: project work |
| 1) Students: Choice of research focus |
| 2) Independent work on the chosen research paper |
| 3) Writing a 1 page thesis paper |
| 4) Presentation in own expert group |
| 5) Expert groups: research strategies, approaches, methods in chosen focus area |
| 6) Development of a group presentation and group poster |
| 7) Presentation at 1 day conference |
| 8) Dutch and German ethics experts present bioethics and lobby work in German and Dutch political gremia |
| 9) The students develop a comparative view on medical ethics in different countries and derive own standpoints and policy recommendations for the ethical assessment of metabolic and ageing research. The project work runs independently in the different expert groups throughout the semester and is organised via StudIP. The students and groups receive regular feedback and guidance in presence meetings. |

The days for presence meetings and final conference are determined with the participants during the first meeting. The students organize their own work in groups according to the jigsaw concept. Their work is structured by a weekly schedule, tasks to be handed in at fixed deadlines across the semester, lectures and presence meetings.

### Reader's advisory

Primary and secondary literature will be provided and introduced at the first meeting

**Recommended textbook(s) or other literature:**

Roger B. McDonald, Biology of aging, Garland Science

Ludger Rensing; Volkhard Rippe

Skills to be acquired in this module
- Upon successful completion of this course, students
  - know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
  - understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
  - have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents and birds)
  - are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
  - have practical skills in handling small rodents and birds
  - have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
  - have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“ for rodents, birds and fish. We aim to obtain accreditation by the Federation of European Laboratory Animal Science Associations (FeLaSa) by mid-2017.

**Module contents**
- Background knowledge on:
  - Legislation, ethics and the 3Rs
  - Scientific integrity
  - Data collection
  - Basic biology of rodents, birds and fish
  - Husbandry, and nutrition of rodents, birds and fish
  - Animal Welfare
  - Health monitoring
  - Pain and distress
  - Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant:
- Handling and external examination of mouse, gerbil, zebra finch, chicken, zebra fish
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

#### Skills to be acquired in this module
- *Neurosci. knowl.*
- **Social skills**
- **Data present./disc.**
- **Scientific English**

Upon completion of this course, students

- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

#### Module contents
Lectures cover

- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

Entry requirements  
Skills to be acquired in this module  
- Social skills  
- Interdiscipl. knowl.  
- Maths/Stats/Progr.  
- Scientific English  

Upon successful completion of this course, students  
- have basic statistical competencies for understanding data  
- understand the main statistical methods and their practical use through application  
- can evaluate statistical methods regarding the qualities and their limits  

Module contents  
- populations and samples; exploratory data analysis through describing statistics  
- elementary probabilities and random variables  
- important discrete and continuous distributions  
- estimating parameters through the method of maximum likelihood  
- confidence intervals and classical significance testing  
- pairs of random variables; distribution and dependence  
- classical regression analysis  
- basic use of the software R to apply those methods

Entry requirements

Skills to be acquired in this module

+ Neurosci. knowlg.
++ Maths/Stats/Progr.
+ Data present./disc.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/.

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.

Module contents

Data types and data structures, control structures, functions, modules, file input/output Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

Upon successful completion of this course, students

• know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
• understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
• have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
• are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
• have practical skills in handling small rodents or birds or fish
• have profound knowledge of anaesthetia, analgesia and basic principles of surgery.
• have practised invasive procedures and euthanasia.

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments” and EU directive D „Persons killing animals”. We aim to obtain accreditation by the Federation of European Laboratory Animal Science Associations (FeLaSa) by 2018.

Entry requirements
Skills to be acquired in this module
- Neurosci. knowlg.
- Independent research
- Scient. Literature
- Social skills
- Interdiscpl. knowlg.
- Data present./disc.
- Scientific English
- Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of neuroscience.

Critical reading of neuroscience literature:
- identify article type and audience
- summarize scientific contents
- identify strengths and weaknesses of methods, conclusions etc.
- put into scientific context
- discuss manuscript style
- discuss social and ethical context and implications of the study

Critical discussion of own studies:
- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

Module contents
The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context can be achieved by different options: - Option 1: Seminar 'Neuroscience Journal Club': All students read and discuss 12 published papers (one each week). Different fields of neuroscience (e.g. molecular, cellular, behavioral, computational) will be covered with one classical and one recent paper each. Papers and questions about each paper will be provided prior to the start of the seminar. Students prepare answers to these questions independently and discuss their answers during the seminar. The module is passed when a student actively participates in the discussion of at least 10 papers. - Option 2: Written report on a neuroscientific topic of the student's choice, based on scientific literature, e.g. in the context of an independent student study group. The report should discuss scientific results in a scientific and a social / ethical context. - Option 3: Active participation in a scientific conference, workshop, summer school etc: Participation in a scientific conference, workshop, summer school etc; lasting a minimum of 3 full days can be credited with 3 ECTS, if the student presents own scientific results (poster, talk) obtained, e.g., in a research module or Master thesis. - Option 4: Participation in at least 20 scientific presentations (e.g. IBU / DfN colloquium, Hanse lecture neuroscience) and submission of a short (1 page) written summary of each talk. - For other individual options (e.g. teaching in neuroscience) ask the module organizer.

Reader's advisory
Option 1 (seminar): List of 12 published papers will be provided prior to the course. All students are required to
read at least 10 of those.
Other options: dependent on the scientific topic

Background neuroscience textbooks, e.g.:
Galizia, Lledo ‘Neuroscience – From Molecule to Behavior’, 2013, Springer
Nicholls et al. ‘From Neuron to Brain’, 5th edition 2012, Sinauer
