

## Modules for Biology

Date 08/08/20

# Background Modules

## bio605 - Molecular Genetics and Cell Biology

<b>Module label</b>	Molecular Genetics and Cell Biology	
<b>Module code</b>	bio605	
<b>Credit points</b>	12.0 KP	
<b>Workload</b>	360 h	
<b>Used in course of study</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Molecular Biomedicine (Master) &gt; Background Modules</li> <li>• Master's Programme Neuroscience (Master) &gt; Background Modules</li> </ul>	
<b>Contact person</b>	<p>Module responsibility</p> <ul style="list-style-type: none"> <li>◦ John Neidhardt</li> </ul> <p>Authorized examiners</p> <ul style="list-style-type: none"> <li>◦ John Neidhardt</li> <li>◦ Karl-Wilhelm Koch</li> <li>◦ Kathrin Thedieck</li> </ul> <p>Module counseling</p> <ul style="list-style-type: none"> <li>◦ Karl-Wilhelm Koch</li> <li>◦ Kathrin Thedieck</li> </ul>	
<b>Entry requirements</b>	BSc (Biologie, Biochemie)	
<b>Skills to be acquired in this module</b>	<p>++ deepened biological expertise          ++ deepened knowledge of biological working methods          + data analysis skills          ++ interdisciplinary thinking          + critical and analytical thinking          + independent searching and knowledge of scientific literature          + data presentation and discussion in German and English (written and spoken)          + teamwork          + ethics and professional behaviour          + project and time management</p> <p>Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology</p>	
<b>Module contents</b>	<p>Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.          Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.          Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.          Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.</p>

Lecture		2.00	WiSe	28 h
Seminar		1.00	WiSe	14 h
Exercises		5.00	WiSe	70 h
<b>Total time of attendance for the module</b>				<b>112 h</b>

## bio655 - Ornithology

<b>Module label</b>	Ornithology
<b>Module code</b>	bio655
<b>Credit points</b>	12.0 KP
<b>Workload</b>	360 h
<b>Used in course of study</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> </ul>
<b>Contact person</b>	<p>Module responsibility</p> <ul style="list-style-type: none"> <li>◦ Franz Bairlein</li> </ul> <p>Authorized examiners</p> <ul style="list-style-type: none"> <li>◦ Georg Martin Klump</li> <li>◦ Sandra Bouwhuis</li> <li>◦ Christine Köppl</li> <li>◦ Ulrike Langemann</li> <li>◦ Henrik Mouritsen</li> <li>◦ Heiko Schmaljohann</li> <li>◦ Franz Bairlein</li> </ul> <p>Module counseling</p> <ul style="list-style-type: none"> <li>◦ Georg Martin Klump</li> <li>◦ Sandra Bouwhuis</li> <li>◦ Christine Köppl</li> <li>◦ Ulrike Langemann</li> <li>◦ Henrik Mouritsen</li> <li>◦ Heiko Schmaljohann</li> <li>◦ Franz Bairlein</li> </ul>
<b>Entry requirements</b>	
<b>Skills to be acquired in this module</b>	<p>The module imparts advanced knowledge on different aspects of ornithology. The students acquire:</p> <ul style="list-style-type: none"> <li>• An extended knowledge of morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds</li> <li>• Knowledge, presentation and discussion of relevant English literature from various fields of ornithology</li> </ul> <p>++ deepened biological expertise  + deepened knowledge of biological working methods  + critical and analytical thinking  + independent searching and knowledge of scientific literature  ++ data presentation and discussion in German and English (written and spoken)</p>
<b>Module contents</b>	<p>The module is composed of the lecture "Ecology and Physiology of Birds", a seminar accompanying the lecture "Current Questions of Ornithology", a seminar "Behavioural Ecology of Birds", and a seminar "Methods in Field Ornithology".</p> <p>Lecture "Ecology and Physiology of Birds":  This lecture consolidates special aspects of systematics, morphology, physiology, migration, orientation, population biology, communication and behavioural ecology in birds.</p> <p>Seminar "Current Questions of Ornithology":  In this seminar, original English publications are presented and discussed which deal with current research results from various fields treated in the lecture. Every student reads a paper on one scientific article and discusses the results of that article with the other participants.</p> <p>Seminar "Behavioural Ecology of Birds" (option 1):  In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.</p> <p>Seminar "Methods in Field Ornithology" (option 2):  The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.</p>

## bio675 - Molecular Ecology

<b>Module label</b>	Molecular Ecology			
<b>Module code</b>	bio675			
<b>Credit points</b>	12.0 KP			
<b>Workload</b>	360 h			
<b>Used in course of study</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Landscape Ecology (Master) &gt; Basismodule</li> </ul>			
<b>Contact person</b>	<p>Module responsibility</p> <ul style="list-style-type: none"> <li>◦ Arne Nolte</li> </ul> <p>Authorized examiners</p> <ul style="list-style-type: none"> <li>◦ Arne Nolte</li> <li>◦ Gabriele Gerlach</li> </ul> <p>Module counseling</p> <ul style="list-style-type: none"> <li>◦ Gabriele Gerlach</li> </ul>			
<b>Entry requirements</b>	<p>B.Sc. (Biologie, Umweltwissenschaften) M.Sc. (Biologie, Marine Umweltwissenschaften, Landschaftsökologie)</p>			
<b>Skills to be acquired in this module</b>	<p>The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.</p> <p>++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + interdisciplinary thinking + critical and analytical thinking + independent searching and knowledge of scientific literature ++ ability to perform independent biological research ++ data presentation and discussion in German and English (written and spoken) + statistics &amp; scientific programming</p>			
<b>Module contents</b>	<p>Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical.</p> <p>Excercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.</p>			
<b>Reader's advisory</b>	will be announced during the course

## bio720 - Marine Biodiversity

<b>Module label</b>	Marine Biodiversity			
<b>Module code</b>	bio720			
<b>Credit points</b>	15.0 KP			
<b>Workload</b>	450 h			
<b>Used in course of study</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> <li>• Master's Programme Biology (Master) &gt; Background Modules</li> </ul>			
<b>Contact person</b>	<p>Module responsibility</p> <ul style="list-style-type: none"> <li>◦ Pedro Miguel Martinez Arbizu</li> </ul> <p>Authorized examiners</p> <ul style="list-style-type: none"> <li>◦ Pedro Miguel Martinez Arbizu</li> <li>◦ Thomas Glatzel</li> </ul> <p>Module counseling</p> <ul style="list-style-type: none"> <li>◦ Thomas Glatzel</li> </ul>			
<b>Entry requirements</b>	BSc (Biology)			
<b>Skills to be acquired in this module</b>	[nop] ++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills ++ interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ ability to perform independent biological research ++ data presentation and discussion in German and English (written and spoken) ++ teamwork + ethics and professional behaviour + project and time management ++ statistics & scientific programming [/nop] Knowledge of fundamentals, topical subjects and methods in Marine Biology and Marine Geology. Studies and critical assessment of the scientific literature.			
<b>Module contents</b>	L: (AW) General Marine Geology E: Biogenic sedimentation, Interaction benthos-sediment; (SS) Plankton of the oceans; (MH) unicellular plankton; (IK) benthos of the North-Sea; (PM) biodiversity in the deep sea and on sea-mountains; (JG) conceptions and hypotheses of marine biodiversity, biodiversity of marine vertebrates; (GG) animal migrations and dispersal behaviour. A lecture comprises the above-mentioned subjects and imparts marine biological theories, research results and methods. In the seminar, research is presented and discussed. In the laboratory course/exercises, subjects are treated in coordination with the contents of the lecture. With the aid of a computer, data are analysed and interpreted statistically.			
<b>Reader's advisory</b>	as announced in the lecture

<b>Entry requirements</b>	none			
<b>Skills to be acquired in this module</b>	<p>+ deepened biological expertise          ++ deepened knowledge of biological working methods          ++ data analysis skills; ++ critical and analytical thinking          + independent searching and knowledge of scientific literature          ++ data presentation and discussion in English (written and spoken)          ++ statistics &amp; scientific programming</p>			
<b>Module contents</b>	<p>Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses. Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.</p>

<b>Entry requirements</b>				
<b>Skills to be acquired in this module</b>	<p>[nop] ++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ ability to perform independent biological research + data presentation and discussion in German and English (written and spoken) ++ project and time management ++ statistics &amp; scientific programming [/nop] The molecule aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).</p>			
<b>Module contents</b>	<p>S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a "mini symposium" subsequent to the field studies. E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication</p>

<b>Entry requirements</b>	
<b>Skills to be acquired in this module</b>	<p>++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills ++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics</p> <p>Upon successful completion of this course, students know the fundamentals of neurotransmission know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease know the principles of drug treatment for psychiatric disorders have in-depth knowledge in selected areas of these topics are able to understand, explain and critically assess neuroscientific approaches in animals and humans are able to understand and critically assess published work in the area of cognitive neuroscience</p>
<b>Module contents</b>	<p>The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: History of cognitive neuroscience Methods of cognitive neuroscience Attention Learning Emotion Language Executive functions. The supervised exercise either deepens that knowledge by exercises or discussions of recent papers/ talks on the respective topic covered during that week. The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: Introduction to Terms and Definitions in Drug Research Dopaminergic and Noradrenergic System Cholinergic and Serotonergic System GABAergic and Glutamatergic System Addiction Depression Schizophrenia Anxiety Alzheimer's Disease</p>

## Research Modules

### bio810 - Independent Research

<b>Module label</b>	Independent Research
<b>Module code</b>	bio810
<b>Credit points</b>	15.0 KP
<b>Workload</b>	450 h
<b>Used in course of study</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Research Modules</li> <li>• Master's Programme Biology (Master) &gt; Research Modules</li> </ul>
<b>Contact person</b>	<p>Module responsibility</p> <ul style="list-style-type: none"> <li>◦ Gerhard Wolfgang Zotz</li> </ul> <p>Authorized examiners</p> <ul style="list-style-type: none"> <li>◦ Gerhard Wolfgang Zotz</li> <li>◦ Lehrende der Biologie</li> </ul>
<b>Entry requirements</b>	<p>External research projects are done on an individual basis. They are supervised by one person from Oldenburg and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See <a href="https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/">https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/</a> (Learning Agreement for External Research Module)</p>
<b>Skills to be acquired in this module</b>	<p>++ deepened biological expertise          ++ deepened knowledge of biological working methods          ++ data analysis skills          ++ critical and analytical thinking          ++ independent searching and knowledge of scientific literature          ++ ability to perform independent biological research          ++ data presentation and discussion in German and English (written and spoken)          + teamwork          ++ project and time management          ++ statistics &amp; scientific programming</p> <p>Students perform individual research projects to learn:</p> <ul style="list-style-type: none"> <li>• planning and organization of a research project in a group outside of University of Oldenburg</li> <li>• formulate a scientific hypothesis</li> <li>• planning, performing and analyzing experiments and / or simulations</li> <li>• working with scientific background literature on the specific context of the project</li> <li>• oral presentation and discussion of backgrounds and results in the lab seminar</li> <li>• write a scientific report in publication format</li> <li>• prepare and present a scientific poster</li> </ul>
<b>Module contents</b>	<p>Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad)</p> <p>The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.</p> <p>Note:</p> <ul style="list-style-type: none"> <li>• all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor, students should contact appropriate supervisors individually</li> <li>• prior to project start, external and local supervisors must fill the learning agreement form</li> <li>• the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor</li> <li>• participation in a joint poster presentation of concurrent research modules is highly recommended.</li> </ul>

<b>Entry requirements</b>				
<b>Skills to be acquired in this module</b>	<p>In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.</p> <p>+ deepened biological expertise          ++ deepened knowledge of biological working methods          ++ data analysis skills          + critical and analytical thinking          ++ independent searching and knowledge of scientific literature          + ability to perform independent biological research          ++ data presentation and discussion in German and English (written and spoken)          + teamwork          + statistics &amp; scientific programming</p>			
<b>Module contents</b>	<p>In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa. In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.</p>

<b>Entry requirements</b>				
<b>Skills to be acquired in this module</b>	+ Social skills + Interdiscipl. knowlg. ++ Maths/Stats/Progr. + Scientific English  students learn the use of the software R in application scenarios  students learn to actively "speak" the programming language R students practice statistical data analysis with R			
<b>Module contents</b>	The lecture gives an intuitive introduction into the use of the statistics software R. We start by introducing the basic handling of R and the syntax of its programming language. We use those to obtain the first statistical analyses from R. The next important step is to create informative graphics to represent the statistical results. Finally, we look into programming concepts that allow for more complex statistical analyses.

<b>Entry requirements</b>	keine			
<b>Skills to be acquired in this module</b>	<p>+ Scient. Literature          ++ Social skills          + Data present./disc.          ++ Ethics</p> <p>Upon completion of this course, students</p> <ul style="list-style-type: none"> <li>• have basic knowledge of non-biological aspects of professional life (e.g., law, management, languages)</li> <li>• know the basic safety and environmental concerns in bioscientific workplaces</li> <li>• are able to critically define and discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation</li> <li>• have the ability to communicate scientific concepts, both orally and in writing</li> <li>• are able to prepare and give a coherent presentation in a team</li> <li>• have practised to lead a group discussion</li> </ul>			
<b>Module contents</b>	<p>Lectures introduce the legal framework and the application procedures for experimental work with animals, humans and genetically modified organisms.          In supervised exercises, students research the ethical aspects and controversial issues of about 10 particular topics in the biosciences. They take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.</p> <p>Example topics:          Good scientific practise and fraud          Neuroenhancement          Artificial intelligence          Animal welfare, Animal experiments          Overfishing, Nature conservation          State-of-the-art genetic tools and their implications          Genetically modified organisms, e.g., in food production, chimeras          Stem cells          Humans as experimental subjects</p> <p>A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks.          A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.</p>			
<b>Reader's advisory</b>	<p>Current law and interpretative commentaries, e.g., by the German Research Council (DFG) or the German Ethics Panel          Introductory papers aimed at lay persons, e.g. from "The Scientist" or widely respected newspapers          Problem-based, independent search for relevant scientific literature is an integral part of this module</p>

**Skills to be acquired in this module**

[/code]+ Neurosci. knowlg.  
+ Expt. methods  
++ Scient. literature  
++ Social skills  
+ Interdiscipl. knowlg.  
++ Data present./disc.  
+ Scientific English  
++ Ethics

In this module the participants gain an overview of arguments and experimental strategies in ageing research. We will focus on the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, and genetics. In addition, the main ageing theories will be covered. The participants work throughout the semester in project groups and present their results at a conference at the end of the course. Ethicists and philosophers from Germany and The Netherlands accompany the course, and chair at the conference a session on ethical aspects of ageing research. Under their moderation, the participants derive joint standpoints and policy recommendations.  
At the end of this course the participants can

understand, analyse, and present scientific articles from ageing research

present the results of their studies and analyses using different presentation techniques  
apply the learned contents in novel contexts (ethics in ageing research)

Topics

Major ageing theories

arguments and experimental strategies in the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, genetics in ageing research  
application of the learned contents in novel contexts (ethics in ageing research)  
understanding, analysing, and presentation of scientific articles  
presentation of results with different presentation techniques

---

**Module contents**

Lecture: major ageing theories and methods in ageing research are presented and discussed  
Exercise: project work  
1) Students: Choice of research focus  
2) Independent work on the chosen research paper  
3) Writing a 1 page thesis paper  
4) Presentation in own expert group  
5) Expert groups: research strategies, approaches, methods in chosen focus area  
6) Development of a group resentation and group poster  
7) Presentation at 1 day conference  
8) Dutch and German ethics experts present bioethics and lobby work in German and Dutch political gremia  
9) The students develop a comparative view on medical ethics in different countries and derive own standpoints and policy recommendations for the ethical assessment of metabolic and ageing research. The project work runs independently in the different expert groups throughout the semester and is organised via StudIP. The students and groups receive regular feedback and guidance in presence meetings.

The days for presence meetings and final conference are determined with the participants during the first meeting. The students organize their own work in groups according to the jigsaw concept. Their work is structured by a weekly schedule, tasks to be handed in at fixed deadlines across the semester, lectures and presence meetings.

---

**Reader's advisory**

Primary and secondary literature will be provided and introduced at the first meeting

<b>Entry requirements</b>				
<b>Skills to be acquired in this module</b>	+ Neurosci. knowlg. ++ Maths/Stats/Progr. + Data present./disc.  The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see <a href="https://www.python.org/">https://www.python.org/</a> .  Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).  Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetic data from various noise models to assess signal-to-noise ratio in instrumental datasets.			
<b>Module contents</b>	Data types and data structures, control structures, functions, modules, file input/output Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...			
<b>Reader's advisory</b>	open access <a href="http://www.swaroopch.com/notes/python/">http://www.swaroopch.com/notes/python/</a> <a href="http://docs.python.org/3/tutorial/index.html">http://docs.python.org/3/tutorial/index.html</a>

## neu790 - Communicating Neuroscience

<b>Module label</b>	Communicating Neuroscience
<b>Module code</b>	neu790
<b>Credit points</b>	3.0 KP
<b>Workload</b>	90 h ( 28 h contact / 62 h individual reading and preparing discussion questions )
<b>Used in course of study</b>	<ul style="list-style-type: none"> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Biology (Master) &gt; Skills Modules</li> <li>• Master's Programme Neuroscience (Master) &gt; Skills Modules</li> </ul>
<b>Contact person</b>	<p>Module responsibility</p> <ul style="list-style-type: none"> <li>◦ Jutta Kretzberg</li> </ul> <p>Authorized examiners</p> <ul style="list-style-type: none"> <li>◦ Jutta Kretzberg</li> <li>◦ Jannis Hildebrandt</li> <li>◦ Christine Köppl</li> </ul>
<b>Entry requirements</b>	
<b>Skills to be acquired in this module</b>	<p>+ Neurosci. knowlg. + Independent research ++ Scient. Literature ++ Social skills + Interdiscipl. knowlg. ++ Data present./disc. + Scientific English ++ Ethics</p> <p>Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of neuroscience.</p> <p>Critical reading of neuroscience literature:</p> <p>identify article type and audience</p> <p>summarize scientific contents identify strengths and weaknesses of methods, conclusions etc. put into scientific context discuss manuscript style discuss social and ethical context and implications of the study</p> <p>Critical discussion of own studies:</p> <p>present own results in a way that is appropriate for the target audience</p> <p>put own studies into the context of scientific literature acquire additional knowledge about a broader field of research</p>
<b>Module contents</b>	<p>The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context can be achieved by different options: - Option 1: Seminar 'Neuroscience Journal Club': All students read and discuss 12 published papers (one each week). Different fields of neuroscience (e.g. molecular, cellular, behavioral, computational) will be covered with one classical and one recent paper each. Papers and questions about each paper will be provided prior to the start of the seminar. Students prepare answers to these questions independently and discuss their answers during the seminar. The module is passed when a student actively participated in the discussion of at least 10 papers. - Option 2: Written report on a neuroscientific topic of the student's choice, based on scientific literature, e.g. in the context of an independent student study group. The report should discuss scientific results in a scientific and a social / ethical context. - Option 3: Active participation in a scientific conference, workshop, summer school etc. Participation in a scientific conference, workshop, summer school etc. lasting a minimum of 3 full days can be credited with 3 ECTS, if the student presents own scientific results (poster, talk) obtained, e.g., in a research module or Master thesis. - Option 4: Participation in at least 20 scientific presentations (e.g. IBU / DfN colloquium, Hanse lecture neuroscience) and submission of a short (1 page) written summary of each talk. - For other individual options (e.g. teaching in neuroscience) ask the module organizer.</p>
<b>Reader's advisory</b>	Option 1 (seminar): List of 12 published papers will be provided prior to the course. All students are required to

read at least 10 of those.  
Other options: dependent on the scientific topic

Background neuroscience textbooks, e.g.:  
Galizia, Lledo 'Neuroscience – From Molecule to Behavior', 2013, Springer  
Nicholls et al. 'From Neuron to Brain', 5th edition 2012, Sinauer  
Kandel et al. 'Principles of Neural Science', 5th Edition 2013, McGraw-Hill Comp.
