**Module responsibility**
- Michael Kleyer
- Vanessa Minden

**Prüfungsberechtigt**
- Alle hier genannten

**Module counselling**
- Cord Peppler-Lisbach
- Robert Biedermann

### Entry requirements

- Basic methods of explorative statistics and adequate application of statistical tests relevant to ecological data.
- To learn, interpret and apply methods of habitat modelling
- To understand the fundamentals of spatial explicit analysis of species-environment relationships as well as the fundamentals of spatial prediction of environmental requirements in species
- To adequately analyse measured and observed spatial data applying methods of spatial statistics and geostatistics, respectively
- To learn and to understand relevant methods of multivariate analysis of vegetation data
- To be able to interpret and to assess the results obtained as well as the relevant literature
- To be able to apply the treated methods independently
- To learn and to improve skills in using the statistics software R

### Module contents

**Part 1: Introduction to statistical analysis of ecological data (NN)**

- Experimental design
- Explorative data analysis
- Distribution tests, data transformation
- Chi² test
- Anova, Kruskal-Wallis test
- t & U test
- Multiple comparisons, post-hoc tests

**Part 2: Habitat modelling and spatial statistics (Biedermann)**

- Linear (OLS) regression
- GLM (logistic regression, Poisson regression)
- Spatial explicit modelling, GIS integration
- Spatial statistics

**Part 3: Multivariate analysis of vegetation ecological data (Peppler-Lisbach)**

- Cluster analysis
- Statistical degrees of fidelity

**Classification:**

- Indirect procedures: PCA, CA, DCA
• Canonical procedures: RDA, CCA

Literaturempfehlungen
Crawley, M.J. (2007): The R Book. 942 S. Wiley & Sons, Chichester. Additional literature will be announced during the course.

- Maaike Bader

**Entry requirements**
Knowledge of phytosociology, zoo-ecology, pedology and ecology, comparable to the corresponding modules of BSc. Environmental Sciences

**Skills to be acquired in this module**
Qualification imparted to students:
Upon successful completion of the module the students will gain:

- a thorough knowledge of environmental conditions and biological mechanisms enabling plant species to survive in landscapes
- a thorough knowledge of the eco-physiology of plants in landscapes
- a thorough knowledge of the environmental conditions and biological mechanisms enabling animals to survive in landscapes

**Ranking/position of the module within the course of studies:**
In the initial phase of the Master programme, this module imparts theories and models of the conditions of survival in plant and animals species as well as of the abiotic/biotic interdependencies in heterogenous landscapes. In combination with other compulsory modules it serves to give students a survey of the special field of Landscape Ecology and to enable them to competently select advanced modules in the following semesters.

**Module contents**
- Ecology of plants in landscapes
- Eco-physiology of plants in landscapes
- Ecology of animals in landscapes

**Literaturempfehlungen**
- Literature will be announced during the course.

**Entry requirements**
Upon successful completion of the module the students will gain:
- advanced skills in analysing a landscape unit
- a thorough knowledge of geological, pedological, hydrological, hydrogeological, and botanical relationships within an ecosystem
- a thorough knowledge of the genesis and properties of Northwest German soils
- a thorough knowledge of hydrological and hydrogeological properties of Northwest Germany
- a fundamental knowledge of national and international soil systematics
- the qualification to ecologically record and assess soils (including humus form)
- the ability to perform soil ecological interpretations

**Module contents**
- Landscape unitSpiekeroog (EX/E)
- Special Pedology (L)
- Special Hydrogeology (L)
- Pedological field work (E)

**Entry requirements**
- Basic knowledge in Geology, Geomorphology, and Botany, comparable to the respective Bachelor modules in Environmental Sciences

**Skills to be acquired in this module**
- Upon successful completion of the module students will gain:
  - Advanced knowledge of the most important marine, semiterrestrial and terrestrial ecosystems on the North Sea coast.
  - Advanced knowledge of erosion and transport processes of unconsolidated sediments as well as their sedimentation in terrestrial, coastal and marine areas.
  - Advanced skills in addressing sediments and in sampling.
  - Knowledge of the most important pollen types of the Northwest European flora, their chemical preparation and analysis of palynological samples as well as application of palynology in Palaeoecology, Palaeoclimatology, and as a dating method.
  - Knowledge of the most important diatoms (pelagic and benthic types) of the North Sea coast, skills in the chemical preparation and analysis of diatom samples as well as in the application of diatom research in Palaeoecology and facies addressing.

**Module contents**
- a) "Coastal biotopes and adjacent regions" - L: Flora and fauna of the most important ecosystems on the North Sea coast (sublittoral, Zostera meadows, salt marshes, woods, mires);
- b) "Clastic sediments – Transport und sedimentation" - L: Petrological cycle, weathering, transport, physical fundamentals of sediment transport, aeolian, fluviatile and marine sediment transport;
- c) "Biological methods of addressing facies – pollen and diatom analysis" - LC: Application of coring techniques in the field, sampling, chemical preparation for pollen and diatom analysis, palynology and spore research of higher plants, mosses and ferns, diatom research, facies research in the coastal region

**Literaturempfehlungen**

**Entry requirements**  
Completed ecology-oriented Bachelor course

**Skills to be acquired in this module**  
With the successful completion of the module the students will gain a general and advanced knowledge of crucial approaches and instruments of nature conservation in Germany and Europe, especially of the implementation of large protected areas (NSG, biosphere reserve, national park etc.), of maintenance/management projects and measures as well as of approaches to their integration into nature conservation and regional development strategies (via agriculture, tourism etc.) in co-operation with national park administrative authorities and other relevant actors. Additionally, the module gives basic skills in developing ecological connectivity systems (example dragonflies) as well as in developing and implementing approaches to ecological planning inside and outside the nature reserves.

**Ranking/position of the module within the course of studies:** The module focuses on problems, methods, results, and analyses relevant to nature conservation and refers to corresponding issues of modules in Bachelor courses as well as of basic modules in Master courses of Landscape Ecology.

**Module contents**  
a) Seminar "Protected areas and regional development": Survey of the most important types of large protected areas in Europe as well as current concepts of integrating the purposes of conservation with the tasks of regional development especially in peripheral rural areas
b) Seminar "Practice of ecological planning": Presentation of relevant instruments used in spatial and regional planning aiming at the particular demands of ecological planning; closer inspection based on appropriate practical examples
    *this seminar takes place in the winter term*
c) Field course "Habitat connectivity": Theory of ecological connectivity including causes and impacts of fragmentation and isolation in nature-near biotopes; investigation of migration and dispersal behaviour in selected dragonfly species of ditch systems
d) Excursion "Protected areas": Presentation of a selected large protected area in Germany or Europe especially considering geographical, floristic, faunistic, historical, agricultural, and nature conservation aspects as well as aspects of landscape and economics

loek220 - Ecology of the Soil-Water-Plant-System

Module label: Ecology of the Soil-Water-Plant-System
Module code: loek220
Credit points: 15.0 KP
Workload: 450 h

Used in course of study: Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester

Ansprechpartner/-in:
- Module responsibility
  - Gudrun Massmann
  - Alle hier genannten
- Module counseling
  - Luise Dorothee Giani
  - Cord Peppler-Lisbach

Entry requirements

Skills to be acquired in this module:
With this module students will gain technical skills and qualifications for sampling, analysing and interpreting data within the soil-water-plant system. Field studies are performed in the context of current research questions. The studies aim at predicting the impacts of environmental changes on fluxes of water and solutes in the landscape at different scales. Students are prepared for advanced research activities. The collected field data are also used for laboratory work within the scope of the present module and further modules, e.g. for modelling purposes.

Upon successful completion of the module students will gain:
- Knowledge of pedological, hydrological and vegetation oriented ecological field inventories
- Advanced skills in the analysis of soil plant and water samples
- Advanced knowledge of ecosystem processes
- Advanced knowledge into current fields of research

Module contents:
- Physico-chemical processes in soils
- Transport of water and substances at the intersection point between soil and plant
- Transport of water and substances in the landscape
- Interdisciplinary analysis of ecosystem processes (field studies, labora

Literaturempfehlungen:
Literature will be announced during the preparatory course and is contingent on the latest developments in the research field.

**Module Label**: Aquatic Ecology  
**Module Code**: lök230  
**Credit Points**: 9.0 KP  
**Workload**: 270 h  
**Used in Course of Study**:  
- Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester  
**Module Responsibility**: Ellen Kiel  
**Module Contents**:  
- The prior goals and themes of this module are:  
  - To learn about important parameter and ecological processes of specific aquatic habitats;  
  - learn about threats and important disturbance factors;  
  - work independently on scientific question;  
  - learn methods and learn how to apply specific methods in field and in the laboratory experiments;  
  - start to development methods on your own;  
  - analyse the field and laboratory data, and apply modern statistical methods;  
  - start critical analysis and discussion of field and laboratory data;  
  - learn to develop mapping and assessment methods;  
  - study principles of typology and models describing selected systems;  
  - learn how to deal with nature conservation conflicts by referring to experimental field and laboratory data.  
**Module Frequency**: Jährlich  
**Module Capacity**: 20  
**Languages of Instruction**: German, English  
**Module Level**: MM (Mastermodul)  
**Modulart**: Wahlpflicht  
**Vorkenntnisse / Previous Knowledge**: V/S/Ü  
**Prüfungsberechtigt**: Ellen Kiel  
**Entry Requirements**:

**Ansprechpartner/-in**
- Michael Kleyer (Module responsibility)
- Alle hier genannten (Prüfungsberechtigt)
- Luise Dorothee Giani (Module counseling)

**Entry requirements**
Upon successful completion of the module students will gain:

- Technical skills in ecological field experiments, determination of plants in the field, phytosociological records, soil inventories, biomass determination and determination of biological characteristics
- Technical skills in laboratory work, statistics
- Skills in mapping plants and animals, application of GIS, spatial statistics
- Advanced knowledge of spatial ecology and the conditions of survival in heterogeneous landscapes as well as knowledge of functional ecology; assessment of academic voids between theory and empiricism
- Skills in independently dealing with ecological literature and information, respectively

**Module contents**
- Practical training in the field and in the laboratory, practical training in statistics
- Functional ecology of communities in spatio-temporally heterogeneous landscapes: Literature analyses
- Functional plant ecology: Biological characteristics related to disturbances and soil resources (laboratory analyses, statistical analysis)

**Literaturempfehlungen**
Literature will be announced during the preparatory course and is contingent on the latest developments in the research field.

Präsenzzeit Modul insgesamt 56 h
The landscape management support plan aims at compensating for any project-related impacts on the environment. The mitigation and compensation plan is the outcome of a planning process which will be trained in this course.

Upon successful completion of the module students will gain:

- Technical skills in mapping plants and animals in landscapes: Records, sorting of records for preparing mapping keys; field mapping.
- Technical skills in landscape management support planning including GIS analysis, evaluation of the compensation of environmental impacts on selected ecosystem compartments, and planning of compensation and mitigation.

Ranking/position of the module within the course of studies:

This module imparts both action-oriented and theoretical knowledge required for landscape management support planning.

Mapping results obtained in the field study are fed into GIS, compensation and mitigation measures are planned, and finally the impacts are balanced by the compensation measures.

Relevant literature will be announced during the preparatory course and is contingent on the latest developments in the research field. Additionally, a script for the exercise will be handed over to the participants.

- Module counceling  
  - Rainer Buchwald  

**Entry requirements**: Completed Bachelor studies with ecological orientation

**Skills to be acquired in this module**: The module qualifies the participants to extend their knowledge acquired in their ecologically oriented Master studies of Landscape Ecology. This comprises advanced knowledge of the flora and vegetation types in Central Europe as well as the acquisition of additional methods in vegetation ecology.

**Module contents**: In the summer term, the module (6 CP) includes a one-week field course in a selected Central European natural landscape focussing on floristic, vegetation ecological, phytosociological (syntaxonomical) aspects as well as on aspects of biocoenology and nature conservation.

**Literature recommendations**

**Links**

**Language of instruction**: German

**Duration (semesters)**: 2 Semester

**Module frequency**: jährlich

**Module capacity**: unlimited

**Reference text**: The field course in this module is also part of the 9CP module lök285 "Special Vegetation Ecology". Therefore, it is not possible to register for the modules lök280 and lök285 simultaneously.

**Module level**: MM (Mastermodul)

**Modulart**: Wahlpflicht

**Vorkenntnisse / Previous knowledge**

**Final exam of module**: Before the end of the module  
**Assignment**: Exercises

**Course type**: Exercises

**SW**: 4.00

                              ○ Michael Wark

Entry requirements           Bachelor studies of Natural Science, Environmental Science or Economics
Skills to be acquired in this module
The module qualifies students to deal with the different forms of bioenergy and their current perspectives. Hereby, they acquire competences in the scientific basal subjects of physics, chemistry, and biology as well as with respect to the energetic, technical, ecological, and economic aspects that have to be considered for a synoptic assessment of different forms of bioenergy.

**Used in course of study**
- Master Landschaftsökologie > Vertiefungsmodule drittes Fachsemester
- Master Sustainability Economics and Management > Ergänzungsmodule

**Ansprechpartner/-in**
- Module responsibility
  - Ingo Mose
- Prüfungsberechtigt
- Alle hier genannten
- Module counseling
  - Ingo Mose

**Entry requirements**
- Good command of English

**Skills to be acquired in this module**
- Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context.
- Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization.

**Module contents**
- **SE/EX Multifunctionality and rural development (3 CP)**
- **V Topical issues of agriculture and agricultural policy (1.5 CP)**
- **SE/EX Sustainable tourism (3 CP)**
- **SE/EX Renewable energy planning (3 CP)**
- **V Colloquium on sustainable spatial development (1.5 CP)**
- **SE Special subject job market: Job market and inequality in Europe (3 CP)** – This course (1.07.211 / FK I) takes place in the summer semester.

  **Multifunctionality and rural development**
  - Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context.

  **Agriculture and agricultural policy**
  - Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers.

  **Sustainable tourism**
  - Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.

  **Renewable energy planning**
  - Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.

  **Colloquium on sustainable spatial development**
  - Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.

  **Special subject job market: Job market and inequality**
  - This course (1.07.211 / FK I) takes place in the summer semester. Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

**Literaturempfehlungen**
- Schmied, D. (ed.): Winning and losing. The changing geography of Europe’s rural areas. Additional literature will be announced in the seminars.

iök321 - Sustainable Spatial Development in Europe

Module label
Sustainable Spatial Development in Europe

Module code
iök321

Credit points
9.0 KP

Workload
270 h

Used in course of study
- Master Landschaftsökologie > Vertiefungsmodul drittes Fachsemester

Ansprechpartner/-in
Module responsibility
- Ingo Mose

Prüfungsberechtigt
- Alle hier genannten

Entry requirements
Good command of English

Skills to be acquired in this module
Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context. Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization.

Module contents
SE/EX Multifunctionality and rural development (3 CP)
V Topical issues of agriculture and agricultural policy (1.5 CP)
SE/EX Sustainable tourism (3 CP)
SE/EX Renewable energy planning (3 CP)
V Colloquium on sustainable spatial development (1.5 CP)
SE Special subject job market: Job market and inequality in Europe (3 CP) – This course (1.07.211 / FK I) takes place in the summer semester.

Multifunctionality and rural development
Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context.

Agriculture and agricultural policy
Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers.

Sustainable tourism
Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.

Renewable energy planning
Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.

Colloquium on sustainable spatial development
Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.

Special subject job market: Job market and inequality
This course (1.07.211 / FK I) takes place in the summer semester.
Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

Literaturempfehlungen
Schmied, D. (ed.): Winning and losing. The changing geography of Europe’s rural areas. Additional literature will be announced in the seminars.

**Präsenzzeit Modul insgesamt** 140 h
### Sustainable Spatial Development in Europe

**Module label:** Sustainable Spatial Development in Europe  
**Module code:** lök322  
**Credit points:** 15.0 KP  
**Workload:** 450 h  
**Used in course of study:** Master Landschaftsökologie > Vertiefungsmodule drittes Fachsemester  
**Ansprechpartner/-in:** Ingo Mose  
**Entry requirements:** Good command of English  
**Skills to be acquired in this module:** Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context. Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization.

**Module contents:**
- **SE/EX Multifunctionality and rural development (3 CP)**
- **V Topical issues of agriculture and agricultural policy (1.5 CP)**
- **SE/EX Sustainable tourism (3 CP)**
- **SE/EX Renewable energy planning (3 CP)**
- **V Colloquium on sustainable spatial development (1.5 CP)**
- **SE Special subject job market: Job market and inequality in Europe (3 CP)** — This course (1.07.211 / FK I) takes place in the summer semester.

**Module contents details:**
- **Multifunctionality and rural development**
  - Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context.
- **Agriculture and agricultural policy**
  - Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers.
- **Sustainable tourism**
  - Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.
- **Renewable energy planning**
  - Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.
- **Colloquium on sustainable spatial development**
  - Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.
- **Special subject job market: Job market and inequality**
  - This course (1.07.211 / FK I) takes place in the summer semester. Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

**Literaturempfehlungen:**
- Schmied, D. (ed.): Winning and losing. The changing geography of Europe’s rural areas. Additional literature will be announced during the seminars.

**Note:**
- The document is a module description for the course lök322 - Sustainable Spatial Development in Europe at the University of Oldenburg. It includes information on the module's label, code, credit points, workload, and use in the course of study. It also details the module's entry requirements, skills to be acquired, and module contents. The document further specifies literature recommendations and links, and provides details on the module's frequency, level, and type. Previous knowledge required for the module is also noted.

Ansprechpartner/-in
- Module responsibility
  - Peter Schaal
- Prüfungsberechtigt
  - Alle hier genannten
- Module counseling
  - Christian Aden

Entry requirements
- Participation in the professionalizing module Introduction to Geoinformatics (BA)

Skills to be acquired in this module
- With this module, students of the Master course will gain qualifications for the analysis of spatial data and for modelling special landscape ecological tasks. Thus, they gain technical skills which they can use for preparing their Master thesis and also an important qualification for their future professional career.

Module contents
- a) Practical work with GIS (E)
  - The students learn to compile geodatabases as well as to use complex geographical analysis tools. Moreover, they gain knowledge into mobile application of GIS and practise data management based on map server applications.
- b) Analysis and Models (S/E)
  - The students will gain skills in answering spatial or landscape ecological questions by means of complex GIS analysis (erosion models, route planning) as well as basic skills in spatial data modelling.
- c) Scanning analysis (S/E)
  - Application and integration of data obtained by photogrammetry and aerial survey are practised on the basis of scientific articles and practical cases. The spectrum of the seminar covers work with digital landscape models, three-dimensional surface analysis as well as spectral analysis of aerial and satellite digital images.

Entry requirements
Basic knowledge of taxonomy + determination of mainly vertebrates, basic skills in faunistic field methods, L Animal Ecology

Skills to be acquired in this module

L Special Aquatic Ecology
The module imparts general and special knowledge of the ecology of typical floodplain water systems with special emphasis on floodplain dynamics and the resulting processes related to those water systems. Floodplain development and (faunistic) biodiversity are further main topics comprising e.g. the explanation of ecological conditions and colonisation processes and referring to questions of nature protection, examining the habitat preference of selected species and describing the population development of typical floodplain species.

E Special Aquatic Ecology
Familiarization with the course of a planning process on the basis of an exemplary project in North-west Germany; independent development of a concept of methods for assessing the faunistic actual state and subsequent realization in the field; scientific documentation and ecologically relevant assessment of the situation in the project area using selected indicator groups (scientific determination of selected taxa); preparation of final expert opinions on the project

L Applied Animal Ecology
Qualification for preparing a professional zooecological contribution within the scope of an expert opinion; familiarization with the most important faunistic indicator groups for scientific objectives relevant to a project

Module contents

L Special Aquatic Ecology
Ecology of typical floodplain water systems (mainly old water bodies and temporary water bodies); description of the decisive processes in floodplain and water system dynamics as well as the expressivity of the (faunistic) biodiversity; description of the ecological conditions and colonisation processes relevant to questions of nature protection, aspects of biodiversity as well as habitat preference and population development of typical floodplain species.

E Special Aquatic Ecology
Description of legal and planning procedures based on a case study; development and realization of a concept of methods for assessing the faunistic current status; scientific documentation (determination of taxa), analysis (determination and classification of species-related characteristics of the taxa relevant to the planning) and ecologically relevant assessment of the situation in the project area; final expert opinion on the project

L Applied Animal Ecology
Importance of professional zooecological contributions within the scope of ecologically relevant planning; legal and qualified arguments; regulations for the conservation of species under national and international law; faunistic indicator: complex of problems related to vicarious species, well-founded selection of indicator groups; Principles of developing a concept of sampling and of performing field work; description of standard methods of sampling and analysis, essential aspects of a professional zooecological contribution for an expert opinion on a project; detailed description of the most important faunistic indicator groups for scientific objectives relevant to a project

Entry requirements
Basic knowledge of Soil Science, Hydrogeology and Hydrochemistry

Skills to be acquired in this module

E: Applied modelling of water and solute transport in groundwater:
Impartment of knowledge into quantitative hydrogeology (hydraulics and advection-dispersion). Qualification to develop simple groundwater flow and transport models.

E: Hydrochemical modelling of water-rock interactions using PHREEQC:
Impartment of knowledge into quantitative hydrogeochemistry and skills in hydrogeochemical modelling.

L: Major Soils of the World and excursion to the World Soil Museum in Wageningen (The Netherlands):
Impartment of knowledge into distribution, properties and classification of soils of the world. Qualification to apply the World Reference Base for Soil Resources (WRB) and to identify the soils of the world.

E: Special soil science field and laboratory exercises:
Impartment of knowledge into specific field and laboratory methods. Qualification to select and apply specific field and laboratory methods as well as to analyse and interpret results.

Module contents

E: Applied modelling of water and solute transport in groundwater:

E: Hydrochemical modelling of water-rock interactions using PHREEQC:
Modelling of hydrogeochemical processes (speciation reactions and mineral reactions, pyrite oxidation, oxidation of organic matter, redox reactions, ion exchange, equilibrium reactions and reaction kinetics) using the software PHREEQC (http://wwwbrr.cr.usgs.gov/projects/GWC_coupled/phreeqc/)

L: Major Soils of the World and excursion to the World Soil Museum in Wageningen (The Netherlands):
Application of the international soil classification system "WRB", step-wise familiarization with soils and their properties as well as with the related landscapes and catenas (from polar to tropical soils), study of varnished profiles of globally distributed soils.

E: Special soil science field and laboratory exercises:
Selection of current scientific objectives, construction of a sampling and investigation design, performance of field studies (preferably abroad) and laboratory analysis, analysis and interpretation of results.

Literaturempfehlungen

International soil classification system for naming soils and creating legends for soil maps.

- Master Landschaftsökologie > Vertiefungsmodule drittes Fachsemester

Ansprechpartner/-in:  
Module responsibility  
- Ellen Kiel  
- Ines Wolpmann

Prüfungsberechtigt:  
Alle hier genannten

Module counseling:  
- Ellen Kiel

Entry requirements:

- Basic courses of Ecology (1st and 2nd semesters LÖK)  
- Skills in determining aquatic organisms, e.g. via Bachelor modules  
  - Knowledge of forms  
  - Running water ecology  
  - Aquatic habitats  
  - Master course in the module “Aquatic Ecology”  
  - Comparable courses at other universities

Skills to be acquired in this module:

- Qualification to independently plan field experiments suitable for answering current ecological questions  
  (individuals, populations, communities)  
- Methodological competence/independence in performing field experiments  
- Qualification to independently analyse the experiments in the laboratory guided by hypotheses and using adequate methods, materials and statistical methods  
- Competence in presenting results on a scientific level (scientific report presenting and discussing the method; scientific publication; both in English)  
- Impartment of manifold methodological skills in the field of aquatic ecology, experimental field research (autecological, population-ecological and synecological research approaches)  
- Impartment of extended expertise in planning experiments in general and their analysis in the field of animal ecology (application and linking of acquired skills; generalisable knowledge)  
- Practical experience in analysing field experiments in general (comprising laboratory phases, access to literature and databases, preparation of scientific publications)  
- Preparation of Master and Ph.D. theses requiring skills in experimental field research

Module contents:

1st course phase (theoretical preparation and planning)  
- Picking up current ecological research topics related to aquatic habitats, e.g. in streams and ditches (the respective system is selected prior to the start of the course and should change)  
- Specification of questions and frame conditions by the course lecturer concerning current research questions in the fields of autecology, population ecology, and synecology  
- Instructions for literature research and the respective analysis by students  
- Summary and presentation of the current standard of knowledge (structured brief reviews presented to the course participants by students and commented by the lecturer as well as preparation of a synopsis as part of the term paper or the oral examination (see below))  
- Concrete formulation of questions and working hypotheses based on literature research

2nd course phase (practical preparation and planning; laboratory and field work)  
- Preparatory inspection of the investigation area accompanied by the lecturer  
- Independent development of a concept of methods (advised by the lecturer)  
- Presentation of the planned experiment and of the analysis (treatment of samples, data processing etc.)  
- Independent practical preparation of experiments (calibrate equipment, prepare solutions, prepare trapping jars, determine aquatic data etc.), analysis steps (e.g. prepare laboratory equipment), and logistics (transportation, entry permissions etc.)  
- Description of methods for all working steps in writing  
- Independent realization of planning (advised by lecturer)  
- Report on all procedures including reflection

3rd course phase (further development and application of acquired knowledge; theoretical phase)  
- Common discussion about the possibilities of and limits to applying the procedure to concrete questions concerning other habitats, other animal associations etc.

Literatureempfehlungen:  
Methods in Ecology and Evolution (British Ecological Society):  
http://www.methodsinecologyandevolution.org/view/0/index.html  
TIEE: http://www.esa.org/tiee/misc/about.html

Additional scientific publications and materials with examples of relevant research work will be made available via StudIP as an E-reserve of reference literature prior to the start of the course.

**Entry requirements**

**Skills to be acquired in this module**

After successfully having completed the Master module, students will be able to treat a problem in the field of Landscape Ecology within a fixed period according to scientific methods.

**Module contents**

- E: Preparing the Master thesis
- SE: Active participation in the seminar of the research group, where the Master thesis is to be prepared.

**Literaturempfehlungen**

Introductory literature will be made available by the respective supervisor. In the further course of the work, independent literature research is expected of the students.
