**Used in course of study**
- Master Landschaftsökologie > Basismodule

**Contact person**
- Module responsibility
  - Michael Kleyer
  - Vanessa Minden
- Authorized examiners
  - Alle hier genannten
- Module counseling
  - Cord Peppler-Lisbach
  - Robert Biedermann

**Entry requirements**

**Skills to be acquired in this module**
- Basic methods of explorative statistics and adequate application of statistical tests relevant to ecological data.
- To learn, interpret and apply methods of habitat modelling
- To understand the fundamentals of spatial explicit analysis of species-environment relationships as well as the fundamentals of spatial prediction of environmental requirements in species
- To adequately analyse measured and observed spatial data applying methods of spatial statistics and geostatistics, respectively
- To learn and to understand relevant methods of multivariate analysis of vegetation data
- To be able to interpret and to assess the results obtained as well as the relevant literature
- To be able to apply the treated methods independently
- To learn and to improve skills in using the statistics software R

**Module contents**

**Part 1: Introduction to statistical analysis of ecological data NN (NN)**
- Experimental design
- Explorative data analysis
- Distribution tests, data transformation
- Chi² test
- Anova, Kruskal-Wallis test
- t & U test
- Multiple comparisons, post-hoc tests

**Part 2: Habitat modelling and spatial statistics (Biedermann)**
- Linear (OLS) regression
- GLM (logistic regression, Poisson regression)
- Spatial explicit modelling, GIS integration
- Spatial statistics

**Part 3: Multivariate analysis of vegetation ecological data (Peppler-Lisbach)**

**Classification:**
- Cluster analysis
- Statistical degrees of fidelity

**Ordination:**
- Indirect procedures: PCA, CA, DCA
• Canonical procedures: RDA, CCA

Reader’s advisory

  - Ellen Kiel
  - Maaike Bader

#### Entry requirements
Knowledge of phytosociology, zoo-ecology, pedology and ecology, comparable to the corresponding modules of BSc. Environmental Sciences

#### Skills to be acquired in this module
Qualification imparted to students:
Upon successful completion of the module the students will gain:
- a thorough knowledge of environmental conditions and biological mechanisms enabling plant species to survive in landscapes
- a thorough knowledge of the eco-physiology of plants in landscapes
- a thorough knowledge of the environmental conditions and biological mechanisms enabling animals to survive in landscapes

Ranking/position of the module within the course of studies:
In the initial phase of the Master programme, this module imparts theories and models of the conditions of survival in plant and animals species as well as of the abiotic/biotic interdependencies in heterogenous landscapes. In combination with other compulsory modules it serves to give students a survey of the special field of Landscape Ecology and to enable them to competently select advanced modules in the following semesters.

#### Module contents
- Ecology of plants in landscapes
- Eco-physiology of plants in landscapes
- Ecology of animals in landscapes

#### Reader's advisory
Literature will be announced during the course.

Entry requirements
Skills to be acquired in this module
Upon successful completion of the module the students will gain:
- advanced skills in analysing a landscape unit
- a thorough knowledge of geological, pedological, hydrological, hydrogeological, and botanical relationships within an ecosystem
- a thorough knowledge of the genesis and properties of Northwest German soils
- a thorough knowledge of hydrological and hydrogeological properties of Northwest Germany
- a fundamental knowledge of national and international soil systematics
- the qualification to ecologically record and assess soils (including humus form)
- the ability to perform soil ecological interpretations

Module contents
Landscape unit Spiekeroog (EX/E)
Special Pedology (L)
Special Hydrogeology (L)
Pedological field work (E)

Reader’s advisory
Literature will be announced during the lecture.

Iök130 - Environmental Planning

Module label: Environmental Planning

Module code: Iök130

Credit points: 9.0 KP

Workload: 270 h

Used in course of study:
- Master Landschaftsökologie > Basismodule
- Master Sustainability Economics and Management > Ergänzungsmodule

Contact person:
- Module responsibility: Michael Kleyer
- Authorized examiners: Alle hier genannten
- Module counseling: Luise Dorothee Giani, Ingo Mose, Peter Schaal, Sarah Witte

Entry requirements: Basic knowledge of environmental planning. Students who have not gained such basic knowledge during the Bachelor course please contact the persons responsible for the module in order to evaluate possibilities for catching up relevant knowledge.

Skills to be acquired in this module:
The students will:
- gain advanced knowledge into the formal and informal organization of spatial developmental processes in a combination of disciplinary and interdisciplinary concepts;
- get to know the system of privileged planning combined with cross-section planning as well as investigate and assess possible deductions for concrete decision making;
- elaborate case studies and typical planning problems in seminar papers and develop their own positions regarding the instruments;
- get to know assessment methods for all important ecosystem compartments and gain the skills to deduce ecosystem services from ecosystem functions.

Ranking and position of the module within the course of studies:
The module offers fundamental and advanced knowledge in the first semester on the basis of which planning exercises can be performed during the Master courses.

Module contents:
- a) Development of models and assessment of ecosystem functions for environmental planning:
  Presentation of theoretical concepts and practicable methods applied to assess ecosystem functions
- b) Actor-oriented planning instruments:
  Presentation of aims, forms and mechanisms of formal and informal instruments of area and environmental planning considering participative forms of the actor in different frameworks
- c) Special planning:
  Presentation of legal grounds, organization, instruments and practical methods of planning institutions including negative or positive impacts on the environmental quality for humans and nature. Possibilities of influencing the planning results from the point of view of precautionary environmental protection
- d) Conservation and Evaluation of Soils:
  Presentation of legal grounds, practical methods and opportunities for soil protection and soil evaluation in regional and environmental planning.

Reader’s advisory:
Additional literature will be announced during the lectures.

Entry requirements

Basic knowledge in Geology, Geomorphology, and Botany, comparable to the respective Bachelor modules in Environmental Sciences

Skills to be acquired in this module

Upon successful completion of the module students will gain:
- Advanced knowledge of the most important marine, semiterrestrial and terrestrial ecosystems on the North Sea coast.
- Advanced knowledge of erosion and transport processes of unconsolidated sediments as well as their sedimentation in terrestrial, coastal and marine areas.
- Advanced skills in addressing sediments and in sampling.
- Knowledge of the most important pollen types of the Northwest European flora, their chemical preparation and analysis of palynological samples as well as application of palynology in Palaeoecology, Palaeoclimatology, and as a dating method.
- Knowledge of the most important diatoms (pelagic and benthic types) of the North Sea coast, skills in the chemical preparation and analysis of diatom samples as well as in the application of diatom research in Palaeoecology and facies addressing.

Module contents

a) "Coastal biotopes and adjacent regions" - L: Flora and fauna of the most important ecosystems on the North Sea coast (sublittoral, Zostera meadows, salt marshes, woods, mires);
b) "Clastic sediments – Transport und sedimentation“ - L: Petrological cycle, weathering, transport, physical fundaments of sediment transport, aeolian, fluvial and marine sediment transport;
c) "Biological methods of addressing facies – pollen and diatom analysis“ - LC: Application of coring techniques in the field, sampling, chemical preparation for pollen and diatom analysis, palynology and spore research of higher plants, mosses and ferns, diatom research, facies research in the coastal region

Reader's advisory

Chapman & Hall.

Entry requirements
Completed ecology-oriented Bachelor course

Skills to be acquired in this module
With the successful completion of the module the students will gain a general and advanced knowledge of crucial approaches and instruments of nature conservation in Germany and Europe, especially of the implementation of large protected areas (NSG, biosphere reserve, national park etc.), of maintenance/management projects and measures as well as of approaches to their integration into nature conservation and regional development strategies (via agriculture, tourism etc.) in co-operation with national park administrative authorities and other relevant actors. Additionally, the module gives basic skills in developing ecological connectivity systems (example dragonflies) as well as in developing and implementing approaches to ecological planning inside and outside the nature reserves.

Ranking/position of the module within the course of studies: The module focuses on problems, results, and analyses relevant to nature conservation and refers to corresponding issues of modules in Bachelor courses as well as of basic modules in Master courses of Landscape Ecology.

Module contents

a) Seminar “Protected areas and regional development”: Survey of the most important types of large protected areas in Europe as well as current concepts of integrating the purposes of conservation with the tasks of regional development especially in peripheral rural areas

b) Seminar “Practice of ecological planning”: Presentation of relevant instruments used in spatial and regional planning aiming at the particular demands of ecological planning; closer inspection based on appropriate practical examples this seminar takes place in the winter term

c) Field course “Habitat connectivity”: Theory of ecological connectivity including causes and impacts of fragmentation and isolation in nature-near biotopes; investigation of migration and dispersal behaviour in selected dragonfly species of ditch systems

d) Excursion “ Protected areas”: Presentation of a selected large protected area in Germany or Europe especially considering geographical, floristic, faunistic, historical, agricultural, and nature conservation aspects as well as aspects of landscape and economics

**Entry requirements**

**Skills to be acquired in this module**
With this module students will gain technical skills and qualifications for sampling, analysing and interpreting data within the soil-water-plant system. Field studies are performed in the context of current research questions. The studies aim at predicting the impacts of environmental changes on fluxes of water and solutes in the landscape at different scales. Students are prepared for advanced research activities. The collected field data are also used for laboratory work within the scope of the present module and further modules, e.g. for modelling purposes.

Upon successful completion of the module students will gain:

- Knowledge of pedological, hydrological and vegetation oriented ecological field inventories
- Advanced skills in the analysis of soil plant and water samples
- Advanced knowledge of ecosystem processes
- Advanced knowledge into current fields of research

**Module contents**

- Physico-chemical processes in soils
- Transport of water and substances at the intersection point between soil and plant
- Transport of water and substances in the landscape
- Interdisciplinary analysis of ecosystem processes (field studies, labora

**Reader’s advisory**

**Entry requirements**

**Skills to be acquired in this module**
The prior goals and themes of this module are:
- To learn about important parameter and ecological processes of specific aquatic habitats;
- learn about threats and important disturbance factors;
- work independently on scientific question;
- learn methods and learn how to apply specific methods in field and in the laboratory experiments;
- start to development methods on your own;
- analyse the field and laboratory data, and apply modern statistical methods;
- start critical analysis and discussion of field and laboratory data;
- learn to develop mapping and assessment methods;
- study principles of typology and models describing selected systems;
- learn how to deal with nature conservation conflicts by referring to experimental field and laboratory data.

**Module contents**
- 3 courses:
  1. Lowland Waters (3 CP);
  2. Bioassessment (3 CP);
  3. Field Experiments (3 CP)

**Reader’s advisory**
Relevant literature will be made available in advance via StudIP and during the course.

lök240 - Functional ecology of communities in heterogeneous landscapes

Module label: Functional ecology of communities in heterogeneous landscapes
Module code: lök240
Credit points: 15.0 KP
Workload: 450 h

Used in course of study: Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester

Contact person
Module responsibility
- Michael Kleyer
Authorized examiners
- Alle hier genannten
Module counseling
- Luise Dorothee Giani

Entry requirements
Skills to be acquired in this module
Upon successful completion of the module students will gain:
- Technical skills in ecological field experiments, determination of plants in the field, phytosociological records, soil inventories, biomass determination and determination of biological characteristics
- Technical skills in laboratory work, statistics
- Skills in mapping plants and animals, application of GIS, spatial statistics
- Advanced knowledge of spatial ecology and the conditions of survival in heterogeneous landscapes as well as knowledge of functional ecology; assessment of academic voids between theory and empiricism
- Skills in independently dealing with ecological literature and information, respectively

Ranking/position of the module within the course of studies:
The module imparts action-oriented and theoretical knowledge of the conditions of survival in plant and animal species in heterogeneous landscapes. It serves the prognosis of impacts on the biodiversity caused by environmental changes. This represents a crucial qualification for environmental planning and habitat restitution projects.

Module contents
- Practical training in the field and in the laboratory, practical training in statistics
- Functional ecology of communities in spatio-temporally heterogeneous landscapes: Literature analyses
- Functional plant ecology: Biological characteristics related to disturbances and soil resources (laboratory analyses, statistical analysis)

Reader's advisory
Literature will be announced during the preparatory course and is contingent on the latest developments in the research field.

Lök260 - Restoration of Terrestrial Ecosystems

Module label
Restoration of Terrestrial Ecosystems

Module code
Lök260

Credit points
6.0 KP

Workload
180 h

Used in course of study
- Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester

Contact person
Module responsibility
- Rainer Buchwald

Authorized examiners
- Alle hier genannten

Entry requirements
Basic knowledge in Ecology, Vegetation Science, and Zoology, comparable to the respective Bachelor modules in Environmental Sciences

Skills to be acquired in this module
The participants will become acquainted with the possibilities and limits of renaturation and restoration projects in terrestrial ecosystems. This implies an extensive knowledge in autecology and population ecology of selected species on the one hand; on the other hand, monitoring by means of hydrological and/or pedological parameters as well as based on the vegetation and selected animal groups is crucial for evaluating such projects. In cooperation with the respective project management, student groups will contribute to the evaluation and advancement of the respective project as well as similar project(s) by performing individual records, analyses and assessments.

Ranking/position of the module within the course of studies:
The module is closely related to the Master modules “Practice of Nature Conservation”, “Special Ecology” and “Ecology of Soil-Water-Plant Systems” and comprises questions of scientific and applied nature conservation.

Module contents
Theory and Practice of Restoration Ecology (L): The lecture deals with the fundamentals of Restoration Ecology and exemplarily with the biotope systems fen and bog, grassland and heath. Restoration of Terrestrial Ecosystems (LC): The participants collect data contributing to the evaluation of current restoration projects (Hudewald, mesophilic grassland, heath, oligotrophic stagnant waters).

Reader's advisory

Additional literature will be announced during the course, if necessary.

Lök270 - Landscape Management Support Planning

Module label: Landscape Management Support Planning
Module code: lök270
Credit points: 15.0 KP
Workload: 450 h

Used in course of study: Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester

Contact person:
- Module responsibility
  - Michael Kleyer
  - Authorized examiners
    - Alle hier genannten

Entry requirements:
Skills to be acquired in this module:
The landscape management support plan aims at compensating for any project-related impacts on the environment. The mitigation and compensation plan is the outcome of a planning process which will be trained in this course.
Upon successful completion of the module students will gain:

- Technical skills in mapping plants and animals in landscapes: Records, sorting of records for preparing mapping keys; field mapping.
- Technical skills in landscape management support planning including GIS analysis, evaluation of the compensation of environmental impacts on selected ecosystem compartments, and planning of compensation and mitigation.

Ranking/position of the module within the course of studies:
This module imparts both action-oriented and theoretical knowledge required for landscape management support planning.

Module contents:
Mapping results obtained in the field study are fed into GIS, compensation and mitigation measures are planned, and finally the impacts are balanced by the compensation measures.

Reader's advisory:
Relevant literature will be announced during the preparatory course and is contingent on the latest developments in the research field. Additionally, a script for the exercise will be handed over to the participants.

Entry requirements
Good command of English

Skills to be acquired in this module
Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context. Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization.

Module contents
SE/EX Multifunctionality and rural development (3 CP)
V Topical issues of agriculture and agricultural policy (1.5 CP)
SE/EX Sustainable tourism (3 CP)
SE/EX Renewable energy planning (3 CP)
V Colloquium on sustainable spatial development (1.5 CP)
SE Special subject job market: Job market and inequality in Europe (3 CP) – This course (1.07.211 / FK I) takes place in the summer semester.

Multifunctionality and rural development
Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context.

Agriculture and agricultural policy
Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers.

Sustainable tourism
Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.

Renewable energy planning
Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.

Colloquium on sustainable spatial development
Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.

Special subject job market: Job market and inequality
This course (1.07.211 / FK I) takes place in the summer semester. Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

Reader's advisory
Schmied, D. (ed.): Winning and losing. The changing geography of Europe’s rural areas. Additional literature will be announced in the seminars.

Contact person:
- Module responsibility: Ingo Mose
- Authorized examiners: Alle hier genannten

Entry requirements:
- Good command of English

Skills to be acquired in this module:
- Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context.
- Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization.

Module contents:
- SE/EX Multifunctionality and rural development (3 CP)
- V Topical issues of agriculture and agricultural policy (1.5 CP)
- SE/EX Sustainable tourism (3 CP)
- SE/EX Renewable energy planning (3 CP)
- V Colloquium on sustainable spatial development (1.5 CP)
- SE Special subject job market: Job market and inequality in Europe (3 CP) – This course (1.07.211 / FK I) takes place in the summer semester.

Multifunctionality and rural development
Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context.

Agriculture and agricultural policy
Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers.

Sustainable tourism
Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.

Renewable energy planning
Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.

Colloquium on sustainable spatial development
Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.

Special subject job market: Job market and inequality
This course (1.07.211 / FK I) takes place in the summer semester.
Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

Reader's advisory:
- Schmied, D. (ed.): Winning and losing. The changing geography of Europe's rural areas.
- Additional literature will be announced during the seminars.

- Module counseling
  - Christian Aden

Entry requirements: Participation in the professionalizing module Introduction to Geoinformatics (BA)

Skills to be acquired in this module: With this module, students of the Master course will gain qualifications for the analysis of spatial data and for modelling special landscape ecological tasks. Thus, they gain technical skills which they can use for preparing their Master thesis and also an important qualification for their future professional career.

Module contents:

a) Practical work with GIS (E)
   The students learn to compile geodatabases as well as to use complex geographical analysis tools. Moreover, they gain knowledge into mobile application of GIS and practise data management based on map server applications.

b) Analysis and Models (S/E)
   The students will gain skills in answering spatial or landscape ecological questions by means of complex GIS analysis (erosion models, route planning) as well as basic skills in spatial data modelling.

c) Scanning analysis (S/E)
   Application and integration of data obtained by photogrammetry and aerial survey are practised on the basis of scientific articles and practical cases. The spectrum of the seminar covers work with digital landscape models, three-dimensional surface analysis as well as spectral analysis of aerial and satellite digital images.

Entry requirements
Basic knowledge of taxonomy + determination of mainly invertebrates, basic skills in faunistic field methods, L Animal Ecology

Skills to be acquired in this module
Special Aquatic Ecology
The module imparts general and special knowledge of the ecology of typical floodplain water systems with special emphasis on floodplain dynamics and the resulting processes related to those water systems. Floodplain development and (faunistic) biodiversity are further main topics comprising e.g. the explanation of ecological conditions and colonisation processes and referring to questions of nature protection, examining the habitat preference of selected species and describing the population development of typical floodplain species.

E Special Aquatic Ecology
Familiarization with the course of a planning process on the basis of an exemplary project in Northwest Germany; independent development of a concept of methods for assessing the faunistic actual state and subsequent realization in the field; scientific documentation and ecologically relevant assessment of the situation in the project area using selected indicator groups (scientific determination of selected taxa); preparation of final expert opinions on the project

Module contents
L Special Aquatic Ecology
Ecology of typical floodplain water systems (mainly oxbow lakes bodies and temporary water bodies); description of the decisive processes in floodplain and water system dynamics as well as the expressivity of the (faunistic) biodiversity; description of the ecological conditions and colonisation processes relevant to questions of nature protection, aspects of biodiversity as well as habitat preference and population development of typical floodplain species.

E Special Aquatic Ecology
Description of legal and planning procedures based on a case study; development and realization of a concept of methods for assessing the faunistic current status; scientific documentation (determination of taxa), analysis (determination and classification of species-related characteristics of the taxa relevant to the planning) and ecologically relevant assessment of the situation in the project area; final expert opinion on the project

Entry requirements:
Basic knowledge of Soil Science, Hydrogeology and Hydrochemistry

Skills to be acquired in this module:
E: Applied modelling of water and solute transport in groundwater:
  Impartment of knowledge into quantitative hydrogeology (hydraulics and advection-dispersion). Qualification to develop simple groundwater flow and transport models.

E: Hydrochemical modelling of water-rock interactions using PHREEQC:
  Impartment of knowledge into quantitative hydrogeochemistry and skills in hydrogeochemical modelling.

L: Major Soils of the World and excursion to the World Soil Museum in Wageningen (The Netherlands):
  Impartment of knowledge into distribution, properties and classification of soils of the world. Qualification to apply the World Reference Base for Soil Resources (WRB) and to identify the soils of the world.

E: Special soil science field and laboratory exercises:
  Impartment of knowledge into specific field and laboratory methods. Qualification to select and apply specific field and laboratory methods as well as to analyse and interpret results.

Module contents:
E: Applied modelling of water and solute transport in groundwater:

E: Hydrochemical modelling of water-rock interactions using PHREEQC:
  Modelling of hydrogeochemical processes (speciation reactions and mineral reactions, pyrite oxidation, oxidation of organic matter, redox reactions, ion exchange, equilibrium reactions and reaction kinetics) using the software PHREEQC (http://wwwbrr.cr.usgs.gov/projects/GWC_coupled/phreeqc/)

L: Major Soils of the World and excursion to the World Soil Museum in Wageningen (The Netherlands):
  Application of the international soil classification system "WRB", step-wise familiarization with soils and their properties as well as with the related landscapes and catenas (from polar to tropical soils), study of varnished profiles of globally distributed soils.

E: Special soil science field and laboratory exercises:
  Selection of current scientific objectives, construction of a sampling and investigation design, performance of field studies (preferably abroad) and laboratory analysis, analysis and interpretation of results.

Reader's advisory:

International soil classification system for naming soils and creating legends for soil maps.

Module: Experimental designs in ecological field studies

Module code: lök390
Credit points: 6.0 KP
Workload: 180 h

Module responsibilities:
- Ellen Kiel
- Ines Wölpmann

Contact person:
- Ellen Kiel

Entry requirements:
- Basic courses of Ecology (1st and 2nd semesters LÖK)
- Skills in determining aquatic organisms, e.g. via Bachelor modules
  - Knowledge of forms
  - Running water ecology
  - Aquatic habitats
  - Master course in the module “Aquatic Ecology”
  - Comparable courses at other universities

Skills to be acquired in this module:
- Qualification to independently plan field experiments suitable for answering current ecological questions
  (individuals, populations, communities)
- Methodological competence/independence in performing field experiments
- Qualification to independently analyse the experiments in the laboratory guided by hypotheses and using
  adequate methods, materials and statistical methods
- Competence in presenting results on a scientific level (scientific report presenting and discussing the method;
  scientific publication; both in English)
- Impartment of manifold methodological skills in the field of aquatic ecology, experimental field research
  (autecological, population-ecological and synecological research approaches)
- Practical experience in analysing field experiments in general (comprising laboratory phases, access to
  literature and databases, preparation of scientific publications)
- Preparation of Master and Ph.D. theses requiring skills in experimental field research

Module contents:
1st course phase (theoretical preparation and planning)
- Picking up current ecological research topics related to aquatic habitats, e.g. in streams and ditches (the
  respective system is selected prior to the start of the course and should change)
- Specification of questions and frame conditions by the course lecturer concerning current research questions in
  the fields of autecology, population ecology, and synecology
- Instructions for literature research and the respective analysis by students
- Summary and presentation of the current standard of knowledge (structured brief reviews presented to the
  course participants by students and commented by the lecturer as well as preparation of a synopsis as part of
  the term paper or the oral examination (see below))
- Concrete formulation of questions and working hypotheses based on literature research
2nd course phase (practical preparation and planning; laboratory and field work)
- Preparatory inspection of the investigation area accompanied by the lecturer
- Independent development of a concept of methods (advised by the lecturer)
- Presentation of the planned experiment and of the analysis (treatment of samples, data processing etc.)
- Independent practical preparation of experiments (calibrate equipment, prepare solutions, prepare trapping
  jars, determine aquatic data etc.), analysis steps (e.g. prepare laboratory equipment), and logistics
  (transportation, entry permissions etc.)
- Description of methods for all working steps in writing
- Independent realization of planning (advised by lecturer)
- Report on all procedures including reflection
3rd course phase (further development and application of acquired knowledge; theoretical phase)
- Common discussion about the possibilities of and limits to applying the procedure to concrete questions
  concerning other habitats, other animal associations etc.

Reader's advisory:
- Methods in Ecology and Evolution (British Ecological Society):
  http://www.methodsinecologyandevolution.org/view/0/index.html
- TIEE: http://www.esa.org/tiee/misc/about.html

Additional scientific publications and materials with examples of relevant research work will be made available
via StudIP as an E-reserve of reference literature prior to the start of the course.

#### Entry requirements

**Skills to be acquired in this module**

After successfully having completed the Master module, students will be able to treat a problem in the field of Landscape Ecology within a fixed period according to scientific methods.

**Module contents**

- E: Preparing the Master thesis
- SE: Active participation in the seminar of the research group, where the Master thesis is to be prepared.

**Reader's advisory**

Introductory literature will be made available by the respective supervisor. In the further course of the work, independent literature research is expected of the students.
