Pflichtmodule

phy611 - Theoretical Methods

Module label	Theoretical Methods
Modulkürzel	phy611
Credit points	6.0 KP
Workload	180 h (attendance: 56 hrs, self study: 124 hrs)
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Pflichtmodule
Zuständige Personen	- Cocchi, Caterina (module responsibility) - Anemüller, Jörn (Prüfungsberechtigt) - Avila Canellas, Kerstin (Prüfungsberechtigt) - Cocchi, Caterina (Prüfungsberechtigt) - Doclo, Simon (Prüfungsberechtigt) - Hartmann, Alexander (Prüfungsberechtigt) - Kühn, Martin (Prüfungsberechtigt) - Kunz-Drolshagen, Jutta (Prüfungsberechtigt) - Neu, Walter (Prüfungsberechtigt) - Peinke, Joachim (Prüfungsberechtigt) - Poppe, Björn (Prüfungsberechtigt) - Schmidt, Thorsten (Prüfungsberechtigt) - Stoevesandt, Bernhard (Prüfungsberechtigt) - Strybny, Jann (Prüfungsberechtigt)
Prerequisites	basic programming skills (matlab, python, C/C++)
Skills to be acquired in this module	Computational Fluid Dynamics (CFD I & II) - Deeper understanding of the fundamental equations of fluid dynamics. - Overview of numerical methods for the solution of the fundamental equations of fluid dynamics. - Confrontation with complex problems in fluid dynamics. - To become acquainted with different, widely used CFD models that are used to study complex problems in fluid dynamics. - Ability to apply these CFD models to certain defined problems and to critically evaluate the results of numerical models. Computerorientierte Physik Extension and complement of qualification in theoretical physics through the acquisition of solid and deep knowledge of advanced concepts and methods in theoretical physics. Depending on the selected course the students acquire knowledge in the fields of basis numerical methods of theoretical physics, algorithms and data structures in scientific computing, code debugging. They obtain skills for a confident application of modern methods of theoretical physics such as diagram generation, Molecular Dynamics and Monte Carlo simulations and quantitative analysis of advanced problems of theoretical physics and in further development of the physical intuition. They enhance their competences to effectively deal with sophisticated problems of theoretical physics, to independently develop approaches to current issues of theoretical physics, and to comprehend common concepts and methods of theoretical physics and the natural sciences, in general. Modelling and Simulation The students attending successful the course acquire an advanced understanding of the conceptual design of models in the field of engineering sciences. Special emphasis is on identifying the significant physical processes and the choice of the most efficient modelling type. The interaction of numerical simulations with field measurements and laboratory measurements including the theory of similarity will be discussed. To meet the needs of renewable energy, laser technology, environmental sciences and marine sciences the practical focus is on the modelling and simulation of fluid dynamics in small scales and close to structures.
Module contents	Computational Fluid Dynamics (CFD I & II) CFD I: The Navier-Stokes equations, filtering / averaging of Navier-Stokes equations, introduction to numerical methods, finite- differences,

finite-volume methods, linear equation systems, NS-solvers, RANS, URANS, LES, DNS, turbulent flows, incompressible flows, compressible flows, efficiency and accuracy.

- CFD II: Introduction to different CFD models, such as OpenFOAM and PALM. Application of these CFD models to defined problems from rotor aerodynamics and the atmospheric boundary layer.

Computerorientierte Physik

- Debugging
- Data structures
- Algorithms
- Random number generation
- Data analysis
- Percolation
- Monte Carlo simulation
- Finite size scaling
- Quantum Monte Carlo
- Molecular dynamics simulations
- Event-driven simulations
- Graphs and algorithms
- Genetic algorithms
- optimization problems

Modelling and Simulation

- Understanding of advanced fluid dynamics including three-dimensional, transient and compressible processes
- Identifying the significant physical processes, defining the dimensionality and relevant scales in time and space
- Theory of similarity, range of dimensionless numbers
- Potential Theory
- Numerical Algorithms and possibilities of independent coding of simplest mathematical models
- Limitations of numerical models, risk of empirical approaches included in numerical models
- Introduction of a complete chain of Open-Source-CFD-Tools, considering preprocessing, processing and postprocessing tools
- Need and availability of appropriate measurement techniques for the steering, calibration and verification of models
- Contactless high-resolving measuring techniques in the fluid dynamics
- Limits of accuracy of different modelling and simulation concepts

phy631 - Advanced Metrology

Module label	Advanced Metrology			
Modulkürzel	phy631			
Credit points	6.0 KP			
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)			
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Pflichtmodule			
Zuständige Personen	• Huke, Philipp (module responsibility) • Huke, Philipp (Prüfungsberechtigt) • Huke, Philipp (Module counselling)			
Prerequisites				
Skills to be acquired in this module	The course in Advanced Metrology sets up a high level route enabling the students to acquire skills to allow them to operate effectively in the majors of Engineering Physics. This is achieved by provision of state-of-the-art technical and physical approaches covering broad aspects of advanced metrology within the context of Laser&optics, Biomedical physics & acoustics, and renewable energies. Demonstrate systematic knowledge across appropriate advanced metrology technologies, management and environmental issues to provide solutions for international industries and/or research organisations			
Module contents	The module combines theory and practical applications of the fundamentals of metrology in all majors. • Fundamentals of Metrology • Dimensional Measurement Systems • Basic metrology operators including Association and Filtration. • Optical Metrology and Instrumentation • Surface and Nanometrology • Machine Tool and Large Volume Metrology • Process Measurement and Control • Individual Project			
Literatureempfehlungen	T. Yoshizawa (Ed.): Handbook of Optical Metrology: Principles and Applications, 2nd rev. ed., Crc Pr Inc., 2015 Recent publications on specific topics

phy640 - Seminar Advanced Topics in EP

Module label	Seminar Advanced Topics in EP	
Modulkürzel	phy640	
Credit points	3.0 KP	
Workload	90 h (Attendance: 28 hrs, Self study: 62 hrs)	
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Pflichtmodule	
Zuständige Personen	• Neu, Walter (module responsibility) • Herráez, Iván (Prüfungsberechtigt) • Neu, Walter (Prüfungsberechtigt) • Koch, Sandra (Prüfungsberechtigt)	
Prerequisites	Participation: 1st -3rd semester. Presentation: Master thesis work in progress or finished; at least one successfully completed specialization module.	
Skills to be acquired in this module	The students are enabled to demonstrate the ability to communicate clearly, both orally and in writing, to specialist and non-specialist audiences. Demonstrate knowledge, fundamental understanding and critical awareness of current research fields in the student's master projects. Personal development through practice of communication, presentation, time management, teamwork, problem solving, project management, critical evaluation, numeracy, and IT skills.	
Module contents	Current seminar topics	
Literatureempfehlungen	M. Alley: The Craft of Scientific Presentations, Springer, 2nd ed., 2013 Publications according to seminar topics

Prerequisites	Acc. selected course			
Skills to be acquired in this module	This module aims to raise the students understanding of the strategic, leadership, and technical aspects of project management and their role in adding competitive advantage to any enterprise. Concepts and techniques for programme and project management are introduced, developed and applied, with the aid of relevant case material. The students learn to consider specific key instrument types in current usage. This will be delivered in a project study format with each instrument being evaluated in terms of operating principle, design, and signal processing.

phy691 - Advanced Research Project (Preparation Master Thesis)

Module label	Advanced Research Project (Preparation Master Thesis)
Modulkürzel	phy691
Credit points	15.0 KP
Workload	450 h (Attendance: 320 hrs, Self study: 130 hrs Project work: 40 hours/week or part time)
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Pflichtmodule
Zuständige Personen	- Neu, Walter (module responsibility) - Agert, Carsten (Prüfungsberechtigt) - Drolshagen, Gerhard (Prüfungsberechtigt) - Avila Canellas, Kerstin (Prüfungsberechtigt) - Gülker, Gerd (Prüfungsberechtigt) - Anemüller, Jörn (Prüfungsberechtigt) - Knecht, Robin (Prüfungsberechtigt) - Biehs, Svend-Age (Prüfungsberechtigt) - Brand, Thomas (Prüfungsberechtigt) - Torio, Herena (Prüfungsberechtigt) - Holtorf, Hans-Gerhard (Prüfungsberechtigt) - Cocchi, Caterina (Prüfungsberechtigt) - Dietz, Mathias (Prüfungsberechtigt) - Doclo, Simon (Prüfungsberechtigt) - Doerner, Karl-Joachim (Prüfungsberechtigt) - Englert, Lars (Prüfungsberechtigt) - Enzner, Gerald (Prüfungsberechtigt) - Lücke, Jörg (Prüfungsberechtigt) - Lukassen, Laura (Prüfungsberechtigt) - Ewert, Stephan (Prüfungsberechtigt) - Feudel, Ulrike (Prüfungsberechtigt) - Fatikow, Sergej (Prüfungsberechtigt) - Gütay, Levent (Prüfungsberechtigt) - Hartmann, Alexander (Prüfungsberechtigt) - Herráez, Iván (Prüfungsberechtigt) - Hohmann, Volker (Prüfungsberechtigt) - Neu, Walter (Prüfungsberechtigt) - Huke, Philipp (Prüfungsberechtigt) - Knipper, Martin (Prüfungsberechtigt) - Koch, Sandra (Prüfungsberechtigt) - Kollmeier, Birger (Prüfungsberechtigt) - Kühn, Martin (Prüfungsberechtigt) - Lehnhoff, Sebastian (Prüfungsberechtigt) - Kunz-Drolshagen, Jutta (Prüfungsberechtigt) - Lienau, Christoph (Prüfungsberechtigt) - Looe, Hui Khee (Prüfungsberechtigt) - Nilius, Niklas (Prüfungsberechtigt) - Meyer, Bernd (Prüfungsberechtigt) - Poppe, Björn (Prüfungsberechtigt) - Peinke, Joachim (Prüfungsberechtigt) - Oetjen, Arne (Prüfungsberechtigt) - Steinfeld, Gerald (Prüfungsberechtigt) - Pehlken, Alexandra (Prüfungsberechtigt) - Schneider, Christian (Prüfungsberechtigt) - Reck, Martin (Prüfungsberechtigt) - Ruehmann, Antje (Prüfungsberechtigt) - Schellenberg, Markus (Prüfungsberechtigt) - Schmidt, Andreas Hermann (Prüfungsberechtigt) - Schmidt, Thorsten (Prüfungsberechtigt) - Silies, Martin (Prüfungsberechtigt) - Siedenburg, Kai (Prüfungsberechtigt) - Stoevesandt, Bernhard (Prüfungsberechtigt) - Teubner, Ulrich (Prüfungsberechtigt) - van de Par, Steven (Prüfungsberechtigt) - Uppenkamp, Stefan (Prüfungsberechtigt) - Wark, Michael (Prüfungsberechtigt) - Wollenhaupt, Matthias (Prüfungsberechtigt)
Prerequisites	Sound knowledge in the specialisation field of Master thesis
Skills to be acquired in this module	Students are able to search for and to state an adequate research problem in the field of the working group or industry (problem should be related to the topics covered in the masters programme). They are capable to derive

	research questions based on the statement of the problem and prepare an elaborated research proposal yielding lab work that serves as the preliminary study for the Master's Thesis. Students are in a position to develop the specialised bases (detailed theoretical background of the topic, ample and critically annotated literature review, research objectives and research question(s), fully developed methods section, sketched workplan) of the Master's Thesis Project in terms of content and style in such a way that they form a sound basis for a successful Master's Thesis. Students gain expertise in workflow optimization, data collection and data analysis. Independent management and transformation of a complex and unpredictable problem from the general field of study contexts of the Master degree program \"Engineering Physics\" (including related subject areas) utilizing scientific state-of-the-art research methods.	
Module contents	Independent research for the definition of a physics and engineering solution to a problem in the chosen field. Specialized knowledge of a subject area as foundation for the student's research. The assignment of specific tasks will be given after consulting the responsible lecturers and is depending upon the current research profile. The Advanced research project (preliminary study to the Master's thesis) forms the basis of the Master's Thesis Project and must contain the following aspects: - Detailed theoretical background of the topic - Ample and critically annotated literature review - Research objectives and research question(s) - Fully developed methods section - Draft of a fully formed table of contents

Advanced Physics

phy602 - Advanced Nuclear & Particle Physics

Module label	Advanced Nuclear & Particle Physics	
Modulkürzel	phy602	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Advanced Physics	
Zuständige Personen	- Poppe, Björn (module responsibility) - Drolshagen, Gerhard (Prüfungsberechtigt) - Poppe, Björn (Prüfungsberechtigt) - Looe, Hui Khee (Prüfungsberechtigt)	
Prerequisites	Basic lectures in physics / engineering	
Skills to be acquired in this module	High-Energy Radiation Physics: Basic understanding of the physical basics of high-energy radiation physics (in the energy sector from approx. 106 eV). Students should understand the universal approaches of the physical description of the generation, acceleration, interaction and detection of high-energy radiation across disciplines. Space Environment: Basic understanding of the main components of the near-Earth space environment. The students shall become familiar with the different types of radiation and particles in space, their physical characteristics and their effects on hardware and humans in space. The interdisciplinary nature of these topics shall become clear.	
Module contents	High-Energy Radiation Physics: Fundamentals of high-energy radiation physics, types of radiation in the environment, cosmos and medicine, cosmic rays, fundamentals of astroparticle physics, terrestrial and cosmic accelerators, interaction of radiation with matter, detection mechanisms and dosimetry, technical realizations for acceleration and detection. Space Environment: Overview of radiation and particles in space and their energy ranges. The upper Earth atmosphere, the spectrum of the sun and its variability, plasma, solar-terrestrial interactions, the radiation belts of Earth, cosmic rays, meteoroids and meteors, near-Earth objects, space debris. Effects and potential protection measures.	
Literatureempfehlungen	H. Krieger: Strahlungsmessung und Dosimetrie, Springer Verlag, Wiesbaden, 2013; Grun: Astroparticle Physics, Springer Verlag, Heidelberg, 2005; Falkenburg, Rhode (Eds.): From Ultra Rays to Astroparticles, Springer Verlag, Heidelberg, 2012

phy603 - Fluid Dynamics

Module label	Fluid Dynamics	
Modulkürzel	phy603	
Credit points	6.0 KP	
Workload	180 h (Attendance: 84 hrs, Self study: 96 hrs)	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Advanced Physics	
Zuständige Personen	- Peinke, Joachim (module responsibility) - Avila Canellas, Kerstin (Prüfungsberechtigt) - Lukassen, Laura (Prüfungsberechtigt) - Peinke, Joachim (Prüfungsberechtigt)	
Prerequisites		
Skills to be acquired in this module	Fundamental knowledge and comprehension on the movement of fluids	
Module contents	Fluid Dynamics I: Basic equations: Navier-Stokes-equation, Continuity- equation, Bernoulli-equation; Vortex- equation { and Energy balance equations; laminar flows and stability analysis; exact solutions, application of basic equations Fluid Dynamics II: Reynolds-equation, "closing problem" of turbulence: Turbulence models: Cascade models, Stochastic models	
Literatureempfehlungen	J. Spurk, N. Aksel: Fluid Mechanics, Springer D. J. Tritton: Physical Fluid dynamics. Clarendon Press, Oxford, 2003 G. K. Batchelor: An introduction to fluid dynamics. phy633 - Optics

Module label	Optics	
Modulkürzel	phy633	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Advanced Physics	
Zuständige Personen	- Teubner, Ulrich (module responsibility) - Teubner, Ulrich (Prüfungsberechtigt)	
Prerequisites	Electrodynamics	
Skills to be acquired in this module	The students acquire broad theoretical and experimental knowledge of optics together with the necessary physical background. In the laboratory they acquire practical skills during application of their knowledge from lecture. The module prepares the students to work in the field of optical science and engineering in general, and yields the base for all further specialisations within the field of optics and laser technology.	
Module contents	Fundamental and advanced concepts of optics. Topics include: reflection and refraction, optical properties of matter, polarisation, dielectric function and complex index of refraction, evanescent waves, dispersion and absorption of light, Seidel's aberrations, Sellmeier's equations, optical systems, wave optics, Fourier analysis, wave packets, chirp, interference, interferometry, spatial and temporal coherence, diffraction (Huygens, Fraunhofer, Fresnel), focussing and optical resolution, brilliance, Fourier optics, optics at short wavelengths (extreme UV and X-rays)	
Literatureempfehlungen	Born and Wolf: Principles of Optics (Cambridg Press); E. Hecht: Optics (Addison-Wesley); Pedrotti and Pedrotti: Introduction to Optics (Prentice- Hall); Saleh and Teich, Fundamentals of Photonics (Wiley); all those books are also available in German

Schwerpunkt: Biomedical Physics

bio279 - Basic Concepts in Animal Physiology

Module label	Basic Concepts in Animal Physiology	
Modulkürzel	bio279	
Credit points	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	• Master of Education Programme (Special Needs Education) Biology (Master of Education) > Mastermodule • Master's Programme Engineering Physics (Master) > Schwerpunkt: Biomedical Physics	
Zuständige Personen	• Heyers, Dominik (module responsibility) • Köppl, Christine (Module counselling) • Dedek, Karin (Module counselling) • Heyers, Dominik (Prüfungsberechtigt) • Köppl, Christine (Prüfungsberechtigt) • Dedek, Karin (Prüfungsberechtigt)	
Prerequisites		
Skills to be acquired in this module	++ biological knowledge ++ knowledge of biological working methods + biologically relevant knowledge in the natural sciences and mathematics + statistics & scientific programming ++ abstract, logical, analytical thinking + deepened expertise in biological specialist field ++ independent learning and (research-based) working + teamwork Basic knowledge on physiological processes and their underlying mechanisms with a focus on human physiology. Performing, analysing and documenting physiological experiments.	
Module contents	The lecture (Vorlesung: 5.02.271 - Physiologie der Tiere und des Menschen) covers topics such as cell physiology, sensory physiology, neurophysiology, functions of the vegetative system, blood physiology/immune response, blood cycle, respiration and digestion. Emphasis will be on human physiology. In the following lab exercises, students get the opportunity to perform physiological experiments linking to topics from the lecture. By performing experiments on themselves and computer simulations students will gain insight into the underlying physiological principles.	
Literatureempfehlungen	Klinke, Pape, Kurtz, Silbernagl: Physiologie, Aufl. 6, 2010 Schmidt, Lang, Heckmann: Physiologie des Menschen mit Pathophysiologie, Aufl. 31, 2011 (if available: Wehner, Gehring: Zoologie)

phy678 - Processing and analysis of biomedical data

Module label	Processing and analysis of biomedical data	
Modulkürzel	phy678	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)	
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Biomedical Physics	
Zuständige Personen	• Poppe, Björn (module responsibility) • Brand, Thomas (Prüfungsberechtigt) • Ewert, Stephan (Prüfungsberechtigt) • Hohmann, Volker (Prüfungsberechtigt) • Uppenkamp, Stefan (Prüfungsberechtigt)	
Prerequisites	Basic signal processing, algebra knowledge	
Skills to be acquired in this module	This course introduces basic concepts of statistics and signal processing and applies them to real-world examples of bio-medical data. In the second part of the course, recorded datasets are noise-reduced, analyzed, and discussed in views of which statistical tests and analysis methods are appropriate for the underlying data. The course forms a bridge between theory and application and offers the students the means and tools to set up and analyze their future datasets in a meaningful manner.	
Module contents	Normal distributions and significance testing, Monte- Carlo bootstrap techniques, Linear regression, Correlation, Signal-to-noise estimation, Principal component analysis, Confidence intervals, Dipole source analysis, Analysis of variance Each technique is explained, tested and discussed in the exercises.

phy698 - Selected Topics on Medical Radiation Physics

Module label	Selected Topics on Medical Radiation Physics
Modulkürzel	phy698
Credit points	6.0 KP
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Biomedical Physics
Zuständige Personen	• Poppe, Björn (module responsibility) • Looe, Hui Khee (Prüfungsberechtigt) • Poppe, Björn (Prüfungsberechtigt) • Ruehmann, Antje (Prüfungsberechtigt) • Chofoor, Ndimofor (Prüfungsberechtigt)
Prerequisites	
Skills to be acquired in this module	

5.04.4242:

Neben den aktuellen Themen der Strahlenphysik erlernen die Studierenden den Umgang mit meist englischsprachigen Fachzeitschriften aus dem Bereich. Darüber hinaus werden Präsentationstechniken durch eigene Vorträge erlernt. Parallel zu der Veranstaltung wird die Verwendung eines Monte-Carlo Strahlungstransport-Codes (EGS) erlernt und somit die Fähigkeit vertieft, komplexe physikalische Modelle in eine Software umzusetzen.

5.04.4642:

Der Kurs vermittelt die Fähigkeit zum Verständnis grundlegender Anwendungen der Strahlenphysik in der Medizin. Die Studierenden erweitern somit ihre Kompetenzen im Hinblick auf die Bewertung fächerübergreifender Zusammenarbeit unterschiedlicher Disziplinen. Sie erlernen zudem den selbständigen Umgang mit fremdsprachlicher Literatur.

Module contents

5.04.4242:

Aktuelle Themen aus der Medizinischen Strahlenphysik

wie: IMRT, NMR, PET, SPECT usw.;

5.04.4642:

Grundlagen der Strahlentherapie, Dosimetrie, Einführung

in die Strahlentherapie, Wechselwirkung von Strahlung

mit Materie, Elektronen, Photonen und Teilchenstrahlung,

mathematische Beschreibung von Dosisverteilungen in Absorbern, Detektoren und dosimetrische Protokolle, Grundlagen der Bestrahlungsplanung sowie Brachytherapie.

Zuständige Personen	- Neu, Walter (module responsibility) - Neu, Walter (Prüfungsberechtigt)			
Prerequisites	Medizin for Scientist , Optics, Laser Physics			
Skills to be acquired in this module	To provide advanced knowledge in the eld of medical optics and optical technologies in medicine as well as their theoretical background and experimental methods. Students will be scientifically competent positioned to critically follow current developments and initiate the design (development and design) of innovative optical applications in medicine.			
Module contents	Physiology and psychophysics of vision, theory of imaging systems, ophthalmic optics, lighting technology, photometry, vision in the workplace and in trac, optical measurements on patients, diagnostic and therapeutic laser applications, radiation protection (infrared, UV, laser), microscopy, di raction and subdi raction limited methods, optical spectroscopy, uorescence methods.

phy632 - Spectrophysics

Module label	Spectrophysics	
Modulkürzel	phy632	
Credit points	6.0 KP	
Workload	180 h (Attendance: 28 hrs, Self study: 62 hrs)	
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Laser and Optics	
Zuständige Personen	• Neu, Walter (module responsibility) • Koch, Sandra (Prüfungsberechtigt) • Neu, Walter (Prüfungsberechtigt) • Schellenberg, Markus (Prüfungsberechtigt)	
Prerequisites	Atomic and Molecular Physics, Optical systems	
Skills to be acquired in this module	Students gain in depth theoretical as experimental knowledge on advanced optical spectroscopy applied to atomic and molecular systems. They are qualified in setting up innovative methods and measurement devices based on their expert competence in up-to-date research and development areas. The module prepares the students to work in the field of optical science and engineering in general, and yields the base for all further specialisations within the field of optics and laser technology.	
Module contents	Atomic structure and atomic spectra, molecular structure and molecular spectra, emission and absorption, width and shape of spectral lines, radiative transfer and transition probabilities, elementary plasma spectroscopy, experimental tools in spectroscopy, dispersive and interferometric spectrometers, light sources and detectors, laser spectroscopy, nonlinear spectroscopy, molecular spectroscopy, time resolved spectroscopy, coherent spectroscopy

phy634 - Biophotonics and Spectroscopy

Module label	Biophotonics and Spectroscopy			
Modulkürzel	phy634			
Credit points	6.0 KP			
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)			
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Laser and Optics			
Zuständige Personen	- Neu, Walter (module responsibility) - Koch, Sandra (Prüfungsberechtigt) - Neu, Walter (Prüfungsberechtigt) - Schellenberg, Markus (Prüfungsberechtigt)			
Prerequisites	Basics in optics and laser physics, in particular, fundamentals of optics and photonics; atomic and molecular physics; spectrophysics			
Skills to be acquired in this module	The students thoroughly deepen their knowledge on concepts of spectroscopy as well as on biophotonics, This module provides the theoretical background for analytical applications involving UV-Visible spectroscopy, atomic absorption, emission and laser based spectroscopies. The students develop a sound understanding of the principles and instrumentation of atomic and molecular spectroscopy with in depth applications to a wide range of environments e.g. analytical, biological, industrial, pharmaceutical, environmental. The students develop problem solving skills with reasoning based on theory underlying spectroscopy and photonics in biosciences and medicine thus providing a background to practical laboratory training.			
Module contents	Application of atomic and molecular spectroscopy at a wide range of fields, e.g. industrial, biosciences, microscopy, pharmaceutical, environmental, trace analysis: 1. Explain the mechanisms of and fundamental distinctions between molecular and atomic spectroscopy 2. Recognise the issues regarding sensitivity and selectivity of molecular and atomic spectroscopy 3. Evaluate the limitations and analytical issues associated with each method 3. Demonstrate analytical application of these atomic and molecular absorption and emission techniques 4. Discriminate the analytical challenges that can be appropriately solved by these spectroscopic techniques

Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Laser and Optics		
Zuständige Personen	• Neu, Walter (module responsibility) • Schüning, Thomas (module responsibility) • Neu, Walter (Prüfungsberechtigt) • Schüning, Thomas (Prüfungsberechtigt)		
Prerequisites	Knowledge in physics, optics, production engineering		
Skills to be acquired in this module	Fundamental knowledge of the characteristics of the laser beam, Knowledge of laser sources for industrial applications, knowledge of procedures of the material processing with laser beams Knowledge of the physical-technical procedures of the individual manufacturing processes with laser beams; Ability for the estimation of favorable working parameters; The participants should be able to understand the procedures of the material processing with laser beams and evaluate the tasks of manufacturing.		
Module contents	Overview of the interactions between laser beams and materials in laser material processing. Allocation of the processes in relation to production technology with the laser beam as a tool. Intensive treatment of the manufacturing processes with laser beams in terms of quality, speed and costs. The processes of cutting, joining, surface treatment and generative manufacturing are dealt with intensively using examples from industrial production. Within the framework of lecture-accompanied project work, the application technologies are processed, optimized and evaluated by the students in the laser laboratory.

inf511 - Smart Grid Management

Module label	Smart Grid Management
Modulkürzel	inf511
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	• Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik • Master's Programme Computing Science (Master) > Angewandte Informatik • Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies • Master's Programme Environmental Modelling (Master) > Mastermodule • Sustainable Renewable Energy Technologies (Master) > Mastermodule
Zuständige Personen	• Lehnhoff, Sebastian (module responsibility) • Lehrenden, Die im Modul (Prüfungsberechtigt)
Prerequisites	No participant requirements
Skills to be acquired in this module	After successful completion of the course the students should be able to understand the existing structures and technical basis of energy systems to produce, transfer and distribute electricity and their interaction and dependency on each other. They should have developed an understanding for necessary IT- and process control technology components, methods and processes to control and operate electrical energy systems. The students are able to estimate and evaluate the requirements and challenges of ICT and computer science which are caused by the development and integration of unforeseeable fluctuations of decentralised plants. The students will be able to estimate the influence of distributed control concepts and algorithms for decentralised plants and consumers in the so called Smart Grid energy systems. Regarding the requirements the students will be able to analyse the safety, reliability, realtime capability and flexibility of Smart Grid energy systems. Professional competence The students: • understand the existing structures and the technical basis of energy systems producing, transferring and distributing electricity and their interaction and dependency on each other. • develop an understanding for necessary IT- and process control technology components, methods and processes to control and operate electrical energy systems. • estimate and evaluate the requirements and challenges of ICT and computer science which are caused by the development and integration of unforeseeable fluctuations of decentralised plants. • estimate the influence of distributed control concepts and algorithms for decentralised plants and consumers in the so called Smart Grid energy systems. Methodological competence The students: • analyse the safety, reliability, realtime capability and flexibility of Smart Grid energy systems • use advanced mathematical methods to calculate networks Social competence The students: • create solutions in small teams • discuss their solutions Self-competence The students: • reflect their own use of electricity as a limited resource
Module contents	Content of the Module: In this course information technology, economical energy industry and technical basic knowledge and methods are analysed by

using concrete Smart Grid approaches. The basic calculation methods for an intelligent grid management are introduced. This module deals with the technical and economical framework for a permissible electrical network as well as mathematical modelling and calculation methods to analyse conditions of electrical energy networks (in stationary conditions).
These are:

- The organisation of the EU energy market (regulatory framework, responsibility in liberalisation of electrical energy systems)
- Establishment and operation of electrical energy supply networks (network topology, statutory duties of supply, supply quality/system services, malfunctions and protection systems)
- Network calculation (complex vector representation, effective/idle power, mathematical performance models/net model, transformation: node performance to node voltage and electricity, calculation of conductive current, current flow, fix-point-iteration, Newton-Raphson-Method, voltage drop, transformer model)
- Intelligent network management (Smart Grids), aggregation forms, machine learning approaches)

phy609 - Photovoltaic Physics

Module label	Photovoltaic Physics			
Modulkürzel	phy609			
Credit points	6.0 KP			
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)			
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies • Sustainable Renewable Energy Technologies (Master) > Mastermodule			
Zuständige Personen	• Kühn, Martin (module responsibility) • Gütay, Levent (Prüfungsberechtigt) • Knipper, Martin (Prüfungsberechtigt)			
Prerequisites	Solid-state-Physics, semi-conductor Physics, Module Renewable Energy Technologies I			
Skills to be acquired in this module	describe schematically the events around the pn-junction under bias in the dark and under illumination, calculate the width of the space charge region, use solar cell data sheets in their professional career, discuss the concepts of solar cell materials, design and optimization, choose a PV technology for a given project			
Module contents	This specialization module covers the physics of photovoltaics. The behaviour of solar cells is discussed from a fundamental physical point of view to explain the differences in performance and limits of various photovoltaic materials. Students learn how solar cells function, are designed and optimized, Optical and electronical properties of semiconductors, light absorption, Charge carrier generation/recombination/life time, Charge carrier transport across the pn-junction in equilibrium and under light and voltage bias, Transport equations, Current-voltage characteristics, efficiency, Quantum efficiency, Design concepts to optimize the efficiency, Overview of the most important PV technologies

phy616 - Computational Fluid Dynamics 1 / 2

Module label	Computational Fluid Dynamics 1 / 2		
Modulkürzel	phy616		
Credit points	6.0 KP		
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)		
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > European Wind Energy Master • Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies • Master's Programme Environmental Modelling (Master) > Mastermodule • Sustainable Renewable Energy Technologies (Master) > Mastermodule		
Zuständige Personen	• Lukassen, Laura (module responsibility) • Avila Canellas, Kerstin (Prüfungsberechtigt) • Lukassen, Laura (Prüfungsberechtigt) • Peinke, Joachim (Prüfungsberechtigt) • Stoevesandt, Bernhard (Prüfungsberechtigt)		
Prerequisites	Fluid Dynamics I		
Skills to be acquired in this module	Deeper understanding of the fundamental equations of fluid dynamics. Overview of numerical methods for the solution of the fundamental equations of fluid dynamics. Confrontation with complex problems in fluid dynamics. To become acquainted with different, widely used CFD models that are used to study complex problems in fluid dynamics. Ability to apply these CFD models to certain defined problems and to critically evaluate the results of numerical models.		
Module contents	CFD I: The Navier-Stokes equations, filtering / averaging of Navier- Stokes equations, introduction to numerical methods, finite- differences, finite-volume methods, linear equation systems, NS-solvers, RANS, URANS, LES, DNS, turbulent flows, incompressible flows, compressible flows, efficiency and accuracy. CFD II: Introduction to different CFD models, such as OpenFOAM and PALM. Application of these CFD models to defined problems from rotor aerodynamics and the atmospheric boundary layer.

phy641 - Energy Resources & Systems

Module label	Energy Resources & Systems
Modulkürzel	phy641
Credit points	6.0 KP
Workload	180 h (Attendance: 56 hrs, Self-study: 124 hrs)
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies • Master's Programme Environmental Modelling (Master) > Mastermodule • Master's Programme European Master in Renewable Energy (EUREC) (Master) > Mastermodule • Master's Programme Sustainability Economics and Management (Master) > Additional Modules • Sustainable Renewable Energy Technologies (Master) > Mastermodule
Zuständige Personen	• Agert, Carsten (module responsibility) • Knipper, Martin (module responsibility) • Knipper, Martin (Prüfungsberechtigt) • Torio, Herena (Prüfungsberechtigt) • Schmidt, Thomas (Prüfungsberechtigt)
Prerequisites	
Skills to be acquired in this module	After successful completion of the module students should be able to: • characterize the global energy system and analyze the structure and constraints of today's energy system, • explain the availability and connection between solar and wind energy, • identify the problems and challenges of energy supply due to fluctuating energy resources with varying and seasonal load profiles, • relate the solar irradiance conversion process as well as the atmospheric radiation balance of the earth to Wind Energy Meteorology.
Module contents	This module will give an overview on the global energy system and the challenges of energy supply due to fluctuating energy resources with varying and seasonal load profiles. Energy Meteorology (Lecture - 90 h workload) Section I: Solar Irradiance • Radiation laws, • Solar geometry, • Interaction of solar irradiance with the atmosphere, • Radiation climatology, • Solar radiation model, • Statistical properties of solar irradiance, • Measuring devices to ascertain solar radiation balance, • Satellite-supported data acquisition to assess solar irradiance, Section II: Wind Flow • Origin and potential of atmospheric energy movements, Heat balance of the atmosphere, • Physical laws of atmospheric flow, • Wind circulation in the atmosphere, local winds, • Wind flow in atmospheric layers (vertical structure, Ekman Layer), • Assessment of wind potential (European Wind Atlas: model, concept, • Wind Measurements, Energy Systems (Lecture - 90 h workload) • Definitions, separation electrical - thermal energy use, • Resources and reserves, • Energy system analysis: Efficiencies at various levels of the energy chain; Exergy analysis, • Energy scenarios, • Climate change,

- Advanced (power plant) technologies for conventional fuels,
- Electric power systems with large shares of renewables

phy644 - Wind Energy Physics, Data & Analysis

Module label	Wind Energy Physics, Data & Analysis
Modulkürzel	phy644
Credit points	6.0 KP
Workload	180 h (attendance: 2*28 hrs, self-study: 124 hrs)
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies
Zuständige Personen	- Kühn, Martin (module responsibility) - Avila Canellas, Kerstin (Prüfungsberechtigt) - Kühn, Martin (Prüfungsberechtigt) - Peinke, Joachim (Prüfungsberechtigt) - Steinfeld, Gerald (Prüfungsberechtigt) - Schmidt, Andreas Hermann (Prüfungsberechtigt) - Torio, Herena (Prüfungsberechtigt)
Prerequisites	The module starts in the winter term: Wind Energy Physics has to be taken before participating in Wind Physics Measurement Project
Skills to be acquired in this module	After successful completion of the module students should be able to: - Evaluate wind energy related measurements, - Interpret such measurements gained in the field of wind energy applications, - Critically evaluate measured data
Module contents	The winter term lecture teaches the basic knowledge in wind energy physics. Physical properties of fluids, wind characterization and anemometers, aerodynamic aspects of wind energy conversion, dimensional analysis, (pittheorem), and wind turbine performance, design of wind turbines, electrical systems. The sequentially following WPhyMP addresses problems based on real wind data, which will be solved on at least four important aspects in wind physics. The course will comprise lectures and assignments as well as self-contained work in groups of 3 persons. The content consist of the following four main topics, following the chronological order of the work process: Data handling (measurements, measurement technology, handling of wind data, assessment of measurement artefacts in wind data, preparation of wind data for further processing); Energy Meteorology (geographical distribution of winds, wind regimes on different time and length scales, vertical wind profile, distribution of wind speed, differences between onshore and offshore conditions); Measure - Correlate - Predict (MCP) (averaging of wind data, bin-wise averaging of wind data, long term correlation and long term correction of wind data, sources of long term wind data); LIDAR (analyses and conversion of data from LIDAR measurements

phy646 - Wind Physics Student's Lab

Module label	Wind Physics Student's Lab
Modulkürzel	phy646
Credit points	6.0 KP
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies
Zuständige Personen	• Schmidt, Andreas Hermann (Prüfungsberechtigt) • Kühn, Martin (module responsibility)
Prerequisites	Basic computer knowledge; mechanics; mathematical methods for physics and engineering; basic knowledge of wind energy utilization; previous knowledge of metrology; basic knowledge of aerodynamics
Skills to be acquired in this module	The "Wind Physics Student's Lab" aims to foster the learning process by own research activities of the students in wind physics and additionally to build up skills for scientific and experimental work and scientific writing. Therefore, this course is also intended as preparation for the master thesis. The course is organized as seminar with integrated work in the laboratory. The students will investigate an individual, self-formulated research question and will be guided by the supervisors through the research-based learning process. The work in groups and discussion of solutions aims to improve skills in team working. In order to introduce the students to current wind energy research, the course is offered in three versions. These versions represent the work of the three research groups at ForWind - University Oldenburg.
Module contents	Content of Wind2Grid-Seminar The seminar consists of three main phases with different learning steps: 1st phase: Class-room seminar building up basic competences identification of the technical tasks introduction to current research introduction to the learning platform investigating standard situations and functional interaction by means of the experimental system defining an own research question defining an experimental strategy planning the experiment 2nd phase: Laboratory work (1 week) set-up, execution, data acquisition and decommissioning of the experiment 3rd phase: Evaluation and documentation evaluating the experiment documentation with a short report (paper) presentation The seminar "Wind turbine rotor in turbulent inflow" is connected to the scientific work of the research group Turbulence, Wind Energy and Stochastics (TWIST). In this seminar, turbulent wind fields and their effects on wind turbines will be investigated. Students learn how turbulence can be described, investigated and evaluated for different purposes. The students gain a deep understanding of the phenomenon of turbulence. They learn to work with measured data from the open field and perform own experiments with an active turbulence grid and a model of a wind turbine in a turbulent wind tunnel. They learn to establish their own research questions and are encouraged to develop own methods. The seminar consists of three main phases with different learning steps: 1st phase: Class-room seminar - building up basic competences - identification of the technical and/or scientific tasks - introduction to current research - introduction to the experiment related to the seminar • investigating standard situations and functional interaction by means of the experimental system • defining own research questions • defining an experimental strategy • planning the experiment 2nd phase: Laboratory work

- set-up, execution, data acquisition and decommissioning of the experiment

3rd phase: Evaluation and documentation

- evaluating the experiment
- documentation with a short report (paper)
- presentation

phy647 - Future Power Supply Systems

Module label	Future Power Supply Systems
Modulkürzel	phy647
Credit points	6.0 KP
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies • Master's Programme Environmental Modelling (Master) > Mastermodule • Sustainable Renewable Energy Technologies (Master) > Mastermodule
Zuständige Personen	• Agert, Carsten (Prüfungsberechtigt) • Torio, Herena (module responsibility) • Agert, Carsten (module responsibility)
Prerequisites	Knowledge from module RE technology I, Mathematics
Skills to be acquired in this module	After successful completion of the module students should be able to • explain the management, power balancing and the provision of ancillary services within future electricity grid configurations with high shares of fluctuating and distributed generation • perform power system simulation with related software tools • describe different grid-designs, including mini- and microgrids • compare different markets for electricity (Futures' Market, Day-Ahead-Market, Intraday-Market, Balancing Power Market, Self-Consumption) and assess the suitability of these concepts for promoting the implementation of higher shares of fluctuating distributed power generation within the electricity grid. • explain the technical principles and resulting limiting factors of concepts and components required for power control within "Smart City", "Smart Grid", and "Smart Home" concepts.
Module contents	Future Power Supply Systems: • Technology and characteristics of conventional power plants based e. g. on coal, gas, and nuclear, • Fundamentals, structure, technologies and operation of (AC-) electricity grids (incl. balancing power, voltage management, etc.), • Fluctuating distributed generation: Characteristics and solutions on the transmission and distribution grid levels, incl. storage, vehicle-to-grid-concepts, smart inverters, heat pumps / CHP, etc, • Interactions between technology and economics: The different electricity markets (Futures Market, Day-Ahead-Market, Intraday-Market, Balancing Power Market, Self-Consumption) and their links to the physical world, • "Smart City", "Smart Grid", "Smart Home", • Mini- and Micro-Grids, • Energy scenarios and modelling, • Chemical energy carriers in the energy system: power-to-gas (e.g. methane) and power-to-liquids (e.g.methanol)

phy649 - Design of Wind Energy Systems

Module label	Design of Wind Energy Systems
Modulkürzel	phy649
Credit points	6.0 KP
Workload	180 h (Attendance: 72 hrs, Self study: 108 hrs)
Verwendbarkeit des Moduls	• Master's Programme Engineering Physics (Master) > Schwerpunkt: Renewable Energies • Sustainable Renewable Energy Technologies (Master) > Mastermodule
Zuständige Personen	• Kühn, Martin (module responsibility) • Kühn, Martin (Prüfungsberechtigt) • Schmidt, Andreas Hermann (Prüfungsberechtigt)
Prerequisites	Basics in Wind Energy Utilisation
Skills to be acquired in this module	Design of Wind Energy Systems: The students attending the course will have the possibility to expand and sharpen of their knowledge about wind turbine design from the basic courses. The lectures include topics covering the whole spectrum from early design phase to the operation of a wind turbine. Students will learn in exercises how to calculate and evaluate design aspects of wind energy converters. At the end of the lecture, they should be able to: estimate the site specific energy yield, calculate the aerodynamics of wind turbines using the blade element momentum theory, model wind fields to obtain specific design situations for wind turbines, estimate the influence of dynamics of a wind turbine, especially in the context of fatigue loads, transfer their knowledge to more complex topics such as simulation and measurements of dynamic loads, calculate the economic aspects of wind turbine Aeroelastic Simulation of Wind turbines: student who has met the objectives of the course will be able to: understand the basic concept of an aero-servo-elastic computer code to determine the unsteady aerodynamic loads, derive and validate the required parameters to model the aero-hydro-elastic response of a wind turbine, identify and interpret the required empirical parameters to correct the blade element momentum (BEM) method with respect to dynamic in flow, unsteady airfoil aerodynamics (dynamic stall), yawed flow, dynamic wake modeling, explain the effects of the different models on the resulting time series and validate the code, interpret design standards for on- and offshore wind turbines, select the required load cases according to sitespecific environmental data, identify the dimensioning load cases and calculate design loads for different main components of a wind turbine.
Module contents	Design of Wind Energy Systems Introduction to industrial wind turbine design, rotor aerodynamics and Blade Element Momentum (BEM) theory, dynamic loading and system dynamics, wind field modelling for fatigue and extreme event loading, design loads and design aspects of onshore wind turbines, simulation and measurements of dynamic loads, design of offshore wind turbines, power quality and grid integration on wind turbines. Aeroelastic Simulation of Wind turbines: The course focuses on the practical implications and hands-on experience of the aero-hydro-servo-elastic modelling and simulation of wind turbines. The subjects are similar but the treatment is complementary to the parallel course 'Design of Wind Energy Systems', which deals with the underlying theoretical background: advanced wind field modelling for fatigue and extreme event loading, modelling of wind farm flow and wake effects, rotor aerodynamics (e.g. stationary or dynamic effects, comparison of Blade Element Momentum theory and more advanced methods like free vortex methods or CFD), structural dynamics and dynamic modelling of wind turbine structures (modelling by ordinary or partial differential equations, stochastics, multi body system modelling), advanced control of wind turbines, design standards, design loads and design aspects of off-shore and onshore wind turbines. The students analyse in pairs a model of an entire wind turbine with the aid of a typical wind turbine design tool like GH Bladed, Flex5 or

Aerodyn/FAST.

phy605 - Digital Signal Processing

Module label	Digital Signal Processing	
Modulkürzel	phy605	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Acoustics	
Zuständige Personen	- Doclo, Simon (module responsibility) - Doclo, Simon (Prüfungsberechtigt)	
Prerequisites		
Skills to be acquired in this module	The students acquire knowledge about theoretical concepts and methods of signal processing and system theory for discrete-time signals and systems. The students are able to apply these theoretical concepts and methods in analytical, numerical and programming exercises.	
Module contents	System properties (stability, linearity, time-invariance, causality); Discrete-time signal processing: sampling theorem, time-domain analysis (impulse response, convolution), z-transform, frequency-domain analysis (transfer function, discrete-time Fourier transform, discrete Fourier transform, FFT, STFT), digital filter design (FIR, IIR, linear phase filter, all-pass filter, signal flow graph), multi-rate signal processing (down/up-sampling, filter banks); Statistical signal processing: stationarity, ergodicity, correlation, Wiener-Khinchin theorem, spectral estimation; Adaptive filters: optimal filters, Wiener filter, time-domain algorithms (RLS, NLMS), frequency-domain algorithms (FDAF); Matlab exercises about discrete-time signal processing and adaptive filters.	
Literatureempfehlungen	A. V. Oppenheim, R. W. Schaffer, "Discrete-Time Signal Processing", Prentice Hall, 2013. J. G. Proakis, D. G. Manolakis, "Digital Signal Processing – Principles, Algorithms and Applications", Prentice Hall, 2013. S. Haykin, "Adaptive Filter Theory", Pearson, 2013. P. P. Vaidyanathan, "Multirate systems and filter banks", Prentice Hall, 1993. K.-D. Kammeyer, K. Kroschel, "Digitale Signalverarbeitung: Filterung und Spektralanalyse mit MATLAB Übungen", Broschert, 2018

phy677 - Speech processing

Module label	Speech processing	
Modulkürzel	phy677	
Credit points	6.0 KP	
Workload	180 h (180 h (Präsenzzeit 56h, Selbststudium: 124h))	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Acoustics	
Zuständige Personen	- Doclo, Simon (module responsibility) - Doclo, Simon (Prüfungsberechtigt) - Enzner, Gerald (Prüfungsberechtigt) - Kollmeier, Birger (Prüfungsberechtigt) - Meyer, Bernd (Prüfungsberechtigt)	
Prerequisites	Introductory signals and systems lecture	
Skills to be acquired in this module	The students will be able to (a) explain the foundations of speech production, perception and analysis, (b) understand the mathematical and information-theoretical principles of speech signal processing, and (c) apply the studied methods to explain the working principle of practical speech processing systems.	
Module contents	Speech production and perception, speech analysis, speech signal processing (STFT, LPC, cepstrum, speech enhancement), speech coding, speech synthesis, automatic speech recognition, speech quality and intelligibility measures, selected topics on speech processing research.	
Literatureempfehlungen	M. R. Schroeder, Computer Speech: Recognition, Compression, Synthesis, Springer, 2013. J. R. Deller, J. H. L. Hansen, J. G. Proakis: Discrete-Time Processing of Speech Signals, Wiley-IEEE Press, 1999. P. Vary, R. Martin: Digital Speech Transmission, Wiley, 2006. J. Benesty, M. M. Sondhi, Y. Huang: Handbook of Speech Processing, Springer, 2008. D. Yu, L. Deng: Automatic Speech Recognition: A Deep Learning Approach, Springer, 2015.

Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Acoustics	
Zuständige Personen	- van de Par, Steven (module responsibility) - Ewert, Stephan (Prüfungsberechtigt) - Kollmeier, Birger (Prüfungsberechtigt) - van de Par, Steven (Prüfungsberechtigt)	
Prerequisites	Introductory acoustics lecture	
Skills to be acquired in this module	The students acquire knowledge about advanced concepts in acoustics, electro-acoustics, room acoustics, acoustical measurement methods and virtual acoustics. The students acquire skills to critically and independently apply these concepts and methods to acoustical problems.	
Module contents	Acoustical measurement methods (sound pressure, spectrum, transfer function, intensity); Non-linear measurement methods (Hammerstein model); Inverse problems in acoustics and regularization; High-resolution methods, acoustic camera; Binaural virtual acoustics; Spherical harmonics, virtual acoustics (Ambisonics, Wave Field Synthesis); Transaural systems; Room acoustics simulation.	
Literaturempfehlungen	G. Müller, M. Möser: Akustische Messtechnik, Springer, 2017; H. Kuttruff: Room Acoustics, CRC Press, 2016; M. Vorländer: Auralization: Fundamentals of Acoustics, Modelling, Simulation, Algorithms and Acoustic Virtual Reality, Springer, 2020

phy694 - Machine Learning II

Module label	Machine Learning II	
Modulkürzel	phy694	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Acoustics	
Zuständige Personen	- Lücke, Jörg (module responsibility) - Lücke, Jörg (Prüfungsberechtigt)	
Prerequisites	The course requires the introductory course "Machine Learning - Probabilistic Unsupervised Learning" or equivalent courses. Furthermore, basic knowledge in higher Mathematics as taught as part of first degrees in Physics, Mathematics, Statistics, Engineering or Computer Science (basic linear algebra and analysis) is required. Additionally, programming skills are required (the course supports matlab and python). Many relations to statistical physics, statistics, probability theory, stochastic exist but the course's content will be developed independently of detailed prior knowledge in these fields.	
Skills to be acquired in this module	The students will deepen their knowledge on mathematical models of data and sensory signals. Building up on the previously acquired Machine Learning models and methods, the students will be lead closer to current research topics and will learn about models that currently represent the state-of-the-art. Based on these models, the students will be exposed to the typical theoretical and practical challenges in the development of current Machine Learning algorithms. Typical such challenges are analytical and computational intractabilities, or local optima problems. Based on concrete examples, the students will learn how to address such problems. Applications to different data will teach skills to use the appropriate model for a desired task and the ability to interpret an algorithm's result as well as ways for further improvements. Furthermore, the students will learn interpretations of biological and artificial intelligence based on state-of-the-art Machine Learning models.	
Module contents	This course builds up on the basic models and methods introduced in introductory Machine Learning lectures. Advanced Machine Learning models will be introduced alongside methods for efficient parameter optimization. Analytical approximations for computationally intractable models will be defined and discussed as well as stochastic (Monte Carlo) approximations. Advantages of different approximations will be contrasted with their potential disadvantages. Advanced models in the lecture will include models for clustering, classification, recognition, denoising, compression, dimensionality reduction, deep learning, tracking etc. Typical application domains will be general pattern recognition, computational neuroscience and sensory data models including computer hearing and computer vision.	
Literatureempfehlungen	Pattern Recognition and Machine Learning, C. M. Bishop, Springer 2006. (best suited for lecture).; Information Theory, Inference, and Learning Algorithms, D. MacKay, Cambridge University Press, 2003. (free online)

phy696 - Advanced Topics Speech and Audio Processing

Module label	Advanced Topics Speech and Audio Processing	
Modulkürzel	phy696	
Credit points	6.0 KP	
Workload	180 h (Attendance: 56 hrs, Self study: 124 hrs)	
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Schwerpunkt: Acoustics	
Zuständige Personen	- Doclo, Simon (module responsibility) - Doclo, Simon (Prüfungsberechtigt) - Gerkmann, Timo (Prüfungsberechtigt)	
Prerequisites	Basic principles of signal processing (preferably successfully completed the course Signal- und Systemtheorie and/or Blockpraktikum Digitale Signalverarbeitung)	
Skills to be acquired in this module	The students will gain in-depth knowledge on the subjects' speech and audio processing. The practical part of the course mediates insight about important properties of the methods treated in a self-study approach, while the application and transfer of theoretical concepts to practical applications is gained by implementing algorithms on a computer.	
Module contents	After reviewing the basic principles of speech processing and statistical signal processing (adaptive filtering, estimation theory), this course covers techniques and underlying algorithms that are essential in many modern-day speech communication and audio processing systems (e.g. mobile phones, hearing aids, headphones): acoustic echo and feedback cancellation, noise reduction, dereverberation, microphone and loudspeaker array processing, active noise control. During the exercises a typical hands-free speech communication or audio processing system is implemented (in Matlab).

Workload	900 h
Verwendbarkeit des Moduls	Master's Programme Engineering Physics (Master) > Abschlussmodul
Zuständige Personen	- Brückner, Hans Josef (Prüfungsberechtigt) - Agert, Carsten (Prüfungsberechtigt) - Avila Canellas, Kerstin (Prüfungsberechtigt) - Biehls, Svend-Age (Prüfungsberechtigt) - Brand, Thomas (Prüfungsberechtigt) - Lukassen, Laura (Prüfungsberechtigt) - Struve, Bert (Prüfungsberechtigt) - Dietz, Mathias (Prüfungsberechtigt) - Doclo, Simon (Prüfungsberechtigt) - Ewert, Stephan (Prüfungsberechtigt) - Hohmann, Volker (Prüfungsberechtigt) - Feudel, Ulrike (Prüfungsberechtigt) - Hartmann, Alexander (Prüfungsberechtigt) - Schüning, Thomas (Prüfungsberechtigt) - Lücke, Jörg (Prüfungsberechtigt) - Kollmeier, Birger (Prüfungsberechtigt) - Kühn, Martin (Prüfungsberechtigt) - Neu, Walter (Prüfungsberechtigt) - Kunz-Drolshagen, Jutta (Prüfungsberechtigt) - Lienau, Christoph (Prüfungsberechtigt) - Poppe, Björn (Prüfungsberechtigt) - Peinke, Joachim (Prüfungsberechtigt) - Meyer, Bernd (Prüfungsberechtigt) - Nilius, Niklas (Prüfungsberechtigt) - van de Par, Steven (Prüfungsberechtigt) - Schmidt, Thorsten (Prüfungsberechtigt) - Strybny, Jann (Prüfungsberechtigt) - Teubner, Ulrich (Prüfungsberechtigt) - Uppenkamp, Stefan (Prüfungsberechtigt) - Wark, Michael (Prüfungsberechtigt) - Wollenhaupt, Matthias (Prüfungsberechtigt) - der Masterarbeit, BetreuerIn (module responsibility)
Prerequisites	Master Curriculum Engineering Physics
Skills to be acquired in this module	As a general objective for the Master Thesis, the student shall demonstrate the ability to constructively, critically and independently formulate, discuss and communicate issues at stake, integrating theory and methodology. As specific competency objectives within the Master Thesis, after completion the student shall be able to: - demonstrate knowledge of relevant and latest publications concerning the selected topic - elaborate the Master Thesis on the basis of clearly formulated, general objectives and specific characteristics of the topic - identify and put to use in an operational manner empirical or other scientific material and methods that are appropriate in relation to the subject - develop a balanced discussion of material, methods, results and possible consequences of these in relation to the field of Renewable Energy - present the Master Thesis orally and defend the results and conclusions in a critical discussion The module is designed to apply and deepen the methodologies acquainted throughout the program to a specific scientific problem given by the supervisor. In order to achieve a result the student needs to apply scientific as well as keycompetencies described in the next section. Students have understood the scientific problem, they have learned the ropes of the problem, they have selected, acquainted or deepened a set of scientific and methodologies and key-competencies necessary to solve the problem and they have applied those methods.
Module contents	The master thesis module finalizes and concludes the master programme. The student presents the achieved results as a written thesis and defends the results / conclusions to a board of examiners. Within this framework, the students work independently on a current topic from

the research areas of the working groups. The work is accompanied by a seminar to present and review results and the progress of the work intermittently. The results will be presented and defended in a final colloquium. The publication of thesis results is appreciated.
