Background Modules

bio605 - Molecular Genetics and Cell Biology

Module label	Molecular Genetics and Cell Biology		
Modulkürzel	bio605		
Credit points	12.0 KP		
Workload	360 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Biology (Master) > Background Modules • Master's Programme Biology (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules • Master's Programme Neuroscience (Master) > Background Modules 		
Zuständige Personen	<ul style="list-style-type: none"> • Neidhardt, John (module responsibility) • Neidhardt, John (Prüfungsberechtigt) • Koch, Karl-Wilhelm (Prüfungsberechtigt) • Jüschke, Christoph (Prüfungsberechtigt) 		
Prerequisites	BSc (Biologie, Biochemie)		
Skills to be acquired in this module	<p>++ deepened biological expertise ++ deepened knowledge of biological working methods + data analysis skills ++ interdisciplinary thinking + critical and analytical thinking + independent searching and knowledge of scientific literature + data presentation and discussion (E) (written and spoken) + teamwork + ethics and professional behaviour + project and time management</p> <p>Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology</p>		
Module contents	<p>Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases. Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.</p>

gsw010 - Molecular Physiology

Module label	Molecular Physiology
Modulkürzel	gsw010
Credit points	6.0 KP
Workload	180 h
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master's Programme Molecular Biomedicine (Master) > Background Modules
Zuständige Personen	<ul style="list-style-type: none">• Milenkovic, Ivan (module responsibility)• Milenkovic, Ivan (Prüfungsberechtigt)• Radulovic, Tamara (Prüfungsberechtigt)• Keine, Christian (Prüfungsberechtigt)• Radulovic, Tamara (Module counselling)• Milenkovic, Ivan (Module counselling)
Prerequisites	Enrolment in Master's programme Molecular Biomedicine; Knowledge of cell biology is beneficial for comprehension of lecture content
Skills to be acquired in this module	<p>Goals of the Module: Upon successful completion of this module, students</p> <ul style="list-style-type: none">- know molecular mechanisms of cellular physiology- know physiology of the following human body organ systems: muscular system, nervous system, cardiovascular system, respiratory system, urinary system- understand pathophysiology of certain diseases- know basic principles of functional tests for certain organ systems. <p>Competencies: ++ deepened biological expertise ++ deepened clinical/pathological expertise ++ deepened knowledge of medical diagnostic methods + data analysis and clinical interpretation + interdisciplinary thinking</p>
Module contents	<p>The module focuses on physiology of the cell, physiology of human organ systems in health and disease, homeostatic regulation mechanisms</p> <p>Lecture topics: 1. Cellular mechanisms of excitability 2. Synaptic transmission 3. Muscle contraction 4. Spinal cord reflexes 5. Motor skills 6. Basic principles of circulatory function 7. Pulmonary ventilation 8. Regulation of respiration 9. General sensory physiology 10. Physiology of special senses 11. Kidneys 12. Water homeostasis and osmoregulation</p> <p>Exercise: 1. Excitability of nerve cells and AP propagation 2. Reflexes 3. Electrocardiography 4. Pulmonary function tests and regulation of respiration 5. Functional tests for sensory systems 6. Water and osmolarity homeostasis</p>
Literatureempfehlungen	Guyton and Hall - Textbook of medical physiology (covers most topics) Kandler, Schwarz, Jessell - Principles of neural science Gary G. Matthews – Cellular Physiology of Nerve and Muscle

Practical training		2	SoSe und WiSe	28
Präsenzzeit Modul insgesamt				56 h

gsw020 - Cellular and Subcellular Structures

Module label	Cellular and Subcellular Structures	
Modulkürzel	gsw020	
Credit points	6.0 KP	
Workload	180 h	
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master's Programme Molecular Biomedicine (Master) > Background Modules 	
Zuständige Personen	<ul style="list-style-type: none"> • Bräuer, Anja (module responsibility) • Bräuer, Anja (Prüfungsberechtigt) • Maier, Esther Christine (Prüfungsberechtigt) • Maier, Esther Christine (Module counselling) 	
Prerequisites	Enrolment in Master's programme Molecular Biomedicine	
Skills to be acquired in this module	<p>Goals of the Module: Upon successful completion of this module, students know and understand cellular and subcellular structures and their function in the human body.</p> <p>Competencies: ++ deepened biological expertise ++ deepened clinical / pathological expertise, ++ deepened knowledge of biological working methods ++ deepened knowledge of clinical / pathological diagnostics, + interdisciplinary thinking, + critical and analytical thinking, + ability to perform independent biological research + ethics and professional behaviour</p>	
Module contents	<p>The module aims to give students an insight into microscopic functional anatomy. In this module, we will cover aspects of cell compartmentalisation and tissue organisation as the basis for normal function and homeostasis. In addition, we will cover examples of organ organisation and organ function. To introduce students to clinical concepts, and to deepen their understanding of the functional roles of cells and tissues, we will also cover aspects of the pathological basis of disease for selected organs and organelles.</p> <p>In the accompanying seminar, students will have the chance to work on light and electron microscopic pictures, to practice annotation and identification of cells and tissues. In addition, the students will read and present original literature. This will introduce select aspects of disease, but also introduce research methodology and scientific thinking.</p> <p>This course is not a full histology course, but it serves as an introduction to the topic, recapitulates aspects of cell biology and introduces a few select aspects of pathology. Thus, this module is aimed at students with little experience in cell biology.</p>	
Literatureempfehlungen	Molecular Biology of the Cell (Alberts et al., 6th ed.) Junqueira's Basic Histology: Text and Atlas (Mescher, 14th ed.) Robbins Basic Pathology (Kumar et al., 9th ed.)

Zuständige Personen	<ul style="list-style-type: none">• Loser, Karin (module responsibility)• Loser, Karin (Prüfungsberechtigt)• Mykicki, Nadine (Prüfungsberechtigt)
Prerequisites	Enrolment in Master's programme Molecular Biomedicine Basic knowledge in primary cell culture, quantitative real-time PCR, flow cytometry or histology would be highly desirable.
Skills to be acquired in this module	<p>Goals of this module: After completing this module, students are able to perform experimental approaches necessary to investigate selective immunological questions. These will comprise the normal function of the healthy immune system as well as processes leading to immune system dysregulation or immune system dysfunction in several systemic or organ specific diseases. Based on the basic knowledge of immunology acquired in the module students will be able to understand and analyze specific scientific problems, plan experimental approaches accordingly, and perform the experiments.</p> <p>Skills to be acquired/ competencies: ++ Deepened biological expertise ++ Deepened clinical expertise ++ Deepened knowledge of biological working methods + Deepened knowledge of clinical diagnostics ++ Data analysis skills + Interdisciplinary thinking ++ Critical and analytical thinking + Independent searching and knowledge of scientific literature + Ability to perform independent biological research ++ Data presentation and discussion (written and spoken) + Teamwork + Project and time management</p> <p>Methods: Key methods learned and implemented in this module include - Primary cell culture and cell separation - RNA extraction, reverse transcription and quantitative real-time PCR - Tissue sectioning, immunohistology and immunofluorescence staining including microscopy - Multicolor flow cytometry - Quantification of soluble factors and inflammatory mediators using multiplex-assay techniques</p>
Module contents	<p>Lecture: - Regulation of innate and adaptive immune responses in healthy individuals - Dysregulation of the immune system in inflammatory diseases, cancer or autoimmunity - Impact of the environment on immune regulation</p> <p>Seminar: - Presentation and discussion of laboratory methods used in the practical part</p> <p>Exercise: This module involves working on small research projects in groups of 2-3 students. The projects include basic immunology in humans and mice with the goal of better understanding the development of allergy, sterile inflammation or autoimmunity as well as immune regulation during cancer or infection. Using the knowledge of immune regulation gained in the lecture and seminar, students will analyze and evaluate specific scientific problems. Required methods of immunology, cell and molecular biology (e.g., flow cytometry, cell separation, isolation and culture of primary immune cells, gene expression studies, histology) are taught and used.</p>

Modulkürzel	gsw250			
Credit points	6.0 KP			
Workload	180 h			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> Master's Programme Molecular Biomedicine (Master) > Background Modules 			
Zuständige Personen	<ul style="list-style-type: none"> Noster, Janina (module responsibility) Noster, Janina (Prüfungsberechtigt) 			
Prerequisites	Enrolment in Master's programme Molecular Biomedicine			
Skills to be acquired in this module	<p>Goals of this module: Upon completion of this module the students will have a basic knowledge about bacteriology, antibiotic resistances and gene mutagenesis methods.</p> <p>Skills to be acquired/ competencies: ++ deepened biological expertise ++ deepened knowledge of biological working methods + deepened knowledge of clinical diagnostics + data analysis skills ++ interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ data presentation and discussion (written and spoken) + teamwork + ethics and professional behavior ++ project and time management</p>			
Module contents	<p>Lecture: In the first lectures, basic knowledge of general and specific bacteriology is taught. Subsequently, antibiotic resistance as well as resistance mechanisms are explained in more detail. Finally, the topic of horizontal gene transfer and mobile genetic elements will be discussed.</p> <p>Seminar: The seminar will address with the topic of antibiotic resistances. Students gain initial experience in formulating a scientific question and designing experiments to answer it. Different cloning strategies are discussed in detail.</p> <p>Practical course: The methods developed in the seminar will be put into practice. Antibiotic resistance plasmids will be modified using various techniques and the effects of these manipulations on bacterial physiology and resistance patterns will be investigated.</p>			
Literatureempfehlungen	Textbooks of microbiology. Current literature on antibiotic resistances and horizontal gene transfer will be announced in the lecture.

Prerequisites	Enrolment in Master's programme Molecular Biomedicine
Skills to be acquired in this module	<p>Goals of the Module:</p> <p>Upon successful completion of this module, students</p> <ul style="list-style-type: none"> - are familiar with the basic epigenetic mechanisms - know the principles of different sequencing techniques, both for genetic and epigenetic research - are familiar with the "first 1000 days of life concept" and how the early environment influences long term health - know how the human body is colonized - know about the basic mechanisms involved in CNV development during fetal and early postnatal life - know about the methods used to study molecular intercellular signaling - know about the non-invasive methods used to study functional brain development - know about the insults leading to cerebral ischemia - know about the mechanism of the neurovascular response - know about the cellular and electrophysiological effects of acute and chronic cerebral ischemia - know about the cell types, cellular interactions and molecular changes during peripheral nerve; degeneration and regeneration following nerve trauma - are able to explain some oncogenic mechanisms of viruses - can explain preeclampsia and its immunological regulation - are familiar with antibiotic classes, mode of actions of antibiotics, principles of antibiotic resistance, dissemination of current plasmids causing multi-resistance - know about differences between susceptibility, tolerance, resistance and persistence to antibiotics, the methods to determine minimal inhibitory concentrations, the causes of persistent infections, the characteristics of persister cells and mechanisms of persister cell formation, and current medical treatment strategies - are able to explain the concept of cancer immunosurveillance and immunoediting - can explain current strategies in immunotherapy of cancer including checkpoint inhibition, CAR T cell therapy and cancer vaccination - are able to explain the mechanisms underlying therapy resistance in malignant diseases, particularly cancers of the gastrointestinal tract and the hepato-pancreato-biliary system - can explain current strategies in cancer diagnostic, particularly liquid biopsy <p>Competencies:</p> <ul style="list-style-type: none"> ++ deepened clinical expertise ++ deepened knowledge of biological working methods and clinical diagnostics ++ interdisciplinary thinking + data analysis skills ++ critical and analytical thinking + independent searching and knowledge of scientific literature + ethics and professional behavior
Module contents	<p>The module focuses on molecular aspects as part of current clinical research in different fields.</p> <p>Lectures: (Part 1)</p>

- Genetic and epigenetic sequencing technology
- Epigenetic programming by early life events
- The human microbiome and colonization of the human body
- Molecular insights into functional brain development
- Basic mechanisms involved in CNS development during fetal and early postnatal life
- Introduction to methods used to study molecular signaling
- Introduction to non-invasive methods used to study functional brain development
- (Part 2)
 - Contribution of the immune system to the progression of infection, autoimmunity, cancer or (neuro-) inflammation
 - Modulation of the immune system as a potential therapeutic option
 - Interaction of the microbiome with the immune system and impact of environmental factors on the development of immune-mediated diseases
- (Part 3)
 - Oncogenic potential of viruses (e.g. Cervix carcinoma caused by HPV viruses)
 - Molecular insights into carcinogenesis
 - Preeclampsia and its immunological regulation
- (Part 4)
 - Concept of cancer immunosurveillance and immunoediting
 - Current strategies for cancer immunotherapy
 - Mechanisms of cancer therapy resistance
 - Current strategies for cancer diagnosis and liquid biopsy
- (Part 5)
 - Insights into antibiotic resistance (mode of antibiotics, principles of antibiotic resistance)
 - Emergence of multi-resistance and dissemination of plasmids causing multi-resistance
 - Differences between susceptibility, tolerance, resistance and persistence of pathogens to antibiotics
 - Current hypotheses of inducers for persister cell formation and medical treatment
- (Part 6)
 - Neurovascular regulation in response to cerebral ischemia
 - Molecular and cellular mechanisms of peripheral nerve regeneration

Prerequisites	Enrolment in Master's programme Molecular Biomedicine
Skills to be acquired in this module	<p>Goals of the Module: Upon successful completion of this module, students</p> <ul style="list-style-type: none"> - can define and identify oncogenes and tumor suppressor genes - know about the hallmarks of cancer and can explain them based on example pathways and traits - know about the complexity of the tumor tissue and the different cells that are involved - know about the principles of metastasis. <p>Competencies: ++ deepened biological & clinical expertise ++ interdisciplinary thinking + deepened knowledge of biological working methods & clinical diagnostics ++ data analysis skills + usage of databases and computational tools ++ critical & analytical thinking + independent searching & knowledge of scientific literature ++ data presentation & discussion (written and spoken) + teamwork ++ ethics & professional behavior</p>
Module contents	<p>Part 1 - Lecture: We will give a brief overview of several aspects of tumor biology: Types of mutation, hallmarks of cancer, tumor as a tissue, metastasis, oncogenes and tumor suppressor genes, signal transduction and many example pathways that are important for cancer progression. In addition, you will learn about tumor-infiltrating immune cells and new therapy options like tumor-immune therapy.</p> <p>Part 2 - Seminar: Students will be expected to demonstrate the ability to prepare presentations in small working groups where they critically evaluate current research regarding specific examples of tumor diseases and their therapy (problem-orientated learning)</p> <p>Optional: Lectures from the study programme Human Medicine (winter semester only; will be held in German): Lecture topics from the human Medicine programme focusses on large tumor entities, therapy strategies, and basics of carcinogenesis and therapeutic implementation. Please note, that these lectures are not part of the curriculum and are therefore not relevant for the examinations.</p>
Literaturempfehlungen	<p>Current literature will be uploaded on Stud.IP. Previous literature research is not necessary.</p> <p>If you are looking for more information/background: Weinberg; "The Biology of Cancer"; Garland Science</p>

Prerequisites	none
Skills to be acquired in this module	<p>++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics</p> <p>Upon successful completion of this course, students</p> <ul style="list-style-type: none"> • know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language • understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint. • have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish) • are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation • have practical skills in handling small rodents or birds or fish • have profound knowledge of anaesthesia, analgesia and basic principles of surgery. • have practised invasive procedures and euthanasia. <p>NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.</p>
Module contents	<p>Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:</p> <ul style="list-style-type: none"> • Legislation, ethics and the 3Rs • Scientific integrity • Data collection " • Basic biology of rodents, birds and fish • Husbandry, and nutrition of rodents, birds and fish • Animal Welfare • Health monitoring • Pain and distress • Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

Literaturempfehlungen		"LAS interactive" internet-based learning platform
