Modules for Biology

Background Modules

bio703 - Basic Concepts in Plant Sciences

Module label
Basic Concepts in Plant Sciences

Module code
bio703

Credit points
12.0 KP

Workload
360 h

Used in course of study
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules

Contact person
Module responsibility
- Dirk Carl Albach

Authorized examiners
- Dirk Carl Albach
- Gerhard Wolfgang Zotz
- Sascha Laubinger
- Klaus Bernhard von Hagen

Module counseling
- Gerhard Wolfgang Zotz
- Sascha Laubinger
- Klaus Bernhard von Hagen

Entry requirements
Skills to be acquired in this module
Communicating deeper knowledge in ecology, phylogeny, evolution and genetics of plants
Communicating scale- and method-overarching thinking
Communicating deeper theoretic concepts of ecology, evolution and genetics of plants
Communicating deeper knowledge of biological working methods
Communicating data analysis skills
Communicating interdisciplinary thinking
Communicating critical and analytical thinking
Communicating independent searching and knowledge of scientific literature
Communicating ability to perform independent biological research
Communicating data presentation and discussion in German and English (written and spoken)
Communicating teamwork
Communicating ethics and professional behaviour

Module contents
V: Biodiversity of plants (2 SWS) V: Resource acquisition and use by plants (1 SWS)
V: Gene expression in plants (1 SWS) S: Phylogeny of plants (2 SWS) S: Interactions of plants with environmental parameters (2SWS)

bio765 - Current Methods in Plant Sciences - Ecology, Phylogeny and Molecular Biology

Module label: Current Methods in Plant Sciences - Ecology, Phylogeny and Molecular Biology

Module code: bio765

Credit points: 12.0 KP

Workload: 360 h

Used in course of study:
- Master's Programme Biology (Master) > Background Modules
- Master’s Programme Biology (Master) > Background Modules

Contact person:

Module responsibility:
- Sascha Laubinger

Authorized examiners:
- Sascha Laubinger
- Dirk Carl Albach
- Gerhard Wolfgang Zotz

Module counseling:
- Dirk Carl Albach
- Gerhard Wolfgang Zotz

Entry requirements:

Skills to be acquired in this module:
- Acquaintance and practicing ecological, phylogenetic and molecular methods
- Communication of scale- and method-overarching thinking and project planning
- Knowledge of current methods and questions in plant science
- Capacity for teamwork, project- and time management
  - deepened biological expertise
  - deepened knowledge of biological working methods
  - data analysis skills
  - interdisciplinary thinking
  - critical and analytical thinking
  - independent searching and knowledge of scientific literature
  - ability to perform independent biological research
  - data presentation and discussion in German and English (written and spoken)
  - teamwork
  - statistics & scientific programming

Module contents:
- Ü: Current Methods in Plant Science (8 SWS)

bio655 - Ornithology

Module label: Ornithology
Module code: bio655
Credit points: 12.0 KP
Workload: 360 h

Used in course of study:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules

Contact person:
Module responsibility:
- Franz Bairlein

Authorized examiners:
- Georg Martin Klump
- Sandra Bouwhuis
- Christine Köppl
- Ullrhe Langemann
- Henrik Mouritsen
- Heiko Schmaljohann
- Franz Bairlein

Module counseling:
- Georg Martin Klump
- Sandra Bouwhuis
- Christine Köppl
- Ullrhe Langemann
- Henrik Mouritsen
- Heiko Schmaljohann
- Franz Bairlein

Entry requirements:
The module imparts advanced knowledge on different aspects of ornithology. The students acquire:

- An extended knowledge of morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds
- Knowledge, presentation and discussion of relevant English literature from various fields of ornithology
- Deepened biological expertise
- Deepened knowledge of biological working methods
- Critical and analytical thinking
- Independent searching and knowledge of scientific literature
- Data presentation and discussion in German and English (written and spoken)

Skills to be acquired in this module:
The module is composed of the lecture "Ecology and Physiology of Birds", a seminar accompanying the lecture "Current Questions of Ornithology", a seminar "Behavioural Ecology of Birds", and a seminar "Methods in Field Ornithology".

Lecture "Ecology and Physiology of Birds":
This lecture consolidates special aspects of systematics, morphology, physiology, migration, orientation, population biology, communication and behavioural ecology in birds.

Seminar "Current Questions of Ornithology":
In this seminar, original English publications are presented and discussed which deal with current research results from various fields treated in the lecture. Every student reads a paper on one scientific article and discusses the results of that article with the other participants.

Seminar "Behavioural Ecology of Birds" (option 1):
In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

Seminar "Methods in Field Ornithology" (option 2):
The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

| Entry requirements
Skills to be acquired in this module
|nop| ++ deepened biological expertise ++ deepened knowledge of biological working methods ++ data analysis skills + interdisciplinary thinking ++ critical and analytical thinking ++ independent searching and knowledge of scientific literature ++ ability to perform independent biological research + data presentation and discussion in German and English (written and spoken) ++ project and time management ++ statistics & scientific programming [nop] The molecule aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).
| Module contents
S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a "mini symposium" subsequent to the field studies. E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication

bio720 - Marine Biodiversity

Module label: Marine Biodiversity  
Module code: bio720  
Credit points: 15.0 KP  
Workload: 450 h  

Used in course of study:  
- Master's Programme Biology (Master) > Background Modules  
- Master's Programme Biology (Master) > Background Modules

Contact person:  
Module responsibility: Pedro Miguel Martinez Arbizu  
Authorized examiners: Pedro Miguel Martinez Arbizu, Thomas Glatzel  
Module counseling: Thomas Glatzel

Entry requirements: BSc (Biology)

Skills to be acquired in this module:  
- deepened biological expertise  
- deepened knowledge of biological working methods  
- data analysis skills  
- interdisciplinary thinking  
- critical and analytical thinking  
- independent searching and knowledge of scientific literature  
- ability to perform independent biological research  
- data presentation and discussion in German and English (written and spoken)  
- teamwork  
- ethics and professional behaviour  
- project and time management  
- statistics & scientific programming

Knowledge of fundamentals, topical subjects and methods in Marine Biology and Marine Geology. Studies and critical assessment of the scientific literature.

Module contents:  
L: (AW) General Marine Geology  
E: Biogenic sedimentation, Interaction benthos-sediment  
(SS) Plankton of the oceans; (MH) unicellular plankton; (IK) benthos of the North-Sea; (PM) biodiversity in the deep sea and on seamounts; (JG) conceptions and hypotheses of marine biodiversity, biodiversity of marine vertebrates; (GG) animal migrations and dispersal behaviour. A lecture comprises the above-mentioned subjects and imparts marine biological theories, research results and methods. In the seminar, research is presented and discussed. In the laboratory course/exercises, subjects are treated in coordination with the contents of the lecture. With the aid of a computer, data are analysed and interpreted statistically.

Reader's advisory: as announced in the lecture

Safe apnoediving with aptitude test and medical fitness certificate

**Skills to be acquired in this module**
+ [nop] + deepened knowledge of biological working methods + ability to perform independent biological research 
+ teamwork + ethics and professional behaviour + project and time management [nop] By actively participating in this module students acquire qualifications in the following fields: Biological oceanography, marine biology and marine ecology. - Geological formation history of the Mediterranean Sea and Atlantic Ocean, respectively, or the Red Sea and adjacent seas - Oceanography and hydrology - Development of the faunal and floral composition of the Atlantic Ocean, the Mediterranean Sea and the Mediterranean region or the Red Sea (biogeography) - Commercial utilization of the seas and its impacts - Biotopes and biotic communities - Evolution, systematics, morphology, modes of life, and ecology of selected animal groups - Applying theoretical knowledge to real-world organisms/systems - Improved and specialized knowledge of species - Adaptation of life cycles - Interaction between organisms and environment - Dynamics of reef-building and reef-degrading processes - Threat to coral reefs/protection of marine environments Methods: - Formulation and definition of scientific approaches and selection of methods - Observation and investigation of organisms and their habitats (snorkelling/diving) - Documentation of small research projects in groups in the style of a scientific publication - Editorial work to prepare a module report - Popular presentation of results to be published by the media and to be presented at the University Further skills: - Social engagement in groups/teamwork in projects - Independent scientific work in groups - Improvement of scientific discussion culture - Consciousness of the threat to coral reefs - Practising English - Dealing with the culture of the visited region Culture: - History, culture, politics, and religion Additionally: - Physiological aspects of apnoediving - Measures in case of accidents (also caused by "poisonous" organisms)

**Module contents**
Biodiversity of littoral biotic communities – topographical field research

**Reader's advisory**
- Grüter, W., 2001: Leben im Meer - Vielfalt und Zusammenhänge. Dr. Friedrich Pfeil Verlag, München.  
  Should be read prior to a marine biological excursion! This book will arouse your curiosity about the submarine world. A reading book!  
  This textbook is information and fun for all readers interested in marine life as well as in the protection of marine environments.  
  The textbook for the Mediterranean Sea! The general 1st part provides valuable information on symbioses or feeding types, for example.  
  Provides basic information! Very compact, explanatory! Not expensive! A must for biological oceanography! Recommended for preparing examinations! Provides basic information!  
  Highly illustrative! Much additional information on different fields! The authors provide a unique ecological approach that helps students understand the real-world relevance of marine biology by exploring how organisms interact within their individual ecosystems.  
  Provides basic information! Connecting biological oceanography with theoretical ecology! - deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills; critical and analytical thinking
- independent searching and knowledge of scientific literature
- data presentation and discussion in English (written and spoken)
- statistics & scientific programming

Module contents:
Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses.

Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.

<td>The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.</td>

<td>Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical. Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.</td>

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

Module contents
Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.
Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.
Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.
Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

## Module Contents

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion.

Lecture topics:
- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Limb Development
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

### Reader's Advisory

**Used in course of study**
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

**Contact person**
- Module responsibility
  - Ulrike Sienknecht
- Authorized examiners
  - Ulrike Sienknecht
  - Hans Gerd Nothwang
- Module counseling
  - Hans Gerd Nothwang

**Entry requirements**

**Skills to be acquired in this module**
- Upon successful completion of this course, students have skills in methods of developmental biology:
- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with embryo handling, tissue preparation (including cryosectioning), dissection of inner ears, and the use of different histological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab note-book
- know how to carry out formal laboratory reports (and the anatomy of a scientific paper)
- in addition, have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres
- are able to summarize current hypotheses about the evolution of the auditory system in vertebrates
- skills: ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- ++ data presentation and discussion in German and English (written and spoken)
- ++ teamwork
- ++ ethics and professional behaviour
- ++ project and time management

**Module contents**
- Lab exercises in comparative developmental biology on chicken and mouse embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Lectures in the field of auditory system development, such as:
- Development of the Inner Ear
- Development of the Middle Ear
- Evolution of the Central and Peripheral Auditory System
- Development and Layout of the Central Auditory System

**Reader’s advisory**

Skills to be acquired in this module

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking
++ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
+ project and time management

Module contents

- Lecture: Molecular fundamentals of cellular signal processes
- Seminar: Signal transduction
- Exercises: Experiments on cellular signal transduction and enzymology

Mechanisms of biochemical signal transduction are imparted theoretically and experimentally

Reader's advisory

- Textbooks of cell biology and biochemistry. Current literature on topics of signal transduction (as announced in the preparatory meeting).

<tr>
<td>Module contents</td>
<td>The lecture “Neuroethology” provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation. The lecture “Behavioural ecology” provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication. In the seminar “Current issues of Ethology”, current original literature relating to behavioural biology is reported and discussed.</td>

| Skills to be acquired in this module | Upon successful completion of this course, students |
|                          | know the fundamentals of neurotransmission |
|                          | know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions |
|                          | understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease |
|                          | know the principles of drug treatment for psychiatric disorders |
|                          | have in-depth knowledge in selected areas of these topics |
|                          | are able to understand, explain and critically assess neuroscientific approaches in animals and humans |
|                          | are able to understand and critically assess published work in the area of cognitive neuroscience |
| Module contents          | The lecture &quot;Introduction to Cognitive Neuroscience&quot; gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: |
|                          | History of cognitive neuroscience          |
|                          | Methods of cognitive neuroscience          |
|                          | Attention                                  |
|                          | Learning                                   |
|                          | Emotion                                    |
|                          | Language                                   |
|                          | Executive functions.                      |
|                          | The supervised excersise either deepens that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week. |
|                          | The lecture “Psychopharmacology” illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: |
|                          | Introduction to Terms and Definitions in Drug Research |
|                          | Dopaminergic and Noradrenergic System      |
|                          | Cholinergic and Serotonergic System        |
|                          | GABAergic and Glutamatergic System         |
|                          | Addiction                                  |

Contact person:
- Module responsibility: Martin Greschner
- Authorized examiners:
  - Martin Greschner
  - Karin Dedek
  - Ulrike Janssen-Bienhold
  - Christian Puller

Entry requirements: Basic knowledge of neurobiology

Skills to be acquired in this module:
- ++ Neurosci. knowlg.
- ++ Expt. Methods
- ++ Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Upon successful completion of this course, students:
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

Module contents:
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

Reader's advisory:
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

Language of instruction: English

Skills to be acquired in this module
  ++ Neurosci. knowlg.
  + Independent research
  + Scient. Literature
  ++ Interdiscipl. knowlg.
  + Data present./disc.

  • to gain a general understanding of sensory reception
  • to acquire specific knowledge of sensory reception at the molecular and cellular level,

  with focus on the relationship between structure and function of sensory molecules

  • to be able to perform simple quantitative assessments of detection sensitivity to physical stimuli
  • to understand common features in transduction pathways among various senses

Module contents
  General aspects of sensory reception and signal transduction: adequate stimulus, threshold sensitivity and
signal-to-noise limitations, activation of receptor proteins Evolutionary and ecological aspects of sensory
reception The senses: Chemoreception in the gustatory cells and olfactory sensory neurons Thermoreception
in the skin infrared reception in the pit organ Mechanoreception - auditory hair cells, somatosensory neurons in
the skin, lateral line, proprioceptors, baroreceptors Photoreception - ciliary and rhabdomeric photoreceptor cells;
Electroreception in Lorenzini ampullae of elasmobranch fish and in tuberous receptors of mormyrid fish; derived
electroreceptors in aquatic mammals Magnetoreception - candidate structural correlates of magnetoreceptors

Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students
- have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)
- have basic knowledge of the large range of techniques used in auditory research
- are able to read and critically report to others on an original research paper in auditory neuroscience
- are able to research and review a specific topic in auditory neuroscience

**Module contents**
- One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.
- Topics:
  - Hair cells: structure, transduction mechanism, receptor potential, synaptic transmission
  - Basilar papilla / cochlea: structure, micromechanics, amplification; otoacoustic emissions
  - Auditory nerve: phase locking, rate coding. Excitation patterns
  - Ascending auditory pathways: wiring, principles of excitation/inhibition, examples of cellular/molecular specialisations
  - Sound localisation in birds and mammals
  - Central auditory processing: imaging techniques, auditory streams, cortex, primates
  - Relation between psychophysics and neurophysiology

The introductory block is followed by a supervised literature search and individually written term paper on a specific topic in auditory neuroscience.

**Reader's advisory**
- Required reading:
  - About 20 selected original papers (selection varies)

Recommended textbook(s) or other literature:
- Pickles JO (2012) An Introduction to the Physiology of Hearing. Brill, Netherlands

Upon successful completion of this course, students:
- have knowledge on invertebrate neuronal systems in comparison to vertebrate systems
- have discussed an overview of experimental and theoretical methods of invertebrate neuroscience
- have acquired first practical skills in intracellular recordings from invertebrate neurons
- have acquired basic skills in data analysis
- have acquired an intuitive understanding of membrane potential and action potential generation based on computer simulations

Module contents:
The background module Neurophysiology consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation. The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods
In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments

Reader's advisory:
Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP.
Background and seminar literature will be available in Stud.IP

Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

Module contents
The modul comprises (i) a lecture "Functional MRI data analysis" [2 SWS], and (ii) a practical course [5 SWS] and (iii) a seminar "Experiments on Neurocognition" [1 SWS] including aspects of planning, performance and analysis of functional neuro-imaging studies using MATLAB based software.

bio810 - Independent Research

Module label Independent Research
Module code bio810
Credit points 15.0 KP
Workload 450 h
Used in course of study
- Master's Programme Biology (Master) > Research Modules
- Master's Programme Biology (Master) > Research Modules

Contact person
Module responsibility
- Gerhard Wolfgang Zotz
Authorized examiners
- Gerhard Wolfgang Zotz
- Lehrende der Biologie

Entry requirements
External research projects are done on an individual basis. They are supervised by one person from Oldenburg and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/ (Learning Agreement for External Research Module)

Skills to be acquired in this module
++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
++ project and time management
++ statistics & scientific programming

Students perform individual research projects to learn:
• planning and organization of a research project in a group outside of University of Oldenburg
• formulate a scientific hypothesis
• planning, performing and analyzing experiments and / or simulations
• working with scientific background literature on the specific context of the project
• oral presentation and discussion of backgrounds and results in the lab seminar
• write a scientific report in publication format
• prepare and present a scientific poster

Module contents
Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad)

The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.

Note:
• all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor, students should contact appropriate supervisors individually
• prior to project start, external and local supervisors must fill the learning agreement form
• the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor
• participation in a joint poster presentation of concurrent research modules is highly recommended.

Contact person:
Module responsibility:
- Dirk Carl Albach

Authorized examiners:
- Dirk Carl Albach
- Klaus Bernhard von Hagen
- Thijs Janzen

Module counseling:
- Klaus Bernhard von Hagen

Entry requirements:
In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.

- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- ability to perform independent biological research
- data presentation and discussion in German and English (written and spoken)
- teamwork
- statistics & scientific programming

Module contents:
In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa.
In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.

students learn the use of the software R in application scenarios
students learn to actively "speak" the programming language R
students practice statistical data analysis with R
Module contents
The lecture gives an intuitive introduction into the use of the statistics software R. We start by introducing the basic handling of R and the syntax of its programming language. We use those to obtain the first statistical analyses from R. The next important step is to create informative graphics to represent the statistical results. Finally, we look into programming concepts that allow for more complex statistical analyses.

Entry requirements

Skills to be acquired in this module

Upon completion of this course, students

- have basic knowledge of non-biological aspects of professional life (e.g., law, management, languages)
- know the basic safety and environmental concerns in bioscientific workplaces
- are able to critically define and discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
- have the ability to communicate scientific concepts, both orally and in writing
- are able to prepare and give a coherent presentation in a team
- have practised to lead a group discussion

Module contents

Lectures introduce the legal framework and the application procedures for experimental work with animals, humans and genetically modified organisms.

In supervised exercises, students research the ethical aspects and controversial issues of about 10 particular topics in the biosciences. They take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
- Good scientific practise and fraud
- Neuroenhancement
- Artificial intelligence
- Animal welfare, Animal experiments
- Overfishing, Nature conservation
- State-of-the-art genetic tools and their implications
- Genetically modified organisms, e.g., in food production, chimeras
- Stem cells
- Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

Reader's advisory

Current law and interpretative commentaries, e.g., by the German Research Council (DFG) or the German Ethics Panel

Introductory papers aimed at lay persons, e.g. from "The Scientist" or widely respected newspapers

Problem-based, independent search for relevant scientific literature is an integral part of this module

- Scient. literature
- Social skills
- Interdiscipl. knowlg.
- Data present./disc.
- Scientific English
- Ethics

In this module the participants gain an overview of arguments and experimental strategies in ageing research. We will focus on the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, and genetics. In addition, the main ageing theories will be covered. The participants work throughout the semester in project groups and present their results at a conference at the end of the course. Ethicists and philosophers from Germany and The Netherlands accompany the course, and chair at the conference a session on ethical aspects of ageing research. Under their moderation, the participants derive joint standpoints and policy recommendations.

At the end of this course the participants can

understand, analyse, and present scientific articles from ageing research

present the results of their studies and analyses using different presentation techniques

apply the learned contents in novel contexts (ethics in ageing research)

Topics

Major ageing theories
arguments and experimental strategies in the fields of medicine/epidemiology, biochemistry/ cell biology, physiology, genetics in ageing research
application of the learned contents in novel contexts (ethics in ageing research)
understanding, analysing, and presentation of scientific articles
presentation of results with different presentation techniques

Module contents

Lecture: major ageing theories and methods in ageing research are presented and discussed
Exercise: project work
1) Students: Choice of research focus
2) Independent work on the chosen research paper
3) Writing a 1 page thesis paper
4) Presentation in own expert group
5) Expert groups: research strategies, approaches, methods in chosen focus area
6) Development of a group presentation and group poster
7) Presentation at 1 day conference
8) Dutch and German ethics experts present bioethics and lobby work in German and Dutch political gremia
9) The students develop a comparative view on medical ethics in different countries and derive own standpoints and policy recommendations for the ethical assessment of metabolic and ageing research. The project work runs independently in the different expert groups throughout the semester and is organised via StudIP. The students and groups receive regular feedback and guidance in presence meetings.

The days for presence meetings and final conference are determined with the participants during the first meeting. The students organize their own work in groups according to the jigsaw concept. Their work is structured by a weekly schedule, tasks to be handed in at fixed deadlines across the semester, lectures and presence meetings.

Reader's advisory

Primary and secondary literature will be provided and introduced at the first meeting

Recommended textbook(s) or other literature:
Roger B. McDonald, Biology of aging, Garland Science
Altern.: Zellula?re und molekulare Grundlagen, ko?rerliche Vera?nderungen und Erkrankungen,
Therapieansaa?tze
Ludger Rensing ; Volkhard Rippe

**Skills to be acquired in this module**

- ++ Expt. Methods
- + Independent research
- + Scientific Literature
- ++ Social skills
- ++ Interdiscipl. knowlg.
- + Scientific English
- ++ Ethics

Upon successful completion of this course, students

- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation
- have practical skills in handling small rodents or birds or fish
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery.
- have practised invasive procedures and euthanasia.

**Module contents**

Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are:

- Legislation, ethics and the 3Rs
- Scientific integrity
- Data collection
- Basic biology of rodents, birds and fish
- Husbandry, and nutrition of rodents, birds and fish
- Animal Welfare
- Health monitoring
- Pain and distress
- Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

**Reader's advisory**

- Upon completion of this course, students have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience.
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation.
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone).
- are able to recognize and avoid common errors of non-native speakers.

<table>
<thead>
<tr>
<th>Module contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lectures cover</td>
</tr>
</tbody>
</table>

- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

**Entry requirements**

**Skills to be acquired in this module**
- Neurosci. knowlg.
- Maths/Stats/Progr.
- Data present./disc.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/.

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.

**Module contents**
Data types and data structures, control structures, functions, modules, file input/output Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

Entry requirements
Skills to be acquired in this module
  + Neurosci. knowlg.
  + Independent research
  ++ Scient. Literature
  ++ Social skills
  + Interdiscipl. knowlg.
  ++ Data present./disc.
  + Scientific English
  ++ Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of neuroscience.

Critical reading of neuroscience literature:
identify article type and audience
summarize scientific contents
identify strengths and weaknesses of methods, conclusions etc.
put into scientific context
discuss manuscript style
discuss social and ethical context and implications of the study

Critical discussion of own studies:
present own results in a way that is appropriate for the target audience
put own studies into the context of scientific literature
acquire additional knowledge about a broader field of research

Module contents
The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context can be achieved by different options: - Option 1: Seminar 'Neuroscience Journal Club': All students read and discuss 12 published papers (one each week). Different fields of neuroscience (e.g. molecular, cellular, behavioral, computational) will be covered with one classical and one recent paper each. Papers and questions about each paper will be provided prior to the start of the seminar. Students prepare answers to these questions independently and discuss their answers during the seminar. The module is passed when a student actively participated in the discussion of at least 10 papers. - Option 2: Written report on a neuroscientific topic of the student's choice, based on scientific literature, e.g. in the context of an independent student study group. The report should discuss scientific results in a scientific and a social / ethical context. - Option 3: Active participation in a scientific conference, workshop, summer school etc: Participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days can be credited with 3 ECTS, if the student presents own scientific results (poster, talk) obtained, e.g., in a research module or Master thesis. - Option 4: Participation in at least 20 scientific presentations (e.g. IBU / DfN colloquium, Hanse lecture neuroscience) and submission of a short (1 page) written summary of each talk. - For other individual options (e.g. teaching in neuroscience) ask the module organizer.

Reader's advisory
Option 1 (seminar): List of 12 published papers will be provided prior to the course. All students are required to
read at least 10 of those.  
Other options: dependent on the scientific topic  

Background neuroscience textbooks, e.g.:  
Galizia, Lledo 'Neuroscience – From Molecule to Behavior', 2013, Springer  
Nicholls et al. 'From Neuron to Brain', 5th edition 2012, Sinauer
