Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele

Goals of module:
Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling and statistical learning in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.

Competencies:
++ interdisciplinary knowledge & thinking
++ statistics & scientific programming
++ data presentation & discussion
* independent research
* scientific literature
++ ethics / good scientific practice / professional behavior
++ critical & analytical thinking
++ scientific communication skills
* group work

Modulinhalte

Part 1: Multivariate Statistics I (lecture): winter

- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models
- Path modeling
- Factor analysis (exploratory & confirmatory)
- (Multilevel) Structural equation modeling (SEM linear and non-linear)

Part 2: Multivariate Statistics I (seminar): winter

- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

Part 3: Multivariate Statistics II (lecture): summer

- Supervised and unsupervised statistical learning and prediction
- Regularized regression
- Resampling methods
- Tree-based methods
- Support Vector Machines
- Neural Networks (basics)
- Principal components and clustering

Part 4: Evaluation research (seminar): summer

- Paradigms and methods in applied evaluation research (quantitative, mixed-methods)
- Types of studies and designs in evaluation research (experimental, quasi-experimental, (multiple) time series, etc.)
- Specific statistical tools (e.g., Propensity score matching)
- Research synthesis and meta-analysis

### Verwendet in Studiengängen
- Master Neurocognitive Psychology > Mastermodule

### Ansprechpartner/-in
- Modulverantwortung
  - Andrea Hildebrandt
- Prüfungsberechtigt
  - Andrea Hildebrandt
  - Andreas Hellmann

### Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.

### Kompetenzziele
Goals of module:
Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:
- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Ethics / good scientific practice / professional behavior
- Critical & analytical thinking

### Modulinhalte
**Part 1: Introduction to Psychological Assessment (lecture): winter**
- Psychological assessment as a decision process – descriptive and prescriptive models
- Introduction to test theories (will be detailed in Part 3)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Classificatory decisions
- Psychometrics to single cases
- Summarizing results and writing reports

**Part 2: The Assessment Process applied (seminar): winter**
- Case conceptualization (neuropsychology and clinical psychology)
- Formulating hypotheses
- Selecting assessment procedures and planning administration
- Deciding upon decision rules for data integration
- Evaluating the application of assessment procedures
- Analyzing, summarizing and visualizing results
- Integrating results based on the decision rules
- Writing a psychological/assessment report
- Discussing a report with the client

**Part 3: Test theory and test construction (lecture): summer**
- Classical test theory
- Generalizability theory
- Item response theory
- Latent-State and Trait theory
- Measurement invariance across groups and time
- Constructing faking-resistant questionnaires and tests

**Part 4: Assessment in Clinical Neuropsychology (seminar): summer**
- specific knowledge
- exercises in testing / practising tests

### Literatureempfehlungen
Will be specified in the courses.

### Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.

### Kompetenzziele
Goals of module:
Students will acquire specific knowledge about the presentation of scientific results both orally and in writing. Students will learn modern techniques for presentation, literature research and writing skills. They will also be taught about arguing scientifically.

Competencies:
- ++ data presentation & discussion
- ++ scientific literature
- ++ scientific English / writing
- ++ scientific communication skills
- + group work

### Modulinhalte
**Part 1: Communication of scientific results (seminar)**
- Literature search
- Presentation skills
- Writing skills

**Part 2: Psychological colloquium**
Experienced scientists from various psychological disciplines will be giving talks about their experimental results. Speakers will be invited also from other universities. Students are encouraged to discuss the results with the experts and to make suggestions on whom to invite.

**Verwendet in Studiengängen**
- Master Neurocognitive Psychology > Mastermodule

**Ansprechpartner/-in**
- Jochem Rieger
- Kerstin Bleichner

**Teilnahmevoraussetzungen**
Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**
Goals of module:
Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can also deepen their insights of psychological topics that are part of the elective curriculum. Students can strengthen their own professional profile.

Competencies:
++ interdisciplinary knowledge & thinking

**Modulinhalte**
Students can take Master modules and courses from the fields
- Biology
- Neurosciences
- Computer Science
- Physics
- Mathematics
- Pedagogy
- Philosophy
- related fields
- Psychology (additional elective module (NOT psy170, psy220, psy270, psy276, psy280) or from another study programme)

Students whose first language is not German, may take German classes.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis). English classes cannot be taken as Minor.

A list of already approved courses/modules can be found on our website. You can take other courses/modules upon approval.

We recommend taking modules/courses that strengthen your own professional profile.

**Angebotsrhythmus Modul**
irregular

**Aufnahmekapazität Modul**
unbegrenzt

**Hinweise**
PLEASE NOTE:
- If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website)
- If you want to take an additional elective module for your Minor, you need to inform the contact person for the respective module in writing BEFORE the start of the module. If your request is NOT rejected in written form within 4 weeks, the module counts as approved for the Minor. You will receive a pass/fail for this module. You CANNOT use it afterwards as a normal elective module. You can also NOT rededicate an elective that you have already started as your Minor.
- Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.
- It is your responsibility to ask the teacher whether you can take part.

psy150 - Clinical Psychology

Modulbezeichnung: Clinical Psychology
Modulcode: psy150
Kreditpunkte: 9.0 KP
Workload: 270 h

Verwendet in Stuudiengängen:
- Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in:
- Modulverantwortung: Christiane Margarete Thiel

Teilnahmevoraussetzungen:
Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele:
Goals of the Module:
Students acquire scientifically sound, critical thinking regarding the genesis and psychopharmacological treatment of various mental illnesses; decision making based on the medical guidelines and evidence-based practice.

Competencies:
++ Neuropsychological / neurophysiological knowledge
+ experimental methods
+ data presentation & discussion
+ scientific literature
+ critical & analytical thinking
+ knowledge transfer

Modulinhalte:
The first part of the module provides students with a theoretical and practical background on neurobiological and neurochemical bases of psychiatric disorders and pharmacological interventions. This will be complemented by psychiatric interviews in simulated patients focussing on psychopathological assessment. In the second part, the students will learn to plan and assess the effectiveness of psychological interventions for selected disorders.

Part 1: Neurobiological basis of psychiatric disorders and pharmacological intervention (lecture and seminar): winter
- Basics of neurotransmitter systems and psychopharmacology
- Substance Abuse (e.g. psychostimulants, hallucinogens)
- Depression
- Anxiety Disorders
- Alzheimer’s Disease
- Schizophrenia
- psychopathological assessment

Part 2: Psychological interventions within the framework of evidence-based medicine (seminar): summer
- (partly in German): Concepts of evidence based treatment and treatment of acquired dysfunctions of the brain
- Treatment of ADHD

Literaturempfehlungen:
- Selected papers (part 2)

Ansprechpartner/-in

- Modulverantwortung
  - Stefan Debener

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology.

Kompetenzziele

Goals of module:
Students will understand the basic concepts of biomedical signal processing. They will use EEG analysis tools interactively and independently and will understand the complete chain of EEG analysis steps, from data import to the illustration of results. They will be able to use open source tools for EEG analysis and apply theoretical knowledge to practical problems of physiology.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ experimental methods
++ statistics & scientific programming
++ ethics / good scientific practice / professional behavior
+ group work
+ project & time management

Modulinhalte

Students will acquire specific knowledge about neurophysiology and neuroanatomy, learn the fundamental concepts of multi-channel EEG analysis, and acquire hands-on skills in using EEGLAB, an open-source software toolbox for advanced EEG analysis.

Part 1: Neurophysiology and neuroanatomy (lecture): winter

- Neurophysiology, EEG, EMG, ECG
- Neuroanatomy
- Time-domain and frequency-domain analysis methods

Part 2: EEG recording and analysis (seminar): winter

- Recording and analysis of biomedical signals
- Averaging, filtering, signal-to-noise
- Topographical EEG analysis

Part 3: EEG analysis with Matlab (seminar): summer

- EEGLAB file I/O, data structure and scripting
- Preprocessing, artefact rejection and artefact correction
- Statistical decomposition
- Event-related potentials, topographical mapping and power spectra
- Illustration of results

psy190 - Sex and Cognition

Modulbezeichnung: Sex and Cognition
Modulcode: psy190
Kreditpunkte: 6.0 KP
Workload: 180 h

Verwendet in Studiengängen:
- Master Neurocognitive Psychology > Mastermodule

Ansprechpartner/-in: Modulverantwortung
  - Daniel Strüber

Teilnahmevoraussetzungen:
- Enrolment in Master's programme Neurocognitive Psychology.
- Neuroscience students can take part on request.

Kompetenzziele: Goals of module:
- Students will acquire specific knowledge about sex differences in cognitive abilities and social behaviours. They will be able to understand the interrelated impact of social and biological influences on the brain's control of the (sex-specific) behaviours. Students should be able to critically evaluate behavioural sex differences from different perspectives and to reflect on possible implications for society.

- Competencies:
  ++ neuropsychological / neurophysiological knowledge
  + interdisciplinary knowledge & thinking
  ++ data presentation & discussion
  ++ scientific literature
  + critical & analytical thinking
  ++ scientific communication skills
  + group work
  + project & time management

Modulinhalte:

Part 1: Introduction to the study of sex differences (lecture)
- The measurement of sex differences
- Sex differences in emotion
- Sex differences in aggression
- Sex differences in cognitive abilities
- Hormones, sexual differentiation, and gender identity
- Sex hormones and play preferences
- Sex differences in hemispheric organization
- Brain size and intelligence

Part 2: Sex, brain, and behaviour (seminar)
- Sex differences in empathy
- The extreme male brain theory of autism (S. Baron-Cohen)
- Sex differences in neuropsychiatric disorders
- Sex differences in stress response
- Social implications of sex differences

**Teilnahmevoraussetzungen**
Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**
Goals of module:
Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 3), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3).

Competencies:
++ neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
++ experimental methods
+ data presentation & discussion
++ scientific literature
+ critical & analytical thinking
+ scientific communication skills

**Modulinhalte**

**Part 1: Introduction to Clinical Neuropsychology (lecture): winter**
- Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
- Higher functions (learning & memory, language, emotion, spatial behavior attention)
- Plasticity and disorders (development, learning and reading disabilities, recovery)

**Part 2: Cognitive Neurorehabilitation (seminar): summer**
- Behavioural and neuropsychological approaches
- neurofeedback in neurorehabilitation and ADHD
- memory rehabilitation
- effects of physical activity on cognition
- motor recovery

**Part 3: Topics in Clinical Neuropsychology (seminar; taught partly in German): winter**
- Clinical neuroanatomy
- Neurodegenerative diseases
- Dementia

**Literaturempfehlungen**

**Links**

**Unterrichtssprache**
Englisch

**Dauer in Semestern**
1-2 Semester

**Angebotsrhythmus Modul**
The module will start every winter term.

**Aufnahmekapazität Modul**
30 (Part 3 is not restricted.)

**Hinweise**
3 CP for each module part, choose 2 out of 3 parts! Part 1 (lecture) is mandatory.

**Modullevel**
MM (Mastermodul / Master module)

**Modulart**
Wahlpflicht / Elective

**Lern-/Lehrform / Type of program**
Part 1: lecture; Part 2: seminar; Part 3: seminar

**Vorkenntnisse / Previous knowledge**

## Gesamtmodul
- exam period at the end of winter term
- The module will be tested with a written exam of 2 h duration.
Prüfung | Prüfungszeiten | Prüfungsform
--- | --- | ---
|  |  | required active participation for gaining credits: presentation participation in discussions on other presentations attendance of at least 70% in the seminars (use attendance sheet that will be handed out in the beginning of the winter term).

<td>Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.</td>
</tr>
</tbody>
</table>

**Kompetenzziele**

Goals of the module:

Students will gain an overview of theories of (Neuro)Cognitive Psychology with potential for application. On completion of this module students should have a repertoire of cognitive psychology concepts relevant for real world situations, be able to transfer the learned theoretical concepts into practical contexts and evaluate potential issues arising in the process of translation.

Competencies:

++ Neuropsychological / neurophysiological knowledge
+ interdisciplinary knowledge & thinking
+ experimental methods
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer

**Modulinhalte**

The module will cover core concepts of cognitive psychology, their neuronal basis, basic knowledge of neuroimaging and data analysis techniques. Special emphasis will be put on research aiming at complex real-world settings and translation of basic science in to practice. Examples of successful transfers will be analyzed. The lecture provides the theoretical basis. In the seminar the material is consolidated by examples from the literature which will be presented, critically analyzed and discussed.

Part 1: (Neuro)Cognitive Psychology in the wild I (lecture): summer

- Neurocognitive Psychology with emphasis in real world context
- Methodological considerations: Generalization, validity of theories and research methods
- Information uptake and representation: Sensation, perception, categorization
- Selection of information and capacity: Attention and memory enhancement and failure
- Generation and communication: Language, reading, dyslexia
- Pursuing goals: Thinking, problem solving and acting

Part 2: (Neuro)Cognitive Psychology in the wild II (seminar): winter

In the accompanying seminar we will work through recent examples in the literature for topics of the lecture. The goal is to apply novel knowledge from the lecture to understand and critically discuss actual research approaches.

</tr>
</tbody>
</table>

### Kompetenzziele

- **Goals of module:**
  - The goal of the module is to provide students with basic skills required to plan, implement and evaluate brain computer interfaces as devices for human computer interaction. BCIs are an ideal showcase as they fully span the interdisciplinary field of HCI design, implementation and evaluation. Moreover, BCI-techniques can be used for modern data-driven basic neuroscience. The module combines a lecture on the theoretical foundations of the most important techniques with a seminar/hands on course in which students learn to implement the BCI-processing steps on real neurophysiological data and further elaborate specific subtopics.

- **Competencies:**
  - ++ Understanding of the foundations of statistical learning techniques
  - + provide basics to understand technical time series processing and machine learning papers
  - ++ interdisciplinary knowledge & thinking
  - + experimental methods
  - ++ statistics & scientific programming
  - + critical & analytical thinking
  - + scientific communication skills
  - + knowledge transfer
  - + group work
  - + project & time management

### Modulinhalte

- **Part 1: HCI and BCI Lecture: (Lecture on methodological foundations of BCI): summer**

- **Part 2: Hands on BCI implementation (practical seminar): summer**

- **Topics covered:**
  - A brief history of BCIs and examples of HCI control and basic neuroscience using BCI techniques,
  - Data preprocessing (e.g. filtering, projection techniques) and common artifacts and artifact treatment,
  - Feature generation (e.g. fourier transform, spectral estimation techniques, principle components)
  - Machine learning for classification and regression (e.g. model parameter optimization in multivariate regression),
  - Evaluation (e.g. measures of model quality, cross validation to test model generalization, permutation tests).

Where possible the lecture provides mathematical backgrounds of the data analysis techniques. The practical seminar implements BCI techniques on a real data set and further elaborates specific topics in seminar form.

### Literatureempfehlungen

- There is no required textbook. The lecture slides and notes should be sufficient. However some resources from which they were developed on are given below:

  - General tutorial text providing and overview and accompanying python code on github:

  - Signal processing:

  - PCA & SVD

  - Unsupervised feature Learning and deep learning tutorial:

General texts:

Machine learning and Ai:

Hastie, Tibshirani, and Friedman. The elements of statistical learning. Covers a wide range of machine learning topics. Free online.

BCI

Additional literature and material will be provided on the course website.

Teilnahmevoraussetzungen: Enrolment in Master's programme Neurocognitive Psychology. Neuroscience students can take part on request.

Kompetenzziele: Goals of module:
The aim of this module is to provide students with a theoretical background on how cognitive functions can be altered via neuromodulation.

Competencies:
++ Neuropsychological / neurophysiological knowledge
++ interdisciplinary knowledge & thinking
++ experimental methods
++ ethics / good scientific practice / professional behavior
++ critical & analytical thinking
++ scientific communication skills

Modulinhalte: Students will be introduced to the concepts of neuromodulation and the application of theoretical knowledge of neurophysiology to the modulation of cognitive functions.

Part 1: Neuromodulation of cognition (lecture)
- Neurotransmitter and neuromodulator systems
- Neuropharmacological intervention
- Mechanisms of neural plasticity
- Neurofeedback
- Electric and magnetic brain stimulation
- Therapeutical applications

Part 2: Topics in Neuromodulation (seminar)
- Psychological an therapeutical effects of neuromodulation
- Modulation of neuronal network function
- Deep brain stimulation for therapeutical modulation

- Modulverantwortung
  - Cornelia Kranczioch-Debener

**Teilnahmevoraussetzungen**
Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**

**Goals of module:**
Students will obtain direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.

**Competencies:**

++ expert neuropsychological/neurophysiological knowledge
+ interdisciplinary knowledge & thinking
+ experimental methods
++ ethics / good scientific practice / professional behavior
++ knowledge transfer
+ project & time management

**Modulinhalte**
The students will work in a field of psychology of personal choice. The student will get to know and participate in the daily work routines of a psychologist.

**Hinweise**
The internship lasts 360 hours (9-10 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part.

A part of your internship (maximally 150 hours) can be performed internally in the Department of Psychology. Internal internships cannot be performed in the same lab in which you will perform / have performed your Practical Project psy260!

Your supervisor must be a psychologist. If your supervisor is NOT a psychologist, please contact us for approval BEFORE you start your internship.

Please note that details are regulated in the exam regulations.

A blank internship certificate and the report form can be found on the programme website.

To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kranczioch.

Teilnahmevoraussetzungen
Enrolment in Master's programme Neurocognitive Psychology.
You can only start the practical project if you have passed the exam of psy241 / psy240 Computation in Neuroscience!
Priority is given to students with experience in methods used in the respective lab or students who have taken the respective teaching modules.

Kompetenzziele
Goals of module:
Students will learn to plan, perform and analyse a study in the field of neurocognition. They will need to apply statistical knowledge and programming competencies to the data acquisition and analysis of data. Results will be related to the current neurocognitive literature and presented in a student poster symposium at the end of the module. Additionally, students should gain experience as participants in studies.
Competencies:
++ experimental methods
+ statistics & scientific programming
++ data presentation & discussion
+ independent research
+ scientific literature
+ ethics / good scientific practice / professional behavior
+ scientific communication skills
+ knowledge transfer
+ group work
++ project & time management

Modulinhalte
- The students develop an empirical investigation, carry it out and analyse the results.
- The students present and discuss their project in respect to recent literature in regular meetings and in a poster symposium.
- Students can develop an experimental design for a follow-up study which could potentially be the topic of their Master's thesis.
- As part of the practical project, students should participate in studies of other practical projects!

psy276 - Essentials of fMRI Data Analysis with SPM and FSL

**Modulbezeichnung** Essentials of fMRI Data Analysis with SPM and FSL
**Modulcode** psy276
**Kreditpunkte** 9.0 KP
**Workload** 270 h

**Verwendet in Studiengängen**
- Master Neurocognitive Psychology > Mastermodule

**Ansprechpartner/-in**
- Riklef Weerda
- Peter Sörös

**Teilnahmevoraussetzungen** Enrolment in Master’s programme Neurocognitive Psychology, 3rd semester or higher.

**Kompetenzziele**
- Neuropsychological / neurophysiological knowledge
- interdisciplinary knowledge & thinking
- experimental methods
- statistics & scientific programming
- data presentation & discussion
- independent research
- scientific literature
- ethics / good scientific practice / professional behaviour
- critical & analytical thinking
- group work

This module offers a concise introduction to the basic principles of functional magnetic resonance imaging (fMRI). Students will gain essential knowledge about experimental design, data collection and analysis. Special emphasis will be laid on the statistical background of fMRI data analysis and a hands-on introduction to SPM and FSL, two widely-used and free software packages for fMRI data analysis and results visualisation.

**Modulinhalte**
1. Methodological basics of functional magnetic resonance imaging (fMRI)
2. Basic principles of fMRI experimental design and data collection
3. Statistical background of fMRI data analysis
4. Hands-on training in fMRI data analysis and results visualisation with SPM and FSL

**Literaturempfehlungen**

## Ansprechpartner/-in

- Modulverantwortung
  - Christoph Siegfried Herrmann

## Teilnahmeverwaltungsbedingungen

Enrolment in Master's programme Neurocognitive Psychology.

## Kompetenzziele

**Goals of module:**

Students will gain theoretical and practical knowledge on various non-invasive brain stimulation techniques.

**Competencies:**

- ++ Neuropsychological / neurophysiological knowledge
- ++ experimental methods
- + statistics & scientific programming
- + scientific literature
- + ethics / good scientific practice / professional behaviour

## Modulinhalte

In this module, we will introduce the theoretical concepts, neurophysiological underpinnings and neurocognitive as well as clinical applications of various non-invasive brain stimulation techniques such as transcranial magnetic stimulation (TMS), transcranial direct current stimulation (tDCS), transcranial alternating current stimulation (tACS), and transcranial random noise stimulation (tRNS). A focus will be tACS, because it is especially suited to modulate brain oscillations which have been shown to correlate with cognitive processes.

### Part 1: Introduction to transcranial brain stimulation (lecture)

- Historical overview of brain stimulation
- Different techniques (TMS, IDCS, IACS, IRNS)
- Physiological mechanisms (entrainment, after-effects etc.)
- The use of transcranial brain stimulation in cognitive neuroscience
- Experimental parameters (intensity, electrode montage, etc.)
- Pros and cons of TMS vs. tACS
- Technical aspects (artefact correction, modelling current flow, etc.)
- Safety issues
- Ethical considerations of brain stimulation

### Part 2: Effects of tACS on physiology and cognition (seminar)

- Physiology of tACS (on-line and after-effects)
- Modulating cognitive functions (e.g. memory, attention, and perception)
- Clinical applications of tACS
- Hands-on experience in the lab

**Teilnahmevoraussetzungen**
Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**

**Goals of module:**
Students will to obtain provide direct experience in the field of psychology. This includes being involved in the provision of psychological or neuropsychological services in real-life situations, such as neuropsychological testing or counselling in a hospital or mental health clinic, or conducting and contributing to psychological research. The internship should be chosen by the student such that it can provide a meaningful educational opportunity that will help students to decide on their preferred area of work.

**Competencies:**
- ++ expert neuropsychological/neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- + experimental methods
- ++ ethics / good scientific practice / professional behavior
- ++ knowledge transfer
- + project & time management

**Modulinhalte**
The students will work in a field of psychology of personal choice. The student will and get to know and participate in the daily work routines of a psychologist.

**Literaturempfehlungen**
Information on internships and necessary forms: [https://uol.de/en/psychology/master/course-overview/](https://uol.de/en/psychology/master/course-overview/)

**Unterrichtsprachen**
Englisch, Deutsch

**Dauer in Semestern**
1 Semester

**Angebotsrhythmus Modul**
unregelmäßig

**Aufnahmekapazität Modul**
unbegrenzt

**Hinweise**
The internship lasts 450 hours (12 weeks). It can be performed at 2 different institutions with a minimum duration of 150 hours (4 weeks) for each part. Your supervisor must be a psychologist.

Please note that details are regulated in the exam regulations.

A blank internship certificate and the report form can be found on the programme website.

To generate ideas, a folder with information on internships that other students have performed is available in the office of Dr. Cornelia Kraniczioch.

**Prüfung**
The students have to hand in a written report (2-3 pages) and give a short presentation about their internship. They have to show a certificate from the institution at which they performed the internship. The internship is evaluated as pass/fail.

**Lehrveranstaltungsform**
Praktikum

**SWS**
0.00

**Angebotsrhythmus**
SoSe und WiSe

**Workload Präsenzzeit**

**Teilnahmevereinssetzungen**

Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**

Goals of module:

Students will acquire specific knowledge about psychological assessment and will be trained to utilize this knowledge within a research context and in applied settings. With respect to research applications they will learn about traditional and modern test theories and about their usage in the domain of test construction and the systematic design of interviews and observational methods. From the perspective of applied assessment, students will reflect on the assessment process as a whole. They will learn how to analyze cases ("case conceptualization"), how to plan and conduct the information assessment phase, how to record and summarize collected data and how to integrate across the multitude of information in order to draw conclusions about the case given specific diagnostic strategies (status vs. process assessment and norm oriented vs. criterion oriented assessment, including classificatory decisions). Finally, students will learn about the requirements of report generation in written an oral form given a specific applied context. Ethical guidelines and quality norms will be an implicit topic in all courses in the module.

Competencies:

- Neuropsychological / neurophysiological knowledge
- Interdisciplinary knowledge & thinking
- Ethics / good scientific practice / professional behavior
- Critical & analytical thinking

**Modulinhalte**

**Part 1: Introduction to Psychological Assessment (lecture)**

- Psychological assessment as a decision process – descriptive and prescriptive models
- Theories of reliability (classical and modern approaches)
- Theories of validity (classical and modern approaches)
- Assessment methods, their construction and design, quality criteria
- The logic of decision making in the assessment process
- Psychometrics to single cases
- Summarizing results and writing reports

**Part 2: Psychological Testing (seminar)**

- Psychometric bases of tests and questionnaires
- Types of tests and questionnaires
- Challenges in psychological testing (for example faking good vs. bad)
- Examples of published tests and questionnaires
- Exercising test applications, scoring and result interpretations

**Part 3: Assessment in Clinical Neuropsychology (seminar)**

- specific knowledge
- exercises in testing / practising tests

**Literatureempfehlungen**

Will be specified in the courses.

- Neuropsychological / neurophysiological knowledge
- interdisciplinary knowledge & thinking
- experimental methods
- statistics & scientific programming
- data presentation & discussion
- independent research
- scientific literature
- ethics / good scientific practice / professional behaviour
- critical & analytical thinking
- group work

This module offers a concise introduction to the basic principles of functional magnetic resonance imaging (fMRI). Students will gain essential knowledge about experimental design, data collection and analysis. Special emphasis will be laid on the statistical background of fMRI data analysis and a hands-on introduction to SPM and FSL, two widely-used and free software packages for fMRI data analysis and results visualisation.

**Modulinhalte**
1. Methodological basics of functional magnetic resonance imaging (fMRI)
2. Basic principles of fMRI experimental design and data collection
3. Statistical background of fMRI data analysis
4. Hands-on training in fMRI data analysis and results visualisation with SPM and FSL

  - Stefan Debener

**Teilnahmevoraussetzungen**
- Enrolment in Master's programme Neurocognitive Psychology.

**Kompetenzziele**

**Goals of module:**
Students will learn to understand changes in thinking and behaviour that may arise from brain dysfunctions (part 1, 4), acquire specific knowledge on cognitive rehabilitation (part 2), and learn to understand, communicate and evaluate progress in clinical practice and experimental research in neuropsychology (part 3, 4).

**Competencies:**
- ++ neuropsychological / neurophysiological knowledge
- + interdisciplinary knowledge & thinking
- ++ experimental methods
- + data presentation & discussion
- ++ scientific literature
- + critical & analytical thinking
- ++ scientific communication skills

**Modulinhalte**

**Part 1: Introduction to Clinical Neuropsychology (lecture)**
- Cortical lobes (anatomy, functions, lesion symptoms, neuropsychological tests)
- Higher functions (learning & memory, language, emotion, spatial behavior attention)
- Plasticity and disorders (development, learning and reading disabilities, recovery)

**Part 2: Cognitive Neurorehabilitation (seminar)**
- Behavioural and neuropsychological approaches
- Neurofeedback in neurorehabilitation and ADHD
- Memory rehabilitation
- Effects of physical activity on cognition
- Motor recovery

**Part 3: Research Colloquium Clinical and Experimental Neuropsychology (colloquium)**
- Presentations covering recent advances in the field of Experimental and Clinical Neuropsychology

**Part 4: Topics in Clinical Neuropsychology (seminar; taught partly in German)**
- Clinical neuroanatomy
- Neurodegenerative diseases
- Dementia

### Kompetenzziele

**Goals of module:**

Students will gain an overview of non-psychological topics related to cognitive neuroscience and neuropsychology. They will see how psychological theories apply in other fields. Students can strengthen their own professional profile.

**Competencies:**

++ interdisciplinary knowledge & thinking

### Modulinhalte

Students can take Master modules and courses from the fields

- Biology
- Neurosciences
- Computer Science
- Physics
- Mathematics
- Pedagogy
- Philosophy
- related fields

The content of the courses/modules taken as Minor needs to be clearly different from the contents of the Neurocognitive Psychology modules.

A list of approved courses/modules can be found on our website.

Upon approval, German-speaking students can attend a career-relevant language course (i.e. necessary for internship, practical project or Master's thesis; maximum of 6 CP for this module).

Students whose first language is not German, may take German classes.

We recommend taking modules/courses that strengthen your own professional profile.

### Literaturempfehlungen

- List of approved courses/modules and approval form: [https://uol.de/en/psychology/master/course-overview/](https://uol.de/en/psychology/master/course-overview/)

### Unterrichtsprachen

- Englisch, Deutsch

### Dauer in Semestern

- 1 Semester

### Angebotsrhythmus Modul

- irregular

### Aufnahmekapazität Modul

- unbegrenzt

### Hinweise

PLEASE NOTE:

- If you want to take a module/course which is not listed in the list of approved courses/modules, please request approval BEFORE you start the course/module (list of approved courses/modules and approval form can be found on our website)
- Bachelor level courses are NOT acceptable. Note that Bachelor level courses can be listed in some Master programmes (e.g. Master of Education). This does not qualify a Bachelor level course for the Minor module.
- It is your responsibility to ask the teacher whether you can take part.

### Modullevel

- MM (Mastermodul / Master module)

### Modulart

- Pflicht / Mandatory

### Lern-Lehrform / Type of program

- Lectures and seminars (depends on the chosen modules)

### Vorkenntnisse / Previous knowledge

Ansprechpartner/-in

Teilnahmevoraussetzungen

Enrolment in Master's programme Neurocognitive Psychology.
Completion of at least 60 credit points in other modules including module psy241 or psy240 (Computation in Neuroscience).
Assignment of a topic by thesis supervisor and official application with the examination office.

Kompetenzziele

Goals of module:
Students will demonstrate that they are able to perform a (neuro)psychological experiment according to scientific standards. In addition, they will demonstrate that they are acquainted with the necessary methods and can present their results orally and in written form.

Competencies:
++ experimental methods
+ statistics & scientific programming
+ data presentation & discussion
++ independent research
+ scientific literature
++ scientific English / writing
+ ethics / good scientific practice / professional behavior
+ critical & analytical thinking
+ scientific communication skills
+ knowledge transfer
++ project & time management

Modulinhalte

Part 1: Master's thesis
The students work on a given topic in cognitive neuroscience using literature research and the appropriate experimental methods.

Part 2: Master's colloquium
The preparation of the thesis is accompanied by regular participation in the lab meetings of the groups in which the thesis is performed. Students present their study design at the beginning of their thesis preparation and their results towards the end. In addition, they listen to the presentations of the other lab members and students in the group.
