Background Modules

bio605 - Molecular Genetics and Cell Biology

Module label: Molecular Genetics and Cell Biology
Module code: bio605
Credit points: 12.0 KP
Workload: 360 h

Used in course of study:
- Master Biology > Background Modules
- Master Biology > Background Modules
- Master Neuroscience > Background Modules

Contact person:
Module responsibility:
- John Neidhardt

Authorized examiners:
- John Neidhardt
- Karl-Wilhelm Koch
- Kathrin Thiedeck

Module counseling:
- Karl-Wilhelm Koch
- Kathrin Thiedeck

Entry requirements:

Skills to be acquired in this module:
++ deepened biological expertise
++ deepened knowledge of biological working methods
+ data analysis skills
++ interdisciplinary thinking
+ critical and analytical thinking
+ independent searching and knowledge of scientific literature
+ data presentation and discussion in German and English (written and spoken)
+ teamwork
+ ethics and professional behaviour
+ project and time management

Addressing students with an emphasis on molecular biology, molecular genetics, cell biology, and neurobiology

Module contents:
Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.
Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects.
Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure.
Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

- Franz Bairlein

Entry requirements
Skills to be acquired in this module
- The module imparts advanced knowledge on different aspects of ornithology. The students acquire:
  - An extended knowledge of morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds
  - Knowledge, presentation and discussion of relevant English literature from various fields of ornithology
  - Deepened biological expertise
  - Deepened knowledge of biological working methods
  - Critical and analytical thinking
  - Independent searching and knowledge of scientific literature
  - Data presentation and discussion in German and English (written and spoken)

Module contents
The module is composed of the lecture “Ecology and Physiology of Birds”, a seminar accompanying the lecture “Current Questions of Ornithology”, a seminar “Behavioural Ecology of Birds”, and a seminar “Methods in Field Ornithology”.

Lecture “Ecology and Physiology of Birds”:
This lecture consolidates special aspects of systematics, morphology, physiology, migration, orientation, population biology, communication and behavioural ecology in birds.

Seminar “Current Questions of Ornithology”:
In this seminar, original English publications are presented and discussed which deal with current research results from various fields treated in the lecture. Every student reads a paper on one scientific article and discusses the results of that article with the other participants.

Seminar “Behavioural Ecology of Birds” (option 1):
In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

Seminar “Methods in Field Ornithology” (option 2):
The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

bio675 - Molecular Ecology

Module label: Molecular Ecology
Module code: bio675
Credit points: 12.0 KP
Workload: 360 h

Used in course of study:
- Master Biologie > Background Modules
- Master Biology > Background Modules

Contact person:
Module responsibility:
- Arne Nolte

Authorized examiners:
- Arne Nolte
- Gabriele Gerlach

Module counseling:
- Gabriele Gerlach

Entry requirements:
- B.Sc. (Biologie, Umweltwissenschaften)
- M.Sc. (Biologie, Marine Umweltwissenschaften, Landschaftsökologie)

Skills to be acquired in this module:
The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking
+ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ statistics & scientific programming

Module contents:
Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical.

Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.

Reader's advisory:
will be announced during the course

Knowledge of fundamentals, topical subjects and methods in Marine Biology and Marine Geology. Studies and critical assessment of the scientific literature.

Module contents
- L: (AW) General Marine Geology  
  E: Biogenic sedimentation, Interaction benthos-sediment; (SS) Plankton of the oceans; (MH) unicellular plankton; (IK) benthos of the North-Sea; (PM) biodiversity in the deep sea and on sea-mountains; (JG) conceptions and hypotheses of marine biodiversity, biodiversity of marine vertebrates; (GG) animal migrations and dispersal behaviour.
- A lecture comprises the above-mentioned subjects and imparts marine biological theories, research results and methods.
- In the seminar, research is presented and discussed.
- In the laboratory course/exercises, subjects are treated in coordination with the contents of the lecture. With the aid of a computer, data are analysed and interpreted statistically.

- ++ data presentation and discussion in English (written and spoken)
- ++ statistics & scientific programming

Module contents:
Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses.

Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.

#### Entry requirements

**Skills to be acquired in this module**

- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- + interdisciplinary thinking
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- + data presentation and discussion in German and English (written and spoken)
- ++ project and time management
- ++ statistics & scientific programming

The module aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).

#### Module contents

- **S**: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a “mini symposium” subsequent to the field studies.
- **E**: Planning and performing a field study project, data analysis, written report in the form of a scientific publication

**Total time of attendance for the module** 168 h
bio780 - Biodiversity of Littoral Communities

Module label: Biodiversity of Littoral Communities
Module code: bio780
Credit points: 15.0 KP
Workload: 450 h

Used in course of study:
- Master Biologie > Background Modules
- Master Biology > Background Modules

Contact person:
Module responsibility
- Thomas Glatzel

Authorized examiners
- Thomas Glatzel
- Pedro Miguel Martinez Arbizu

Module counseling
- Pedro Miguel Martinez Arbizu

Entry requirements:
Safe apnoediving with aptitude test and medical fitness certificate

Skills to be acquired in this module:
+ deepened knowledge of biological working methods
+ ability to perform independent biological research
++ teamwork
+ ethics and professional behaviour
+ project and time management

By actively participating in this module students acquire qualifications in the following fields:

Biological oceanography, marine biology and marine ecology:
- Geological formation history of the Mediterranean Sea and Atlantic Ocean, respectively, or the Red Sea and adjacent seas
- Oceanography and hydrology
- Development of the faunal and floral composition of the Atlantic Ocean, the Mediterranean Sea and the Mediterranean region or the Red Sea (biogeography)
- Commercial utilization of the seas and its impacts
- Biotopes and biotic communities
- Evolution, systematics, morphology, modes of life, and ecology of selected animal groups
- Applying theoretical knowledge to real-world organisms/systems
- Improved and specialized knowledge of species
- Adaptation of life cycles
- Interaction between organisms and environment
- Dynamics of reef-building and reef-degrading processes
- Threat to coral reefs/protection of marine environments

Methods:
- Formulation and definition of scientific approaches and selection of methods
- Observation and investigation of organisms and their habitats (snorkelling/diving)
- Documentation of small research projects in groups in the style of a scientific publication
- Editorial work to prepare a module report
- Popular presentation of results to be published by the media and to be presented at the University

Further skills:
- Social engagement in groups/teamwork in projects
- Independent scientific work in groups
- Improvement of scientific discussion culture
- Consciousness of the threat to coral reefs
- Practising English
- Dealing with the culture of the visited region

Culture:
- History, culture, politics, and religion

Additionally:
- Physiological aspects of apnoediving
- Measures in case of accidents (also caused by "poisonous" organisms)
Module contents
Biodiversity of littoral biotic communities – topographical field research

Reader's advisory
GRÜTER, W., 2001: Leben im Meer - Vielfalt und Zusammenhänge. Dr. Friedrich Pfeil Verlag, München. Should be read prior to a marine biological excursion! This book will arouse your curiosity about the submarine world. A reading book!

HEMPEL, G., HEMPEL, I. & S. SCHIEL (HRSG.), 2006: Faszination Meeresforschung – Ein biologisches Lesebuch. Hauschild Verlag. This textbook is information and fun for all readers interested in marine life as well as in the protection of marine environments.

HOFRICHTER, R., 2001: Das Mittelmeer - Fauna, Flora, Ökologie. Spektrum Akademischer Verlag, Heidelberg - Berlin: Band I, II, III. The textbook for the Mediterranean Sea! The general 1st part provides valuable information on symbioses or feeding types, for example.

- Module counseling
  - Maike Claußen

**Entry requirements**

**Skills to be acquired in this module**

Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organo-genesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

**Module contents**

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion.

Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Limb Development
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

**Entry requirements**

**Skills to be acquired in this module**
- Upon successful completion of this course, students have skills in methods of developmental biology:
  - are capable of performing live embryo husbandry
  - are able to carry out in-ovo stainings
  - are familiar with the use of embryonic stage discrimination standards for model organisms
  - document the observed embryonic stages by drawings with anatomical labelling
  - are familiar with embryo handling, tissue preparation (including cryosectioning), dissection of inner ears, and the use of different histological staining methods
  - microscopy, data analysis, and photographic data documentation
  - know the standards of proper documentation of research data and the universal format of a lab note-book
  - know how to carry out formal laboratory reports (and the anatomy of a scientific paper)

- and in addition, have basic knowledge in the field of auditory system development
  - have basic knowledge of the organisation of the auditory system across vertebrate groups
  - have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres
  - are able to summarize current hypotheses about the evolution of the auditory system in vertebrates

- **skills:**
  - ++ deepened biological expertise
  - ++ deepened knowledge of biological working methods
  - ++ data analysis skills
  - ++ critical and analytical thinking
  - + independent searching and knowledge of scientific literature
  - + ability to perform independent biological research
  - ++ data presentation and discussion in German and English (written and spoken)
  - ++ teamwork
  - ++ ethics and professional behaviour
  - ++ project and time management

**Module contents**

Lab exercises in comparative developmental biology on chicken and mouse embryos.

Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses.

Lectures in the field of auditory system development, such as:
- Development of the Inner Ear
- Development of the Middle Ear
- Evolution of the Central and Peripheral Auditory System
- Development and Layout of the Central Auditory System

**Used in course of study**
- Master Biologie > Research Modules
- Master Biology > Research Modules

**Contact person**
- Module responsibility
  - Gerhard Wolfgang Zotz
- Authorized examiners
  - Gerhard Wolfgang Zotz
  - Lehrende der Biologie

**Entry requirements**
External research projects are done on an individual basis. They are supervised by one person from Oldenburg and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (Gerhard.zotz@uol.de) for details. See [https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/](https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/) (Learning Agreement for External Research Module)

**Skills to be acquired in this module**
- ++ deepened biological expertise
- ++ deepened knowledge of biological working methods
- ++ data analysis skills
- ++ critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- ++ data presentation and discussion in German and English (written and spoken)
- + teamwork
- + project and time management
- ++ statistics & scientific programming

Students perform individual research projects to learn:
- • planning and organization of a research project in a group outside of University of Oldenburg
- • formulate a scientific hypothesis
- • planning, performing and analyzing experiments and / or simulations
- • working with scientific background literature on the specific context of the project
- • oral presentation and discussion of backgrounds and results in the lab seminar
- • write a scientific report in publication format
- • prepare and present a scientific poster

**Module contents**
Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad)

The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.

Note:
- • all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor, students should contact appropriate supervisors individually
- • prior to project start, external and local supervisors must fill the learning agreement form
- • the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor
- • participation in a joint poster presentation of concurrent research modules is highly recommended.

Entry requirements

Skills to be acquired in this module

- Deepened biological expertise
- Deepened knowledge of biological working methods
- Data analysis skills
- Critical and analytical thinking
- Independent searching and knowledge of scientific literature
- Ability to perform independent biological research
- Data presentation and discussion in German and English (written and spoken)
- Teamwork
- Statistics & scientific programming

Module contents

In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa. In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.
