Prerequisites

Skills to be acquired in this module
The students get familiar with different software development aspects in a team. Apart from software engineering knowledge and skills they develop key competences like project management, teamwork, problem solving competence and conflict management.

Additionally, students develop special knowledge, skills and competences from the project group topic.

Professional competence
The students:
- characterise and apply computer science basics (algorithms, data structures, programming, basics of practical, technical and theoretical computer science)
- define and describe essential mathematical, logical and physical basics of computer science
- define and illustrate the core disciplines of computer science (theoretical, practical and technical computer science)

Methodological competence
The students:
- examine problems, use formal methods to phrase and analyze them appropriately
- evaluate problems by the use of technical and scientific literature
- reflect on a scientific topic and write a scientific seminar paper under guidance and present their findings

Social competence
The students:
- integrate criticism into their own actions
- respect team decisions
- communicate with users and experts convincingly

Self-competence
The students:
- take on project management tasks
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently
- recognise their abilities and extend them purposefully
- reflect their self-perception and actions with regard to professional, methodological and social aspects
- develop and reflect self-developed hypotheses to theories independently
- work in their field independently

Module contents
Cooperative development of a large-scale computer science project. This project general includes the (further) development of a hard or software system.

Literaturempfehlungen
According to the assigned task

### Skills to be acquired in this module

The Module improves the scientific competencies in preparation of the master thesis. It is intended to replace the project group with the two “Research Project” modules to ensure studibility and to enable students to perform research projects at foreign universities. Additionally, it is also intended to embed the student into the research activities of the supervisor in preparation of a potential doctoral work after finishing the program.

#### Professional competence

- will improve their competences in the required technologies of the research area.

#### Methodological competence

- will improve their competences in scientific methodologies, methods, and tools regarding the research area.

#### Social competence

- will be integrated in the working group of the supervisor of the work and have to present as well as discuss the results within the working group.

#### Self-competence:

- know their abilities and extend them purposefully
- reflect their self-perception and actions with regard to professional, methodological and social aspects
- develop and reflect self-developed hypothesis to theories independently
- work in their field independently

### Module contents

Definition of a research question, identifying the state of the art, development of a research plan, performing research tasks, scientific writing, presentation of results

### Literature recommendations

Will be announced by the supervisor according to the research topic.

Zuständige Personen

Winter, Andreas (Module responsibility)
Lehrenden, Die im Modul (prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

The objective of the module inf006 Software Engineering II is to deepen the subjects and skills of the module Software Engineering I. Special software engineering topics will be presented, deepened and discussed. The lecture deals with different software engineering methods and technology which will be discussed in the seminar. The discussions are contextualised by scientific research projects, practical projects and latest research findings. Professional competence

The students:
- Deepen software engineering methods and techniques
- Use specific software engineering methods and techniques
- Differentiate developmental techniques of software systems
- Discuss software engineering topics
- Design software systems by using appropriate methods
- Solve software engineering problems independently
- Reflect self-designed software engineering solutions critically and present them appropriately

Methodological competence

The Students:
- Structure problems with modelling techniques
- Develop actual methods of software engineering
- Present software engineering solutions
- Write scientific papers independently

Social competence

The Students:
- Explain and discuss software development solutions in their practical use
- Accept criticism and see it as an asset

Self-competence

The Students:
- Reflect their problem-solving behaviour with regard to the possibilities of software technology
- Internalize the presented developmental methods and integrate them in their own actions

Module contents

The following subjects are provided:

- Concept of systems
- Iterative and agile process models of software development
- System development and cost estimation
- Methods, techniques and tools to collect requirements
- Techniques to develop and describe software architecture
- Measurement and evaluation of software systems
- Extended techniques of modelling, meta-modelling, domain specific languages
- Model based development
- Methods and techniques of software evolution

Literaturempfehlungen

- Helmut Balzert: Lehrbuch der Software-Technik, Spektrum Akademischer Verlag, 3. Auflage 2009

and actual papers from IEEE Software, IEEE Transactions on Software-Engineering, Informatik-Spektrum and conferences (z.B. ICSE, ICSE, WCRE, CSMR, ICPC, SLE, u.a.)

Prerequisites
Skills to be acquired in this module
With the help of suitable resources, the students can design, prototype, and evaluate a human-machine interface following the user-centered design process (HCD).

Professional competence
The students:
- can describe and explain the HCD process.
- can classify an unknown method into the HCD process when they are presented with a brief description.
- can select a suitable prototyping approach for a given application.
- can select a suitable prototyping method for a given application.
- can apply selected prototyping methods to create an interactive system.
- can name basic characteristics of human perception and motor skills and explain their importance for the development of interactive systems.
- can suggest and motivate improvement for a given user interface based on the gestalt laws.
- can explain the characteristics of human visual search and utilize it to improve given interfaces.
- can critically compare several variants of an interactive system's concept based on the "Multiple Resource Theory".

Methoden competence
The students:
- can critically compare and select methods for context of use and/or user requirements analysis.
- can apply methods for context of use and/or user requirements analysis to a real-world example.
- can retrospectively discuss and evaluate the use of a method for context of use and/or user requirements analysis.
- can plan, moderate and evaluate an ideation session.
- can formulate a precise research question based on a given problem description.
- can discuss the advantages and disadvantages of an experiment design.
- can select a suitable experiment design for a given research question.
- can define hypotheses and null hypotheses for a given experiment.

Social competence
The students:
- can work out solutions for a given design problem in group work.
- can present solutions to design problem in the plenum.
- can motivate their methodical approach to a design problem.
- can discuss their designs and results in an appropriate and professional manner with the plenum.
- can accept criticisms by their peer group as valuable contributions to their designs.

Self-competence:
The students:
- can accept and learn from mistakes made during the design process.

Module contents
The module covers research methods in the field of human-computer interaction. It discusses the core principles of human-computer interaction and the human-centered design process and its phases, context of use, requirements, and task analysis, prototyping and evaluation. Research methods used in the different phases of the process are introduced and discussed.

Available design options for human-machine interfaces are presented and discussed with regard to human perception capabilities and their limitations. The module discusses methods for user research, including surveys, diaries, case studies, interviews, and focus groups, as well as physiological measurements. The module goes into further detail on evaluation methods, and introduces the foundations of experimental
research in human-computer interaction, including types of research, research hypotheses, experimental design, and statistical analysis.

During the practical project, a concrete human-computer interface will be designed, developed and evaluated.

Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
This module provides knowledge of fault-tolerant distributed systems. The terminology, structure, conception, core challenges and related implementation concepts will be covered in detail.

Professional competence
The students:
- Assess what a fault-tolerant distributed system is and develop awareness of its capabilities
- Name and discuss common implementations of fault-tolerant distributed systems

Methodological competence
The students:
- Reflect the implementation challenges of a distributed system
- Are able to adapt and evolve implementation concepts of fault-tolerant distributed systems in new contexts

Social competence
The students:
- Solve problems in small teams
- Present their solutions to the members of the tutorial
- Discuss their different solutions with members of the tutorial

Self-competence
The students:
- Accept criticism
- Question their initially applied methods for problem solving
- Question their initial solutions in the light of newly learned methods

Module contents
1. Fault, Error, Failure
2. Failure semantics, Fault tolerance
3. Byzantine agreement protocols
4. Stable storage
5. Fail-stop processors
6. Atomic commit protocols
7. Classification of replication control schemes - pessimistic vs. optimistic - semantic vs. syntactic - static vs. dynamic
8. Consistency notions
9. Quality criteria
10. Survey of replication control schemes
11. Design of replication control schemes
12. Unifying frameworks
13. Replication in practice

**Skills to be acquired in this module**

The objective of the module "Requirements Engineering and Management" is to convey the core concepts and technology of the requirements engineering and of the requirements management. In the second half of the semester these methods and techniques will be carried out practically to develop an exemplary requirements definition.

**Professional competence**

The students:

- integrate the process of requirements engineering in the software engineering process
- name the methods and tools of requirements engineering and management
- select methods and tools from requirements engineering and management to solve given problems appropriately
- illustrate the key tasks of the requirements engineering and management
- name the essential concepts to develop and to structure ideas
- discuss the methods of determination requirements and develop validation concepts
- differentiate the software development core activities in greater detail

**Methodological competence**

The students:

- apply the methods of determination, documentation, validation and confirmation of requirements and
- create a comprehensive requirement document in group work

**Social competence**

The students:

- communicate with all stakeholders dealing with software development
- design project visions in groups
- collect requirements in interviews
- design requirements for software systems collaboratively

**Self-competence**

The students:

- reflect their problem-solving behaviour by applying requirements engineering and management capabilities

**Module contents**

The module deals with requirements analysis core concepts as well as methods and techniques of requirements engineering and management. Topics of this module are:

- the necessity of requirements engineering and management
- the requirements engineering process in the software development process
- requirements engineering process (participants, documents, activities)
- understanding the application domains (vision development, system environment documentation, domain model development, use case identification)
- requirements collection (functional and non-functional requirements, requirements collection, requirements documentation, requirements validation, requirements needs)
- requirements management

**Prerequisites**

**Skills to be acquired in this module**

**Professional competence**
The students:
- describe concepts, languages and architectures of database systems
- discuss state-of-the-art database research topics
- analyse information processing tasks and implement solutions appropriately

**Methodological competence**
The students:
- propose concrete processing requirements for special application classes
- assess the consequences of techniques and approaches
- perform supervised research in the field of information systems
- analyse and reflect complex information system requirements
- realize information demands and accordingly gather aim-oriented information

**Module contents**
This module is a continuation of the content of information systems I and of information systems II. It deepens and extends the contents of the preceding modules and focuses mainly on current research questions. A special focus lies on concept of distributed data management.

<p>| Zuständige Personen           | Grawunder, Marco (Module responsibility) |
| Prerequisites                 | - Informationssysteme I     |
| Skills to be acquired in this module | Objective of the module/skills: |
|                               | The module enhances the previous knowledge of databases and information systems. In the context of a professional database system the students realize, implement, install and optimize the system. Theoretical and mathematical approaches are additional contents. Additionally the course provides the capability both to describe the differences between NoSQL Databases and (Object-)Relational Databases and how to use them. |
|                               | Professional competence     |
|                               | The students:               |
|                               | • name realisation techniques, implementations and programming of database systems |
|                               | • program and implement database oriented system routines |
|                               | • administer a professional database system - identify database system performance problems and solve them appropriately |
|                               | Methodological competence   |
|                               | The students:               |
|                               | • make optimisation decisions during the modelling phase |
|                               | • construct optimisation strategies mathematically |
|                               | Social competence           |
|                               | The students:               |
|                               | • develop appropriate implementations for given problems in a team |
|                               | Self-competence             |
|                               | The students:               |
|                               | • acknowledge the limits of their ability to cope with pressure during the implementation of database specific solutions |
| Module contents               | Content of the Module:*     |
|                               | The module is a practical course. It is a continuation of the modules Information Systems I and Information Systems II. This module especially deals with the technical and theoretical concepts of database systems. Practical database implementation approaches and optimisation concepts are additional contents of the module. In detail the module provides: low-level database management programming, aspects of catalogue systems implementation, optimisation strategies based on different parallelisation and partitioning strategies, query concepts and modification. |

inf112 - Modern Programming Technologies

Module label: Modern Programming Technologies

Modulkürzel: inf112

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Praktische Informatik

Zuständige Personen:
Boles, Dietrich (Module counselling)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:

Skills to be acquired in this module:
The objective of the module is to provide the students with modern programming technologies. After the course, the students are able to use these technologies during the development and implementation of complex applications.

Professional competence:
The students:
- name modern programming technologies
- appropriate use modern programming technologies to solve complex problems

Methodological competence:
The students:
- search for solutions to specific problems in the internet independently

Social competence:
The students:
- develop software in teams
- discuss own and someone else's solutions

Self-competence:
The students:
- reflect their problem-solving behaviour and take up new solutions, e.g. from the internet

Module contents:
The module enhances the students' programming skills. It focuses on modern programming technologies. Among others, these are .NET Framework, Java Server Technologies like Java EE or Spring, Android App development or the development of skills for digital voice assistants. The new technologies are presented in the lecture part. In the exercises, the students develop their own larger applications in groups of 2 or 3 students in reference to the lecture content.

- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Praktische Informatik

Zuständige Personen:
Theel, Oliver (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module:
The aim of the module "Operating Systems 2" is to convey further knowledge and skills regarding the conception, implementation, and evaluation of operating systems.

Professional competence:
The Students:
- assess in detail what an operating system is able do
- recognize the problems in the implementation of operating systems
- identify and evaluate implementations of further subproblems and apply them

Methodological competence:
The Students:
- transfer implementation concepts to other contexts
- critically question different solutions with regard to their properties

Social competence:
The Students:
- solve problems partly in small groups
- present own potential solutions to the exercise group
- discuss their different potential solutions within the exercise group

Self-competence:
The Students:
- accept criticism
- reflect their own potential solutions taking into account the methods taught

Module contents:
The module conveys the following contents:
1. additional aspects of file systems
2. Input/output control
3. User representation
4. Advanced synchronization concepts
5. User interfaces
6. Job scheduling
7. Architectures of operating systems
8. Examples of operating systems

inf131 - Advanced Topics in Human Computer Interaction

Module label: Advanced Topics in Human Computer Interaction
Modulkürzel: inf131
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Computing Science (Master) > Praktische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction

Zuständige Personen:
Boll-Westermann, Susanne (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:

Skills to be acquired in this module:

This course aims to provide a sample of some of the most recent and significant advances in this exciting area. Topics may include: situational awareness, designing for attention, ambient/peripheral interaction, computer support cooperative work and social computing (CSCW), ubiquitous and context-aware computing, haptic and gestural interaction, audio interaction, gaze-based interaction, biometric interfaces, and embedded, physical and tangible computing, mobile and wearable interfaces.

This course is explicitly not focused on the methods used in HCI practice (i.e., user-centered design cycle), but rather focuses on (recent) research.

Professional competences:
The students:
- demonstrate a systematic understanding of knowledge and critical awareness of a selection of the recent research advances in the area of HCI
- valuate and critique recent developments in the field of HCI on scientific and technological grounds
- develop ability to conceptualize, design, implement, and evaluate user-centered systems and techniques.
- plan an implement exploratory projects directed at envisioning and prototyping novel interactive artifacts

Methodological competences:
The students:
- analyze, review and critique research papers
- carry out original research from start to finish
- summarize and present research findings
- work in a team to produce and evaluate prototypes of novel interactive artifact

Social competences:
The students:
- work collaboratively in groups to analyze and review research papers
- summarize and present research findings to rest of class
- discuss how HCI concepts and methods can be applied in analysis, design, and evaluation of interactive technologies.
- discuss social and ethical implications of interactive technologies

Self-competences:
The students:
- are comfortable tackling original research questions
- show aptitude in conceptualizing and running both qualitative and quantitative HCI experiments
- acquire the ability to summarize, analyze, and critique published (peer-review) research papers

Module contents:

HCI is a fast-growing field, where scientific research in this area crosses multiple disciplines. The body of theoretical and empirical knowledge that can inform the design of effective systems is rapidly developing, which underscores the importance of current research in the field.

This course aims to provide a sample of some of the most recent and significant advances in this exciting area.
Topics may include: situational awareness, designing for attention, ambient/peripheral interaction, computer support cooperative work and social computing (CSCW), ubiquitous and context-aware computing, haptic and gestural interaction, audio interaction, gaze-based interaction, biometric interfaces, and embedded, physical and tangible computing, mobile and wearable interfaces.

The course will consist of lectures and lab sessions. Lab sessions will cover assignments (writing paper reviews, presentations, and peer assessment). In addition to assignments and a final exam, a small part of the course includes a mini group-based HCI project.

Prerequisites

Skills to be acquired in this module
This module integrates current developments in the field in adequate study courses.

Professional competences
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences
The students:
- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences
The students:
- support team process by their abilities

Self-competences
The students:
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Prerequisites

Skills to be acquired in this module | This module integrates current developments in the field in adequate study courses.

Professional competences

The students:

- Define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- Recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- Identify, structure and solve problems/tasks, also in new or developing subject areas
- Apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- Are aware of the current limits and contribute to the development of computer science research and technology
- Discuss and evaluate recent computer science developments

Methodological competences

The students:

- Examine tasks with technical and research literature, write an academic article and present their solutions academically
- Evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research
- Schedule time and use resources

Social competences

The students:

- Communicate with users and experts convincingly

Self-competences

The students:

- Pursue the overall and special computer science development critically
- Develop and reflect self-developed hypotheses to theories independently

### Skills to be acquired in this module
- **The aim of the module is to integrate the latest developments in the field of "Media Informatics and Multimedia Systems" appropriately into a course of study.**

#### Professional competences
- The students:
  - define and contrast special themes in computer science, and reflect on computer science practices in general.
  - recognize and evaluate applied techniques and methods and their limits
  - identify, structure and solve problems/tasks, in new or developing subject areas
  - apply state of the art and innovative methods to solve problems, if necessary from other disciplines
  - recognize current limits and contribute to the development of computer science research and technology
  - discuss and evaluate recent computer science developments

#### Methodological competences
- The students:
  - evaluate and apply tools, technology and methods and utilize them appropriately
  - combine new and original approaches and methods creatively
  - reflect on problems/tasks, including new or developing subject areas in their discipline and apply computer science methods for investigation and resolution

#### Social competences
- The students:
  - integrate their skills in a team environment.

#### Self-competences
- The students:
  - pursue the further development of computer science in general and in this particular sub-field critically
  - innovatively conduct professional activities effectively and independently

- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

**Methodological competences**

The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

**Social competences**

The students:

- support team process by their abilities

**Self-competences**

The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
This module integrates current developments in the field in adequate study courses.

Professional competences
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences
The students:
- examine tasks with technical and research literature, write an academic article and present their solutions academically
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research
- schedule time processes and resources

Social competences
The students:
- communicate with users and experts convincingly

Self-competences
The students:
- pursue the overall and special computer science development critically
- develop and reflect self-developed hypotheses to theories independently

- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

The required prerequisites are further specified in the details of the assigned course.

Skills to be acquired in this module

The module aims to integrate current developments in the field of Practical Informatics into the course of study in the appropriate course forms.

Subject competences

The students:

- differentiate and contrast a subarea of practical computer science in more detail
- recognize and assess the techniques and methods to be applied in the special field of the course and their limits
- identify, structure and solve problems also in new or emerging areas of their discipline
- recognize the limits of current knowledge and technology and contribute to the further scientific and technological development of computer science
- discuss current developments in practical computer science and assess their significance
- critically follow further developments in the special field discussed in the course.

Methodological competencies

Students will:

- apply state-of-the-art and innovative methods in the research and solution of problems, drawing on other disciplines where appropriate
- investigate problems on the basis of technical and scientific literature,
- write an article according to scientific criteria, and present their results in a scientific talk
- reflect on problems, including those in new or emerging areas of practical computer science, and apply computer science methods to investigate and solve them
- plan time schedules and other resources
- develop and reflect on their own theories on independently generated hypotheses

Social Skills

Students will:

- communicate persuasively orally and in writing with users and professionals
- solve tasks goal-oriented in a team

Self-competencies

The students

- deepen their self-organization skills
- reflect self-critically on their actions and skills in the special field under consideration and assess them appropriately

Module contents

In this module, content and methods on current topics in practical computer science are taught.

For details on objectives and contents, please refer to the details of the assigned course or contact the lecturers directly.

inf191 - Special Topics in Practical Computer Science II

Module label: Special Topics in Practical Computer Science II
Modulkürzel: inf191
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Praktische Informatik

Zuständige Personen:
Peter, Andreas (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:
Skills to be acquired in this module:
Das Modul hat zum Ziel aktuelle Entwicklungen im Vertiefungsgebiet "Zuverlässige Systeme" II in den jeweils angemessenen Lehrveranstaltungsformen in das Studium zu integrieren.

Fachkompetenzen:
Die Studierenden:
- differenzieren und kontrastieren einen Teilbereich der Informatik, auf den sie sich spezialisiert haben, im Detail genauer oder reflektieren die Informatik im Allgemeinen
- erkennen und beurteilen die in ihrem Spezialgebiet anzuwendenden Techniken und Methoden und deren Grenzen
- identifizieren, strukturieren und lösen Probleme auch in neuen oder erst im Entstehen begriffenen Bereichen ihrer Disziplin
- wenden dem Stand der Wissenschaft entsprechende und innovative Methoden bei der Untersuchung und Lösung von Problemen an, gegebenenfalls unter Rückgriff auf andere Disziplinen
- erkennen die Grenzen des heutigen Wissensstands und der heutigen Technik und tragen zur weiteren wissenschaftlichen und technologischen Entwicklung der Informatik bei
- diskutieren aktuelle Entwicklungen der Informatik und beurteilen deren Bedeutung

Methodenkompetenzen:
Die Studierenden:
- evaluieren Werkzeuge, Technologien und Methoden und wenden diese differenziert an
- entwickeln kreativ neue und originäre Vorgehensweisen und Methoden
- reflektieren Probleme auch in neuen oder erst im Entstehen begriffenen Bereichen ihrer Disziplin und wenden Informatik-Methoden zur Untersuchung und Lösung an

Sozialkompetenzen:
Die Studierenden:
- integrieren ihre Fähigkeiten in Teamprozesse Selbstk Hemmungen
- verfolgen die weitere Entwicklung in der Informatik allgemein und in ihrem Spezialgebiet kritisch führen innovative Tätigkeiten in ihrem Berufsfeld erfolgreich und eigenverantwortlich aus

Prerequisites

Skills to be acquired in this module
Professional competences:
The students:
- Ability to describe and analyze system components and architectures using system level description languages SpecC and SystemC
- Capabilities for partitioning and parallelizing of applications

Methodological competences:
The students:
- Knowledge of refinement and transformation techniques for transferring an initial specification into a real implementation
- Knowledge of the phases of a system-level design flow
- Knowledge of current design methods and tools in system level design
- Knowledge about formal models of computation of specification languages
- Knowledge of current research results and trends in system level design
- Capabilities for partitioning and parallelizing of applications
- Ability to implement a complete system design-to-implementation specification

Social competences:
The students:
- Implement solutions of given problems in teams
- Discuss their outcomes appropriately

Self-competences:
The students:
- presentation skills
- reflect their solutions by using methods learned in this course

Module contents
The ever-increasing integration densities of integrated circuits enable the implementation of increasingly powerful and complex systems. This can be on the one hand the integration of several sub-components on the same chip (system-on-chip) or on the other hand the implementation of more powerful algorithms. However, traditional design techniques are hardly able to cope with the increasing complexity of today’s embedded systems. Therefore, in research and practice efforts through new methods and tools, there is a significant increase in productivity in the design process, thus closing the so-called “design productivity gap”. This is achieved, for example, by a stronger abstraction, in which the behavior of components is described only at the algorithmic level and is automatically translated into hardware or software implementations by high-level synthesis techniques. The final system implementation is achieved by means of a structured refinement and exploration processes. Throughout this refinement flow, system properties (for example, timing, energy consumption, chip area and costs) are estimated on each abstraction level and guide the designer in the iterative decision process. By means of techniques such as virtual prototyping, entire systems can be simulated and verified on each refinement layer, even without the availability of a full implementation for all system components.

This module builds on the modules Embedded Systems I and II, deepens the knowledge acquired there for the design of hardware/software systems and expands them with current methods and tools. With SystemC, a language is presented that is already widely used in industry and research for the design and verification of hardware/software systems and supports several abstraction levels from clock cycle accurate hardware

Zuständige Personen
Fränzle, Martin Georg (Module responsibility)

Prerequisites

Skills to be acquired in this module
The module gives an introduction to hybrid discrete-continuous systems, as arising by embedding digital hardware into physical environments, and it elaborates on state of the art methods for the mathematical modelling and the analysis of such systems. It thus provides central competences for understanding and designing reliable cyber-physical systems.

Professional competence
The students:
- characterise formal models of cyber-physical systems: hybrid automata, hybrid state transition systems
- name domain-specific system requirements: safety, stability, robustness
- name analysis methods: symbolic state-space exploration, abstraction and abstraction refinement, generalized Lyapunov-Methods
- use state-of-the-art analysis tools
- select and apply adequate modelling and analysis methods for concrete application scenarios
- apply methods to reduce large state spaces and reduce infinite-state systems by abstraction
- know the de-facto industry standards for system modelling and are able to apply the corresponding modelling frameworks and tools

Methodological competence
The students:
- model heterogeneous dynamical systems with adequate modelling and design tools, in particular Simulink/Stateflow
- transfer modelling and analysis methods to other heterogeneous domains, e.g. socio-technical systems

Social competence
The students:
- work in teams
- solve complex modelling, design, and analysis tasks in teams

Self-competence
The students:
- reflect their actions and respect the scope of methods dedicated to hybrid systems

Module contents
Embedded computer systems continuously interact with their environment, which generally comprises state- and time-continuous components. The coupling of the embedded system to its environment thus induces complex interleavings between discrete computational and decision processes and continuous processes. The resulting processes are neither amenable to the analytic techniques of continuous control nor of discrete mathematics. They instead require a broader, integrated theory: hybrid discrete-continuous systems. The lectures provide an in-depth introduction into a variety of analysis and design methods of these computer-based systems and their recent extensions to cyber-physical systems.

The accompanying hands-on-project enhances the lecture by developing and using design and verification

Zuständige Personen
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
The module provides practical relevance to the design of digital embedded systems.

Professional competence
The students:
- characterise the structure of microprocessor systems
- name control aspects of time sensitive external components
- program efficient embedded systems

Methodological competence
The students:
- use specifications from electrical components data sheets

Social competence
The students:
- work in a team
- discuss solutions

Module contents
Embedded systems support complex feedback problems, control problems and data processing tasks. They have an important value creation potential for telecommunications, production management, transport and electronics. The functionality of embedded systems is realised by the integration of processors, special hardware and software. The embedded systems design is influenced by the heterogeneity of system architectures, the complexity of systems and technical and economic requirements.

This module gives an initial review of computer architectures. After that embedded systems are introduced by a specific microprocessor. Furthermore, external hardware will be connected to the microprocessor. Besides this, the design of circuit boards will be discussed. The students will design, develop and implement a circuit layout with CAD and programme this embedded system with a Flash-eprom.

Literaturempfehlungen
Lecturers notes, hardware manuals and data sheets, and development tool manuals

**Verwendbarkeit des Moduls**
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

**Zuständige Personen**
- Fatikow, Sergej (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**
Experts in different branches try to approach their application-specific control and information processing problems by using fuzzy logic and artificial neural networks (ANN). The experiences gathered up to now prove robotics and automation technology to be predestined fields of application of both these approaches. The major topics of the course are control problems in robotics and automation technology, principles of fuzzy logic and ANN and their practical applications, comparison of conventional and advanced control methods, combination of fuzzy logic and ANN in control systems. The course gives a comprehensive treatment of these advanced approaches for interested students.

**Professional competence**
The students:
- recognise control problems in robotics and automation technology,
- name principles of fuzzy logic and ANN and their practical applications,
- compare conventional and advanced control methods,
- characterise the combination of fuzzy logic and ANN in control systems

**Methodological competence**
The students:
- will acquire knowledge of the tools, methods and applications in fuzzy logic and ANN
- deepen their knowledge for the practical use of the given methods
- can use common software tools for design and application of fuzzy logic and ANN

**Social competence**
The students:
- gain experience in interdisciplinary work
- are integrated into the recent research work

**Objective of the module / skills:**

**Self-competence**
The students:
- are able to transfer the gained knowledge for later use in their theses or studies for AM&R
- can Design (complex) fuzzy logic controller and ANN systems
- reflect their (control) solutions by using methods learned in this course

**Module contents**
- Control problems in robotics and automation technology
- Basic ideas of fuzzy logic and ANN
- Principles of fuzzy logic
- Fuzzy logic of rule-based systems
- ANN models
- ANN learning rules
- Multilayer perceptron networks and backpropagation
- Associative networks
- Self-organizing feature maps
- PID design principles
- Design of fuzzy control systems
- Fuzzy logic application examples
- Design of ANN control systems
- ANN application examples
- Fuzzy + Neuro: principles and applications

inf305 - Medical Technology

Module label: Medical Technology

Modulkürzel: inf305

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Interdisziplinäre Module
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen:
- Hein, Andreas (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence
The students:
- Describe medical diagnosis and therapy methods
- Understand the core concepts of computer-assisted medical interventions
- Are aware of the basic concepts and legal conditions of the development of medical devices
- Define the character of medical devices' software parts and implement them
- Assess the complex interaction of medical products and patients
- Get familiar with the development of medical products within a short period of time

Methodological competence
The students:
- Recognise the interdisciplinary challenges and accordingly exchange information with other disciplines

Social competence
The students:
- Present solutions for specific questions

Self-competence
The students:
- reflect their solutions by using methods learned in this course

Module contents

- Medical areas and areas of application
- Basic requirements for medical systems (hygiene, MPG, technical security, materials)
- Medical systems:
  - Functional diagnostics (ECG, EMG, EEG)
  - Imaging systems (CT, MRI, ultrasound, PET, SPECT) - Therapy equipment (Laser, RF, Microtherapy)
  - Signal processing / monitoring (cardiovascular, hemodynamic, respiratory, metabolic, cerebral)
- Medical Informatics (HIS, DICOM, Telemedicine, VR, image processing).

inf307 - Robotics

Module label: Robotics
Modulkürzel: inf307
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Interdisziplinäre Module
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen
Hein, Andreas (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence
The students:
- Name and know the functions and applications of robot systems
- Characterise the basic concepts to program robot systems
- Differentiate between the interaction of mechanical, electrical and software components

Methodological competence
The students:
- Define characteristics and components of robot systems for a specific application
- Design and implement robot system sub-components
- Design and parameterise simple control structures
- Plan the application of robot systems and derive the requirements
- Model electrical and mechanical systems
- Develop and realise simple robot systems

Social competence
The students:
- Solve robot systems problems in team work

Self-competence
The students:
- Reflect their solutions in reference to robot system methods

Module contents

- Integration in production plants / aims / subsystems
- Architectures / classifications (classification of robots)
- Robot components + Computer systems for programming
  - PA-10
    - Lego Mindstorms
- Basics of kinematics
  - Coordinate transformation, homogeneous coordinates, Coordinate transitions
  - Kinematic equation systems, transformation of vectors
- Kinematic
  - Joint types (manipulators) / Wheels, TCP
  - Denavit-Hartenberg-Transformation
  - Forward calculation
  - Backward calculation
- Sensors
  - General properties of sensors, parameter
  - Simple optical position sensors
  - Inductive-, capacitive- und ultrasonic-sensors
  - Distance sensors (laser scanner, triangulation sensors)
  - Force sensors
  - Sensor data preparation
Planing / Regulation

- Overall regulation approach, terms, process- and control functions, PID-controller
- Planning concepts and approaches (On-Line, Off-Line), planning processes, construction and path planning
- Actuators

inf308 - Microrobotics II

Module label: Microrobotics II
Modulkürzel: inf308
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Interdisziplinäre Module
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen
Fatikow, Sergej (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
After having given an established introduction in the module "Microrobotics and Microsystem Technology" this lecture offers a further specialisation in microrobotics. Within the course, all relevant areas (among others the research topics of the division "Microrobotics and Control Engineering (AMiR)") will be presented and analysed. The student will be provided with an insight into current research projects of AMiR and of other research institutes of microrobotics worldwide; here mainly the requirements of industry to microrobots will be discussed. The lecture will be enhanced by practical courses in the research laboratories of AMiR.

Professional competence
The students:
- name and recognise the basic concepts of nanotechnology, in particular, micro- and nanorobotics approaches
- differentiate the development, control and application of micro- and nanorobotics systems
- implement and design application-specific micro- and nanorobotics systems

Methodological competence
The students:
- transfer their control engineering and image processing abilities on interdisciplinary problems
- transfer their hands-on experience to develop controls and applications of microrobotic systems on new tasks

Social competence
The students:
- work in a team

Self-competence
The students:
- reflect their problem-solving behaviour and use hands-on experience to develop, control and application of microrobotics

Module contents
Smart and versatile microrobots; microactuators (piezo-, ferrofluid- and SMA-actuators) for microrobots; real-time image processing in the micro world (SEM, optical microscopy); micro force sensors and tactile sensors for microrobots; microrobot control systems, e.g. neural networks and fuzzy logic; haptic interface for the control of microrobots; neural speech interface for the control of microrobots; robot-based micro- and nanohandling (SEM, optical microscopy); applications: microassembly, nano-testing, cell handling; Micro Air Vehicles (MAVs); multi-robot systems: team behavior, communication, control issues

Literaturempfehlungen
- Lecture notes (can be obtained in secretariate, A1-3-303)

**Prerequisites**

**Skills to be acquired in this module**
This module introduces the estimation of power dissipation and optimisation.

**Professional competence**
The students:
- Discuss the fundamental problems of power dissipation
- Characterise the requirements-driven design process of embedded systems
- Name power loss analysis and optimization methods
- Design embedded systems with common design and analysis tools
- Design power-optimized embedded systems

**Methodological competence**
The students:
- Model systems with a hardware description language
- Analyze and model hardware components
- Perform multi-dimensional optimization of systems

**Social competence**
The students:
- Implement solutions of given problems in teams
- Discuss their outcomes appropriately

**Self-competence**
The students:
- Acknowledge the limits of their ability to cope with pressure during the modeling process of systems

**Module contents**
According to Moore’s Law the number of integratable transistors on a computer chip doubles every two years. In addition, new circuits are getting faster and faster. This leads not only to an increased functionality of a system, but it also increases the electrical power consumption.

This electrical power consumption is problematic from two different points of view: Firstly, the electrical power must be supplied. Secondly, the resulting heat has to dissipate from the system. An increased power consumption always causes lower battery life and higher energy costs. The heat generation reduces the reliability and life of integrated circuits. The cooling (ceramic housings, cooling elements, fans, etc.) increases the system’s costs.

Today the development of heat, caused by power dissipation, needs to be considered during the embedded system design process. This knowledge takes the system's reliability and operation costs into account.

This module introduces the estimation of power dissipation and optimisation.

Prerequisites

Skills to be acquired in this module
This module introduces the principles of automated driving.

Professional competences:
The students:
- Discuss different levels of automated driving (eg. SAE-Level) and the differences
- Discuss different levels of connected driving and the differences
- Discuss core-domains of automated vehicles
- Discuss important technological pillars in the areas sense, plan, and act
- Discuss transition between different levels of automation
- Discuss the impact of connected vehicle functions on automated driving
- Discuss the impact of automated vehicle functions on connected driving
- Characterise the impact of automated and connected driving on road traffic
- Characterise the interaction of humans and automated and connected vehicles
- Design an abstract procedure for the change of different levels of automation
- Design a rough vehicle architecture for automated and connected driving

Methodological competences:
The students:
- Analyze complex automated and connected vehicles (→ domains)
- Analyze core-functions of automated and connected vehicles (→ functions)

Social competences:
The students:
- Work in teams - Discuss their outcomes appropriately

Self-competences:
The students:
- Acknowledge the limits of their ability to cope with pressure during the analysis of complex (automated and connected) socio-technical systems

Module contents
- levels of automated driving (eg. SAE-Level)
- levels of connected driving - core-domains of automated vehicles
- transition between different levels of automation
- selected connected vehicle functions
- selected automated vehicle functions
- human factors and socio-technical systems
- vehicle architectures

Hein, Andreas (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
Professional competences:
The students learn:
- Programming of robots (mobile or stationary)
- Implementation of elementary operations
- Integration of operations into a small application scenario
- Programming using Robot Operating System (ROS)

Methodological competences:
The students learn:
- Systematic development process with team members
- Systematic evaluation of the application
- Designing a robotic application using basic and advanced robotic concepts

Social competences:
The students learn:
- Project management
- Team work
- Organization of the team

Self-competences:
The students:
- Time management
- Autodidactic work (literature search, technical specs, related work)

Module contents
Robotic systems will be provided to the students. They will then define the project/application scenario of the robots by their own and complete the project as a small team with self-organization and work distribution among the team members.

The module consists of a lecture and an exercise part:
Lecture: 2-3 lectures for introduction onto the module and introduction into the Robot Operating System (ROS) as well as the concepts of the projects.
Exercises: After the introduction period, the students will work self-organized to complete the proposed project. Work can be distributed weekly or on as concentrated time blocks.

Prerequisites
Skills to be acquired in this module
Professional competences:
The students:
- Ability to describe and analyze system components and architectures using system level description languages SpecC and SystemC
- Capabilities for partitioning and parallelizing of applications

Methodological competences:
The students:
- Knowledge of refinement and transformation techniques for transferring an initial specification into a real implementation
- Knowledge of the phases of a system-level design flow
- Knowledge of current design methods and tools in system level design
- Knowledge about formal models of computation of specification languages
- Knowledge of current research results and trends in system level design
- Capabilities for partitioning and parallelizing of applications
- Ability to implement a complete system design-to-implementation specification

Social competences:
The students:
- Implement solutions of given problems in teams
- Discuss their outcomes appropriately

Self-competences:
The students:
- presentation skills
- reflect their solutions by using methods learned in this course

Module contents
The ever-increasing integration densities of integrated circuits enable the implementation of increasingly powerful and complex systems. This can be on the one hand the integration of several sub-components on the same chip (system-on-chip) or on the other hand the implementation of more powerful algorithms. However, traditional design techniques are hardly able to cope with the increasing complexity of today's embedded systems. Therefore, in research and practice efforts through new methods and tools, there is a significant increase in productivity in the design process, thus closing the so-called "design productivity gap". This is achieved, for example, by a stronger abstraction, in which the behavior of components is described only at the algorithmic level and is automatically translated into hardware or software implementations by high-level synthesis techniques. The final system implementation is achieved by means of a structured refinement and exploration processes. Throughout this refinement flow, system properties (for example, timing, energy consumption, chip area and costs) are estimated on each abstraction level and guide the designer in the iterative decision process. By means of techniques such as virtual prototyping, entire systems can be simulated and verified on each refinement layer, even without the availability of a full implementation for all system components.

This module builds on the modules Embedded Systems I and II, deepens the knowledge acquired there for the design of hardware/software systems and expands them with current methods and tools. With SystemC, a language is presented that is already widely used in industry and research for the design and verification of hardware/software systems and supports several abstraction levels from clock cycle accurate hardware
description, over transaction level models to process based functional specifications.

Prerequisites

Skills to be acquired in this module

The students learn fundamental techniques in strategy synthesis as foundation for high-level control strategies in highly autonomous systems

**Professional competences:**
The students:

- understand the concepts of open, reactive systems and can explain their relevance
- can provide formal model of open reactive systems and their relevance for system design
- understand the concept of world models as internal representation of a systems environment
- understand and can explain the concept of strategies, and relate this to system design
- understand the relevance of information flow in distributed system
- understand the relevance of choosing the periphery of world models
- can formalize system requirements in temporal logic
- understand the relevance of assumptions in system design

**Methodological competences:**
The students:

- methods for synthesis of winning strategies in closed systems
- methods for synthesizing remorse-free strategies in open systems
- methods for determining the perimeter of world models

- methods for cooperative strategy synthesis

**Social competences:**
The students:

- Work in teams
- Solve complex modelling, design, and synthesis tasks in teams

**Self-competences:**
The students:

- Reflect their actions and respect the scope of methods for strategy synthesis

Module contents

The module gives an introduction to the synthesis of control strategies for highly autonomous systems. We first introduce classical game theory and present algorithms for synthesizing strategies for reactive system. We extend this to open systems, and analyze conditions, under which synthesis for distributed systems is decidable. We introduce remorse-free strategies and present compositional approaches to synthesis of remorse-free strategies. We analyze under what conditions world models allow for optimal remorse free strategies. We provide algorithms for computing weakest assumptions on the system environments under which winning strategies exist. We extend this to cooperative strategy synthesis, where multiple players cooperate in achieving jointly the system objectives. We illustrate these concepts with examples from autonomous driving.

The students:

- Acknowledge the limits of their ability to cope with pressure during the work on the topics of the module

Module contents

- Core-concepts of the transportation domain
- Modes of transportation (focus on the automotive sector)
- Automated and connected driving (short introduction/overview)
- Human factors in the automotive sector
- Traffic infrastructure (focus on intersections)
- Basic principles in traffic management

<td>Professional competences: The students are enabled to analyze and build autonomous systems.</td>
</tr>
<tr>
<td></td>
<td>Methodological competences: The students know examples of existing autonomous systems, understand the elements involved in their architectural design and the rationale behind decomposing the problem into obligations for the respective system components. The module furthermore enables the students to analyze existing architectures for autonomous systems with respect to their performance and safety. The students learn how to decompose a problem of designing an autonomous system into an architecture, are able to derive design obligations for its components, and can structure a pertinent safety case. They understand the software and hardware components necessary for achieving system autonomy and are able to design or instantiate these.</td>
</tr>
<tr>
<td></td>
<td>Social competences: The students acquire hands-on experience in designing components for autonomous systems in small teams and present the underlying theory, their particular design decisions, and their personal evaluation to fellow students.</td>
</tr>
<tr>
<td></td>
<td>Self-competences: The students can judge adequacy of their methodological skills for designing particular autonomous solutions. They are able to assess the safety impact of such a solution and are therefore able to develop a personal ethical stance towards its realization.</td>
</tr>

inf339 - Industrie 4.0 Digitalization in Industrial Manufacturing

Module label: Industrie 4.0 Digitalization in Industrial Manufacturing

Modulkürzel: inf339

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen:
Fränzel, Martin Georg (Module responsibility)

Lehrenden, Die im Modul (Prüfungsberechtigt):

Prerequisites:
None

Skills to be acquired in this module:
The module consists of a lecture part and a seminar part, in which special topics of the lecture are prepared and presented by the students on the basis of examples. This gives a clear insight into the different aspects and allows further discussion. The preparation and presenting a presentation with subsequent discussion on the respective topic area offers a deeper understanding.

Professional competence:
The student:
- Recognize fundamental relationships of the digitization in industrial manufacturing
- Gain knowledge about key competences of the digitization in industrial manufacturing
- Develop practical knowledge about special topics of the digitization in industrial manufacturing
- Put concrete approaches for discussion

Methodological competence:
The student:
- Capture needed information and analyze them
- Prepare the recorded information according to target group
- Form an understanding of the digitization in industrial manufacturing

Social competence:
The student:
- present and discuss their own work on a technical level

Self-competence:
The student:
- understand their own level of knowledge
- learn how to prepare and present a specific topic

Module contents:
The module conveys basic knowledge about the digitization of industrial production (Industrie 4.0). In addition to an overview of economic and technical aspects and opportunities of digitizing production, the module focuses on technologies for data acquisition, communication and control in production plants

Networked machine tools, Production planning and control, organization, Quality and IT systems for planning and operation, The Intelligent workpiece, Intelligent tools, Transfer systems, Assembly 4.0, Cyber Security, Convertible modular automation systems, Production transformation strategy, Business models

Literaturempfehlungen:

Prerequisites

Skills to be acquired in this module

Competencies:
The students identify fundamentals of uncertainty modeling in control systems as well as problem-specific methods for the consideration of uncertainty during simulation and observer synthesis.

Professional Competences:
The students identify fundamentals of uncertainty modeling in control systems, characterize problem-specific solution techniques for systems with stochastic and set-based uncertainty, and are aware of software implementations in simulation, control, and state estimation.

Methodological competences:
The students analyze problems of control-oriented uncertainty modeling, analyze fundamental solution techniques on a theoretical basis as well as transfer and generalize them independently toward novel research-oriented application scenarios.

Social competences:
The students analyze problems of control-oriented uncertainty modeling, analyze fundamental solution techniques on a theoretical basis as well as transfer and generalize them independently toward novel research-oriented application scenarios.

Self competences:
The students critically reflect the achieved results of their project work and acknowledge limitations of various approaches for a control-oriented uncertainty modeling.

Module contents

1. Mathematical modeling of uncertainty in linear and nonlinear dynamic systems
   2. Stochastic modeling approaches
      - Probability distributions
      - Bayesian state estimation for discrete-time systems (linear/nonlinear) and for continuous-time systems (linear)
      - Linear estimation techniques in an extended state-space (Carleman linearization for special system classes)
      - Monte-Carlo methods
   3. Estimation of states, parameters and simulation of uncertain processes
      - Outlook: Markov models
      - Outlook: Bayesian networks
   4. Set-based approaches
      - Set-based algorithms: Forward-backward contractor and bisection techniques
      - Interval methods for a verified solution of ordinary differential equations and for a stability proof of uncertain systems
      - Estimation of states and parameters as well as simulation of uncertain processes
   5. Outlook: Synthesis of controllers and state observers under an explicit description of uncertainty

inf341 - Robust Control and State Estimation in Digitalised Energy Systems

Module label: Robust Control and State Estimation in Digitalised Energy Systems

Modulkürzel: inf341

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen:
Rauh, Andreas (Module responsibility)

Lehrenden, Die im Modul (Prüfungsberechtigt):

Prerequisites:
Skills to be acquired in this module:

Competencies:
The students identify fundamentals of robust control and state estimation as well as problem-specific solution techniques and their corresponding software implementation.

Professional competences:
The students identify fundamentals of robust control and state estimation, characterize problem-specific solution techniques for different classes of uncertainty and are aware of reliable software implementations.

Methodological competences:
The students analyze problems of robust control and state estimation for dynamic systems, analyze fundamental solution techniques on a theoretical basis, and transfer as well as generalize those independently to new fields of applications.

Social competences:
The students develop solution ideas for real-life control problems within an accompanying project in small teams and explain the obtained results in short presentations.

Self competences:
The students critically reflect the achieved results of their project work and acknowledge limitations of various approaches for robust control and state estimation.

Module contents:

1. Robustness of linear systems/system analysis
   - Boundary crossing theorem of Frazer and Duncan
   - Mikhailov criterion
   - Khartonov criterion
   - Frequency response approaches

2. Selected control design techniques/control synthesis
   - Parameter-space approach of Ackermann and Kaesbauer
   - Eigenvalue and eigenvalue domain assignment
   - H-infinity control
   - Frequency response approaches (Sensitivity function approaches in the frequency domain)

3. Robust LMI-based control techniques
   - Lyapunov stability
   - Polytopic uncertainty modeling
   - Optimality of solutions

4. Duality between control and observer synthesis
   - Robust state estimation
   - Sliding mode observers

5. Interval methods: Solution of static and dynamic problems (Enclosing function values, Branch-and-bound techniques, Verification techniques for differential equations)

6. Fundamentals: Fault detection and fault-tolerant control

Prerequisites

Skills to be acquired in this module

This module integrates current developments in the field in adequate study courses.

Professional competences

The students:

- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences

The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences

The students:

- support team process by their abilities

Self-competences

The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Module contents

See assigned course description, e.g. „Sicherheitsanalysetechniken“, „Zielarchitekturen Eingebetteter Systeme für Automotive-Anwendungen“, „Modellbasierter Systementwurf“, ...

- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences
The students:
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Module contents:
See assigned course description, e.g. „Modellbasierter Systementwurf“, „Konstruktionsprinzipien ausgewählter Klassen von Fahrzeugfunktionen“

### Skills to be acquired in this module

**Professional competences**
The students:

- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

**Methodological competences**
The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

**Social competences**
The students:

- support team process by their abilities

**Self-competences**
The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Prerequisites

Skills to be acquired in this module

This module integrates current developments in the field in adequate study courses.

Professional competences

The students:

- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences

The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences

The students:

- Support team process by their abilities

**Self-competences++

The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Prerequisites
This module integrates current developments in the field in adequate study courses.

Professional competences
The students:
- Define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- Recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- Identify, structure and solve problems/tasks, also in new or developing subject areas
- Apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- Are aware of the current limits and contribute to the development of computer science research and technology
- Discuss and evaluate recent computer science developments

Methodological competences
The students:
- Examine tasks with technical and research literature, write an academic article and present their solutions academically
- Evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research
- Schedule time processes and resources

Social competences
The students:
- Communicate with users and experts convincingly

Self-competences
The students:
- Pursue the overall and special computer science development critically
- Develop and reflect self-developed hypotheses to theories independently

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Computing Science (Master) > Theoretische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen
Fränzle, Martin Georg (Module responsibility)

Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence
- The module gives an introduction to hybrid discrete-continuous systems, as arising by embedding digital hardware into physical environments, and it elaborates on state of the art methods for the mathematical modelling and the analysis of such systems. It thus provides central competences for understanding and designing reliable cyber-physical systems.

- The students:
  - characterise formal models of cyber-physical systems: hybrid automata, hybrid state transition systems
  - name domain-specific system requirements: safety, stability, robustness
  - name analysis methods: symbolic state-space exploration, abstraction and abstraction refinement, generalized Lyapunov-Methods
  - use state-of-the-art analysis tools
  - select and apply adequate modelling and analysis methods for concrete application scenarios
  - apply methods to reduce large state spaces and reduce infinite-state systems by abstraction
  - know the de-facto industry standards for system modelling and are able to apply the corresponding modelling frameworks and tools

Methodological competence
- The students:
  - model heterogeneous dynamical systems with adequate modelling and design tools, in particular Simulink/Stateflow
  - transfer modelling and analysis methods to other heterogeneous domains, e.g. socio-technical systems

Social competence
- The students:
  - work in teams
  - solve complex modelling, design, and analysis tasks in teams

Self-competence
- The students:
  - reflect their actions and respect the scope of methods dedicated to hybrid systems

Module contents

- Embedded computer systems continuously interact with their environment, which generally comprises state- and time-continuous components. The coupling of the embedded system to its environment thus induces complex interleavings between discrete computational and decision processes and continuous processes. The resulting processes are neither amenable to the analytic techniques of continuous control nor of discrete mathematics. They instead require a broader, integrated theory: hybrid discrete-continuous systems. The lectures provide an in-depth introduction into a variety of analysis and design methods of these computer-based systems and their recent extensions to cyber-physical systems.

- The accompanying hands-on-project enhances the lecture by developing and using design and verification...
tools.

inf450 - Correctness of Graph Programs

Module label: Correctness of Graph Programs

Modulkürzel: inf450

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Theoretische Informatik

Zuständige Personen:
Lehrenden, Die im Modul (Prüfungsberechtigt)
Lehrenden, Die im Modul (Module responsibility)

Prerequisites

Skills to be acquired in this module:
The objectives of this module are modelling of systems, system changes and system properties. Introduction to graph programs. Introduction into system correctness. Methods for proving system correctness.

Professional competence
The students:
- Describe the basics of graph programs and graph properties
- Describe verification procedures of system correctness

Methodological competence
The students:
- Model systems, system changes and system properties
- Apply the formalism of graph programs

Social competence
The students:
- Solve problems in a team
- Present and discuss their proposed solutions

Self-competence
The students:
- Reflect upon their actions with regard to term rewriting systems and the methods of those

Module contents:
The module is an introduction to the modelling of systems, system changes and system properties by means of graphs, graph programs and graph conditions and presents a method for proving correctness of systems with respect to a pre- and a postcondition.

The basic structures used in this lecture are graphs; they are used in practically all domains of computing science for the representation of complex structures. Graph programs are constructed from the core constructs of nondeterministic rule application, sequential composition and iteration and they can effect programmatic changes of a graph structure. One well-known method for determining the correctness of programs with respect to a pre- and a postcondition is based on the construction of a weakest precondition of the postcondition and the attempt to decide whether the given precondition implies the computed weakest precondition.

inf453 - Combination of Specification Techniques

Module label: Combination of Specification Techniques
Modulkürzel: inf453
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master’s Programme Computing Science (Master) > Theoretische Informatik

Zuständige Personen:
Olderog, Ernst-Rüdiger (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:
inf400/inf401 Theoretische Informatik I and II

Skills to be acquired in this module:
Introduction to the specification languages Z for data, CSP for processes, and their combination CSP-OZ for reactive systems with data and process parts.

Professional competence
The students:
- specify data and processes with Z, CSP and CSP-OZ formally
- check data refinement relations formally
- verify CSP-OZ specifications with FDR model checker

Methodological competence
The students:
- are able to integrate complementary specification methods

Social competence
The students:
- work together in small groups to solve problems
- present solutions to problems to groups of other students

Self-competence
The students:
- learn persistence in pursuing difficult tasks
- learn precision in specifying problems

Module contents
The course addresses a research trend in formal methods, the combination and integration of different specification methods. It focuses on a concrete combination CSP-OZ of the specification techniques CSP (Communicating Sequential Processes) for processes and Z and Object-Z for data, respectively. Reactive systems are described by CSP-OZ.

As a preparation, the specification languages Z and CSP are described, followed by the combination CSP-OZ with its process-oriented semantics. The concepts of refinement and inheritance and the possibility of automatic verification of a sublanguage of CSP-OZ with the FDR model checker for CSP will be discussed. Finally, the course explains possibilities of extending CSP-OZ for the specification of time-critical systems.

Topics:
- specification of complex data and operations in Z, type definition and pattern calculations of Z, data refinement
- specifications of communicating processes in CSP, operational semantics of CSP, three abstract semantic models
- for CSP: Trace semantics, failures semantics, failures-divergences semantics, process refinement in the above semantics, FDR model checker for CSP
- combined specification method CSP-OZ, transformational semantics as CSP-process, theorems of refinements,
- object-oriented concepts of class and inheritance in CSP-OZ

**Skills to be acquired in this module**

Introduction to Milner's Calculus of Communicating Systems (CCS) and the ?-Calculus.

**Professional competence**

The students:

- Know the theory of the operational semantics of CCS and the ?-calculus
- Perform equivalence proofs using simulations and bisimulations
- Specify communicating and mobile systems with CCS and the ?-calculus

**Methodological competence**

The students:

- Learn about different views on mobility
- Recognize equivalences as formal means for system correctness

**Social competence**

The students:

- Work together in small groups to solve problems
- Present their solutions to groups of other students

**Self-competence**

The students:

- Learn persistence in pursuing difficult tasks
- Learn precision in specifying problems

**Module contents**

Communication is one of the basic concepts of computer science. It occurs between computers in a network as well as between components of a computer. The focus of the course is on Robin Milner's ?-calculus. It enables a new modelling of communication, taking the location of the communication into account.

The ?-calculus can describe the change of data in a computer as well as the sending of messages or even programs along networks like the internet. It is also possible to describe reconfigurable networks. This will be shown using the examples of mobile phones, schedulers, automatic vending machines, data structures, communication protocols, and objects in object-oriented programming. All these applications are backed by the theory of the ?-calculus, which is based on operational semantics and a concept of behavioural equivalence. The theory will be explained in a step-by-step manner.

**Topics:**

- different views on mobility
- transition systems with simulations and bisimulations
- Milner's Calculus of Communicating Systems (CCS) and Milner's ?-calculus for mobile systems, both with operational semantics, structural congruence, strong equivalence and observational equivalence, relationship between reactions and transitions, solvability of recursive equations
- formal specification of examples of communicating and mobile systems using CCS and the ?-calculus
- proof of strong equivalence and observational equivalence of given processes
- specification of dynamic data structures in the ?-calculus

Prerequisites

Skills to be acquired in this module

Model checking is a technique for the automatic verification of hardware and software systems. In the course, the students develop knowledge and skills in requirements specification via temporal logic and the automatic algorithmic checking of systems with respect to requirements.

Professional competence

The students:

- name the operators in temporal logics and the differences between linear-time and branching-time logics,
- specify requirements in LTL and CTL
- translate LTL formulae to Büchi automata
- construct BDDs for boolean functions
- describe CTL formulae in fixpoint form
- apply model checking algorithms to Kripke structures
- know the expressivity of bisimulation

Methodological competence

The students:

- apply formal modelling techniques
- prove properties of temporal logics
- use model checking tools for the verification of systems

Social competence

The students:

- work on tasks in groups and discuss solutions
- develop system descriptions in groups and interpret results of tools

Self-competence

The students:

- organize their own work for the course

Module contents

- temporal logics LTL and CTL
- Büchi automata
- explicit model checking
- Binary decision diagrams
- Lattices, fixpoints, CTL as transformers
- Symbolic model checking
- bisimulation

Prerequisites:

Skills to be acquired in this module:
Introduction to formal methods of the specification and verification of time sensitive systems and their combinations.

Professional competence:
The students:
- Learn about different models of time and real-time properties
- Specify and verify real-time systems
- Model real-time systems using Timed Automata and PLC-Automata
- Apply the model checker UPPAAL for the verification of real-time properties
- Specify real-time systems using the Duration Calculus
- Learn about decidability and undecidability results for real-time systems

Methodological competence:
The students:
- Recognize logic and automata as adequate forms for describing real-time systems

Social competence:
The students:
- Work together in small groups to solve problems
- Present their solutions to groups of other students

Self-competence:
The students:
- Learn persistence in pursuing difficult tasks
- Learn precision in specifying problems

Module contents:

Examples of time-critical systems are railway control systems, robots, or even gas burners. It is essential for these systems to comply with certain timing conditions. For example, the control of a railway crossing must close the gates not later than 4 seconds after the sensors have reported an approaching train. If the gates are open, they should stay that way for at least 15 seconds to allow for a safe crossing of vehicles.

Different specification methods have been developed to describe such timing conditions. The Duration Calculus developed by Zhou Chaochen in 1991 is one attractive method. It is a logic combined with a calculus, in which the duration of states can be described. The course will introduce the Duration Calculus and will explain its application by means of examples. As further specification method Timed Automata introduced by Alur & Dill in 1994 will be presented. After the specification of real-time system requirements the verification of programs implementing these requirements will follow. The specification methods of the Duration Calculus and Timed Automata are used to describe the real-time behaviour of these programs. The correctness is then proven on the basis of these behavioral descriptions.

Topics:
- discrete and continuous model of time
- logics and automata models for the specification of real-time systems (predicate logic, Duration Calculus, Timed CTL, Timed Automata, PLC-Automata)
- decidability and undecidability results for real-time systems
- model checker UPPAAL for Timed Automata
- formaler Spezifikation von Realzeit-Systemen mit Hilfe von \( \text{Duration Calculus} \) sowie \( \text{Timed Automata} \) und \( \text{PLC-Automata} \)
- Überprüfung von spezifischen \( \text{Timed Automata} \) mit dem Modellprüfer \( \text{UPPAAL} \)
- Transformation von \( \text{Duration Calculus} \) für diskrete Zeit in reguläre Sprachen
- Implementierbarkeit von Realzeit-Systemen auf PLC-artigen Hardware

Workload
180 h

Verwendbarkeit des Moduls
• Master's Programme Computing Science (Master) > Theoretische Informatik

Zuständige Personen
Lehrenden, Die im Modul (Prüfungsberechtigt)
Lehrenden, Die im Modul (Module responsibility)

Prerequisites

Skills to be acquired in this module
The objectives of this module are an introduction to (term) rewriting systems, termination and confluence, the undecidable sets of termination and confluence problems, verification procedures of termination and confluence

Professional competence
The students:

• describe the basics of term rewriting systems
• characterise the undecidability of termination and confluence problems
• describe verification procedures of termination and confluence

Methodological competence
The students:

• apply verification procedures of termination and confluence
• apply Huet’s completion procedure

Social competence
The students:

• solve problems in a team
• present and discuss their results

Self-competence
The students:

• reflect their actions with regard to term rewriting systems and the methods of those

Module contents
The module is an introduction to term rewriting systems and provides verification procedures for termination and confluence. Term rewriting systems, termination and confluence are introduced, the undecidability of termination and confluence problems and the decidability for a set of special term rewriting systems are shown. For this purpose reduction and simplification orders, critical pairs, orthogonality and Huet’s completion procedure are introduced, examined and combined.

- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen
Peter, Andreas (Module responsibility)

Peter, Andreas (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
The goal of this module is to provide a foundation in computer and network security.

**Professional competences:**
The students: - are aware of the threats posed by cyber attacks to computer and network systems - understand the basic principles and mechanisms to protect a system against these threats - are able to apply this knowledge to assess the risk of cyber attacks to a given system as well as to develop and evaluate countermeasures against them

**Methodological competences:**
The students: carry out a threat and risk assessment - formulate security requirements for a given system - identify and apply standard security solutions to meet them (These are examples, the exact skills depend on the focus chosen by the student.)

**Social competences:**
The students: - are able to master a new topic by self-study and interaction with experts and peers - are able to explain principles and applications of computer security to experts and non-experts - are able to expertly discuss security risks and incidents

**Self-competences:**
The students: - follow up and critically assess current developments in computer security including security incidents - are security aware in their own behaviour, in their assessment of the systems they work with, and those they develop

Module contents
This module provides a broad and comprehensive knowledge in computer security. The topics cover threat analysis and attack trees, essential cryptographic tools, user authentication, access control, malware, intrusion detection and prevention, denial-of-service attacks and defences, software security and trusted systems, and network security. Students without prior knowledge in computer security focus on basic principles such as listed above. Students with prior knowledge in computer security can deepen their knowledge by studying real-world examples such as the SSL/TLS protocol. Typically, they will illustrate their topic by discussing a security incident reported in the public domain security news.

Lehrenden, Die im Modul (Prüfungsberechtigt)
- Peter, Andreas (Module responsibility)

**Prerequisites**

**Skills to be acquired in this module**
- **Professional competences:** The students: - are aware of the threats posed by cyber attacks to cyber-physical systems - understand security solutions specific to CPS - know examples of security architectures of CPS - are able to apply this knowledge to assess the risk of cyber attacks to a given CPS as well as to develop a conceptual systems security architecture for it
- **Methodological competences:** The students: - carry out a threat and risk assessment for a given CPS - formulate security requirements for a given CPS - develop a systems security architecture for a given CPS to meet them (These are examples, the exact skills depend on the focus chosen by the student.)
- **Social competences:** The students: - are able to master a new topic by self-study and interaction with experts and peers - are able to explain the significance and facets of security for CPS to experts and non-experts - are able to expertly discuss security risks and incidents of CPS
- **Self-competences:** The students: - follow up and critically assess current developments in the security of CPS including relevant security incidents - are security aware and foster a security culture with respect to CPS and the resulting critical infrastructures

**Module contents**
Embedded systems in the energy, transportation, and health domains are currently undergoing a technological transition towards highly networked automated cyber-physical systems (CPS). Such systems are potentially vulnerable to cyber attacks, and these can have physical impact. This includes targeted sabotage of a plant (e.g. Stuxnet), large-scale sabotage of infrastructure to cause economic damage (e.g. attacks against energy grids), and indiscriminate attacks to cause civilian casualties (e.g. by compromise of transportation systems). In this module we investigate and discuss security principles, solutions, and architectures for CPS as well as real-life security incidents. The topics include distance bounding protocols, location tracking and counter-measures, safety and security engineering of CPS, security in the automotive and maritime domain including car hacking and vehicle-2-x communication, hacking in the medical domain, attacks against energy grids, Stuxnet, CPS and society: benefits, risks, acceptance.

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Theoretische Informatik

Zuständige Personen
Lehrenden, Die im Modul (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
This module integrates current developments in the field in adequate study courses.

Professional competences
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences
The students:
- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences
The students:
- support team process by their abilities

Self-competences
The students:
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Module contents
See assigned course description, e.g. „Automatentheorie und Logik“, „Modelchecking“, „Effiziente Algorithmen“ und „Theorie und Spiele“.

inf481 - Software Analysis

Module label: Software Analysis
Modulkürzel: inf481
Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Theoretische Informatik

Zuständige Personen:
Wehrheim, Heike (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
Software analyses extract facts about programs from source code. Such facts can be employed by compilers to optimize programs during compilation, but can also be used to verify correctness of programs. The students get to know different analysis methods, specify such techniques themselves and implement them.

Professional competences
The students:
- get to know data flow analysis and specify them
- name the components of data flow systems
- know when to apply widening operators in an analysis
- are able to develop abstract domains and operators for abstract interpretation
- know predicate abstraction and the principle of counterexample-guided abstraction refinement
- know when and how to apply SSA forms
- are able to judge the precision and scalability of points-to analyses

Methodological competences
The students:
- are able to formally define analyses
- are able to prove properties of analyses
- are able to implement analysis

Social competences
The students:
- work on tasks in groups and discuss solutions
- implement analyses in groups.

Self-competences
The students:
- organize their own work for the course

Module contents
- Data flow analyses
- Abstract interpretation
- Predicate abstraction, CEGAR
- SSA forms
- Slicing
- Points-to analysis
- Symbolic execution

Olderog, Ernst-Rüdiger (Module responsibility)  
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

**Skills to be acquired in this module**

This module integrates current developments in the field in adequate study courses.

**Professional competences**

- Define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- Recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- Identify, structure and solve problems/tasks, also in new or developing subject areas
- Apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- Are aware of the current limits and contribute to the development of computer science research and technology
- Discuss and evaluate recent computer science developments

**Methodological competences**

- Examine tasks with technical and research literature, write an academic article and present their solutions academically
- Evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research
- Schedule time processes and resources

**Social competences**

- Communicate with users and experts convincingly

**Self-competences**

- Pursue the overall and special computer science development critically
- Develop and reflect self-developed hypotheses to theories independently

**Module contents**

See assigned course description

#### Professional competences
The students:

- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

#### Methodological competences
The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

#### Social competences
The students:

- support team process by their abilities

#### Self-competences
The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

**Prerequisites**

This module integrates current computer science developments into the informatics program, especially considering the selected focus area, by appropriate study courses.

**Professional competences**

The students:

- know recent technological or scientific computer science developments
- transfer computer science methods and development models to IT application area requirements
- evaluate the possibilities and limitations of computer science methods and tools and
- apply them appropriately

**Methodological competences**

The students:

- review problems, formulate them with formal models and explore them appropriately
- identify and present (one or more) computer science problem solutions
- select and evaluate appropriate tools and methods
- examine problems with technical and scientific literature

**Social competences**

The students:

- cooperate in a team

**Self-competences**

The students:

- plan their informatical actions independently

**Prerequisites**

**Skills to be acquired in this module**
Das Modul hat zum Ziel aktuelle Entwicklungen im Vertiefungsgebiet "Modellierung und Analyse komplexer Systeme" I in den jeweils angemessenen Lehrveranstaltungsformen in das Studium zu integrieren.

**Fachkompetenzen**
- differenzieren und kontrastieren einen Teilbereich der Informatik, auf dem sie sich spezialisiert haben, im Detail genauer oder reflektieren die Informatik im Allgemeinen
- erkennen und beurteilen die in ihrem Spezialgebiet anzuwendenden Techniken und Methoden und deren Grenzen
- identifizieren, strukturieren und lösen Probleme auch in neuen oder erst im Entstehen begriffenen Bereichen ihrer Disziplin
- wenden dem Stand der Wissenschaft entsprechende und innovative Methoden bei der Untersuchung und Lösung von Problemen an, gegebenenfalls unter Rückgriff auf andere Disziplinen
- erkennen die Grenzen des heutigen Wissensstands und der heutigen Technik und tragen zur weiteren wissenschaftlichen und technologischen Entwicklung der Informatik bei
- diskutieren aktuelle Entwicklungen der Informatik und beurteilen deren Bedeutung

**Methodenkompetenzen**
- evaluieren Werkzeuge, Technologien und Methoden und wenden diese differenziert an
- entwickeln kreativ neue und originäre Vorgehensweisen und Methoden
- reflektieren Probleme auch in neuen oder erst im Entstehen begriffenen Bereichen ihrer Disziplin und wenden Informatik-Methoden zur Untersuchung und Lösung an

**Sozialkompetenzen**
- integrieren ihre Fähigkeiten in Teamprozesse

**Selbstkompetenzen**
- verfolgen die weitere Entwicklung in der Informatik allgemein und in ihrem Spezialgebiet kritisch
- führen innovative Tätigkeiten in ihrem Berufsfeld erfolgreich und eigenverantwortlich aus

- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction

Zuständige Personen
- Boll-Westermann, Susanne (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

This course aims to provide a sample of some of the most recent and significant advances in this exciting area. Topics may include: situational awareness, designing for attention, ambient/peripheral interaction, computer support cooperative work and social computing (CSCW), ubiquitous and context-aware computing, haptic and gestural interaction, audio interaction, gaze-based interaction, biometric interfaces, and embedded, physical and tangible computing, mobile and wearable interfaces.

This course is explicitly not focused on the methods used in HCI practice (i.e., user-centered design cycle), but rather focuses on (recent) research.

Professional competences
The students:
- demonstrate a systematic understanding of knowledge and critical awareness of a selection of the recent research advances in the area of HCI
- evaluate and critique recent developments in the field of HCI on scientific and technological grounds
- develop ability to conceptualize, design, implement, and evaluate user-centered systems and techniques.
- plan and implement exploratory projects directed at envisioning and prototyping novel interactive artifacts

Methodological competences
The students:
- analyze, review and critique research papers
- carry out original research from start to finish
- summarize and present research findings
- work in a team to produce and evaluate prototypes of novel interactive artifact

Social competences
The students:
- work collaboratively in groups to analyze and review research papers
- summarize and present research findings to rest of class
- discuss how HCI concepts and methods can be applied in analysis, design, and evaluation of interactive technologies.
- discuss social and ethical implications of interactive technologies

Self-competences
The students:
- are comfortable tackling original research questions
- show aptitude in conceptualizing and running both qualitative and quantitative HCI experiments
- acquire the ability to summarize, analyze, and critique published (peer-review) research papers

Module contents

HCI is a fast-growing field, where scientific research in this area crosses multiple disciplines. The body of theoretical and empirical knowledge that can inform the design of effective systems is rapidly developing, which
underscores the importance of current research in the field.

This course aims to provide a sample of some of the most recent and significant advances in this exciting area. Topics may include: situational awareness, designing for attention, ambient/peripheral interaction, computer support cooperative work and social computing (CSCW), ubiquitous and context-aware computing, haptic and gestural interaction, audio interaction, gaze-based interaction, biometric interfaces, and embedded, physical and tangible computing, mobile and wearable interfaces.

The course will consist of lectures and lab sessions. Lab sessions will cover assignments (writing paper reviews, presentations, and peer assessment). In addition to assignments and a final exam, a small part of the course includes a mini group-based HCI project.

Prerequisites

Skills to be acquired in this module

Experts in different branches try to approach their application-specific control and information processing problems by using fuzzy logic and artificial neural networks (ANN). The experiences gathered up to now prove robotics and automation technology to be predestined fields of application of both these approaches. The major topics of the course are control problems in robotics and automation technology, principles of fuzzy logic and ANN and their practical applications, comparison of conventional and advanced control methods, combination of fuzzy logic and ANN in control systems. The course gives a comprehensive treatment of these advanced approaches for interested students.

Professional competence
The students:

- recognise control problems in robotics and automation technology,
- name principles of fuzzy logic and ANN and their practical applications,
- compare conventional and advanced control methods,
- characterise the combination of fuzzy logic and ANN in control systems

Methodological competence
The students:

- will acquire knowledge of the tools, methods and applications in fuzzy logic and ANN
- deepen their knowledge for the practical use of the given methods
- can use common software tools for design and application of fuzzy logic and ANN

Social competence
The students:

- gain experience in interdisciplinary work
- are integrated into the recent research work

Objective of the module / skills:

Self-competence
The students:

- are able to transfer the gained knowledge for later use in their theses or studies for AMiR
- can Design (complex) fuzzy logic controller and ANN systems
- reflect their (control) solutions by using methods learned in this course

Module contents

- Control problems in robotics and automation technology
- Basic ideas of fuzzy logic and ANN
- Principles of fuzzy logic
- Fuzzy logic of rule-based systems
- ANN models
- ANN learning rules
- Multilayer perceptron networks and backpropagation
- Associative networks
- Self-organizing feature maps

Prerequisites
None

Skills to be acquired in this module
The module consists of a lecture part and a seminar part, in which special topics of the lecture are prepared and presented by the students on the basis of examples. This gives a clear insight into the different aspects and allows further discussion. The preparation and presenting a presentation with subsequent discussion on the respective topic area offers a deeper understanding.

Professional competence
The student:
- Recognize fundamental relationships of the digitization in industrial manufacturing
- Gain knowledge about key competences of the digitization in industrial manufacturing
- Develop practical knowledge about special topics of the digitization in industrial manufacturing
- Put concrete approaches for discussion

Methodological competence
The student:
- Capture needed information and analyze them
- Prepare the recorded information according to target group
- Form an understanding of the digitization in industrial manufacturing

Social competence
The student:
- present and discuss their own work on a technical level

Self-competence
The student:
- understand their own level of knowledge
- learn how to prepare and present a specific topic

Module contents
The module conveys basic knowledge about the digitization of industrial production (Industrie 4.0). In addition to an overview of economic and technical aspects and opportunities of digitizing production, the module focuses on technologies for data acquisition, communication and control in production plants.

Networked machine tools, Production planning and control, Organization, Quality and IT systems for planning and operation, The Intelligent workpiece, Intelligent tools, Transfer systems, Assembly 4.0, Cyber Security, Convertible modular automation systems, Production transformation strategy, Business models

inf501 - Environmental Information Systems

Module label: Environmental Information Systems
Modulkürzel: inf501
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master Applied Economics and Data Science (Master) > Data Science
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Environmental Modelling (Master) > Mastermodule
- Master's Programme Sustainability Economics and Management (Master) > Additional Modules

Zuständige Personen:
Vogel-Sonnenschein, Ute (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:
The module gives an overview of the phases and important aspects of the environmental information processing. **Professional competence** The students: - apply basic processing algorithms to classify and process data - compare, evaluate and design data structures to store spatial data efficiently - apply basic functions of a geo-information system - describe, evaluate and apply basic processes of data mining - describe, evaluate and apply basic geostatistics processes - evaluate and apply multicriteria decision making processes

**Methodological competence** The students: - use geoinformation systems for environmental application - use data mining tools for data analysis

**Social competence** The students: - solve tasks in teams of 2-3 students - present and discuss their solutions in class

**Self-competence** The students: - reflect their own behaviour with regard to the methods of environmental informatics

Module contents:
Content of the Module: Environmental information systems make information about the general environmental state available for public management and public facilities, enterprises or interested citizens. The collection, storage and evaluation of this information is interesting for computer science. Within the scope of the lecture we will examine the processing of environmental information step-by-step, this means: - problems of data acquisition and data processing, - data structures and database concepts for an efficient access to (usually) spatial data, - introduction of data analysis (in particular from geostatistics and data mining), - introduction of multicriteria decision processes, as well as - the supply of data supported by meta data. The module "Umweltinformationssysteme" is accompanied by the module "Modellbildung in Simulation ökologischer Systeme". The subjects of "Modellbildung in Simulation ökologischer Systeme" represent the dynamic aspects of environmental systems (mainly of ecological systems). Nevertheless, the modules can be taken independently from each other.

**Prerequisites**

**Skills to be acquired in this module**
Simulation is a major tool for gaining knowledge about systems and their behavior. It can be used to gain system understanding and prediction future system status. The module covers mathematical basic as well a basic simulation technology. The module completes itself by addressing application examples. By seminar and practical work, the students get hands on experience of simulation technologies.

**Professional competence**
The students:

- get an overview on methods, tools and application areas of simulation. They know what simulation can do and what are its limitation. Covered application are mainly in transportation and production domain.

**Methodological competence**
The students:

- know simulation technologies and model building basics. They understand the handling of time and problems of discretization. After lecture students can solve problems with simulation. This includes modelling, use of simulation environment and evaluation of results. Cause of practical use, the independent handling of research questions and the use of simulation as research method will be learned.

**Social competence**
The students:

- gain team and social skills by self-organized development of simulation.

**Self-competence**
The students:

- can apply simulation technologies on scientific research questions.

**Module contents**
In lectures the students get background information and simulation basics. Then they apply their knowledge by developing an own simulation by using state of the art simulation environments.

inf510 - Energy Information Systems

Module label: Energy Information Systems
Modulkürzel: inf510
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Specialization
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Environmental Modelling (Master) > Mastermodule

Zuständige Personen
Lehnhoff, Sebastian (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
The students will learn different approaches to integrate distributed facilities, the regulatory framework, relevant standards and architecture concepts of energy management systems and will be able to apply this knowledge.

Professional competence
The students:
- develop and evaluate IT-architectures for energy management systems
- model objects of this domain appropriately
- model energy information systems
- realise and differentiate advanced tasks of decentralised energy management systems

Methodological competence
The students:
- identify problems of energy management, analyse these problems systematically and provide solutions
- apply different simulation approaches of decentralised plants and consumers

Social competence
The students:
- discuss solutions for energy management systems in the group
- develop use cases in teams
- present self-developed solutions

Self-competence
The students:
- reflect their actions with regard to structuring and decomposing systems
- reflect their own use of power as a limited resource

Module contents
This module provides the computer science basics for energy management. It provides the requirements of energy supply information systems with the focus on technical components and the requirements of decentralised and renewable energy plants.

These are:
- Architectures for energy information systems, e.g. SOA, Seamless Integration Architecture (IEC TC 57), OPC-UA
- Norms and standards of energy industry data models (CIM, 61850)
- Systematisation of energy information system requirements based on ontologies
- Development, analysis and adaption of energy industry reference models and processes
- Methods and technologies to support energy industry processes
- Methods and algorithms to support decision processes of the decentralised energy plants control
- Smart Grid plant communication, particularly for load management
- Methods for modelling and simulation of power supply system dynamics

Prerequisites

Skills to be acquired in this module
After successful completion of the course the students should be able to understand the existing structures and technical basis of energy systems to produce, transfer and distribute electricity and their interaction and dependency on each other. They should have developed an understanding for necessary IT- and process control technology components, methods and processes to control and operate electrical energy systems. The students are able to estimate and evaluate the requirements and challenges of ICT and computer science which are caused by the development and integration of unforeseeable fluctuations of decentralised plants. The students will be able to estimate the influence of distributed control concepts and algorithms for decentralised plants and consumers in the so called Smart Grid energy systems. Regarding the requirements the students will be able to analyse the safety, reliability, realtime capability and flexibility of Smart Grid energy systems.

Professional competence
The students:
- understand the existing structures and the technical basis of energy systems producing, transferring and distributing electricity and their interaction and dependency on each other.
- develop an understanding for necessary IT- and process control technology components, methods and processes to control and operate electrical energy systems.
- estimate and evaluate the requirements and challenges of ICT and computer science which are caused by the development and integration of unforeseeable fluctuations of decentralised plants.
- estimate the influence of distributed control concepts and algorithms for decentralised plants and consumers in the so called Smart Grid energy systems.

Methodological competence
The students:
- analyse the safety, reliability, realtime capability and flexibility of Smart Grid energy systems
- use advanced mathematical methods to calculate networks

Social competence
The students:
- create solutions in small teams
- discuss their solutions

Self-competence
The students:
- reflect their own use of electricity as a limited resource

Module contents
Content of the Module: In this course information technology, economical energy industry and technical basic knowledge and methods are analysed by using concrete Smart Grid approaches. The basic calculation methods for an intelligent grid management are introduced.

This module deals with the technical and economical framework for a permissable electrical network as well as mathematical modelling and calculation methods to analyse conditions of electrical energy networks (in stationary conditions). These are:
The organisation of the EU energy market (regulatory framework, responsibility in liberalisation of electrical energy systems)

Establishment and operation of electrical energy supply networks (network topology, statutory duties of supply, supply quality/system services, malfunctions and protection systems)

Intelligent network management (Smart Grids), aggregation forms, machine learning approaches

| Prerequisites | Programming with JAVA                                 |
| Skills to be acquired in this module | Successfully completing this lecture will enable the students to mathematically model simple controllable electrical generators and consumers and to simulate them together with appropriate control algorithms within smart grid scenarios. To achieve this goal, students will start with deriving computational models from physical models and evaluate them. In order to manage the integration of control algorithms, students are taught the principles of cosimulation using the "mosaik" smart grid co-simulation framework as an example. Students will be able to understand and apply distributed, agent-based control schemes to decentralized energy generators and/ or consumers. As a result, students are able to analyze the requirements for successful application to real power balancing regarding capacity utilization, robustness, and flexibility. In addition, students learn the foundations of planning and conducting simulation based experiments as well as the interpretation of the results. Special attention will be paid on establishing a balance between the results’ precision and robustness and the necessary effort (design of experiments) in order to gain as much insight into interdependencies with as few experiments as possible. |
| Professional competence | The students:  
|                          | • derive and evaluate computational models from physical models  
|                          | • use the "mosaik" smart grid co-simulation framework  
|                          | • analyze the requirements for successful applications to real power balancing regarding capacity utilization, robustness, and flexibility  
|                          | • name the foundations of planning and conducting simulation based experiments as well as the interpretation of the results  
|                          | • are aware of the balance between the results' precision and robustness and the necessary effort (design of experiments) in order to gain as much insight into interdependencies with as few experiments. |
| Methodological competence | The students:  
|                          | • model simple controllable electrical generators and consumers  
|                          | • simulate simple controllable electrical generators and consumers with appropriate control algorithms within smart grid scenarios  
|                          | • apply distributed agent-based control schemes to decentralized energy generators and/ or consumers  
|                          | • evaluate simulation results  
|                          | • search information and look into methods to implement models  
|                          | • propose hypothesis and check their validity with design of experiments methods |
| Social competence | The students:  
|                          | • apply the pair programming development technique  
|                          | • discuss design decisions  
|                          | • identify work packages and are responsible for it |
| Self-competence | The students:  
|                          | • reflect on their own use of power as a limited resource  
|                          | • accept and use criticism to develop their own behaviour |
| Module contents | In this practical course students: |
model controllable, modulating electrical energy generators and consumers,
put their hands on mosaik (installation, description and configuration of scenarios, conduction of
simulations),
learn the principles of agent-based heuristics for optimization problems in future smart grid scenarios,
learn about the challenges of implementing agent-based mechanisms (multi-criticality, convergency,
quality) on the training,
learn the foundations for choice and design of simulation based experiments.

</tbody>
</table>

Module contents

In this module
- Mathematical foundations (algebra, statistics, multi-dimensional analysis, regression and correlation analysis) for energy informatics are taught
- Foundations of evaluation systems (metrics, criteria) are taught
- Different methods of evaluation by statistics are taught practically
- significance tests are taught and practiced
- foundations of design of experiments for choosing simulation parameters are taught
- methods for proving properties of distributed algorithms are taught
- foundations of algorithm design are taught

Prerequisites

Skills to be acquired in this module

Das Modul befasst sich mit der Integration (verteilter) künstlicher Intelligenz in die zukünftige Steuerung des Energienetzes.

Das Modul vermittelt moderne Techniken der künstlichen Intelligenz und des maschinellen Lernens als Beitrag beispielsweise in der semi-automatischen Betriebsführung von Stromnetzen, bei der von Einsicht getriebenen Vermarktung von dezentralen Energieanlagen oder bei der Prognose von Last- und Erzeugungszeitreihen

Fachkompetenzen

Die Studierenden

- kennen Methoden zur Modellierung der Flexibilität von Energieanlagen mittels maschinellem Lernen
- können Flexibilitätsmodelle implementieren
- kennen verschiedene Ansätze der Agenten-basierten Modellierung und Koordination im elektrischen Netz
- kennen Techniken des Adversarial Resilience Learning
- bewerten verschiedene Verfahren des Deep und Reinforcement Learning hinsichtlich ihrer Eigenschaften und Eignung in der verteilten Lastplanung
- charakterisieren Methoden maschinellen Lernens anhand ihrer Eigenschaften

Methodenkompetenz

Die Studierenden

- erzeugen systematisch zulässige Lösungen mittels Einsatz von Dekodertechnik
- wenden maschinelles Lernen in verteilten Algorithmen praktisch an

Sozialkompetenz

Die Studierenden

- wenden die Entwicklungsmethode des Pairprogrammings an
- diskutieren die getroffenen Design Entscheidungen
- präsentieren ihre Arbeitsergebnisse anderen Studierenden

Selbstkompetenz

Die Studierenden

- reflektieren den eigenen Umgang mit der begrenzten Ressource Energie
- nehmen Kritik an und verstehen sie als Vorschlag für die Weiterentwicklung des eigenen Handelns
- erkennen die gesellschaftspolitische Verantwortung beim Einsatz von Methoden der künstlichen Intelligenz

Module contents

In dieser Veranstaltung werden

- mathematische Grundlagen Supportvektor-basierter Modellierungstechniken vermittelt
- geometrische Untervektorraummodellierungen vermittelt und von den Studierenden angewendet
- Grundlagen verteilter Algorithmen in Energienetzen vermittelt
- das Design intelligenter Agenten mittels Reinforcement Learning und Q-Learning vermittelt und praktisch angewendet
- Grundlagen des Adversarial Resilience Learning vermittelt
Literaturempfehlungen
- Mehr wird in der Veranstaltung bekannt gegeben

inf520 - Management of Information Systems in Health Care

Module label
Management of Information Systems in Health Care

Modulkürzel
inf520

Credit points
6.0 KP

Workload
180 h

Verwendbarkeit des Moduls
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen
Marx Gómez, Jorge (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence
The students:
- know healthcare information systems and their functions
- know clinical software architectures and apply their IT strategies
- know and apply system integration standards, methods (including medical technology) and risk management
- know and apply clinical information systems and maintain them
- know the legal and regulatory framework (including data privacy) for the operation of healthcare IT systems
- implement simple data analyses on care data
- know and apply procurement processes and changes

Methodological competence
The students:

Social competence
The students:
- reflect on and become more familiar with the different hospital roles (IT-manager, IT-employer, hospital supervisors, clinician, manager) and their interests

Self-competence
The students:
- reflect their solutions by using methods learned in this course and present them appropriately

Module contents

- Basics of the healthcare system
- Basics of the medical documentation
- Healthcare information systems / clinical information systems / intensive care information systems (PDMS)
- PDMS parameters, including interface terminology and semantic standards
- Data privacy and security
- System integration and interoperability (HL7, …)
- Hospital financing / DRG-System: regulatroy framework and implementation
- Care data analyses
- Requirements engineering
- Procurement project and risk management

Verwendbarkeit des Moduls

- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen

- Wulff, Antje (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)
- Kaspar, Mathias (Module counselling)

Prerequisites

Skills to be acquired in this module

The students are aware of the requirements of biomedical research information processing and technologies. They know, develop and evaluate approaches.

Professional competences:
The students:

- Know the principles of biomedical research and identify resulting requirements and develop appropriate solutions
- Know the regulatory guidelines and assess the suitability of (IT) solutions or develop them
- Plan, apply, evaluate, report and assess IT solution evaluation studies
- Are aware of the biomedical research responsibility and the ethical challenges

Methodological competences:
The students:

- Search literature systematically
- Plan and assess clinical studies
- Develop concepts for a data privacy and GCP conform study management
- Know and apply medical classification systems
- Validate and run software for clinical trials, cohorts and registries
- Plan and assess healthcare IT studies

Social competences:
The students:

- Present solutions/results
- Discuss studies constructively, professionally and appropriately
- Discuss ethical biomedical research problems from different points of view

Self-competences:
The students:

- Reflect their own values and attitudes in the context of medical and biomedical research border areas
- Reflect their self-capacity with regard to the responsibility and the workload during the implementation of studies and the operation of study information systems

Module contents

- Basics / Biomedical research theory
- Systematic literature research, repositories
- Study schedule and method design
- Biomedical research regulatory framework
- Biomedical research ethics
- IT infrastructure in research / IT components incl. molecular medicine
- (Data) privacy
- Operating of software for clinical trials, cohorts and registries
- Clinical study report standards (Equator-Network), review process
- Evaluation of healthcare IT (GEP-HI and STARE-HI) / evidence based healthcare informatics

inf523 - Medical Software Engineering

Module label: Medical Software Engineering
Modulkürzel: inf523
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen
Kaspar, Mathias (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
This Module provides the regulatory requirements of medical software. Focus is on software life cycle methods and approaches, the implementation of combined usability- and risk management processes as well as quality management.

Professional competence
The students:
- Know and use obligatory medical software requirements
- Know methods and approaches to develop security-critical medical software and implement them by example
- Know at least one medical application area and its specific professional, organisational and regulatory requirements

Methodological competence
The students:
- Are able to apply risk management methods of socio-technical systems
- Are able to extend their knowledge of new application areas. They are able to handle the obstacles of normative frameworks and software development.

Social competence
The students:
- Realise the importance of communication during the software development process between developer, customer and user of a successful and secure system. Feedback, request, respectful cooperation and empathy of other disciplines’ working processes are of great importance.

Self-competence
The students:
- Realise their responsibility as a computer scientist and reflect their impact on patients, medical employers and hospitals (corporates)

Module contents
Content of the Module:
This module provides medical software development processes. The module deals with normative software requirements with the focus on patient privacy and quality management. Contents are the declaration of conformity based on medical product classes and software security classes. The software security is focused on software quality, tests and verification, validation as well as quality and risk management. The software life cycle provides security related systems and software as well as software architecture and different process models.

Skills to be acquired in this module

The aim of the modul is to provide students with a basic knowledge of humand medicine. This should facilitate the understanding of the domain in case of a career choice or focus on medical informatics / medical technology and lead to basics for own questions and ideas for the application of methods of informatics in medicine.

**Professional competence** The students
- learn the basics of medical terminology (Terminologia Anatomica) and the anatomy of the human body and can name the most important structure in technical language
- know the basics of the physiology of the human body and can describe the essential body functions
- gain insights into pathophysiological processes of the human body and the associated effects on the function of the human organism
- know the control circuits of the human body for maintaining important body functions and know that this control circuits can be used as a possibility to intervene in processes of the human body
- know reference values of important physiological parameters and can derive conclusions on body functions

**Methodological competence** The students
- know the possible measurement procedures resulting from the physiological processes of the human body.
- apply measurement procedures to describe and evaluate human body functions. They can name examples of use and examples of interpretation
- know influencing variables that affect the interpretation of results from measurement procedures as well as the limits of measurement procedures
- learn how to carry out examinations according to protocols and how to document the results in a standardized way.

**Social competence** The students
- experience an appreciative interaction with each other through regular role changes - they take on the role of the test person as well as that of the experimenter - an appreciative way of dealing with each other.
- learn how to deal with ethical issues by means of borderline situations in medicine.
- describe in detail the data obtained in measurement procedures and consider them critically with other students
- integrate professional and factual criticism into their own courses of action
- use simulated examples from everyday clinical practice to learn the standardized procedures necessary to ensure patient safety

**Self competence** The students
- deal with the function, the efficiency of the own body but also with its limits
- deal with the life cycle of conception, birth, adolescence, adulthood and aging

- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

**Zuständige Personen**
- Fatikow, Sergej (Module responsibility)
- Marx Gómez, Jorge (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

**Skills to be acquired in this module**
- Probabilistic Bayesian models are generated with special tools (e.g. BUGS, JAGS, STAN) or domain specific programming languages (WebPPL, PyMC3, …etc.). If they mimic cognitive processes of humans (e.g. pilots, drivers) or animals they could be used as cooperative assistance systems in technical or financial systems like cars, robots, or recommenders.

**Professional competence**
The students:
- learn to map problem to model classes to come up with practical solutions

**Methodological competence**
The students:
- acquire basic skills in the design, implementation, and identification of probabilistic models with Bayesian methods
- acquire knowledge about alternative non-Bayesian machine learning methods

**Social competence**
The students:
- learn to present and discuss probabilistic theories, methods, and models.

**Self-competence**
The students:
- reflect and evaluate chances and limitations of probabilistic approaches
- learn to deliberate on machine-learning alternatives

**Module contents**
Theories, methods, and examples of Bayesian models with practical applications

Prerequisites

Skills to be acquired in this module

Professional competence:
The students:
- recognise optimisation problems
- implement simple algorithms of heuristic optimisation
- critically discuss solutions and selection of methods
- deepen previous knowledge of analysis and linear algebra

Methodological competence
The students:
- deepen programming skills
- apply modelling skills
- learn about the relation between problem class and method selection

Social competence
The students:
- cooperatively implement content introduced in lecture
- evaluate own solutions and compare them with those of their peers

Self-competence
The students:
- evaluate own skills with reference to peers
- realize personal limitations
- adapt own problem solving approaches with reference to required method competences

Module contents

Computational Intelligence comprises intelligent and adaptive methods for optimisation and learning. The module “Computational Intelligence I” concentrates on methods for evolutionary optimisation and heuristic approaches. The exercises introduce and deepen practical aspects of the implementation and algorithmic design, also taking into account application aspects.

Overview of Content:

- foundations of optimisation
- genetic algorithms and evolution strategies
- parameter control and self-adaptation
- runtime analysis
- swarm algorithms
- constrained optimisation
- multi-objective optimisation
- meta-modeling

Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**  None

**Skills to be acquired in this module**

In the lecture "Convolutional Neural Networks" you will learn the basics of Convolutional Neural Networks, from methodological understanding to implementation.

**Professional competence**
The Students:
- will learn Deep Learning expertise, which are essential qualifications as AI experts and Data Scientists.

**Methodological competence**
The Students:
- learn the methods mentioned as well as the implementation in Python, NymPy and Keras.

**Social competence**
The Students:
- are encouraged to discuss the taught content in groups and work together to implement the programming tasks in the exercises

**Self-competence**
The Students:
- are guided to conduct independent research on advanced methods as the teaching field changes dynamically

**Module contents**
Students learn the basics of machine learning and in particular the topics of dense layers, cross-entropy, backpropagation, SGD, momentum, Adam, batch normalization, regularization, convolution, pooling, ResNet, DenseNet, and convolutional SOMs

## Module: Intelligent Systems

**Module label**: Intelligent Systems  
**Modulkürzel**: inf537  
**Credit points**: 6.0 KP  
**Workload**: 180 h

**Verwendbarkeit des Moduls**
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

**Zuständige Personen**
- Sauer, Jürgen (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

- **Professional competence** The students: - name the structure of agent-based systems - use problem-solving methods for complex problems - characterise the application area of process planning - evaluate the suitability of processes regarding to specific problems  
- **Methodological competence** The students: - assign problem-solving methods to different problems  
- **Social competence** The students: - implement selected methods in small teams  
- **Self-competence** The students: - develop own solutions for given problems

**Module contents**

A lot of application areas use “intelligent” problem-solving methods. These are the main focus of this lecture. They will be illustrated by examples in order to enhance the students’ problem-solving abilities. These include: - A brief introduction into AI - Agent systems and - Solution methods of AI like heuristics, meta-heuristics, soft computing methods. To apply and foster the contents of the lecture, an intelligent planning system is implemented in practical exercises.

**Zuständige Personen**

Sauer, Jürgen (Module responsibility)
Lehrende, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

Skills to be acquired in this module

- **Professional competence**: The students: - characterise problems that occur during the operation of large-scale operating systems - characterise conceptional, technical, economical and organizational problem-solving processes - use these concepts to solve problems validly
- **Methodological competence**: The students: - describe a current problem area based on information from the internet and literature
- **Social competence**: The students: - present their findings on a problem area - discuss their results regarding a specific application area
- **Self-competence**: The students: - reflect actual concepts with regard to specific application areas

**Module contents**

- **Content of the Module**: "Adaptive Computing" deals with the field of concepts and solutions to manage large scale application systems or dynamic data centers. Technically oriented solutions like the configuration of data centers such as the hard- and software virtualization, the high availability, the storage management and the identity management are not the only contributions of Adaptive Computing. Others are organisational aspects of companies, such as personnel planning and service agreements. This module provides and compiles current topics of Adaptive Computing. The module also presents and evaluates several Adaptavie Computing technologies. Current HW-/ SW-concepts of large-scale application systems, strategies, service management and security concepts are specifically included. The lecture introduces current concepts and solutions for the management of dynamic data centers. Among others, the following subjects are provided:
  - IT-Strategy,
  - Organisation - ITIL (overview) - Service-Management Tools (e.g. OTRS) - Outsourcing - Security (policies, privacy, data security, safety) - Spatial design of data centers - HW-Strategies: Cluster, Storage, ...

- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen

Marx Gómez, Jorge (Module responsibility)
Lehrenden, Die im Modul (Module responsibility)

Prerequisites

Skills to be acquired in this module

After successful completion of the course, students should be able to answer specific, entrepreneurial questions with the help of data-driven methods. The handling of data should be mastered unerringly in the programming languages Python and/or R. Furthermore, competences in the field of algorithmics and data storytelling should be developed.

The module teaches basic skills in the field of data science and the application of various methods and algorithms. The cooperation with a practice partner ensures that the students work on a problem that is as real and practical as possible. By working independently on the problem and the final presentation of the results, further soft skills of the students will be trained.

Professional competence

The students:

- learn how to handle structured and unstructured data sources.
- acquire practical knowledge about different methods of data science.
- learn basic procedures in the implementation of data science projects.
- follow and refine the implementation of the practical learning by means of a partly given model scenario, but also by self-initiatives.

Methodological competence

The students:

- are able to explore and analyze data sets
- recognize connections in large data sets
- form a hypothesis for the solution of a business problem.

Social competence

The students:

- work in groups, identify work packages and take on responsibility for the jobs assigned to them.
- discuss and introduce the results on a functional level.

Self-competence

The students:

- reflect their approach on the basis of self-defined goals.
- collect and analyze required information.
- prepare the collected information in a target group-oriented manner

Module contents

If methodological competence in the field of data science is to be learned and expanded, this is usually only possible with the help of open available, idealized data sets and exemplary tasks. Basic programming skills can be acquired in this way, but dealing with real business problems and solving them with the help of data science methods can only be learned through practice. In this module, a real problem of a practice partner is presented, this partner provides data and domain knowledge and then a data-centered solution for this problem must be designed and implemented independently.

Within the module, the following topics are dealt with:

- Exploration and analysis of data
- Methods of data science (e.g. deep learning)
- Dealing with programming languages and development frameworks (R, Python, Tensorflow)
- Hypothesis Formation and Data Storytelling

Zuständige Personen:
Hahn, Axel (Prüfungsberechtigt)

Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:
Skills to be acquired in this module:
The module deals with the economic aspects and synergy effects of maritime sub-areas. In addition to the basic knowledge of the maritime sub-areas, current approaches from research are taught. The basic ship parameters are examined with regard to their economic efficiency, stability calculations and ship dynamics are derived and effects of the ship hull, propellers and systems on the economic efficiency of a ship are considered. The focus here is on understanding economic thinking and the interaction of the sub-areas. Furthermore, future-oriented solutions and trends will be discussed. **Professional competence** The students - name the basics of planning and control of operational logistics in a shipyard - name the basics of planning of economic design - recognise the application possibilities of simulation in design, construction and dynamics - identify the basic maritime sub-areas and their synergies **Methodological competence** The students - Link relations with tree structures - Illustrate the questions and concepts of the design process **Social competence** The students - Present computational problem solving to groups - Discuss their outcomes appropriately - Implement solutions of given problems in teams - Accept criticism of their peer group as valuable contributions **Self-competence** The students - reflect their self-image and their actions of their results

inf581 - Special Topics in 'Digitalized Energy Systems'

Module label: Special Topics in 'Digitalized Energy Systems'
Modulkürzel: inf581
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen:
- Vogel-Sonnenschein, Ute (Module responsibility)
- Nieße, Astrid (Module responsibility)
- der Informatik, Lehrende (Prüfungsberechtigt)

Prerequisites:

Skills to be acquired in this module:
The module aims to integrate current developments in the field of digitalised energy systems into the degree programme in the appropriate course forms.

Professional competences:
The students:
- differentiate and contrast a sub-area of computer science in which they have specialised in more detail, or reflect on computer science in general
- recognise and assess the techniques and methods to be applied in their special field and their limitations
- identify, structure and solve problems also in new or emerging areas of their discipline
- apply state-of-the-art and innovative methods in investigating and solving problems, drawing on other disciplines where appropriate
- recognise the limits of current knowledge and technology and contribute to the further scientific and technological development of computer science
- discuss current developments in computer science and assess their significance

Methodological competences:
Students will:
- evaluate tools, technologies and methods and apply them in a differentiated manner
- creatively develop new and original approaches and methods
- reflect on problems, including those in new or emerging areas of their discipline, and apply computer science methods to investigate and solve them.

Social competences:
Students:
- integrate their skills into team processes

Self-competences:
Students:
- critically follow further developments in computer science in general and in their field of specialisation
- carry out innovative activities in their professional field successfully and on their own responsibility

Module contents:
depending on the area of specialization and the assigned course

Literaturempfehlungen:

### Prerequisites

#### Skills to be acquired in this module

**Professional competences**
The students:

- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

**Methodological competences**
The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

**Social competences**
The students:

- support team process by their abilities

**Self-competences**
The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

**Prerequisites**

This module integrates current developments in the field in adequate study courses.

**Professional competences**

The students:

- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

**Methodological competences**

The students:

- examine tasks with technical and research literature, write an academic article and present their solutions academically
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research
- schedule time processes and resources

**Social competences**

The students:

- communicate with users and experts convincingly

**Self-competences**

The students:

- pursue the overall and special computer science development critically
- develop and reflect self-developed hypotheses to theories independently

**Prerequisites**

**Skills to be acquired in this module**

The module aims to integrate current developments in the specialization area "Medical Informatics" into the course of study in the appropriate course forms.

**Professional competences**
- differentiate and contrast a subfield of computer science in which they specialize in more detail or reflect on computer science in general
- recognize and evaluate the techniques and methods to be used in their area of specialization and their limitations
- identify, structure and solve problems also in new or emerging areas of their discipline
- apply state-of-the-art and innovative methods in investigating and solving problems, drawing on other disciplines as appropriate
- recognize the limits of current knowledge and technology and contribute to the further scientific and technological development of computer science
- discuss current developments in computer science and assess their significance

**Methodological competences**
- evaluate tools, technologies and methods and apply them in a differentiated manner
- creatively develop new and original approaches and methods
- reflect on problems also in new or emerging areas of their discipline and apply computer science methods to investigate and solve them

**Social competences**
- integrate their skills into team processes

**Self-competences**
- critically follow further developments in computer science in general and in their field of specialization
- carry out innovative activities in their professional field successfully and independently

**Zuständige Personen**  
Lehrenden, Die im Modul (Module counselling)

**Prerequisites**

**Skills to be acquired in this module**
Das Modul hat zum Ziel aktuelle Entwicklungen im Vertiefungsgebiet "Lernende und Kognitive Systeme" II in den jeweils angemessenen Lehrveranstaltungsformen in das Studium zu integrieren.

Fachkompetenzen
- differenzieren und kontrastieren einen Teilbereich der Informatik, auf den sie sich spezialisiert haben, im Detail genauer oder reflektieren die Informatik im Allgemeinen
- erkennen und beurteilen die in ihrem Spezialgebiet anzuwendenden Techniken und Methoden und deren Grenzen
- identifizieren, strukturieren und lösen Probleme auch in neuen oder erst im Entstehen begriffenen Bereichen ihrer Disziplin
- wenden dem Stand der Wissenschaft entsprechende und innovative Methoden bei der Untersuchung und Lösung von Problemen an, gegebenenfalls unter Rückgriff auf andere Disziplinen
- erkennen die Grenzen des heutigen Wissenstands und der heutigen Technik und tragen zur weiteren wissenschaftlichen und technologischen Entwicklung der Informatik bei
- diskutieren aktuelle Entwicklungen der Informatik und beurteilen deren Bedeutung

Methodenkompetenzen
Die Studierenden:
- evaluieren Werkzeuge, Technologien und Methoden und wenden diese differenziert an
- entwickeln kreativ neue und originäre Vorgehensweisen und Methoden
- reflektieren Probleme auch in neuen oder erst im Entstehen begriffenen Bereichen ihrer Disziplin und wenden Informatik-Methoden zur Untersuchung und Lösung an

Sozialkompetenzen
Die Studierenden:
- integrieren ihre Fähigkeiten in Teamprozesse

Selbstkompetenzen
Die Studierenden:
- verfolgen die weitere Entwicklung in der Informatik allgemein und in ihrem Spezialgebiet kritisch
- führen innovative Tätigkeiten in ihrem Berufsfeld erfolgreich und eigenverantwortlich aus

**Methodological competences**
The students:

- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

**Social competences**
The students:

- support team process by their abilities

**Self-competences**
The students:

- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen
- Kramer, Oliver (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
- This module integrates current developments in the field in adequate study courses.

Skills to be acquired in this module

Professional competences
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences
The students:
- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences
The students:

- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

**Zuständige Personen**
Marx Gómez, Jorge (Prüfungsberechtigt)
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

**Skills to be acquired in this module**

**Objective of the module/skills:**
Current module provides basics of business intelligence with focus on enterprises and strong emphasis on data warehousing technologies. Students of the course are provided with knowledge, which reflects current research and development in a data analytic domain.

**Professional competence**
The students:
- name and recognize the role of business intelligence as part of daily business process
- being able to analyse advantages and disadvantages of different approaches and methods of the data analytics and being able to apply them in simple case studies
- obtain theoretical knowledge about data collection and modelling processes, including most applicable approaches and best practices

**Methodological competence**
The students:
- being able to execute typical tasks of business intelligence, and also being able to deepen knowledge on different approaches and methods
- gain a hands on experience and being able to understand advantages and disadvantages of different methods and being able to use obtained knowledge in most efficient ways

**Social competence**
The students:
- build solutions based on case studies given to the group, for example solving the issue of a factless fact table
- discuss solutions on a technical level
- present obtained case studies solutions as part of the exercises

**Self-competence**
The students:
- critically review provided data and information

**Module contents**
Data warehouse technology together with business intelligence are increasingly being used by business in order to get better decision support and enrich ongoing processes with data-rich decisions. Data warehouse technology enables an integration of data from heterogeneous sources, whether business intelligence builds on top of it. For instance, business intelligence allows to build reporting on very large volumes of data (including historical) coming primary from data warehouse.

As part of the current module following contents are taught:
• Definition and scope of business intelligence.
• Procedures and objectives of data warehousing.
• Process of extracting, transforming and loading (ETL) of data.
• Phases of data modelling, data capturing and reporting in conjunction with a plausible case studies/scenarios.
• Prospects for further and evolving topics for business intelligence (e.g. Adaptive Business Intelligence, In-MemoryComputing, etc.)
• Introduction to Data Mining.
• Case studies based practical exercises and assessments in order to impart practical knowledge.

### Verwendbarkeit des Moduls
- Master Applied Economics and Data Science (Master) > Data Science
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

### Zuständige Personen
- Marx Gómez, Jorge (Prüfungsberechtigt)

### Lehrplan, Die im Modul (Prüfungsberechtigt)

#### Prerequisites
- Current module provides advanced business intelligence, data science with focus on enterprises and strong emphasis on big data and data analytics. Students of the course are provided with knowledge, which reflects current research and development in a data analytics domain.

#### Professional competence
- The students:
  - name and recognize the role of data analytics / data science as part of a daily business process in a particular company
  - able to organize from management perspective data analysis projects
  - being able to analyze advantages and disadvantages of different approaches and methods of data analytics and being able to apply them in simple case studies
  - obtain theoretical knowledge about data collection and modeling processes, including state of the art approaches and available best practices

#### Methodological competence
- The students:
  - being able to execute typical tasks of data analysis, and also being able to proceed deeper with respect to different approaches and methods
  - gain a hand on experience and being able to understand advantages and disadvantages of different methods and being able to use obtained knowledge

#### Social competence
- The students:
  - build solutions based on case studies given to the group, for example design of regression model based on provided dataset
  - discuss solutions on a technical level
  - present obtained case studies solutions as part of the exercises

#### Self-competence
- The students:
  - critically review provided offered information

### Module contents
- After current course students will get advanced knowledge in the domains such as business intelligence and data analytics. Besides that, students will have a chance to have a deeper look into related technical fields such as InMemory Computing, Data Mining and Machine Learning, Big Data Processing with Distributed Systems (e.g., Apache Hadoop / Spark) from both, research and practical, perspectives. Students will be provided with real-world experience gathered from business intelligence and data science related projects. Materials of the course are believed to be justified with current demands of data analytics market. Thus, providing students with relevant knowledge in order to give them advantages in future job.

inf650 - Transport Systems

Module label: Transport Systems
Modulkürzel: inf650
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen:
Sauer, Jürgen (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites:
- Objective of the module/skills:
The Module Transport systems deals with planning and controlling systems of internal and external company logistics as well as public transport. It provides basic knowledge and recent research topics. The focus is on a resource orientated holistic view of company logistics as well as the planning of transport infrastructure. Furthermore, trends such as autonomous vehicles and intelligent transport systems are discussed.

Professional competence
The students:
- name the basics of planning and controlling company logistics
- assess transport systems of companies
- name methods and approaches of computer aided transport systems and classify them
- characterise software to plan complex logistics

Methodological competence
The students:
- display topics and concepts of transport systems
- simulate transport and its systems with appropriate methods

Social competence
The students:
- work in groups
- discuss their results appropriately

Self-competence
The students:
- realise their limits while working on a project containing aspects of modelling and implementation
- question the presentation of their results

Module contents
- Transport and logistics concepts
- Data acquisition of company logistics
- Planning- and simulation software for complex logistics- and transport processes
- Energy- and resource efficient transport systems
- Resource oriented transport cost calculations (e.g. CO2, noise pollution)
- Planning models for transport infrastructure

Verwendbarkeit des Moduls

- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Environmental Modelling (Master) > Mastermodule
- Master's Programme Sustainability Economics and Management (Master) > Additional Modules

Zuständige Personen

Marx Gómez, Jorge (Module responsibility)
Lehrende, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

This module completes the knowledge and abilities gained in the field of Environmental Informatics and it creates a strong reference to up to date topics in the field of sustainability. The content taught in this module can directly be applied in an upcoming study and professional career.

Professional competence

The students:

- are able to classify and explain the sustainability paradigm
- are aware of the current status of sustainability reporting
- are able to define and to model material flows
- have obtained know-how in the field of corporate environmental management information systems (CEMIS)

Methodological competence

The students:

- implement CEMIS
- apply different techniques and methods to case studies
- develop new case studies in teams

Social competence

The students:

- are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them
- present and discuss their own results with the team and the other members of the course

Self-competence

The students:

- learn about their own limitations and learn to accept criticism in order to strengthen their own abilities

Module contents

This course teaches methods, approaches and techniques in the field of information processing in order to support solutions to problems that arise from companies' impact on the environment. In particular, ICT supported approaches of production-integrated environmental protection, environmental controlling and reporting are introduced and discussed. In order to enable the integration of such approaches into environmental protection, environmental management and its systems are taught as well.

The content in detail:

- environmental management as a basis for sustainability
- sustainability and material flow management
- strategic environmental management
- eco-controlling life cycle
- characteristics and system architectures of CEMIS
- standard software systems
- environmental accounting systems

                                  Lehrenden, Die im Modul (Prüfungsberechtigt) |
| Prerequisites                 | The module deepens the contents of the modules „Wirtschaftsinformatik“ and „Wirtschaftsinformatik/Informationsmanagement“. The students will be able to contextualise IT systems and their functions in companies. They are able to participate in the implementation of IT systems in companies. The students know the essential tasks of materials management, production planning and controlling, warehousing, acquisition and supply chain management. |
| Skills to be acquired in this module | The students:  
                                  • name and differentiate the basics of business informatics and information management  
                                  • classify IT systems and their functions in companies  
                                  • name and characterise the the essential tasks of materials management, production planning and controlling, warehousing, acquisition and supply chain management |
| Professional competence       | The students:  
                                  • transfer a holistic development process of production planning and control  
                                  • implement IT systems in businesses |
| Methodological competence     | The students:  
                                  • participate in implementing IT systems in companies  
                                  • construct and present computational solutions to groups and within their work group  
                                  • integrate professional and objective criticism in their own and others’ results |
| Social competence             | The students:  
                                  • recognize the planning horizon for IT systems  
                                  • reflect their role and skills to implement IT systems in businesses |
| Self-competence               | The module “Production-oriented Business Informatics” deals especially with production planning and control processes affected by process planning tasks, as well as classic problems of industrial production. The lecture is focussed on the application of information systems in industrial production companies. Priorities are order flow business processes and PPS-/ERP-Systems. Case studies and demonstrations illustrate the application of these systems. |
| Module contents               | Literatureempfehlungen:

inf653 - ERP Technologies

**Module label**
ERP Technologies

**Modulkürzel**
inf653

**Credit points**
6.0 KP

**Workload**
180 h

**Verwendbarkeit des Moduls**
- Master of Education Programme (Vocational and Business Education) Computing Science (Master of Education) > Akzentsetzungsbereich Wirtschaftsinformatik
- Master’s Programme Business Informatics (Master) > Akzentsetzungsmodule Bereich Wirtschaftsinformatik
- Master’s Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master’s Programme Computing Science (Master) > Angewandte Informatik

**Zuständige Personen**
Marx Gómez, Jorge (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

**Skills to be acquired in this module**

**Learning objectives:**
- Generation of understandings into the working approaches and tasks of ERP systems
- Examining components of ERP systems
- Generating knowledge about important aspects of the operation processes of ERP systems, such as data storage and processing, user management, and system maintenance.

**Professional competence**
The students:
- describe ERP systems in compliance with functions and technologies
- identify state-of-the-art and future architectures of ERP systems
- discuss the usage of core technologies (also in practical case studies, for example with SAP NetWeaver)

**Methodological competence:**
The students:
- categorize fundamental technologies in combination with other enterprise-wide information systems
- apply the presented methods in practical contexts

**Social Competence:**
The students:
- construct solutions to given problems in groups
- present solutions to computing science problems before groups

**Self-competence:**
The students:
- recognize the limits of their capacity in implementing and customizing of business application systems

**Module contents**
The module provides the following content:
- Overview of the components of ERP systems and their functionality and administration
- In-depth analysis of ERP system architecture under consideration of surface structures and user management in ERP systems, with focus on of data storage, particularly the used data models and database structures, backup and recovery strategies
- Deployment of ERP applications in form of application service providing, including the technical characteristics of this business model, especially Special Administration, delimitation and monitoring tasks for systems, which at the same time be provided several customers

Lecture will be accompanied by SAP case studies.

inf654 - Mobile Commerce

Module label: Mobile Commerce
Modulkürzel: inf654
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master of Education Programme (Vocational and Business Education) Computing Science (Master of Education) > Akzentsetzungsbereich
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen:
Marx Gómez, Jorge (Module responsibility)
Lehrende, Die im Modul (Prüfungsberechtigt)

Prerequisites:

Skills to be acquired in this module:

Professional competence
The students:
- define and encompass MC
- explain the development stages of MC
- are aware of the current developments within MC and are able to classify them
- get to know technical essentials, functionalities and standards of wireless ICT
- assess the fields of application and limitations of wireless ICT
- examine the relevant mobile devices and their respective operating systems, know their characteristics and evaluate their fields of application
- examine market participants, assess business models, optimize business processes
- gain insight into specifics via examples and exercises

Methodological competence
The students:
- get to know security aspects and specifics of mobile application design
- prototypically develop an Android application
- prepare and give presentations
- develop a concept of a business model for an Android application

Social competence
The students:
- work on their project in groups of three

Self-competence
The students:
- reflect their own group-dynamic activities in respect of a mutual goal (successfully finish their project)

Module contents:
See above

Literaturempfehlungen:
- Also all materials provided within the lecture

**inf655 - IT-Controlling**

**Module label**
IT-Controlling

**Modulkürzel**
inf655

**Credit points**
6.0 KP

**Workload**
180 h

**Verwendbarkeit des Moduls**
- Master’s Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master’s Programme Computing Science (Master) > Angewandte Informatik

**Zuständige Personen**
Marx Gómez, Jorge (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**
This module emphasizes the importance of IT-Controlling within an enterprise. The students gain knowledge on practically orientated technologies in order to leave a better understanding for the application and conversion possibilities of IT-Controlling.

**Skills to be acquired in this module**
- **Professional competence**
  The students:
  - name general tasks and functions of IT-Controlling.
  - recognize the importance strategic IT-Controlling applications.
  - learn strategies and methods of IT-Controlling.
  - identify the existence of an IT-Strategy as a pre condition of IT-Controlling.
  - know about the risks of IT-Outsourcing.
  - use IT-Controlling tools (e.g. information systems, portfolio analysis, benchmarking IT-Reporting).

- **Methodological competence**
  The students:
  - use their knowledge by independently compiled presentations on recent IT-Controlling subjects.

- **Social competence**
  The students:
  - discuss their results essentially and appropriately in this subject.
  - present their subjects to the group.

- **Self-competence**
  The students:
  - understand and analyse their own state of knowledge.
  - reflect their own effects on groups

**Module contents**
The employment of information technologies for enterprises is usually a key factor. By the change of our society to an information society, information gains more and more importance and takes a central role within ICT systems. The specifics of the ICT area cannot be supported by the classical economic controlling. The application of a strategical IT-Controlling becomes more and more important. The result of a study shows that in the meantime in about 80% of the German enterprises an ICT strategy was compiled. However, the study makes also clear, that about two out of three enterprises use no methods of strategical IT-Controlling. The new discipline of IT-Controlling provides plans and methods to avoid isolated applications.

- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

**Zuständige Personen**
Sauer, Jürgen (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**
Focus of this module is to learn and apply the product engineering process. A project will enable the students to design a product from the idea to the prototype. More specifically, a systematic, partial domain-specific, approach to solve technical problems and aspects of project management will be learned. Regular meetings are used to train the presentation capabilities of the students and to schedule working packages within the teams.

**Professional competence**
The students:
- learn and try out the handling of virtual and physical prototypes
- learn and try out the construction and validation of virtual prototypes with the aid of CAD-applications
- learn and combine different basic development concepts from the mechanical engineering, microelectronics, control engineering and software engineering

**Methodological competence**
The students:
- learn and try out project management concepts
- learn and recognise the connections of different development concepts from different fields, e.g. mechanical engineering, control engineering, microelectronics and software engineering
- develop own products with creativity techniques
- schedule and organise the product development supported by project management techniques independently
- learn the systematic refining of their own product idea with SysML
- design and test products with state-of-the-art CAD-applications

**Social competence**
The students:
- impart their structure and mode of action to other people
- develop their own products in small teams
- present their solutions to groups
- integrate criticism to their solutions
- support other groups by giving appropriate criticism

**Self-competence**
The students:
- recognise and reflect their own limitations to get familiar and to plan a project in an unknown field (e.g. maritime construction/industries)

**Module contents**
This module is a lecture accompanied by a hands-on project. The students work on one product development task. The product development starts with the idea-finding/brainstorming process which is used to create a digital product concept. During the semester a digital prototype will be created and validated by its initial requirements. Finally, a physical prototype is produced with a 3D-Printer (Rapid Prototyping). The progress of the project has to be documented and presented at different milestones.

Prerequisites

Skills to be acquired in this module

This course aims at examining emerging research questions in the field of corporate environmental management information systems (CEMIS). After finishing this course, the students will have extensive knowledge regarding Business Environmental Informatics. In addition, they will be aware of recent research topics and challenges as well as relevant software solutions and practical projects.

Professional competence

The students:

- will obtain extensive knowledge in the field of CEMIS
- know emerging research questions and challenges as well as software solutions and projects

Methodological competence

The students:

- find their own solutions or apply already existing approaches to new and unsolved questions in the field of CEMIS
- capture required data, analyse it and present it to their team or the whole group

Social competence

The students:

- are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them
- present and discuss their own results with the team and the other members of the course

Self-competence

The students:

- learn about their own limitations and learn to accept criticism in order to strengthen their own abilities

Module contents

A strong social pressure forces enterprises to question their current way of implementing their business and to include different aspects of sustainability into their strategies and operational actions. Such a rethinking of one's business is supported by corporate environmental management information systems. Such systems aim at optimising the energy and resource usage, emission and waste minimisation as well as production integrated environmental protection. Of course they support the fulfillment of legal requirements such as waste management or hazardous material handling.

The module will cover:

- recent and emerging research questions and topics related to the field of CEMIS as well as Business Environmental Informatics.
- discussion and hands-on experience of standard software systems and newly established solutions.
- applying the knowledge obtained to the definition of new as well as on solving new case studies.

Type and language of program will be announced prior to the beginning of the course. The course is recognised as a practical project in the Master's programme Sustainability Economics and Management.

Verwendbarkeit des Moduls
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen
Marx Gómez, Jorge (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
After finishing this course, students should be able to set up a sustainability report tailor made for different target groups for any kind of organization.
The students will be enabled to know and apply different available standards and guidelines as well as to estimate the influence of data defects and the feasibility of recent information and communication technology. This course emphasizes the importance of sustainability reporting as a means of an organization's communication (internal and external) and provides an overview on relevant indicators, standards and guidelines. Based on that the handling of data defects and missing data as well as different approaches of reporting will be discussed. In addition, the specific requirements of different target groups regarding content and presentation of a report will be discussed as well.

Professional competence
The students:
- are aware of different indicators, standards and guidelines and know when to apply which.
- know different approaches of data capturing, interpolation of missing or corrupt data as well as the influence of each of these issues on the validity of a report.
- implement concepts for tailor made target group orientation.

Methodological competence
The students:
- prepare a small sustainability report based on their decision which standard or guideline to use.
- capture existing data and analyse it.
- prepare a tailor made target oriented presentation of their results.

Social competence
The students:
- are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them.
- present and discuss their own results with the team and the other members of the course

Self-competence
The students:
- learn about their own limitations and learn to accept criticism in order to strengthen their own abilities

Module contents
The following topics will be covered in this module:
- different definitions of the term sustainability.
- the importance of sustainability reporting as a means of an organisation's communication.
- LCA, environmental accounting, supply chain management as data sources.
- semantic, comparability and transformation of indicators, standards and guidelines.
- interpolation and interpretation of data defects.
- how to report (e.g. knowledge management, document engineering, integrated reporting, different target groups).

inf661 - Digital Transformation

Module label: Digital Transformation
Modulkürzel: inf661
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen
Marx Gómez, Jorge (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
After successful completion of the lecture, the students should be able to define enabler and actors of a digital transformation within the context of a model company. Furthermore, key competences such as Cloud Computing or IoT are used to make potential exploitation by new digital business models visible. The results will be evaluated.

The lecture explains basic properties of a digital transformation for companies and shows specific development potential. By forming and building a model company, students are able to create a realistic and practical scenario. A final documentation reveals the degree of fulfillment and the students point of view on the scenario.

Professional competence
The students:
- recognize basic properties and facts of a digital transformation for companies
- devise different terms of digital transformation
- expose actual introduction projects
- compile practical knowledge by dividing goals of enabler and actors of a digital transformation
- obtain basic knowledge of key competences such as IT-Security, Data Analytics, Big Data, Cloud Computing
- identify digital business models within the specific development potential

Methodological competence
The students:
- determine and analyse required information
- prepare the given information for specific target groups
- destablish an analytical understanding of digital enterprise structures within key competences and applications

Social competence
The students:
- work in groups, identify work packages and take on responsibility for the jobs assigned to them
- discuss and introduce the results on a functional level

Self-competence
The students:
- reflect their actions on the basis of self defined objectives
- analyse their own state of knowledge

Module contents
Within the lecture the upcoming topics are discussed:
- definition and introduction of digital transformation
- success factors, market changes and introductory projects
- enabler of a digital transformation (competences, applications and structures)
- digital business models and networks
- actors of a digital transformation
- industry 4.0 in the context of a digital transformation

| Prerequisites              | This module integrates current developments in the field in adequate study courses. |
| Skills to be acquired in this module | **Professional competences**  
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
discuss and evaluate recent computer science developments  
**Methodological competences**  
The students:
- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and
- apply computer science methods for solutions and research
**Social competences**  
The students:
- support team process by their abilities
**Self-competences**  
The students:
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently |

**Verwendbarkeit des Moduls**

- Master's Programme Business Informatics (Master) > Akzentsetzungsmodule Bereich Wirtschaftsinformatik
- Master's Programme Business Informatics (Master) > Akzentsetzungsmodul der Informatik
- Master's Programme Computing Science (Master) > Angewandte Informatik

**Zuständige Personen**

Marx Gómez, Jorge (Module responsibility)
Sauer, Jürgen (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

*This module integrates current developments in the field, especially with a focus on corporate environmental management information systems, in adequate study courses.*

**Professional competences**

The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

**Methodological competences**

The students:
- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and
- apply computer science methods for solutions and research

**Social competences**

The students:
- support team process by their abilities

**Self-competences**

The students:
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

**Module contents**

See assigned course description

**Literaturempfehlungen**

As announced in course

## Prerequisites

Skills to be acquired in this module

This module integrates current developments in the field in adequate study courses.

**Professional competences**
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

**Methodological competences**
The students:
- examine tasks with technical and research literature, write an academic article and present their solutions academically
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research
- schedule time processes and resources

**Social competences**
The students:
- communicate with users and experts convincingly

**Self-competences**
The students:
- pursue the overall and special computer science development critically
- develop and reflect self-developed hypotheses to theories independently

**Verwendbarkeit des Moduls**
- Master of Education Programme (Gymnasium) Computing Science (Master of Education) > Pflichtmodule
- Master of Education Programme (Hauptschule and Realschule) Computing Science (Master of Education) > Mastermodule
- Master of Education Programme (Vocational and Business Education) Computing Science (Master of Education) > Pflichtbereich
- Master's Programme Computing Science (Master) > Angewandte Informatik

**Zuständige Personen**
- Diethelm, Ira (Module responsibility)
- Lehrenden, Die im Modul (Prüfungs berechtigt)

**Prerequisites**

**Skills to be acquired in this module**

**Professional competence**
- The students:
  - (re-)construct the knowledge of computer science by the method of didactical reduction
  - differentiate the development of computer science and evaluate this development with current trends for class
  - select computer science education approaches for lesson planning, organisation and implementation

**Methodological competence**
- The students:
  - (re-)construct core concepts of lesson planning for computer science education requirements

**Social competence**
- The students:
  - present self-developed lesson plans and lesson materials
  - discuss lesson plans regarding computer science education concepts
  - accept opinions and criticism
  - provide constructive feedback

**Self-competence**
- The students:
  - adapt computer science education concepts for lesson planning
  - reflect on their self-perception with regard to the conception of computer science education

**Module contents**
- The lecture will focus on the requirements and challenges of computer science education in grammar school (German: Gymnasium). Main focus:
  - Didactical (re-)construction of computer science knowledge, especially its didactical reduction
  - Didactical categorisation of computer science and the development, importance and evaluation of computer science in school
  - Scheduling, organisation and implementation of computer science in class

**Literaturempfehlungen**
- Further literature will be announced in the lecture.

Prerequisites

Skills to be acquired in this module

The students:*

• know research methods from the computer science education field and apply these methods exemplary
• are able to verify computer science education approaches and develop those approaches
• characterise computer science education approaches by their effects to the lesson content, methods and tools

Professional competence

The students:

• characterise computer science education research methods
• analyse research issues with computer science education research methods
• differentiate computer science education concepts and their effects on lesson content, teaching methods and tools

Methodological competence

The students:

• transfer the research methods acquired on different research issues and adjust them appropriately
• develop research theories, hypotheses and prove them on new contexts

Social competence

The students:

• discuss research methods acquired from other students and lecturers
• present research methods and accept or provide appropriate criticism

Self-competence**

The students:

• include the presented research methods into their plans and activities to prove their hypotheses
• reflect their self-perception with regard to the research methods of computer science education

Module contents

• Computer science education research methods
• The purpose of theoretically developed specific lessons
• Approaches for the evaluation of computer science education or computer science education concepts

Literaturrempfehlungen

• Humbert, Ludger: Didaktik der Informatik. Wiesbaden: B. G. Teubner, 2005
• Further literature will be announced in the lecture

**Präsenzzeit Modul insgesamt** 56 h
inf705 - Practical in Computer Science Education

Module label: Practical in Computer Science Education

Modulkürzel: inf705

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls: Master's Programme Computing Science (Master) > Angewandte Informatik

Zuständige Personen:
- Diethelm, Ira (Module responsibility)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module:

**Professional competence**
The students:

- know hard- and software system engineering approaches and use them in practice
- make a qualified and contextual choice of hard- and software designing approaches
- characterise and consider challenges of soft- and hardware systems in education

**Methodological competence**
The students:

- know engineering approaches and use them in new contexts
- evaluate decision making concepts and use them in different domains

**Social competence**
The students:

- cooperate with team members during the development process
- recognize package tasks and resume their responsibilities
- analyse team conflicts and resolve them
- document the software development process in a team
- moderate team meetings and decision making processes appropriately

**Self-competence**
The students:

- reflect their self-perception with regard to the implementation of software systems

Module contents:

A hard- or software system for education will be designed in this practical course. The requirements analysis of hard- or software systems and the dealing with customers are the main topics of this practical course.

inf710 - Special Topics in 'Computer Science Education' I

Skills to be acquired in this module

Professional competences
The students:
- define and contrast a computer science part, in which they are specialised, in detail or evaluate computer science in general
- recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- identify, structure and solve problems/tasks, also in new or developing subject areas
- apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- are aware of the current limits and contribute to the development of computer science research and technology
- discuss and evaluate recent computer science developments

Methodological competences
The students:
- evaluate and apply tools, technology and methods sophisticatedly
- combine new and original approaches and methods creatively
- evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competences
The students:
- support team process by their abilities

Self-competences
The students:
- pursue the overall and special computer science development critically
- implement innovative professional activities effectively and independently

**Prerequisites**

**Skills to be acquired in this module**

This module integrates current computer science developments into the business informatics program by appropriate study courses.

**Professional competence**
The students:
- Know recent technological or scientific computer science developments  
- Transfer computer science methods and development models to IT application area requirements  
- Evaluate the possibilities and limitations of computer science methods and tools and apply them appropriately

**Methodological competence**
The students:
- Review problems, formulate them with formal models and explore them appropriately  
- Identify and present (one or more) computer science problem solutions  
- Select and evaluate appropriate tools and methods  
- Examine problems with technical and scientific literature

**Social competence**
The students:
- work in a team

**Self-competence:**
The Students:  
- Plan their informatical actions independently

### Skills to be acquired in this module

Die Studierenden sollen forschungsmethodische Ansätze der Informatikdidaktik kennen und exemplarisch anwenden können. Sie sollen fachdidaktische Ansätze begründet überprüfen und weiterentwickeln können und die entsprechenden Auswirkungen auf Inhalte, Methoden und Werkzeuge des Unterrichts beschreiben können.

#### Fachkompetenzen

Die Studierenden:

- charakterisieren forschungsmethodische Ansätze der Informatikdidaktik u
- untersuchen eine exemplarische Forschungsfrage, mit Hilfe von Forschungsmethoden der Informatikdidaktik
- differenzieren Ansätze der Fachdidaktik und deren Auswirkung auf Inhalte, Methoden und Werkzeuge des Unterrichts

#### Methodenkompetenzen

Die Studierenden:

- transferieren die vorgestellten Forschungsmethoden auf neue Fragestellungen und passen sie zweckmäßig an entwickeln Theorien,
- stellen Hypothesen zur Forschung im Unterricht auf und überprüfen sie

#### Sozialkompetenzen

Die Studierenden:

- diskutieren in Gruppen die vorgestellten Forschungsmethoden
- präsentieren von ihnen verwendete Forschungsmethoden und nehmen Kritik an bzw. geben fachliche Kritik

#### Selbstkompetenzen

Die Studierenden:

- beziehen die vorgestellten Forschungsmethoden in ihr Handeln ein, um ihre Hypothesen zu überprüfen
- reflektieren ihr Selbstbild als Forschender im Bereich der Fachdidaktik

### Module contents

In der Veranstaltung werden thematisiert: - forschungsmethodische Ansätze in der Informatikdidaktik - Möglichkeiten der theoriegeleiteten Entwicklung von konkreten Unterrichtsszenarien - Ansätze zur Evaluation informatischer Bildung bzw. informatikdidaktischer Konzepte

### Literaturempfehlungen

- Further literature will be announced in the lecture.

Verwendbarkeit des Moduls

- Bachelor's Programme Computing Science (Bachelor) > Akzentsetzungsbereich - Wahlbereich Informatik
- Dual-Subject Bachelor's Programme Computing Science (Bachelor) > Wahlpflicht Technische Informatik (30 KP)
- Master of Education Programme (Gymnasium) Computing Science (Master of Education) > Wahlpflichtmodule (Technische Informatik)
- Master of Education Programme (Hauptschule and Realschule) Computing Science (Master of Education) > Mastermodule
- Master's Programme Computing Science (Master) > Interdisziplinäre Module

Zuständige Personen

Hein, Andreas (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence:
The students:

- Analyse linear electrical networks (direct current and alternating current)
- Name basic concepts to calculate and to use electrical and magnetic fields
- List the characteristics of simple electrical elements (two terminal networks)
- Calculate the parameters of simple electrical networks/wirings
- Apply computer based analysing tools
- Design and implement simple networks/wirings

Methodological competence:
The students:

- Transfer calculation methods onto complex dynamic systems
- Implement electrical system models

Social competence:
The students:

- Present solutions for specific questions

Self-competence:
The students:

- Reflect their solutions by using methods learned in this course

Module contents

- Basic concepts (electric dimensions and units)
- Network elements
- Calculation of linear direct current networks (Ohms law, Kirchhoff's circuit law, superposition principle)
- Characteristics, calculations and representations of electric and magnetic fields
- Construction elements (capacitor and coil)
- Extensions of periodical dimensions dependent on time, pointer representation, calculations with complex root-mean-square value pointers

inf208 - Microrobotics and Microsystems Technology

Module label: Microrobotics and Microsystems Technology
Modulkürzel: inf208
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Bachelor's Programme Computing Science (Bachelor) > Akzentsetzungsbereich - Wahlbereich Informatik
- Dual-Subject Bachelor's Programme Computing Science (Bachelor) > Wahlplicht Technische Informatik (30 KP)
- Master of Education Programme (Gymnasium) Computing Science (Master of Education) > Wahlpflichtmodule (Technische Informatik)
- Master's Programme Computing Science (Master) > Interdisziplinäre Module

Zuständige Personen
Fatikow, Sergej (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites
Within the last few years, microrobotics and microsystem technology (MST) have become a focus of interest to industry and evolved into an important field with great application potential. It plays a decisive role for industry to be competitive in many areas such as medicine, production engineering, biotechnology, environmental technology, automotive products, etc. Despite of the growing interest in this new technology, there is hardly any book or lecture course that treats microrobotics and MST in a coherent and comprehensive way. This course is an attempt of the Microrobotics and Control Engineering Division (AMiR) to give students a systematic introduction to microrobotics and MST. It discusses all important aspects of this rapidly expanding technology, its diversity of products and fields of application. The course contains an overview of numerous ideas of new devices and the problems of manufacturing them.

Professional competence:
The students:
- name the ideas, challenges and activities of microrobotics and microsystem technology
- describe the microrobotics and MST applications
- characterise MST methods
- name microsensor functionality
- characterise microsensor examples
- discuss MST terms of information technology
- classify microrobotics

Methodological competence
The students:
- discover interdisciplinary connections and links between scientific and technical fields of research and development
- learn technical abstraction of complex contexts

Social competence
The students:
- solving problems partially as group
- present their solutions and approaches to the group

Self-competence
The students:
- reflect their knowledge of technical computer science
- learn to expand on their professional competence independently

Module contents
Ideas and problems of microrobotics and MST; applications; techniques of MST; silicon-based micromechanics; LIGA technology; microactuators: principles and examples (electrostatic, piezoelectric, magnetostrictive, electromagnetic, SMA-based, thermomechanical, electrorheological and other actuators); microsensors: principles and examples (force and pressure, position and speed, acceleration, biological and chemical, temperature and other sensors); MST and information processing; micromechanical design and simulation; classification of microrobots; coarse positioning of a microrobot; fine positioning of a microrobot; handling of microparts: problems and solutions; micro grasp techniques; microassembly; process automation by microrobots; desktop robot cell in SEM

Literaturempfehlungen
Essential:
• Lecture notes

Recommended:

**Verwendbarkeit des Moduls**
- Bachelor's Programme Computing Science (Bachelor) > Akzentsetzungsbereich - Wahlbereich Informatik
- Dual-Subject Bachelor's Programme Computing Science (Bachelor) > Wahlpflicht Technische Informatik (30 KP)
- Master of Education Programme (Gymnasium) Computing Science (Master of Education) > Wahlpflichtmodule (Technische Informatik)
- Master's Programme Computing Science (Master) > Interdisziplinäre Module

**Zuständige Personen**
- Fatikow, Sergej (Module responsibility)
- Hein, Andreas (Module responsibility)

**Prerequisites**
- Module Differential Equations
- Module Basics Electrical Engineering

**Skills to be acquired in this module**

**Professional competence**
The students:
- Describe the core principles of steering and control of technical systems
- Discuss the modelling core concepts of systems and their controllers
- Name methods to determine the quality of controlled systems
- Model technical systems with differential equations and their transfer functions
- Develop control structures, evaluate their stability and determine their optimal control parameters

**Methodological competence**
The students:
- Are aware of the technical challenges and solve them by including the implementations of other disciplines and methods

**Social competence**
The students:
- Present solutions for specific questions

**Self-competence**
The students:
- Get used to the specific challenges of the development of controlled systems

**Module contents**
Basics; analog transfer elements: linear time invariant (LTI-) systems; simulation and modelling; step response; frequency response; frequency response locus; differential equations and transfer function; control loop stability; types of controlled systems; types of linear controllers; linear control loops: reference and disturbance reaction of the controlled system; rules for control loop optimization; methods of analysis and synthesis, implementation; computerbased control MATLAB/Simulink

**Literaturempfehlungen**
- Unbehauen, H.: Regelungstechnik I, Klassische Verfahren zur Analyse und Synthese linearer kontinuierlicher Regelsysteme
- Lütz, H. und Wendt, W.: Taschenbuch der Regelungstechnik
- further reading will be announced at lecture

Prerequisites

Skills to be acquired in this module

Professional competence
The students:
- Name the concepts of signal and image processing in technical systems
- Name the methods/algorithms of preprocessing, filtering, classification, interpretation and visualisation of signals and pictures
- Select algorithms appropriately
- Evaluate the effectiveness of algorithms
- Design algorithms and processing chains and evaluate their quality

Methodological competence
The students:
- Get used to specific subjects of signal and image processing

Social competence
The students:
- Present solutions for specific questions in signal and image processing

Self-competence
The students:
- Reflect their solutions by using methods learned in this course

Module contents

- Basic Concepts
- Signal Processing
- Signal Spaces and Signal Processing Systems
- Discrete and Constant Signals
- Labelling of Signal Transmitters with Test Signals
- Representations Areas and Transformations
- Time-Discrete Systems and Scanning
- Estimation and Filtering
- Construction with MATLAB
- Image Processing
- Introduction / Range of Applications
- Functional Transformation
- Image Enhancement/Filtering
- Segmentation
- 3D Reconstruction an Visualization

Skills to be acquired in this module

The participants of this course are aware of problems, activities and tools of data processing project management (DP-Project-Management). They are able to identify and select the corresponding tools in different project stages and are familiar with those tools. They are able to describe the business informatics fields of actions. They are competent to work in a team and organise and implement projects.

Professional competence
The students:

- Characterise problems, activities and tools of the data processing project management.
- Are able to identify the corresponding tools in different project stages
- Use specific DP-Project-Management tools
- Differentiate the business informatics field of actions

Methodological competence
The students:

- Perform projects with the tools of each phase

Social competence
The students:

- Work in small project-teams
- Make design decisions cooperatively
- Present solutions

Self-competence
The students:

- Acquire DP-Project-Management methods and use them
- Recognise and are responsible for working packages

Module contents
It is important to know different IT project management types and forms as well as corresponding methods and tools. This course provides basic data-processing problems, activities and methods. The course is based on M. Burghardt’s book. After an introduction, the course is divided as follows:
- Project management (Requirements Engineering, Profitability Analysis, Organisational Structure)
- Project Planning (Project Structure, Network Analysis, Project Plans)
- Project Control (Cost Evaluation, Quality Control)
- Project Completion

The participants get familiar with project management tools. Presentations drawn from practice are intended.

Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence
The students:
- Describe medical diagnosis and therapy methods
- Understand the core concepts of computer-assisted medical interventions
- Are aware of the basic concepts and legal conditions of the development of medical devices
- Define the character of medical devices' software parts and implement them
- Assess the complex interaction of medical products and patients
- Get familiar with the development of medical products within a short period of time

Methodological competence
The students:
- Recognise the interdisciplinary challenges and accordingly exchange information with other disciplines

Social competence
The students:
- Present solutions for specific questions

Self-competence
The students:
- reflect their solutions by using methods learned in this course

Module contents
- Medical areas and areas of application
- Basic requirements for medical systems (hygiene, MPG, technical security, materials)
- Medical systems:
  - Functional diagnostics (ECG, EMG, EEG)
  - Imaging systems (CT, MRI, ultrasound, PET, SPECT) - Therapy equipment (Laser, RF, Microtherapy)
  - Signal processing / monitoring (cardiovascular, hemodynamic, respiratory, metabolic, cerebral)
- Medical Informatics (HIS, DICOM, Telemedicine, VR, image processing).

Zuständige Personen

Hein, Andreas (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module

Professional competence
The students:
- Name and know the functions and applications of robot systems
- Characterise the basic concepts to program robot systems
- Differentiate between the interaction of mechanical, electrical and software components

Methodological competence
The students:
- Define characteristics and components of robot systems for a specific application
- Design and implement robot system sub-components
- Design and parameterise simple control structures
- Plan the application of robot systems and derive the requirements
- Model electrical and mechanical systems
- Develop and realise simple robot systems

Social competence
The students:
- Solve robot systems problems in team work

Self-competence
The students:
- Reflect their solutions in reference to robot system methods

Module contents

- Integration in production plants / aims / subsystems
- Architectures / classifications (classification of robots)
- Robot components + Computer systems for programming
  - PA-10
    - Lego Mindstorms
- Basics of kinematics
  - Coordinate transformation, homogeneous coordinates, Coordinate transitions
  - Kinematic equation systems, transformation of vectors
- Kinematic
  - Joint types (manipulators) / Wheels, TCP
  - Denavit-Hartenberg-Transformation
  - Forward calculation
  - Backward calculation
- Sensors
  - General properties of sensors, parameter
  - Simple optical position sensors
  - Inductive-, capacitive- und ultrasonic-sensors
  - Distance sensors (laser scanner, triangulation sensors)
  - Force sensors
  - Sensor data preparation
Planing / Regulation
- Overall regulation approach, terms, process- and control functions, PID-controller
- Planning concepts and approaches (On-Line, Off-Line), planning processes, construction and path planning
- Actuators

Präsenzzeit Modul insgesamt: 56 h
inf308 - Microrobotics II

Module label: Microrobotics II
Module code: inf308
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls
- Master's Programme Computing Science (Master) > Interdisziplinäre Module
- Master's Programme Computing Science (Master) > Technische Informatik
- Master's Programme Engineering of Socio-Technical Systems (Master) > Embedded Brain Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Human-Computer Interaction
- Master's Programme Engineering of Socio-Technical Systems (Master) > Systems Engineering

Zuständige Personen
Fatikow, Sergej (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

Prerequisites

Skills to be acquired in this module
After having given an established introduction in the module "Microrobotics and Microsystem Technology" this lecture offers a further specialisation in microrobotics. Within the course, all relevant areas (among others the research topics of the division "Microrobotics and Control Engineering (AMiR)") will be presented and analysed. The student will be provided with an insight into current research projects of AMiR and of other research institutes of microrobotics worldwide; here mainly the requirements of industry to microrobots will be discussed. The lecture will be enhanced by practical courses in the research laboratories of AMiR.

Professional competence
The students:
- name and recognise the basic concepts of nanotechnology, in particular, micro- and nanorobotics approaches
- differentiate the development, control and application of micro- and nanorobotics systems
- implement and design application-specific micro- and nanorobotics systems

Methodological competence
The students:
- transfer their control engineering and image processing abilities on interdisciplinary problems
- transfer their hands-on experience to develop controls and applications of microrobotic systems on new tasks

Social competence
The students:
- work in a team

Self-competence
The students:
- reflect their problem-solving behaviour and use hands-on experience to develop, control and application of microrobotics

Module contents
Smart and versatile microrobots; microactuators (piezo-, ferrofluid- and SMA-actuators) for microrobots; real-time image processing in the micro world (SEM, optical microscopy); micro force sensors and tactile sensors for microrobots; microrobot control systems, e.g. neural networks and fuzzy logic; haptic interface for the control of microrobots; neural speech interface for the control of microrobots; robot-based micro- and nanohandling (SEM, optical microscopy); applications: microassembly, nano-testing, cell handling; Micro Air Vehicles (MAVs); multi-robot systems: team behavior, communication, control issues

Literaturempfehlungen
- Lecture notes (can be obtained in secretariate, A1-3-303)

inf524 - Introduction to Medicine for Computer Science Students

**Module label**
Introduction to Medicine for Computer Science Students

**Modulkürzel**
inf524

**Credit points**
6.0 KP

**Workload**
180 h

**Verwendbarkeit des Moduls**
- Master's Programme Computing Science (Master) > Angewandte Informatik
- Master's Programme Computing Science (Master) > Interdisziplinäre Module

**Zuständige Personen**
- Wulff, Antje (Module responsibility)
- Kaspar, Mathias (Module counselling)
- Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**

**Skills to be acquired in this module**
The aim of the modul is to provide students with a basic knowledge of human medicine. This should facilitate the understanding of the domain in case of a career choice or focus on medical informatics / medical technology and lead to basics for own questions and ideas for the application of methods of informatics in medicine.

**Professional competence** The students
- learn the basics of medical terminology (Terminologia Anatomica) and the anatomy of the human body and can name the most important structure in technical language
- Know the basics of the physiology of the human body and can describe the essential body functions
- Gain insights into pathophysiological processes of the human body and the associated effects on the function of the human organism
- Know the control circuits of the human body for maintaining important body functions and that this control circuits can be used as a possibility to intervene in processes of the human body
- Know reference values of important physiological parameters and can derive conclusions on body functions

**Methodological competence** The students
- know the possible measurement procedures resulting from the physiological processes of the human body.
- apply measurement procedures to describe and evaluate human body functions. They can name examples of use and examples of interpretation
- know influencing variables that affect the interpretation of results from measurement procedures as well as the limits of measurement procedures
- learn how to carry out examinations according to protocols and how to document the results in a standardized way.

**Social competence** The students
- experience an appreciative interaction with each other through regular role changes - they take on the role of the test person as well as that of the experimenter - an appreciative way of dealing with each other.
- learn how to deal with ethical issues by means of borderline situations in medicine.
- describe in detail the data obtained in measurement procedures and consider them critically with other students
- integrate professional and factual criticism into their own courses of action
- use simulated examples from everyday clinical practice to learn the standardized procedures necessary to ensure patient safety

**Self competence** The students
- deal with the function, the efficiency of the own body but also with its limits
- deal with the life cycle of conception, birth, adolescence, adulthood and aging

**Skills to be acquired in this module**

This module integrates current computer science developments into the business informatics program by appropriate study courses.

**Professional competence**
The students:
- Know recent technological or scientific computer science developments
- Transfer computer science methods and development models to IT application area requirements
- Evaluate the possibilities and limitations of computer science methods and tools and apply them appropriately

**Methodological competence**
The students:
- Review problems, formulate them with formal models and explore them appropriately
- Identify and present (one or more) computer science problem solutions
- Select and evaluate appropriate tools and methods
- Examine problems with technical and scientific literature

**Social competence**
The students:
- work in a team

**Self-competence:**
The Students:
- Plan their informatical actions independently

Prerequisites

Skills to be acquired in this module

The students prove that they are able to process and solve complex computer science tasks based on gained scientific knowledge and applied research methods. The students successfully implement a task especially by using their acquired professional and methodological knowledge and their professional and social competences.

The accompanying seminar is used to discuss the master’s thesis methodically and content-related. During the seminar the exchange of research and practical experience fosters the students’ ability to discuss and evaluate their thesis with other students and experts.

The master’s thesis is finished by a colloquium.

Professional competence

The students:

- Recognise and evaluate applied techniques and methods of their subject and are aware of their limits
- Design solutions for complex, possibly vaguely defined or unusual computer science tasks/problems and evaluate these with reference to state of the art computer science and technology
- Identify, structure and solve problems/tasks, also in new or developing subject areas
- Apply state of the art and innovative methods to solve problems, if necessary from other disciplines
- Relate knowledge from different disciplines and apply this new knowledge in complex situations
- Develop complex computer systems, processes and datamodels
- Are aware of the current limits and contribute to the development of computer science research and technology
- Discuss and evaluate recent computer science developments

Methodological competence

The students:

- Identify and develop one or more solutions
- Evaluate and apply tools, technology and methods sophisticatedly
- Examine tasks with technical and research literature, write an academic article and present their solutions academically
- Schedule processes and resources
- Apply project management techniques
- Combine new and original approaches and methods creatively
- Evaluate problems/tasks, including new or developing subject areas of their discipline and apply computer science methods for solutions and research

Social competence

The students:

- Communicate with users and experts convincingly
- Take reasonable decisions

Self-competence

The students:

- Pursue the overall and special computer science development critically
- Implement innovative professional activities effectively and independently
- Recognise their abilities and extend them purposefully
- Reflect their self-perception and actions with regard to professional, methodological and social aspects
- Develop and reflect self-developed hypotheses to theories independently
- Work in their field independently

**Verwendbarkeit des Moduls**
- Bachelor's Programme Business Informatics (Bachelor) > Aufbaucurriculum-Wahlbereich Mathematik
- Bachelor's Programme Computing Science (Bachelor) > Wahlpflichtbereich Mathematik
- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen

**Zuständige Personen**
- Chernov, Alexey (Module responsibility)
- Schöpfer, Frank (Module responsibility)

**Prerequisites**
- Analysis I, Lineare Algebra

**Skills to be acquired in this module**
- The students learn and analyze the basic numerical methods. The students learn to implement the basic numerical methods in a computer program.

  **Professional competence**
  - The students:
    - learn basic numerical methods and algorithms
    - analyze properties of the numerical methods using rigorous mathematical tools
    - implement the basic numerical methods in a computer program
    - interpret results of computer simulations

  **Methodological competence**
  - The students:
    - analyze algorithms with mathematical tools
    - implement numerical algorithms for concrete problems

  **Social competence**
  - The students:
    - develop solutions to given problems in groups
    - accept constructive criticism

  **Personal competence**
  - The students:
    - reflect their solution strategies
    - deepen their understanding of the presented mathematical and algorithmical concepts with exercises and adopt the solution methods

**Module contents**
- Numerical methods for linear systems: LU-, Cholesky decompositions, iterative methods
- Numerical methods for nonlinear equations: fixed-point iterations, Newton's Method
- Polynomials, spline and trigonometric interpolation
- Numerical integration: Newton-Cotes, Gauss quadrature rules, adaptive quadrature and extrapolation methods
- Stability and conditioning of algorithms and problems

| Skills to be acquired in this module | Participants...  
1. understand financial accounting as the basis of corporate data and bookkeeping  
2. gain comprehensive knowledge of main accounting areas such as procurement, sales, HR, inventory, tax, provisions etc.  
3. obtain basic knowledge about annual report process of single entities. |
| Module contents | The main objective of this module is to give the students an overview of the double entry bookkeeping as well as the link between financial accounting, balance sheet and income statement. The acquisition of basis knowledge of the corporate accountancy stands in the forefront, for example, how organizations manage the bookkeeping, legal basis of the annual accounts, creating an inventory, content of accounting and income statement. |

**Zuständige Personen**

Prokop, Jörg (Module responsibility)

**Prerequisites**

Students

- understand the role corporate finance plays in today's business environment,
- are able to make consistent investment decisions based on established financial models both under certainty and under uncertainty,
- are able to place these models in the broader context of economic theory, including both neoclassical theory and principal-agent theory,
- are able to assess the limitations of these models,
- analyze firm's main sources of (long-term) financing.

**Module contents**

Course outline:
1. Introduction
2. Valuation and Capital Budgeting
3. Risk and Return
4. Long-Term Financing

This course is an introduction to corporate finance. It covers typical tools and techniques used in making investment and financing decisions, and it provides insights into their theoretical foundations. The concept of time value of money and net present value is discussed in detail, first under certainty, and then in the presence of uncertainty. We will examine the relationship between an investment's risk and its return, and discuss ways to derive risk-adjusted cost of equity capital. In addition, the course provides insights into firms' main sources of (long-term) financing.

The topics covered in this course are relevant for financial decision-making in various areas of business management, including operations management, marketing, and in particular corporate strategy.

**Literaturempfehlungen**

Main textbook:
Hillier, Ross, Westerfield, Jaffe & Jordan, Corporate Finance, current edition, McGraw-Hill (especially chapters 1, 2, 4-10, 14).

Supplementary readings:
Berk & DeMarzo, Corporate Finance, current edition, Boston (Mass.).
Brealey, Myers & Allen, Principles of Corporate Finance, current edition, Boston (Mass.).

### Workload

- Bachelor's Programme Business Administration and Law (Bachelor) > Aufbaubereich Wirtschaftswissenschaften
- Bachelor's Programme Business Informatics (Bachelor) > Akzentsetzungsbereich Wirtschaftswissenschaften
- Bachelor's Programme Business Informatics (Bachelor) > Wahlbereich Informatik, Kultur und Gesellschaft
- Bachelor's Programme Computing Science (Bachelor) > Wahlbereich Informatik, Kultur und Gesellschaft
- Bachelor's Programme Economics and Business Administration (Bachelor) > Studienrichtung Betriebswirtschaftslehre
- Bachelor's Programme Sustainability Economics (Bachelor) > Wahlpflichtbereich
- Master of Education Programme (Vocational and Business Education) Economics and Business Administration (Master of Education) > Mastermodule
- Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master)
- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen

### Skills to be acquired in this module

- Upon completion of the module, students will be able to:
  - understand the challenges of launching an enterprise,
  - strategically analyse the structure of market
  - understand how employees are able to behave like an entrepreneur in established enterprises
  - develop innovative business ideas
  - shape the key factors for realizing a business idea
  - demonstrate a knowledge of the entrepreneurial process
  - demonstrate a knowledge of cost accounting (especially break-even analysis, etc.) and will be able to calculate costs by themselves
  - analyse and evaluate business models

### Module contents

The module combines the lecture “Strategie und Entrepreneurship” with a tutorial. It investigates the challenges of launching enterprises and entrepreneurial behaviour in large companies as well. The content of the module follows the process of an entrepreneur. It starts with business ideas, their perception, and evaluation. In addition, it deals with the most important questions of development and management of new business models. The contents of the courses include the following topics:

- historical, institutional, and theoretical context
- development, evaluation, and pitching ideas
- business models
- building entrepreneurial teams
- entrepreneurship in large enterprises
- resources and finance
- management of growth

#### Zuständige Personen

Siebenhüner, Bernd (Module responsibility)
Lehrenden, Die im Modul (Module counselling)

#### Prerequisites

**Skills to be acquired in this module**

The students:

- understand the goals and concepts of sustainable development;
- discuss the importance of sustainability for companies;
- know basic strategies and instruments that enable companies to achieve sustainable development;
- acquire conceptual and practical skills using case studies, in particular about which instruments can be used to prepare companies for the challenges of sustainable development.

#### Module contents

The module consists of a lecture and a seminar. While the lecture presents and explains concepts, instruments and strategies for sustainable development, the seminar focuses on the practical relevance of the various instruments, concepts and strategies and discusses these based on case studies.

- Concepts and goals of sustainable development
- Introduction to the current discussion on sustainable development
- Current sustainability instruments and strategies for companies
- Case studies

- Asane-Otoo, Emmanuel (Module responsibility)

Lehrenden, Die im Modul (Prüfungsberechtigt):
- Asane-Otoo, Emmanuel (Module counselling)

Prerequisites:
- Keine

Skills to be acquired in this module:
- Die Studierenden sind in der Lage:
  - Ressourcen- und energiekonomische Standardmodelle nachzuvollziehen,
  - Standardmodelle in Hinblick auf weitergehende Fragestellungen anzupassen bzw. zu erweitern,
  - die Funktionsweise von Ressourcen- und Energiemärkten zu verstehen,
  - reale Vorgänge auf Ressourcen- und Energiemärkten anhand der Kriterien Effizienz, Verteilung und Nachhaltigkeit zu bewerten,
  - die institutionell-regulatorischen Rahmenbedingungen von Ressourcen- und Energiemärkten anhand der Kriterien Effizienz, Verteilung und Nachhaltigkeit zu bewerten.

Module contents:
Behandelt werden die Themenlinien nicht regenerierbare Ressourcen (effiziente Nutzung, intertemporale Gerechtigkeit, intertemporales Marktgleichgewicht); regenerierbare Ressourcen (effiziente Nutzung im steady state, Marktgleichgewicht); Nachhaltigkeit; Grundlagen der Energiewirtschaft; Energienachfrage; Energie und Umwelt; Energieressourcen; Märkte für Primärenergieträger; Strommarkt und Regulierung. Dabei stehen die volkswirtschaftlichen Aspekte im Zentrum, wobei notwendigerweise auch grundlegende technische und betriebswirtschaftliche Aspekte vermittelt werden.

Prerequisites

Skills to be acquired in this module

With successful completion of the course, students shall:

- be aware of and be able to evaluate advanced methods of multivariate data analysis.
- be able to select adequate methods in relevant fields of application, like prediction, classification, and segmentation analysis.
- be able to run computer-aided analyses and to interpret the results properly.

Module contents

Various methods of quantitative data analysis such as:

- Linear Regression,
- Logistic Regression,
- Linear Discriminant Analysis,
- Principal Component Analysis,
- Feature selection and evaluation methods.

| Prerequisites         | Building on the existing knowledge of the participants, the course will deepen knowledge of European and international law, whereby emphasis will be laid on those areas in which the dividing line between state intervention (public law) and market rights (private law) has become blurred. Students will be able to analyze contemporary regulatory techniques inherent in the multilevel system of governance and to assess them from an interdisciplinary (economic and legal) perspective.  |
| Module contents       | The module comprises two courses, one of which will be taught by PD Dr. Meyerholt, and the other together with Prof. Godt.  
  - The first course deals with selected issues in environmental law. With the general structure of environmental law as a point of departure, the course content will be taught in a holistic manner that will also incorporate the leading decisions of the higher courts. The second course takes into consideration intra-disciplinary environmental law as situated between public and private economic law, whereby special focus will be laid on the European and international dimensions.  |

**Zuständige Personen**  
Hoppmann, Jörn (Module responsibility)

**Lehrenden, Die im Modul (Prüfungsberechtigt)**

**Prerequisites**
Keine

**Skills to be acquired in this module**

- Know advanced theoretical concepts, research streams, and frameworks of in the field of Strategic Management  
- Understand the links between different theories and are able to critically question them  
- Can apply theories to understand and interpret organizational dynamics in daily life  
- Are able to develop solutions for concrete practical challenges in companies in the context of Strategic Management based on the concepts and frameworks they have learned  
- Can put the newly acquired knowledge into a broader context, so it can be deepened in the further professional life

**Module contents**
The course offers an overview of advanced concepts and frameworks in the field of Strategic Management. At the beginning, the course will provide a brief introduction into the historical development, goals, and research streams of the field. In this context, important terms, methods, and philosophical approaches of (management) research will be clarified. Subsequently, students form groups to analyze selected scientific articles with regard to their theoretical relevance and practical implications. Theoretical topics that will be covered in depth are:

1. Top Management Teams, Upper Echelons and Corporate Governance  
2. Resource- and Capability-based Approaches  
4. Institutional Theory, Institutional Work/Entrepreneurship and Social Movements  
5. Organizational Cognition, Identity, and Framing  
6. Organizational Learning and Ambidexterity  
7. Organizational networks and ecosystems

The results of the analysis will be summarized in a seminar thesis, presented in class, and discussed with the other students. The main goal of the course is to equip students with advanced concepts, which allow them to understand organizational dynamics, question established practices in firms, and develop new solutions that go beyond the application of standard instruments.

- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen

Zuständige Personen
Lehrenden, Die im Modul (Prüfungsberechtigt)
Rott, Peter (Module responsibility)

Prerequisites
Skills to be acquired in this module
Upon completion of the module, students will be able to:
- recognize simple data protection incidents.
- apply existing protection mechanisms.
- implement projects in accordance with the law.
- discuss and defend their plans in front of others.

Module contents
The module gives an overview on data protection laws. Basic knowledge of data protection regulations (DSGVO; BDSG) and existing protection mechanisms is imparted. Within the framework of the seminar, the discussed topics will be deepened with the help of seminar papers and individual aspects will be discussed in more detail.

The event will highlight the new informational structures in modern society and their effects on data protection and data security. Questions concerning general personal rights, freedom of information, IT security and relevant criminal law regulations will be discussed on the basis of examples and legally provided protection mechanisms as well as the tasks of supervisory authorities will be discussed. In particular, the most important decisions on data protection will be covered in detail during the seminar.

At the seminar, students will have the opportunity to prepare in-depth seminar papers on the various topics, which will then be discussed with all participants.

Literaturempfehlungen
Kühling/Klar/Sackmann, Datenschutzrecht, 2018.
Further literature references will be given in the lecture.

**Verwendbarkeit des Moduls**
- Master Applied Economics and Data Science (Master) > Empirical Methods
- Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master)
- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen

**Zuständige Personen**
Stecking, Ralf Werner (Module responsibility)
Lehrenden, Die im Modul (Prüfungsberechtigt)

**Prerequisites**
Skills to be acquired in this module

With successful completion of the course, students shall:

- be aware of and be able to evaluate quantitative forecasting methods.
- be able to select adequate methods in relevant fields of application, like time series and classification analysis.
- be able to run computer-aided analyses and to interpret the results properly.

**Module contents**
Various aspects of quantitative forecasting methods such as:

- Time series components,
- Trend and seasonal methods,
- Stationarity,
- Multivariate forecasting methods,
- Autoregressive and moving average processes,
- Box-Jenkins method.

**Verwendbarkeit des Moduls**
- Master's Programme Business Informatics (Master) > Module der Wirtschafts- und Rechtswissenschaften (Master)
- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen
- Master's programme Social Sciences (Master) > Wahlpflichtmodule anderer Institute und Departments
- Master's Programme Sustainability Economics and Management (Master) > Basic and Accentuation Modules

**Zuständige Personen**
- Lehrenden, Die im Modul (Prüfungsberechtigt)
  - Siebenhüner, Bernd (Module counselling)
  - Wegner, Aikje (Module counselling)
  - Müller, Werner Joachim (Module counselling)
  - Siebenhüner, Bernd (Module responsibility)

**Prerequisites**
- students:
  - have basic information about national and european environmental and sustainability governance
  - describe the history of national and european environmental and sustainability governance
  - reflect upon central principles, instruments, players and strategies in environmental and sustainability governance
  - analyze selected topics of environmental and sustainability governance based upon central principles, instruments, players and strategies

**Module contents**
- Introduction to environmental politics - Politics, Political Science, Policy Analysis
- Environment – Terms and Concepts - Historical Foundations of Environmental Politics
- Actors, institutions and governance structures; Actors in Environmental Policy
- Socio-ecological systems framework
- Environmental Policy in Germany
- Environmental Policy in the European Union
- Steering and principles in environmental policy
- Instruments in environmental policy
- Policy process and environmental policy
- Multilevel and reflexive governance - Multilevel governance
- International environmental governance
- Science-Policy Interface

wir905 - Environmental Sciences

Module label: Environmental Sciences

Modulkürzel: wir905

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen
- Master's Programme Sustainability Economics and Management (Master) > Basic and Accentuation Modules
- Master's Programme Water and Coastal Management (Master) > Science

Zuständige Personen:
- Freund, Holger (Module counselling)
- Köster, Jürgen (Module counselling)
- Dozent, Gast (Module counselling)
- Klenke, Thomas (Prüfungsberechtigt)
- Freund, Holger (Prüfungsberechtigt)
- Köster, Jürgen (Prüfungsberechtigt)
- Klenke, Thomas (Module responsibility)

Prerequisites:

Skills to be acquired in this module:
The Introduction to processes and systems of the dynamic Earth constituting the foundation for sustainable management is presented to produce:
- Knowledge about processes and systems relevant for sustainable management using knowledge and methodologies from all science disciplines in an integrated way.
- Skills in elaborating on complex tasks of environmental management using an interdisciplinary science based approach and to present related findings to non-expert audiences.
- Lecture room presentations and discussions based on slides and black/white board usage.

Short films will be presented to endorse the intended achievements.

Module contents:
- Lecture: Understanding the Bioplanet Earth (2 contact hours/week) (Vorlesung, 2 LVS: Aufbau und Entwicklungsgeschichte der Erde; Dynamik der Erde: Kreisläufe und Evolutionsprozesse; Lebensraum Boden; Wasser; Klima; Biodiversität; Lagerstätten und Ressourcenerschließung; Ökosysteme der Erde.)
- Seminar: Cases in Understanding the Bioplanet Earth (2 contact hours/week)

Introduction to key processes and to systems dynamics of the Earth representing a planet being alive driven by external and internal forces interacting with biological activities. Topics of the lecture comprise introductions to the evolution of the universe and solar systems, the differentiation and sub-systems of the Earth's interior, minerals and rock cycle, soils, ocean and climate, evolution and biodiversity, organisms and physiology, water and element cycling plus insights into ecosystems under different climate conditions. The cases are selected in order to (i) highlight certain principles and theories in geo- and biosciences and (ii) exemplify critical objects and phenomena in modern practice of resource and environmental management.

This module consists of topical programmes of the Master Cluster Environment and Sustainability.

Literaturempfehlungen:
A ‘foundation material pool’ will be made available online for students and lecturers providing paper books, reports and media covering the topics of the lecture and the cases

Lehr-/Lernform / Teaching/Learning method:

Vorkenntnisse / Previous knowledge:

Examination:
- Prüfungszeiten
- Type of examination:
  - By the end of the lecture period.
  - Presentation/discussion and written report on a case:
    - Scientific quality of presentation (40 %)
    - Clarity of presentation and discussion (20 %)
    - Scientific quality of report (40 %)

**Verwendbarkeit des Moduls**
- Master's Programme Computing Science (Master) > Module aus anderen Studiengängen
- Master's Programme Sustainability Economics and Management (Master) > Additional Modules

**Zuständige Personen**
- Peinke, Joachim (Prüfungsberechtigt)
- Knecht, Robin (Prüfungsberechtigt)
- Hölling, Michael (Prüfungsberechtigt)
- Golba, Michael (Prüfungsberechtigt)
- Torio, Herena (Prüfungsberechtigt)
- Holtorf, Hans-Gerhard (Prüfungsberechtigt)
- Peinke, Joachim (Module responsibility)
- Siebenhüner, Bernd (Module responsibility)
- Hölling, Michael (Module responsibility)

**Prerequisites**
None.

**Skills to be acquired in this module**
Students learn details about the wide range of renewable energy sources and renewable energy technology as well as their background story.

**Module contents**
Energy basics, energy resources, global energy overview, energy scenarios, techno-economic aspects of energy use (external costs, life cycle analysis,...), environmental effects of energy use (greenhouse gas emissions, ozone,...), conventional and advanced power plant technologies, power distribution, advanced storage technologies, solar thermal power plants, geothermal and ocean energies.
