Neuroscience - Master-Studiengang
im Sommersemester 2023
erstellt am 29.05.2023

neu150 - Visual Neuroscience - Anatomy	4
neu210 - Neurosensory Science and Behaviour	5
neu220 - Neurocognition and Psychopharmacology	7
neu250 - Computational Neuroscience - Statistical Learning	9
neu241 - Computational Neuroscience - Introduction	11
neu280 - Research Techniques in Neuroscience	13
neu310 - Psychophysics of Hearing	15
neu320 - Introduction to Neurophysics	16
bio605 - Molecular Genetics and Cell Biology	18
bio695 - Biochemical concepts in signal transduction	19
bio845 - Introduction to Development and Evolution	20
bio846 - Lab Exercises in Development and Evolution	22
neu141 - Visual Neuroscience - Physiology and Anatomy	24
neu340 - Invertebrate Neuroscience	26
neu345 - Neural Computation in Invertebrate Systems	28
neu350 - Biological Foundations of Neuroscience	30
neu360 - Auditory Neuroscience	32
neu370 - Neuroprosthetics	34
psy270 - Functional MRI Data Analysis	36
neu610 - External Research Project	38
neu600 - Neuroscience Research Project	40

neu710 - Neuroscientific Data Analysis in Matlab	42
neu725 - Multivariate Statistics and Applications in R	44
neu730 - Biosciences in the Public Eye and in our Laws	45
neu760 - Scientific English	47
neu780 - Introduction to Data Analysis with Python	49
neu751 - Laboratory Animal Science	50
neu790 - Communicating Neuroscience	52
neu800 - Introduction to Matlab	54
neu810 - International Meeting Contribution	55
neu725 - Multivariate Statistics and Applications in R	57
neu820 - Neuroscience Journal Club	59
gsw200 - Microscopic Imaging in Biomedical Sciences	60
neu830 - Introduction to the Neuroanatomy of the Brain	61
mam - Master Thesis	62

Background Modules

neu150 - Visual Neuroscience - Anatomy

Modulbezeichnung	Visual Neuroscience - Anatomy		
Modulkürzel	neu150		
Kreditpunkte	6.0 KP		
Workload	180 h		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules • Master's Programme Molecular Biomedicine (Master) > Background Modules 		
Zuständige Personen	<p>Janssen-Bienhold, Ulrike (Modulverantwortung)</p> <p>Dedek, Karin (Modulberatung)</p> <p>Janssen-Bienhold, Ulrike (Prüfungsberechtigt)</p> <p>Dedek, Karin (Prüfungsberechtigt)</p>		
Teilnahmevoraussetzungen	attendance in pre-meeting		
Kompetenzziele	<p>++ Neurosci. knowlg. ++ Expt. methods + Scient. literature + Social skills + Data present./disc. + Scientific English Ethics</p> <p>Theory: Improved theoretical and methodological knowledge in neurobiology. Discussion of scientific work and presentation of own results. Practice: Performing neuroanatomical experiments. Gaining modern methodological skills.</p>		
Modulinhalte	<p>Lecture: 14 h Introduction to current neurobiological approaches and results. Seminar: 14 h Discussion of background literature and results of own experiments. Lab course: 3 weeks, each 24 h neuroanatomical experiments in small groups on vertebrate retina and brain.</p>		
Literaturempfehlungen	Background and seminar literature will be available in Stud.IP

Teilnahmevoraussetzungen			
Kompetenzziele	[nop] ++ Neurosci. knowlg. + Expt. methods + Scient. literature + Social skills ++ Interdiscipl. knowlg. + Data present./disc. + Scientific English [nop] Upon successful completion of this course, students know the fundamentals of neurotransmission know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease know the principles of drug treatment for psychiatric disorders have in-depth knowledge in selected areas of these topics are able to understand, explain and critically assess neuroscientific approaches in animals and humans are able to understand and critically assess published work in the area of cognitive neuroscience		
Modulinhalte	The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions. Lecture topics: History of cognitive neuroscience Methods of cognitive neuroscience Attention Learning Emotion Language Executive functions. The supervised exercrise either deepens that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week. The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge. Lecture topics: Introduction to Terms and Definitions in Drug Research Dopaminergic and Noradrenergic System Cholinergic and Serotonergic System GABAergic and Glutamatergic System Addiction Depression Schizophrenia Anxiety Alzheimer's Disease

Aufnahmekapazität Modul	18 (Recommended in combination with neu240 Computational Neuroscience - Introduction Shared course components with (cannot be credited twice): psy220 Human Computer Interaction)

Hinweise

Course in the first half of the semester

Students without Matlab experience should take a Matlab course (e.g. neu710) first

Modullevel / module level

Modulart / typ of module	Wahlpflicht / Elective
---------------------------------	------------------------

Lehr-/Lernform / Teaching/Learning method

Vorkenntnisse / Previous knowledge	Programming experience is highly recommended, preferably in Matlab
---	--

Prüfung	Prüfungszeiten	Prüfungsform
---------	----------------	--------------

Gesamtmodul	during the course	Portfolio, consisting of daily short tests, programming exercises and short reports
--------------------	-------------------	---

Lehrveranstaltungsform	Kommentar	SWS	Angebotsrhythmus	Workload Präsenz
Vorlesung		1	--	14
Übung		3	--	42
Seminar		1	--	14
Präsenzzeit Modul insgesamt				70 h

neu241 - Computational Neuroscience - Introduction

Modulbezeichnung	Computational Neuroscience - Introduction
Modulkürzel	neu241
Kreditpunkte	12.0 KP
Workload	360 h (360 h 2 SWS Lecture Total workload 60h: 30h contact/30h individual revision of lecture contents, test preparation 1 SWS Seminar Total workload 45h: 15h contact/30h individual reading and test preparation 10.5 SWS Supervised exercise Total workload 255h: 145h contact/110h individual work on portfolio tasks (programming, interpretation of simulation results))
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neuroscience (Master) > Background Modules
Zuständige Personen	Kretzberg, Jutta (Modulverantwortung) Kretzberg, Jutta (Modulberatung) Kretzberg, Jutta (Prüfungsberechtigt) Greschner, Martin (Prüfungsberechtigt) Ashida, Go (Prüfungsberechtigt)
Teilnahmevoraussetzungen	Programming experience in Matlab (e.g. acquired by a 6 ECTS programming course)
Kompetenzziele	++ Neurosci. knowlg. + Scient. Literature + Social skills ++ Interdiscipl. knowlg ++ Maths/Stats/Progr. + Data present./disc. + Scientific English Upon successful completion of this course, students <ul style="list-style-type: none">• are able to implement and apply algorithms in Matlab• have learned to handle scientific data independently• have acquired theoretical and practical knowledge of advanced data analysis techniques• know about computational model approaches on different levels of abstraction• know how to perform model simulations for single cells and small neuronal networks• can interpret simulation results in a neuroscientific context
Modulinhalte	<p>This course consists of six weeks with different topics, which are introduced in lectures, discussed in depth using selected literature in the seminar and consolidated in computer-based hands-on exercises (in Matlab). Portfolio tasks, mainly interpretation of programming results are given every day.</p> <p>Weeks 1 and 2: Spike train analysis response tuning, spike triggered average, receptive fields, linear-nonlinear model, spike correlation, linear reconstruction, classification</p> <p>Weeks 3 and 4: Neuron models Conductance-based single cell models using differential equations (passive membrane equation, integrate and fire, Hodgkin Huxley, alpha synapses)</p> <p>Weeks 5 and 6: Small network models Feed-forward and feed-back networks, lateral inhibition, central pattern generator, spike-timing dependent plasticity, multi-compartment models</p>
Literaturempfehlungen	Skripts for each course day will be provided prior to / during the course

Copies of scientific articles for the seminar and as basis for portfolio assignments will be provided prior to the course

Recommended textbooks or other literature:
 Dayan / Abbott: Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems. MIT Press (More text book chapters will be suggested prior to the course).

neu310 - Psychophysics of Hearing

Modulbezeichnung	Psychophysics of Hearing			
Modulkürzel	neu310			
Kreditpunkte	12.0 KP			
Workload	360 h (5 SWS Practical (PR) "Experiments in Hearing" Total workload 225h: 70h contact / 110h experimental work / 45h exam preparation 1 SWS Supervised exercise (UE) "Fundamentals in psychoacoustic data analysis" Total workload 45h: 15h contact / 30h practising data analysis (incl. SPSS) 2 SWS Seminar (SE) "Hearing" Total workload 90h: 30h contact / 60h background reading)			
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master Biologie (Master) > Background Modules • Master Biology (Master) > Background Modules • Master Neuroscience (Master) > Background Modules 			
Zuständige Personen	Klump, Georg Martin (Modulverantwortung) Klump, Georg Martin (Prüfungsberechtigt) Langemann, Ulrike (Prüfungsberechtigt)			
Teilnahmevoraussetzungen				
Kompetenzziele	+ Neurosci. knowlg. ++ Expt. Methods + Social skills ++ Maths/Stats/Progr. + Data present./disc. + Scientific English Students will learn the basics about performing a psychoacoustic experiment. Based on an experiment in which they study their own hearing, they will learn how to conduct a behavioural study in hearing and analyze the data. In addition, they will be provided with an overview of the mechanisms of auditory perception.			
Modulinhalte	The modul comprises (i) a seminar "Hearing" [2 SWS] (ii) an exercise "Fundamentals in psychoacoustic data analysis" [1 SWS], and a (iii) practical course [7 SWS] including aspects of planning and conducting psychoacoustic experiments.

Teilnahmevoraussetzungen	

Kompetenzziele

Upon successful completion of this course, students

- know the fundamental problems organisms share in development
- know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
- know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
- know the principles of gene regulatory networks in development and are able to explain examples
- are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
- have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties

skills:

- ++ deepened biological expertise
- + deepened knowledge of biological working methods
- ++ interdisciplinary thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + teamwork

Modulinhalte

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation

- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

Literaturempfehlungen

Modulinhalte

This module builds up on the knowledge and methods acquired in the module neu340 Invertebrate Neuroscience.

In the seminar, the knowledge on invertebrate systems and neural coding in general is deepened based on scientific literature.

In the practical exercise of the module, students can choose one topic from a range of different research questions on computation in the leech nervous system (e.g. comparison of different cell types, electrical and chemical synaptic connections, exact measurement of spike threshold, phase locking). Small groups (2-3) of students plan, perform, and analyze experiments (intracellular recordings) or model simulations (model framework will be provided or can be self-written based on module neu241 computational neuroscience - Introduction) to tackle their topic. The portfolio consists of assignments covering the planning, analysis, interpretation, and presentation of the results with feedback given during the course on each project stage.

Literaturempfehlungen	Course scripts and background and seminar literature will be available in Stud.IP. Scientific literature discussed in the seminar depends on the project topics.

Research Modules

neu610 - External Research Project

Modulbezeichnung	External Research Project
Modulkürzel	neu610
Kreditpunkte	15.0 KP
Workload	450 h (240 h contact or individual lab work / 30 h data analysis / 40 h background reading / 50 h participation in seminar of host group and preparation of presentation/ 60 h preparation of written internship report / 30 science communication workshop with poster preparation and presentation))
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neuroscience (Master) > Research Modules
Zuständige Personen	Köppl, Christine (Modulverantwortung) der Neuroscience, Lehrende (Prüfungsberechtigt)
Weitere verantwortliche Personen	all MSc Neuroscience teachers, see list of examiners
Teilnahmevoraussetzungen	<p>A learning agreement signed by the student, the supervisor at the host institution, and the Oldenburg supervisor (from the list of examiners), needs to be submitted to the examination office prior to the start of lab work.</p> <p>Module can be taken multiple times (see list of choices for each semester), however, examination of individual projects by the same supervisor is limited to EITHER two research projects (neu600 and / or neu610), OR one research project (neu600 or neu610) and the master thesis (first or second supervisor)</p>
Kompetenzziele	<p>+ Neurosci. knowlg.</p> <p>++ Expt. methods</p> <p>++ Independent research</p> <p>++ Scient. literature</p> <p>++ Social skills</p> <p>+ Interdiscipl. knowlg.</p> <p>++ Data present./disc.</p> <p>+ Scientific English</p> <p>+ Ethics</p> <p>Students are introduced to independent research in a specific area of neuroscience by a scientifically working group outside of the regular MSc Neuroscience faculty at the University of Oldenburg (usually a university, research institute, clinics or scientifically working company in Germany or abroad)</p> <p>Students perform individual research projects to learn:</p> <ul style="list-style-type: none">• planning and organization of a research project in a group outside of University of Oldenburg• formulate a scientific hypothesis• planning, performing and analyzing experiments and / or simulations• working with scientific background literature on the specific context of the project• oral presentation and discussion of backgrounds and results in the lab seminar• write a scientific report• prepare and present a scientific poster

Modulinhalte

The External Research Module is carried out under the guidance and supervision of an experienced researcher who is not part of the regular Neuroscience faculty at the University of Oldenburg. It comprises approximately 7

(minimum 5) weeks of experimental or theoretical work, individually or in small groups, and, usually, participation in a regular group seminar during that time.

After completion of the lab work, students will continue to be advised during the writing phase of the project report by the external supervisor and / or by a local Neuroscience faculty member.

The timing of projects is by individual arrangement with the supervisor.

Participation in the Stud.IP workshop on science communication (<https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7>) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Modulinhalte

The Research Module is carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners). It comprises approximately 7 (minimum 5) weeks of experimental or theoretical work, individually or in small groups, and a regular seminar for training, reporting and feedback advice during that time. Students can choose between many options of individual projects,

offered by the different groups involved in the MSc Neuroscience study program.

Research questions, methods and approaches differ between individual projects. Please refer to the list of options in Stud.IP and contact potential supervisors directly.

The timing of projects is by individual arrangement with the supervisor. Many, but not all, project options can also be scheduled during semester breaks, and / or as part-time options (lasting more than 7 weeks).

Note that, for some options, priority for admission to the project is given to students who passed a background module offered by the supervisor

Participation in the Stud.IP workshop on science communication (<https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7>) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

neu710 - Neuroscientific Data Analysis in Matlab

Modulbezeichnung	Neuroscientific Data Analysis in Matlab
Modulkürzel	neu710
Kreditpunkte	6.0 KP
Workload	180 h (180 h 2 SWS Lecture (VL) and Seminar (SE) Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments 2 SWS Supervised exercise (UE) Total workload 90 h: 28 h contact / 62 h individual preparation and working on assignments)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	Kretzberg, Jutta (Modulverantwortung) Kretzberg, Jutta (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Neurosci. knowlg. + Social skills + Interdiscipl. knowlg. ++ Maths/Stats/Progr. + Scientific English +Ethics Upon successful completion of this course, students <ul style="list-style-type: none">• understand basic programming concepts.• have good knowledge about the most important aspects of the programming language Matlab and are able to write their own programs.• have basic knowledge in statistical testing.• have developed and applied a programs for the analysis of electrophysiological data.• have practiced the interpretation of data analysis results in a neuroscience context

Modulinhalte

In each of the seven weeks, one or two specific topics are introduced in the lecture, practiced in the exercises and applied to electrophysiological data in a programming task:

Matlab basics: Matlab windows, work space, vectors & matrices, saving & loading, graphics, scripts, functions

- Data types: numbers, logicals, text, categorical
- Control flow: if statements, loops (for, while)
- Software development: Flow charts, testing, debugging
- Working with data: Searching & sorting, logical indexing
- Advanced data types: sparse matrices, 3D matrices, cell arrays, structures, tables
- Statistics: random numbers, probability distributions, descriptive statistics, inferential statistics
- Application data analysis: Implementation of spike train analysis methods and graphics, function handles
- Application Modelling: curve fitting, simulation of time series

With completing the seven tasks, each participant develops a toolbox of the most common analysis methods for electrophysiological (spike and continuous) data. In addition to writing and commenting code, the programs are applied to experimental data. The tasks include questions about the interpretation of these analysis results.

Hence, the goal of this module is two-fold: Learning the programming language Matlab and analysis methods for electrophysiological data.

neu730 - Biosciences in the Public Eye and in our Laws

Modulbezeichnung	Biosciences in the Public Eye and in our Laws
Modulkürzel	neu730
Kreditpunkte	6.0 KP
Workload	180 h (56h contact / 84h research for presentations / 40h term paper)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Biologie (Master) > Skills Modules• Master Biology (Master) > Skills Modules• Master Neuroscience (Master) > Skills Modules
Zuständige Personen	Köppl, Christine (Modulverantwortung) Sienknecht, Ulrike (Modulberatung) Köppl, Christine (Prüfungsberechtigt) Sienknecht, Ulrike (Prüfungsberechtigt)
Teilnahmevoraussetzungen	
Kompetenzziele	+ Expt. methods + Scient. Literature ++ Social skills ++ Interdiscipl. knowl + Data present./disc. + Scientific English ++ Ethics Upon completion of this course, students <ul style="list-style-type: none">• know basic rules of good scientific practise• are aware of the legal framework that is relevant to biological research, e.g. on animal welfare or genetically modified organisms• have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources• are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation• are able to prepare and give a coherent presentation in a team• have practised to lead a group discussion
Modulinhalte	<p>In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.</p> <p>Example topics: Good scientific practise and fraud Neuroenhancement Artificial intelligence Animal welfare, Animal experiments Overfishing, Nature conservation State-of-the-art genetic tools and their implications Genetically modified organisms, e.g., in food production, chimeras Stem cells Humans as experimental subjects</p> <p>A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.</p>

Teilnahmevoraussetzungen				
Kompetenzziele	+ Neurosci. knowlg. ++ Maths/Stats/Progr. + Data present./disc. The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/ . Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis). Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetic data from various noise models to assess signal-to-noise ratio in instrumental datasets.

Teilnahmevoraussetzungen	none
Kompetenzziele	++ Expt. Methods + Independent Research + Scient. Literature ++ Social skills ++ Interdiscipl. knowlg + Scientific English ++ Ethics Upon successful completion of this course, students <ul style="list-style-type: none">• know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language• understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint.• have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)• are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation• have practical skills in handling small rodents or birds or fish• have profound knowledge of anaesthesia, analgesia and basic principles of surgery.• have practised invasive procedures and euthanasia. NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments“ and EU directive D „Persons killing animals“.
Modulinhalte	Background knowledge is taught using the third-party online platform "LAS Interactive" which concludes with a written exam that has to be passed before the practical part. Topics covered are: <ul style="list-style-type: none">• Legislation, ethics and the 3Rs• Scientific integrity• Data collection "• Basic biology of rodents, birds and fish• Husbandry, and nutrition of rodents, birds and fish• Animal Welfare• Health monitoring

- Pain and distress
- Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

neu725 - Multivariate Statistics and Applications in R

Modulbezeichnung	Multivariate Statistics and Applications in R		
Modulkürzel	neu725		
Kreditpunkte	6.0 KP		
Workload	180 h (2 SWS Lecture: 30h contact / 60h self-studies and exam preparation 2 SWS Seminar: (30h contact / 60h statistical data analysis in R)		
Verwendbarkeit des Moduls	<ul style="list-style-type: none"> • Master Biology (Master) > Skills Modules • Master Neuroscience (Master) > Skills Modules 		
Zuständige Personen	Hildebrandt, Andrea (Modulverantwortung) Hildebrandt, Andrea (Prüfungsberechtigt)		
Teilnahmevoraussetzungen	recommended in semester 1/3 weeks 11-13 of summer semester		
Kompetenzziele	<p>Students will acquire basic knowledge in planning empirical investigations, managing and understanding quantitative data and conducting a wide variety of multivariate statistical analyses. They will learn how to use the statistical methodology in terms of good scientific practice and how to interpret, evaluate and synthesize empirical results from the perspective of statistical modeling in basic and applied research context. The courses in this module will additionally point out statistical misconceptions and help students to overcome them.</p> <p>+ Independent research + Scient. Literature + Social skills ++ Interdiscipl. knowledge ++ Maths/Stats/Progr. ++ Data preset./disc. + Scient. English ++ Ethics</p>		
Modulinhalte	<p>Part 1: Multivariate Statistics I (lecture): Graphical representation of multivariate data The Generalized Linear Modeling (GLM) framework Multiple and moderated linear regression with quantitative and qualitative predictors Logistic regression Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM) Non-linear regression models Path modeling Factor analysis (exploratory & confirmatory) (Multilevel) Structural equation modeling (SEM linear and non-linear)</p> <p>Part 2: Analysis Methods with R (seminar) Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM</p>

Abschlussmodul

mam - Master Thesis

Modulbezeichnung	Master Thesis
Modulkürzel	mam
Kreditpunkte	30.0 KP
Workload	900 h (2 SWS Seminar (SE): 28 h contact, 62 h individual preparation (reading, preparation of presentations) 18 SWS Thesis project: total 810 h. Percentages of contact (individual supervision) and independent work (independent lab work, data analysis, reading, thesis writing) depend on the topic and methods of the thesis project)
Verwendbarkeit des Moduls	<ul style="list-style-type: none">• Master Neuroscience (Master) > Abschlussmodul
Zuständige Personen	Kretzberg, Jutta (Modulverantwortung) der Neuroscience, Lehrende (Prüfungsberechtigt)
Teilnahmevoraussetzungen	<p>The start of the master thesis requires prior completion of at least 60 ECTS.</p> <p>Prior to the start of the thesis project, the form for application for the final thesis and final oral examination needs to be submitted to the examination office and approved by the examination committee. External examiners (not listed on the list of neuroscience examiners) need to apply for the status of an official examiner prior to the start of the project.</p> <p>Depending on project choice, please ask the supervisor for additional requirements.</p>
Kompetenzziele	<p>++ Neurosci. knowlg.</p> <p>++ Expt. Methods</p> <p>++ Independent research</p> <p>++ Scient. Literature</p> <p>++ Social skills</p> <p>+ Interdiscipl. knowlg.</p> <p>+ Maths/Stats/Progr.</p> <p>++ Data present./disc.</p> <p>+ Scientific English</p> <p>+ Ethics</p> <p>In their Master thesis, students perform individual research projects in the limited time of 6 month. Learning goals:</p> <ul style="list-style-type: none">• planning and organization of a research project• teamwork in a research group• formulate a scientific hypothesis• planning, performing and analyzing experiments and / or simulations• working with scientific background literature on the specific context of the project• oral presentation and discussion of backgrounds and results in the lab seminar• write a scientific report• optional: Prepare and present a scientific poster

Modulinhalte

The master thesis comprises 6 months of experimental or theoretical work and thesis writing, and a regular seminar for training, reporting and feedback advice during that time. The aim, methods and results of the thesis are presented in a final oral presentation and exam (Master's colloquium).

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Neuroscience study program. Research questions, methods and approaches differ between individual projects. The timing of projects is by individual arrangement with the supervisor. Note that, for some options, priority for admission to the project is given to students who passed a background and / or research module offered by the supervisor

Please refer to the Stud.IP MSc Neuroscience information community forum for information on the groups and contact potential supervisors directly.

The master thesis project is generally carried out under the guidance and supervision of a member of the Neuroscience faculty at the University of Oldenburg (see list of examiners) and additionally evaluated by a second examiner. External master thesis projects and / or evaluation by persons who are not on the list of examiners need prior approval by the examination committee.

Participation in the Stud.IP workshop on science communication (<https://elearning.uni-oldenburg.de/dispatch.php/course/overview?cid=6fc0dbbfa53d7b3f5e3680f52ac7d0f7>) and a poster presentation at the biology & neuroscience student poster symposium is not mandatory but highly recommended.

Literaturempfehlungen

Provided by the supervisor, depending on the project.
