- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

**Zuständige Personen**
- Neidhardt, John (Module responsibility)
- Neidhardt, John (Prüfungsberechtigt)
- Koch, Karl-Wilhelm (Prüfungsberechtigt)
- Jüschke, Christoph (Prüfungsberechtigt)

**Prerequisites**
- BSc (Biologie, Biochemie)

**Skills to be acquired in this module**
- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- interdisciplinary thinking
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- data presentation and discussion (E) (written and spoken)
- teamwork
- ethics and professional behaviour
- project and time management

**Module contents**
- Lecture: To improve knowledge in molecular genetics, molecular biology and cell biology in correlation with human diseases.
- Exercise: Learn to transfer the theoretical knowledge to experiments. Gaining methodological knowledge in molecular genetics, cell biology and therapeutic approaches. Initial training on how to perform research projects. Subjects of the lecture and seminar: Molecular bases of neurodegenerative diseases, structure and function of DNA/RNA/proteins/membranes, cytoskeleton, cell cycle, programmed cell death, cells in the social structure. Exercises: Learning current methods of molecular biology and human genetics; high throughput technologies, introduction to cell cultivation techniques.

Prerequisites

Skills to be acquired in this module

The aim of the module is to consolidate various aspects of ornithology. The module imparts advanced knowledge on different aspects of ornithology.

The students acquire:

- An extended knowledge of behavioral, sensory, morphological and physiological characteristics in birds and relevant fundamental concept in conservation, ecology and evolution morphological and physiological fundamentals and the resulting ecological and behaviour-biological consequences in birds
- Knowledge, presentation and discussion of relevant English literature from various fields of ornithology
  - ++ broad and deepened biological expertise
  - + deepened in depths knowledge of biological working methods
  - + interdisciplinary thinking
  - + critical and analytical thinking
  - + independent searching and knowledge of scientific literature
  - ++ data presentation and discussion in German and English (written and spoken)

Module contents

The module is composed of the lecture “Ecology, evolution and sensory biology in birds”, a seminar accompanying the lecture “Current Questions in Ornithology”, a seminar “Behavioural Ecology of Birds”, and a seminar “Methods in Field Ornithology”.

Lecture “Ecology, evolution and sensory biology in birds”:

This lecture covers in-depth and specific aspects of phylogeny, speciation and hybridisation, bird migration, orientation, behavioural ecology, population biology, life history and sensory systems of birds. Seminar “Current Questions of Ornithology”:

In this seminar, original English publications are presented and discussed which deal with current research
results from various fields covered in the lectures. Every student reads a paper on one scientific article, presents the study, and discusses the results of that article with the other participants.

Seminar “Behavioural Ecology of Birds” (option 1):

In the seminar, current literature relating to the life history of birds will be reported. During the term, each participant is presenting an original paper in a short talk and the group of students will be guided to critically discuss the paper.

Seminar “Methods in Field Ornithology” (option 2):

The core methods of field ornithology, such as stable isotopes, bird census, ringing, radar, radio tracking, etc., will be introduced with the help of English scientific papers by the students. In the presentations, the corresponding methods will be explained in detail with an emphasis on the pros and cons of the method. The aim of this seminar is to learn how to deal with scientific methods in a critical way.

Prerequisites
Skills to be acquired in this module
- ++ broad and in depths biological expertise
- ++ in depths knowledge of biological working methods
- ++ data analysis skills
- + interdisciplinary thinking
- + critical and analytical thinking
- ++ independent searching and knowledge of scientific literature
- ++ data presentation and discussion in German and English (written and spoken)
- + teamwork
- + project and time management
- + statistics and scientific programming

The aim of the module is to consolidate various aspects of ornithology as well as to impart up to date methods applied in ornithological research.

Module contents
The module comprises four required elective courses (6 CP each), two of which have to be chosen.

Required elective course 1: Laboratory course and seminar “Ecology of Colonial Seabirds” (6 CP) The Institute of Avian Research safeguards a long-term individual-based study on common terns: colonially breeding, migratory, piscivorous seabirds. Students spend a week at the colony (located at the Banter See in Wilhelmshaven) to ask a scientific question (e.g. about foraging behaviour, coloniality or courtship behaviour) and collect data to answer it, then spend a week analysing the data statistically, writing a short report in Biology Letters format and presenting their results to their peers. Students receive one mark for the report and one for the presentation and the final mark for the course will be the average of these two marks.

Required elective course 2: Laboratory course and seminar “Communication in Birds” (6 CP). Original
recordings from bird songs will be used to generate new data sets for the practical. From these recordings we will prepare spectrograms and analyze the waveforms and frequency spectra. Techniques and statistical methods that allow to classify song types from individuals or from populations will be introduced and applied. For example, cluster analysis and discriminant analysis are statistical methods to assess the dissimilarity between "objects" or song type characteristics. The theoretical background for the practical is provided by the seminar using a standard text book on bird song Catchpole & Slater 2008).

Required elective course 3: Laboratory course and seminar “Japanese Quail” (6 CP). Observations and investigations of behaviour in relation to reproductive activity of male and female Japanese quail, at the Institute of Avian Research. Students will learn about theory regarding pace of life and exploration behaviour and develop predictions for inter-individual differences in exploration behaviour in relation to sex and reproductive activity. These predictions will be tested with standardized behavioural observations and measurements of food intake in the quail. The data will be analysed and discussed in the broader context of life-history theory.

Required elective course 4: Laboratory course and seminar “Scientific research in field ornithology, incl. identification of birds” (6 CP) This course has three teaching objectives. Firstly, to impart knowledge of the local bird community. This is conveyed through practical courses, work on bird specimens, and lectures. Secondly, learning and getting to know some standard methods of field ornithology, e.g. breeding survey, waterbird counts, radio telemetry, mist netting. Both teaching objectives form the basis for the third teaching objective. In this, the students independently conduct a scientific ornithological study. The data are analysed in the course under supervision. The results are summarised in a two-page scientific publication. At the end of the course, a kind of scientific conference takes place, in which all scientific projects are presented and discussed. The final grade is made up of the grades for the presentations and the scientific publication.

bio675 - Molecular Ecology

Module label: Molecular Ecology
Modulkürzel: bio675
Credit points: 12.0 KP
Workload: 360 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Landscape Ecology (Master) > Basismodule

Zuständige Personen:
- Nolte, Arne (Module responsibility)
- Gerlach, Gabriele (Module counselling)
- Nolte, Arne (Prüfungsberechtigt)
- Gerlach, Gabriele (Prüfungsberechtigt)
- Dennenmoser, Stefan (Prüfungsberechtigt)

Prerequisites:
B.Sc. (Biologie, Umweltwissenschaften) M.Sc. (Biologie, Marine Umweltwissenschaften, Landschaftsökologie)

Skills to be acquired in this module:
The field of molecular ecology strives to identify relationships between species genotypes, phenotypes and ecological factors. It addresses questions about how organisms adapt and explains patterns of distribution and biodiversity. During the course, participants will get to know the biological background to design an experiment in the field of molecular ecology. We will discuss the state of the art according to literature. Participants will perform sampling and conduct steps of the analysis. The course will cover field methods (sampling) and lab methods (behavior experiments, genetic analyses, phenotypic analyses) as well as computer based analyses.

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
+ interdisciplinary thinking
+ critical and analytical thinking
+ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion (E) (written and spoken)
+ statistics & scientific programming

Module contents:
Lecture: AN/GG - Molecular ecology background of specific study systems. The lectures will introduce a study system that will be analyzed during the course (study systems may vary from year to year). It is the goal of the lecture to provide students with background information to develop an experimental design of a field study during the practical. Exercise: AN/GG - Mixed course with laboratory and field exercises. Samples will be collected in the field. One goal of the course is to apply modern analyses to understand how organisms are distributed. Another aspect is the application of molecular markers to analyze behavioral experiments.

Literatureempfehlungen:
will be announced during the course

#### Verwendbarkeit des Moduls
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules

#### Zuständige Personen
- Martinez Arbizu, Pedro Miguel (Module responsibility)
- Martinez Arbizu, Pedro Miguel (Prüfungsberechtigt)
- Wehrmann, Achim (Prüfungsberechtigt)
- Rossel, Sven (Prüfungsberechtigt)
- Gutt, Julian (Prüfungsberechtigt)
- Kröncke, Ingrid (Prüfungsberechtigt)

#### Prerequisites
- BSc (Biology)

#### Skills to be acquired in this module
- + deepened biological expertise
- + deepened knowledge of biological working methods
- + data analysis skills
- + interdisciplinary thinking
- + critical and analytical thinking
- + independent searching and knowledge of scientific literature
- + ability to perform independent biological research
- + data presentation and discussion (written and spoken) (E)
- + teamwork + ethics and professional behaviour
- + project and time management
- + statistics & scientific programming

Knowledge of fundamentals, topical subjects and methods in Marine Biology and Marine Geology. Studies and critical assessment of the scientific literature.

#### Module contents
- L: (AW) General Marine Geology
- E: Biogenic sedimentation, Interaction benthos-sediment
- SS: Plankton of the oceans
- MH: unicellular plankton
- IK: benthos of the North-Sea
- PM: biodiversity in the deep sea and on seamounts
- JG: conceptions and hypotheses of marine biodiversity
- GG: animal migrations and dispersal behaviour.

Methods and scientific work on research vessels.
A lecture comprises the above-mentioned subjects and imparts marine biological theories, research results and methods. In the seminar, research is presented and discussed. In the laboratory course/exercises, subjects are treated in coordination with the contents of the lecture. With the aid of a computer, data are analysed and interpreted statistically.

#### Literatureempfehlungen
- as announced in the lecture

bio733 - Evolutionary Biology Population Genetics

Module label: Evolutionary Biology Population Genetics

Modulkürzel: bio733

Credit points: 6.0 KP

Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Biology (Master) > Background Modules

Zuständige Personen:
- Gerlach, Gabriele (Module responsibility)
- Albach, Dirk Carl (Module counselling)
- Khan, Gulzar (Module counselling)
- Gerlach, Gabriele (Prüfungsberechtigt)
- Albach, Dirk Carl (Prüfungsberechtigt)
- Khan, Gulzar (Prüfungsberechtigt)

Further responsible persons:
Levent Khan

Prerequisites:
none

Skills to be acquired in this module:
- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills
- critical and analytical thinking
- independent searching and knowledge of scientific literature
- data presentation and discussion (E) (written and spoken)
- teamwork
- statistics & scientific programming

Module contents:
Lecture conveys knowledge about the fields of population genetics, evolution and speciation. Important laboratory methods regarding DNA sequencing will be learned as well as basics and background information on the analysis of dispersal, distribution, genetic diversity of plant and animal species. Exercise: Data sets and methods will be analysed to determine distribution and genetic exchange between populations.

Literaturempfehlungen:
current papers in Evolutionary Biology Futuyama D. Evolutionary Biology, Elsevier, Hartl & Clark Principles of Population Genetics, Sinauer

<td>Module contents</td>
<td>Lecture: Gene expression represents the first step of the translation of genomic information into a phenotype. This phenotype is of broad interest in all disciplines of biology. Gene expression data can reveal how genetic changes at single genes manifest phenotypically and how gene expression is regulated. The same data can also explain differences in life history and adaptation to different environments. Different perspectives can be understood by studying mechanisms of gene regulation as well as broad scale transcriptomics analyses. Exercise: We will generate and analyze gene expression data during the course including wet lab and computational methods. Practicals include the analysis of single-gene expression data as well as RNAseq data representing complete transcriptomes.</td>

The module aims at enabling students to apply theoretical knowledge to practical, hypothesis-based field studies within the scope of a seminar. The data derived from the individual projects performed are then to be documented and discussed in the form of a written laboratory course report oriented by a scientific publication and to be written in English. Several teachers cooperate to enable interdisciplinary approaches (e.g. botanical-zoological approaches).

**Module contents**

- S: Biogeographic and ecological classification and characterization of a biome (e.g. Mediterranean region, moist tropics, boreal zone), independent identification and treatment of scientific questions, presentation of scientific results in a "mini symposium" subsequent to the field studies.
- E: Planning and performing a field study project, data analysis, written report in the form of a scientific publication

- Khan, Gulzar (Prüfungsberechtigt)

Prerequisites:
none

Skills to be acquired in this module:
+ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
* independent searching and knowledge of scientific literature
++ data presentation and discussion in English (written and spoken)
++ statistics and scientific computing

Module contents:

Content of the module:

Lecture: The identification of organisms based on DNA sequences is well established and databased dedicated for this purpose are growing through ‘barcoding of life’ initiatives. Such information can be used to assign sequences extracted from environmental samples to individual species. This can be used to obtain species inventories and to study communities. While these methods are already used in fundamental research, they are only slowly adopted by fields such as conservation and ecosystem monitoring. The lecture covers concepts, methods, promises and problems of sequence based biomonitoring.

Seminar: participants present topics relevant to the module.

Exercise: We will generate and analyse sequence data data from environmental samples to generate species inventories for terrestrial and aquatic ecosystems. For this purpose we will extract eDNA from samples and apply next generation sequencing. The read data will be jointly analysed on the university hpc cluster. The participants will study methods and concepts associated with the analyses and present them in short presentations. The key aspect in the practical cours is to assign sequences to species and to discuss the applicability of the methods in fundamental research and in applied, management oriented research.

- Master's Programme Biology (Master) > Background Modules

Zuständige Personen
Martinez Arbizu, Pedro Miguel (Module responsibility)
Martinez Arbizu, Pedro Miguel (Prüfungsberechtigt)

Prerequisites
Safe apnoediving with aptitude test and medical fitness certificate

Skills to be acquired in this module
+ deepened knowledge of biological working methods
+ ability to perform independent biological research
++ teamwork
+ ethics and professional behaviour
+ project and time management

By actively participating in this module students acquire qualifications in the following fields: Biological oceanography, marine biology and marine ecology: - Geologische formation history of the Mediterranean Sea and Atlantic Ocean, respectively, or the Red Sea and adjacent seas - Oceanography and hydrology - Development of the faunal and floral composition of the Atlantic Ocean, the Mediterranean Sea and the Mediterranean region or the Red Sea (biogeography) - Commercial utilization of the seas and its impacts - Biotopes and biotic communities - Evolution, systematics, morphology, modes of life, and ecology of selected animal groups - Applying theoretical knowledge to real-world organisms/systems - Improved and specialized knowledge of species - Adaptation of life cycles - Interaction between organisms and environment - Dynamics of reef-building and reef-degrading processes - Threat to coral reefs/protection of marine environments

Methods: - Formulation and definition of scientific approaches and selection of methods - Observation and investigation of organisms and their habitats (snorkelling/diving) - Documentation of small research projects in groups in the style of a scientific publication - Editorial work to prepare a module report - Popular presentation of results to be published by the media and to be presented at the University Further skills: - Social engagement in groups/teamwork in projects - Independent scientific work in groups - Improvement of scientific discussion culture - Consciousness of the threat to coral reefs - Practising English - Dealing with the culture of the visited region Culture: - History, culture, politics, and religion Additionally: - Physiological aspects of apnoediving - Measures in case of accidents (also caused by "poisonous" organisms)

Module contents
Biodiversity of littoral biotic communities – topographical field research

Literatureempfehlungen
GRÜTER, W., 2001: Leben im Meer - Vielfalt und Zusammenhänge. Dr. Friedrich Pfeil Verlag, München. % Should be read prior to a marine biological excursion! This book will arouse your curiosity about the submarine world. A reading book!

Skills to be acquired in this module

- Upon successful completion of this course, students
  - know the fundamental problems organisms share in development
  - know the common basic steps of ontogenesis after comparing the life cycles of different species (both vertebrates and invertebrates)
  - know the fundamentals of the genetic control of cell-fate specification, morphogenesis, and organogenesis
  - know the principles of gene regulatory networks in development and are able to explain examples
  - are able to explain and discuss mechanisms of development across taxonomic groups and questions about the evolution of developmental mechanisms
  - have in-depth knowledge of the development of animal nervous systems, including cellular and net-work properties
  - ++ deepened biological expertise
  - + deepened knowledge of biological working methods
  - ++ interdisciplinary thinking
  - ++ critical and analytical thinking
  - + independent searching and knowledge of scientific literature
  - + ability to perform independent biological research
  - + teamwork

Module contents

Lectures on the fundamentals and concepts of developmental biology, including evolutionary aspects. Parallel seminars matching the topics of the lectures and emphasizing discussion. Lecture topics:

- Introduction to Developmental Biology
- Cell-Cell Communication
- Differential Gene Expression (I and II)
- Early Development of Vertebrates, Gastrulation
- Neurulation
- Brain Development
- Axonal Growth, Target Selection, Synaptogenesis and Refinement
- Neural Crest
- Mesoderm Development
- Morphogenesis
- Developmental Mechanisms of Evolutionary Change
- Model Organisms in Developmental Biology
- Transgenic Mice
- Medical Implications of Developmental Biology

#### Skills to be acquired in this module

Upon successful completion of this course, students have skills in methods of developmental biology:

- are capable of performing live embryo husbandry
- are able to carry out in-ovo stainings
- are familiar with the use of embryonic stage discrimination standards for model organisms
- document the observed embryonic stages by drawings with anatomical labelling
- are familiar with tissue preparation (including cryosectioning), the use of different molecular markers, and immunohistological staining methods
- microscopy, data analysis, and photographic data documentation
- know the standards of proper documentation of research data and the universal format of a lab notebook
- know how to carry out formal laboratory reports (and the structure of a scientific paper)
- have basic knowledge in the field of auditory system development
- have basic knowledge of the organisation of the auditory system across vertebrate groups
- have basic knowledge of the development of the middle and inner ear, as well as selected auditory brain centres
- are able to summarize current hypotheses about the evolution of the auditory system in vertebrates skills:
  - ++ deepened biological expertise
  - ++ deepened knowledge of biological working methods
  - ++ data analysis skills
  - ++ critical and analytical thinking
  - + independent searching and knowledge of scientific literature
  - ++ ability to perform independent biological research
  - + data presentation and discussion (written and spoken)
  - + teamwork
  - + ethics and professional behaviour
  - + project and time management

#### Module contents

Lab exercises in developmental biology of auditory research model organisms, such as chicken and mouse
embryos. Practical introduction to methods, such as in-ovo live observation; developmental stage discrimination and description, tissue preparation for histology, sectioning, staining, and microscopy, including data analyses. Seminars in the field of auditory system development and methods based on current literature.

#### Prerequisites
- ++ deepened biological knowledge
- ++ deepened knowledge of techniques in biology
- ++ knowledge in data analysis and presentation
- + cross-disciplinary knowledge and thinking
- ++ critical and analytical thinking
- + independent searching and knowledge of scientific literature
- ++ ability to perform independent biological research
- ++ data presentation and discussion (E) (written and spoken)
- + team work
- + ethics and professional behaviour
- ++ project and time management

#### Skills to be acquired in this module
- Lectures and Lab exercises in topics of evolutionary developmental biology, i.e. comparative develop-mental biology, such as the development of sensory systems in different species.

#### Literatureempfehlungen

- 56 h
neu141 - Visual Neuroscience - Physiology and Anatomy

Module label: Visual Neuroscience - Physiology and Anatomy
Modulkürzel: neu141
Credit points: 12.0 KP

Workload:
- 360 h
- 3 SWS Lecture (VO)
- Total workload: 90 h: 30h contact / 60h background literature reading and preparation for sh
- 1 SWS Seminar (SE)
- Total workload: 30h: 10h contact / 20h literature reading and preparation of result presentation
- 8 SWS Supervised exercise (UE)
- Total workload: 240h: 200h contact / 40h results analysis, writing of short reports for portfolio

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Molecular Biomedicine (Master) > Background Modules
- Master's Programme Neuroscience (Master) > Background Modules

Zuständige Personen:
- Greschner, Martin (Module responsibility)
- Greschner, Martin (Prüfungsberechtigt)
- Dedek, Karin (Prüfungsberechtigt)
- Janssen-Bienhold, Ulrike (Prüfungsberechtigt)
- Puller, Christian (Prüfungsberechtigt)

Prerequisites:
- Basic knowledge of neurobiology

Skills to be acquired in this module:
- ++ Neurosci. knowlg.
- ++ Expt. Methods
- + Independent research
- ++ Scient. Literature
- + Social skills
- + Maths/Stats/Progr.
- ++ Data present./disc.
- + Scientific English
- + Ethics

Upon successful completion of this course, students:
- have basic knowledge of electrophysiological techniques used in neuroscience research
- have acquired first practical skills in some electrophysiological techniques
- have acquired basic skills in data analysis
- have knowledge on retinal physiology and anatomy of the visual system
- have basic knowledge of brain structures and their function
- have profound knowledge of the architecture and circuits of the vertebrate retina
- have acquired basic skills in histological techniques (tissue fixation, embedding, sectioning, staining procedures, immunohistochemistry)
- have acquired fundamental skills in microscopy (differential interference contrast microscopy, phase-contrast microscopy, confocal microscopy)

Module contents:
The background module Neurophysiology consists of two weeks of theoretical introduction and two weeks of hands-on lab exercises in patch or extracellular recordings and two weeks of hands-on lab exercises in anatomy.

The seminars cover the following topics:
- Visual system
- Introduction to electrophysiological methods
- Introduction into methods used in neuranatomy and neurochemistry
- Introduction into microscopy and image analysis
- Presentation and discussion of results relating to the literature

Literatureempfehlungen:
Course scripts and mandatory scientific literature discussed in the seminar will be available in Stud.IP. Background and seminar literature will be available in Stud.IP.

Prerequisites
- Fundamentals of Neurobiology, Behavioural Biology, Evolution, Ecology

Skills to be acquired in this module
++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of behavioural ecology and neuroethology
- are able to present and critically assess scientific data and approaches

Module contents
The lecture “Neuroethology” provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.
The lecture “Behavioural ecology” provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.
In the seminar “Current issues of Ethology”, current original literature relating to behavioural biology is reported and discussed.

Zuständige Personen
- Thiel, Christiane Margarete (Module responsibility)
- Thiel, Christiane Margarete (Module counselling)
- Thiel, Christiane Margarete (Prüfungsberechtigt)
- Gießing, Carsten (Prüfungsberechtigt)

Prerequisites
Skills to be acquired in this module
++ Neurosci. knowlg. + Expt. methods Independent research + Scient. literature + Social skills
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics

Upon successful completion of this course, students
- know the fundamentals of neurotransmission
- know the basic neural mechanisms underlying attention, learning, emotion, language and executive functions
- understand the relationship between disturbances in neurotransmitter systems, cognitive functions and psychiatric disease
- know the principles of drug treatment for psychiatric disorders
- have in-depth knowledge in selected areas of these topics
- are able to understand, explain and critically assess neuroscientific approaches in animals and humans
- are able to understand and critically assess published work in the area of cognitive neuroscience

Module contents
The lecture "Introduction to Cognitive Neuroscience" gives a short introduction into neuroanatomy and cognitive neuroscience methods and then covers different cognitive functions.
Lecture topics:
- History of cognitive neuroscience
- Methods of cognitive neuroscience
- Attention
- Learning
- Emotion
- Language
- Executive functions

The supervised excersise either deepens that knowledge by excersises or discussions of recent papers/ talks on the respective topic covered during that week.
The lecture "Psychopharmacology" illustrates the connection between neurotransmitters and behaviour and its links to psychiatric disease. The lecture contains several interactive parts to consolidate and critically evaluate the acquired knowledge.
Lecture topics:
- Introduction to Terms and Definitions in Drug Research
- Dopaminergic and Noradrenergic System
- Cholinergic and Serotonergic System
- GABAergic and Glutamatergic System
- Addiction
- Depression
- Schizophrenia
- Anxiety
- Alzheimer's Disease

- attendance in pre-meeting

Skills to be acquired in this module
++ Neurosci. knowlg.
++ Expt. Methods
+ Scient. Literature
+ Social skills
+ Maths/Stats/Progr.
+ Independent Research
+ Data present./disc.
+ Scientific English
+ Ethics

Upon successful completion of this course, students
- have knowledge on invertebrate neuronal systems in comparison to vertebrate systems
- have discussed an overview of experimental and theoretical methods of invertebrate neuroscience
- have acquired first practical skills in intracellular recordings from invertebrate neurons
- have acquired basic skills in data analysis
- have acquired an intuitive understanding of membrane potential and action potential generation based on computer simulations

Module contents

The module consists of three weeks of seminar and hands-on lab exercises on intracellular recordings from leech neurons, as well as computer simulations to study the basis of membrane potential and action potential generation.

The seminar covers the following topics:
- Invertebrate neuronal systems in comparison to vertebrate systems
- Ion channels, membrane potential and action potential generation
- Introduction to electrophysiological methods
- Introduction to data analysis methods

In the practical exercises, portfolio assignments will be performed on:
- Qualitative electrophysiological classification of different cell types in the leech nervous system
- Quantitative analysis (stimulus - response relationship) of at least one cell type
- Action potential generation: Comparison of model simulations and experiments
- Planning a small individual team-work project based on the techniques taught in this module, that can be used as basis for the module neu345

Literatureempfehlungen
Course scripts and mandatory scientific literature (3 review articles) discussed in the seminar will be available in Stud.IP Background and seminar literature will be available in Stud.IP

Introduction to Auditory Physiology. May serve as preparation for a Research Module in this area.

Upon successful completion of this course, students

- have profound knowledge on auditory sensory processing at several levels (including cochlear transduction mechanisms, central auditory processing)
- have basic knowledge of the large range of techniques used in auditory research
- are able to read and critically report to others on an original research paper in auditory neuroscience
- are able to research and review a specific topic in auditory neuroscience

<table>
<thead>
<tr>
<th>Module contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>One week introductory block course, comprised of a lecture series and matching seminar that emphasizes discussion.</td>
</tr>
<tr>

**Verwendbarkeit des Moduls**
- Master's Programme Biology (Master) > Background Modules
- Master's Programme Neurocognitive Psychology (Master) > Mastermodule
- Master's Programme Neuroscience (Master) > Background Modules

**Zuständige Personen**
- Gießing, Carsten (Module responsibility)
- Gießing, Carsten (Prüfungsberechtigt)

**Prerequisites**
Enrolment in Master's programme Neurocognitive Psychology.

**Skills to be acquired in this module**

**Goals of module:**
Students will learn the basics about planning and performing a neuroimaging study. They will focus on the statistical and methodological background of functional neuroimaging data analysis and analyse a sample functional MRI data set.

**Competencies:**
- ++ experimental methods
- ++ statistics & scientific programming
- + data presentation & discussion
- ++ group work

**Module contents**
Theoretical knowledge on functional MRI data analysis
Planning, performance and analysis of functional neuroimaging studies using MATLAB-based software
Hands-on fMRI data analysis with SPM

**Literatureempfehlungen**

**Links**
- Language of instruction: English
- Duration (semesters): 1 Semester
- Module frequency: The module will be offered every summer term.
- Module capacity: 15 (The remaining places are reserved for Biology and Neuroscience students.)

**Reference text**
Since the module is primarily offered for the Master's programme Biology it has to be offered as a blocked course. Please contact us if you are interested in the module but have problems with interfering other courses.

PLEASE NOTE:
We strongly recommend to take either psy170, psy270, psy280, or psy220 to gain methodological competencies (EEG, fMRI, TBS, HCI) that are needed for most practical projects and Master's theses!

**Modullevel / module level**: MM (Mastermodul / Master module)
**Modulart / typ of module**: Wahlpflicht / Elective
**Lehr-/Lernform / Teaching/Learning method**: blocked course with lecture, interactive seminar and exercise parts
**Vorkenntnisse / Previous knowledge**: Students need to have solid statistical knowledge as taught in the Introductory Course Statistics and in

<td>External research projects are done on an individual basis. They are supervised by one person from Oldenburg (see list of examiners, <a href="https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte">https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte</a>) and a local supervisor at any university or research institution in Germany and abroad. Please contact Gerhard Zotz (<a href="mailto:Gerhard.zotz@uol.de">Gerhard.zotz@uol.de</a>) for details. See <a href="https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/">https://uol.de/ibu/studium-und-lehre/fach-master-biology/downloads-und-links/</a> (Learning Agreement for External Research Module)</td>
</tr>
</tbody>
</table>

Skills to be acquired in this module

++ deepened biological expertise
++ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion (written and spoken)
+ teamwork
+ project and time management
+ statistics & scientific programming

Students perform individual research projects to learn: • planning and organization of a research project in a group outside of University of Oldenburg • formulate a scientific hypothesis • planning, performing and analyzing experiments and / or simulations • working with scientific background literature on the specific context of the project • oral presentation and discussion of backgrounds and results in the lab seminar • write a scientific report in publication format • prepare and present a scientific poster

Module contents

Students are introduced to independent research in a specific area of biology by a scientific working group outside of the regular IBU Biology faculty at the University of Oldenburg (usually a university research institute in Germany or abroad).

The content and venue of this module is chosen in close coordination with the Prüfungsausschuss Master Biologie, possibly with consultations of other professors. Course work should cover all parts of a scientific project, i.e. data collection, data analysis and the presentation of the results. Irrespective of the particular venue (universities, research institutes) the student has to report to a professor in Oldenburg in form of a written report and an oral presentation, both in English.

Note: • all members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor (see list of examiners, https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte), students should contact appropriate supervisors individually • prior to project start, external and local supervisors must fill the learning agreement form • the supervisor at the host institution is invited to submit a short written statement of assessment, final grading is done by the local supervisor • participation in a joint poster presentation of concurrent research modules is highly recommended.

Bio900 - Biology Research Module

Module label: Biology Research Module

Modulekürzel: bio900

Credit points: 15.0 KP

Workload: 450 h

Verwendbarkeit des Moduls:

- Master's Programme Biology (Master) > Research Modules
- Master's Programme Biology (Master) > Research Modules

Zuständige Personen:

Zotz, Gerhard (Module responsibility)
der Biologie, Lehrende (Module counselling)

Zotz, Gerhard (Prüfungsberechtigt)
der Biologie, Lehrende (Prüfungsberechtigt)

Prerequisites:

Students will learn to plan, perform and analyse a study in a biological field. Topics will be chosen in close coordination with teaching staff. Depending on the particular project, knowledge in statistics, molecular biology, physiology, modelling, or ethology will be necessary. Results will be related to the current biological literature in a written report and be presented in the seminar of the hosting working group.

+ deepened knowledge of biological working methods
++ data analysis skills
++ critical and analytical thinking
++ independent searching and knowledge of scientific literature
++ ability to perform independent biological research
++ data presentation and discussion in German and English (written and spoken)
+ teamwork
++ project and time management
+ statistics & scientific programming

Module contents:

The students develop an empirical investigation, carry it out and analyse the results. The students present and discuss their project both orally and in writing.

Reference text:

Students can choose between many options of individual projects, offered by the different groups involved in the MSc Biology study program. All members of the regular IBU Biology faculty at the University of Oldenburg can act as local supervisor (see list of examiners, https://uol.de/fk5/studium/studiengaenge/pruefungsberechtigte). Please refer to the list of options in Stud.IP and contact potential supervisors directly.

Within the Modul bio900 is it possible to take several courses as long as their contents differ substantially. When taking the course group 5.02.960 it is mandatory to choose two courses out of the group A – D.

bio880 - Skills in Plant Systematics

Module label: Skills in Plant Systematics
Module code: bio880
Credit points: 6.0 KP
Workload: 180 h

Verwendbarkeit des Moduls:
- Master's Programme Biology (Master) > Skills Modules

Zuständige Personen:
- Albach, Dirk Carl (Module responsibility)
- von Hagen, Klaus Bernhard (Module counselling)
- Albach, Dirk Carl (Prüfungsberechtigt)
- von Hagen, Klaus Bernhard (Prüfungsberechtigt)
- Khan, Gulzar (Prüfungsberechtigt)

Prerequisites:
In this module, we provide the skills necessary to describe and distinguish species for floras and monographs/first publication of species. For that, an overview over the plant kingdom is provided. Further, various non-molecular methods of systematics are practiced, such as morphometry, SEM, identification key generation, nomenclature, species delimitation methods, and interpretation of phylogenetic analyses.

- deepened biological expertise
- deepened knowledge of biological working methods
- data analysis skills + critical and analytical thinking
- independent searching and knowledge of scientific literature
- ability to perform independent biological research
- data presentation and discussion (E) (written and spoken)
- teamwork
- statistics & scientific programming

Module contents:
In the seminar we provide an overview over the larger groups of plants and characters for their grouping. We analyse methods for phylogeny generation, angiosperm classification and description of new taxa. In the exercises morphological characters are investigated in various ways and internet resources for further morphological characters presented. Species delimitation methods for molecular and morphological characters are used. Identification keys are generated and nomenclatural rules discussed.

Skills to be acquired in this module:
- biological knowledge
- biologically relevant, natural / mathematical scientific basic knowledge
- interdisciplinary knowledge and thinking
- abstract, logical, and analytical thinking
- expanded knowledge in a specific biological field
- presentation of results and factual discussion, both written and spoken
- (scientific) communication skills

To develop skills in the critical analysis and interpretation of results and themes in diverse areas of modern biology, including (but not limited to) evolutionary biology, population genetics, biodiversity, ecology, genomics, ornithology, and neurobiology.

Module contents:
Discussion and interpretations of one or more themes in modern biology. The themes and exact content will be provided by the instructor(s) at the beginning of the course. The module bio890 may be taken more than once as long as the content covered in the seminars differ substantially.

**Module contents**

- documentation of a natural history collection (e.g., university or from an herbarium) including a description of the object(s), digitalization, check for traces of use and/or damage;  
- if needed: restauration, i.e. fixing loose plants on herbarium vouchers;  
- trace biographies of the collector and the collection/object (provenance);  
- trace comparable collections using databases;  
- as far as possible: identification/validation of scientific identification using databases and scientific literature  
- generating and answer scientific questions based on the collection or develop an educational approach (e.g., teaching lecture)  
- communicate the results, i.e. prepare a poster for a congress and defend your theses and summarize the results in a manuscripts;

- Sienknecht, Ulrike (Module counselling)
- Köppl, Christine (Prüfungsberechtigt)
- Sienknecht, Ulrike (Prüfungsberechtigt)

Prerequisites

- Expt. methods
- Scient. Literature
- Social skills
- Interdiscipl. knowlg
- Data present./disc.
- Scientific English
- Ethics

Skills to be acquired in this module

- know basic rules of good scientific practise
- are aware of the legal framework that is relevant to biological research, e.g., on animal welfare or genetically modified organisms
- have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources
- are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
- are able to prepare and give a coherent presentation in a team
- have practised to lead a group discussion

Upon completion of this course, students

- know basic rules of good scientific practise
- are aware of the legal framework that is relevant to biological research, e.g., on animal welfare or genetically modified organisms
- have practised to research and summarize different viewpoints on biological research, using both scientific (peer-reviewed) and non-scientific sources
- are able to identify and critically discuss ethical conflicts in biological research, e.g., in the context of stem cell research or data manipulation
- are able to prepare and give a coherent presentation in a team
- have practised to lead a group discussion

Module contents

In supervised exercises, students research the ethical aspects and controversial issues on several specific topics in the biosciences. Everyone participates in researching all topics. Students then take turns in summarizing and presenting each topic in small teams, and leading a critical discussion of each topic. Problem-based, independent research of the scientific background by the students is an integral part of this module.

Example topics:
- Good scientific practise and fraud
- Neuroenhancement
- Artificial intelligence
- Animal welfare, Animal experiments
- Overfishing, Nature conservation
- State-of-the-art genetic tools and their implications
- Genetically modified organisms, e.g., in food production, chimeras
- Stem cells
- Humans as experimental subjects

A bonus can be obtained through active participation during the semester. Active participation requires regular oral contributions to the group discussions, that go beyond giving your own talks. A bonus improves the exam mark by one step (0.3 or 0.4). The bonus is optional, an exam mark of 1.0 is achievable without a bonus. A bonus cannot be applied to pass a failed exam.

**Skills to be acquired in this module**  
++ Exp. Methods  
+ Independent Research  
+ Scient. Literature  
++ Social skills  
++ Interdiscipl. knowlg  
++ Scientific English  
++ Ethics

Upon successful completion of this course, students  
- know the relevant EU legislation governing animal welfare and are able to explain its meaning in common language  
- understand and are able to critically discuss salient ethical concepts in animal experimentation, such as the three Rs and humane endpoint  
- have basic knowledge of the biology and husbandry of laboratory animal species held at the University of Oldenburg (rodents or birds or fish)  
- are able to critically assess the needs and welfare of animals without compromising scientific integrity of the investigation  
- have practical skills in handling small rodents or birds or fish  
- have profound knowledge of anaesthesia, analgesia and basic principles of surgery  
- have practised invasive procedures and euthanasia

NOTE: These objectives aim to satisfy the requirements for EU directive A „Persons carrying out animal experiments” and EU directive D „Persons killing animals”.

**Module contents**  
Background knowledge is taught using the third-party online platform “LAS Interactive” which concludes with a written exam that has to be passed before the practical part. Topics covered are:  
- Legislation, ethics and the 3Rs  
- Scientific integrity  
- Data collection  
- Basic biology of rodents, birds and fish  
- Husbandry, and nutrition of rodents, birds and fish  
- Animal Welfare  
- Health monitoring
Pain and distress
Euthanasia

Practical procedures will first be demonstrated, important aspects will then be practiced under supervision by every participant, on an animal model of their choice (rodents, birds or fish):

- Handling and external examination
- Administration of substances, blood sampling
- Euthanasia and dissection
- Transcardial perfusion
- Anaesthesia and surgery

Prerequisites
non-native speakers

Skills to be acquired in this module
- Neurosci. knowlg.
- Social skills
- Data present./disc.
- Scientific English

Upon completion of this course, students
- have increased their proficiency in different forms of scientific presentation and communication in English, with special emphasis on neuroscience
- are able to express themselves with correct sentence structure and grammar, correct use of idioms and correct pronunciation
- are proficient in different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone)
- are able to recognize and avoid common errors of non-native speakers.

Module contents
Lectures cover
- characteristics of the different forms of scientific presentations
- sentence structure using the passive voice
- scientific vocabulary and terminology as contrasted to common speech
- appropriate language for communication with scientific editors and referees

Students read neuroscience texts of an advanced level and practice explaining and presenting these in both written and oral form. They also practice different contexts of scientific communication (e.g., paper, poster and informal exchange by email or phone). Emphasis is placed on individual problems in pronunciation and language use errors.

Prerequisites
Skills to be acquired in this module
- * Neurosci. knowlg.
- ** Maths/Stats/Progr.
- + Data present./disc.

The objective of the module is the acquisition of programming skills with focus on analysis of neurobiological datasets, using the programming language python. Python is available for any computer platform (PC, Mac, Linux) and is open source (for free), see https://www.python.org/.

Students will learn how to write effective scripts for data processing and visualisation, making use of pre-existing program libraries for various generic purposes (maths, statistics, plotting, image analysis).

Typical applications will be analysis of time series (e.g., electrophysiological recordings, movement data), images (e.g. immunohistochemical images, MRI slices), and spatio-temporal correlations in volume data. Students will also learn how to produce synthetica data from various noise models to assess signal-to-noise ratio in instrumental datasets.

Module contents
- Data types and data structures, control structures, functions, modules, file input/output
- Standard libraries and SciPy libraries (Matplotlib, NumPy,...), scikit-image, VPython, ...

Skills to be acquired in this module
- + Neurosci. knowlg.
- ++ Scient. Literature
- ++ Social skills
- ++ Interdiscipl. knowlg.
- ++ Data present./disc.
- + Scientific English
- ++ Ethics

Upon successful completion of this course, students will have thought about and discussed in depth scientific, social and ethical aspects of communication in and about neuroscience. In particular, participants practice critical reading of neuroscience literature, learn about the scientific publication process and discuss science communication to the general public.

**Module contents**
The overall goal of critical discussion of neuroscientific results in a scientific, social and ethical context requires preparation and active participation both before (Stud.IP wiki) and during the weekly sessions. Each participant is responsible for the preparation and moderation of at least one session in a group of 2-3 students. For passing the module, additional active participation is required in at least 10 of the seminar sessions. The specific papers and topics that are discussed vary, but typically cover:

- How to find literature?
- How to read different types of scientific papers: Classic papers, review papers, perspective papers, recent original papers?
- Publication process, Authorship and impact metrics
- Alternative publication paths and data sharing in neuroscience
- Science communication for the general public and on social media
- Face-to-face scientific communication

**Literatureempfehlungen**
List of published papers, as well as online resources for preparation will be selected by the teachers and participants and announced via Stud.IP.

Preparation, presentation and critical discussion of own studies for an international audience:
- participate in an international meeting
- prepare a poster or talk for an international meeting
- present own results in a way that is appropriate for the target audience
- put own studies into the context of scientific literature
- acquire additional knowledge about a broader field of research

**Module contents**

Active participation in a scientific conference, workshop, summer school etc, lasting a minimum of 3 full days. Student must be the presenter (poster or talk) and an author of the presented work, typically carried out in the context of a research module or the Master thesis.

It is mandatory to present the poster or talk to Christine Köppl or Jutta Kretzberg prior to the meeting and incorporate the feedback on the presentation.

- Scientific literature
- Social skills
  - + Interdisciplinary knowledge
  - + Mathematics/Statistics/Programming
  - + Data presentation/dissemination
- Scientific English
  - + Ethics

## Module contents

### Part 1: Multivariate Statistics I (lecture):
- Graphical representation of multivariate data
- The Generalized Linear Modeling (GLM) framework
- Multiple and moderated linear regression with quantitative and qualitative predictors
- Logistic regression
- Multilevel regression (Generalized Linear Mixed Effects Modeling – GLMM)
- Non-linear regression models
- Path modeling
- Factor analysis (exploratory & confirmatory)
- (Multilevel) Structural equation modeling (SEM linear and non-linear)

### Part 2: Analysis Methods with R (seminar)
- Data examples and applications of GLM, GLMM, polynomial, spline and local regression, path modeling, factor analyses and SEM

<td>Successful completion of the Master module demonstrates that students are able to work on a problem in the field of Biology within a fixed period applying scientific methods.</td>
</tr>
<tr>
<td></td>
<td>++ deepened biological expertise</td>
</tr>
<tr>
<td></td>
<td>++ deepened knowledge of biological working methods</td>
</tr>
<tr>
<td></td>
<td>++ data analysis skills</td>
</tr>
<tr>
<td></td>
<td>++ critical and analytical thinking</td>
</tr>
<tr>
<td></td>
<td>++ independent searching and knowledge of scientific literature</td>
</tr>
<tr>
<td></td>
<td>++ ability to perform independent biological research</td>
</tr>
<tr>
<td></td>
<td>++ data presentation and discussion in German and English (written and spoken)</td>
</tr>
<tr>
<td></td>
<td>++ teamwork</td>
</tr>
<tr>
<td></td>
<td>++ ethics and professional behaviour</td>
</tr>
<tr>
<td></td>
<td>++ project and time management</td>
</tr>
</tbody>
</table>
| **Module contents** | Preparing the Master thesis 
Active participation in the seminar of the research group, in which the Master thesis is written |
| **Literaturempfehlungen** | Supervisors may supply an initial reading list with important literature. The students are expected to find and use further literature as needed. |
| **Links**        | |
| **Language of instruction** | English |
| **Duration (semesters)** | 1 Semester |
| **Module frequency** | semiannual |
| **Module capacity** | unlimited |
| **Modullevel / module level** | Abschlussmodul (Abschlussmodul / Conclude) |
| **Modulart / typ of module** | Pflicht / Mandatory |
| **Lehr-/Lernform / Teaching/Learning method** | Seminar, Masterarbeit |
