Entry requirements

Skills to be acquired in this module
Building on the existing knowledge of the participants, the course will deepen knowledge of European and international law, whereby emphasis will be laid on those areas in which the dividing line between state intervention (public law) and market rights (private law) has become blurred. Students will be able to analyze contemporary regulatory techniques inherent in the multilevel system of governance and to assess them from an interdisciplinary (economic and legal) perspective.

Module contents
The module comprises two courses, one of which will be taught by PD Dr. Meyerholt, and the other together with Prof. Godt. The first course deals with selected issues in environmental law. With the general structure of environmental law as a point of departure, the course content will be taught in a holistic manner that will also incorporate the leading decisions of the higher courts. The second course takes into consideration intra-disciplinary environmental law as situated between public and private economic law, whereby special focus will be laid on the European and international dimensions.

Entry requirements:

Skills to be acquired in this module:
The students should...
- know and understand basic concepts, instruments and theories in the context of corporate social responsibility and corporate sustainability
- be able to apply conceptual frameworks to analyze and critically question the sustainability of companies
- develop options to improve the sustainability of companies and derive recommendations for their implementation in practice

Module contents:
The module "CSR" provides an overview of the debates on the social responsibility of firms. The first session will briefly introduce the historical debate on Corporate Social Responsibility and Corporate Sustainability and delineate important concepts. The following sessions will use concrete company case studies as a basis for a critical discussion of central questions in the context of corporate social responsibility and sustainability. Questions that will be discussed are, amongst others:
- How can one determine whether a firm acts in a socially and ecologically sustainable way?
- Which factors drive and hinder the diffusion of socially and ecologically superior solutions and companies in the market?
- In what extent is there a conflict between firm and market growth on the one hand and sustainability on the other hand?
- Which possibilities does a company have to deal with conflicts between social/ecological and economic goals?
- How can existing firms and value chains be transformed toward sustainability?
- What is the role of managers and boards of directors for organizational change toward sustainability?
- How does the ownership and financial structure of firms influence their strategy toward sustainability?
- In what extent can cooperation and partnerships between organizations help integrate social and ecological aspects in firms?
In addition to discussing these questions by drawing on company case studies, students will be introduced to the corresponding theoretical concepts and frameworks in the academic literature. Also, students will be given the opportunity to test different strategies for implementing sustainability in organizations during a simulation, which allows them to gain first-hand insights into the emerging challenges. Toward the end of the course, students will apply and deepen the knowledge they have gathered over the semester by writing a seminar thesis.

Module label: International Sustainability Management

Module code: wir902

Credit points: 6.0 KP

Workload: 180 h

Used in course of study:
- kein Abschluss European Studies in Global Perspectives > Society, Economy and Politics
- Master Sustainability Economics and Management > Basis- und Akzentmodule
- Master Water and Coastal Management > Bereich Socioeconomics
- Master Wirtschaftsinformatik > Bereichswahlmodule
- Master Wirtschaftsinformatik > Module der Wirtschafts- und Rechtswissenschaften (Master)

Contact person:
- Module responsibility: Bernd Siebenhüner
- Authorized examiners:
  - Alkje Wegner
  - Stefanie Sievers-Glotzbach

Entry requirements:
- No

Skills to be acquired in this module:
- Knowledge on the basic concepts and strategies of sustainability management related to corporate practice:
  - Sustainability: Basic concepts, strategies,
  - Domestic and international challenges for business,
  - Business case for sustainable development,
  - Integrative concepts of sustainable corporations,
  - Sustainable strategies,
  - Management instruments
- Discussing topics of international sustainability management with students from different scientific disciplines.
- Ability to present and evaluate different concepts and instruments of international sustainability management.

Module contents:
This module consists of a one lecture and one seminar (2 weekly contact hours per lecture/seminar) dealing with basic concepts and strategies of sustainability management within corporations. Both, lecture and seminar give an overview of current sustainability strategies for companies and present a variety of instruments to integrate and initiate sustainable development within corporations. While the lecture focuses more on theoretical approaches and introduces basic concepts of corporate sustainability management, the seminar provides a variety of case studies and business cases to demonstrate different concepts and instruments of sustainability management. The seminar provides the possibilities for inter- and transdisciplinary exchange and discussions.

#### Entry requirements

- students:
  - have basic information about national and european environmental and sustainability governance
  - describe the history of national and european environmental and sustainability governance
  - reflect upon central principles, instruments, players and strategies in environmental and sustainability governance
  - analyze selected topics of environmental and sustainability governance based upon central principles, instruments, players and strategies

#### Module contents

- Introduction to environmental politics - Politics, Political Science, Policy Analysis
- Environment – Terms and Concepts - Historical Foundations of Environmental Politics
- Actors, institutions and governance structures; Actors in Environmental Policy
- Socio-ecological systems framework
- Environmental Policy in Germany
- Environmental Policy in the European Union
- Steering and principles in environmental policy
- Instruments in environmental policy
- Policy process and environmental policy
- Multilevel and reflexive governance - Multilevel governance
- International environmental governance
- Science-Policy Interface

| Skills to be acquired in this module | The Introduction to processes and systems of the dynamic Earth constituting the foundation for sustainable management is presented to produce:  
                                       • Knowledge about processes and systems relevant for sustainable management using knowledge and methodologies from all science disciplines in an integrated way.  
                                       • Skills in elaborating on complex tasks of environmental management using an interdisciplinary science based approach and to present related findings to non-expert audiences.  
                                       • Lecture room presentations and discussions based on slides and black/white board usage.  
                                       Short films will be presented to endorse the intended achievements. |
| Module contents                   | Lecture: Understanding the Bioplanet Earth (2 contact hours/week) (Vorlesung, 2 LVS: Aufbau und Entwicklungs geschichte der Erde; Dynamik der Erde: Kreisläufe und Evolutionsprozesse; Lebensraum Boden; Wasser; Klima; Biodiversität; Lagerstätten und Ressourcener schöpfung; Ökosysteme der Erde.)  
                                       Seminar: Cases in Understanding the Bioplanet Earth (2 contact hours/week)  
                                       Introduction to key processes and to systems dynamics of the Earth representing a planet being alive driven by external and internal forces interacting with biological activities. Topics of the lecture comprise introductions to the evolution of the universe and solar systems, the differentiation and sub-systems of the Earth’s interior, minerals and rock cycle, soils, ocean and climate, evolution and biodiversity, organisms and physiology, water and element cycling plus insights into ecosystems under different climate conditions. The cases are selected in order to (i) highlight certain principles and theories in geo- and biosciences and (ii) exemplify critical objects and phenomena in modern practice of resource and environmental management.  
                                       This module consists of topical programmes of the Master Cluster Environment and Sustainability. |
| Reader's advisory                 | A 'foundation material pool' will be made available online for students and lecturers providing paper books, reports and media covering the topics of the lecture and the cases |

none

**Skills to be acquired in this module**
This course aims at giving students an understanding of reasons, goals and instruments for climate policy, as well as implied complications due to the long term characteristics and the international dimension of climate change. Students first learn basics about the natural science of climate change and the main statements of climate research about the anthropogenic contribution to climate change. The economic interpretation of high pollution as a symptom of a market failure then leads to the treatment of policy instruments, and the understanding of economic efficiency as a prerequisite for effective climate policy. Game theoretic analysis of international negotiations and agreements provides key insights about the international dimension of the problem. By means of practical examples students then see in detail the functionality and pitfalls of selected implemented (or currently discussed) policies, e.g. the EU-ETS. With successful completion of the course, students shall be able to judge climate policy issues on an informed scientific basis (natural science and economics).

**Module contents**
- Natural science of climate change: greenhouse effect; measures, causes and impacts of climate change.
- Economics of climate change: market failures (public goods, externalities); game theory of international agreements (prisoner’s dilemma, chicken game, assurance game, repeated games, continuous choice);
- environmental policy instruments (especially taxes, tradable permits).
- Climate policy in practice: EU-ETS (pitfalls: market segmentation, conditional grandfathering, lobbying);
- emission taxes and the EU-ETS; interaction between black and green quotas; embodied carbon tariffs.

### Module: Strategic Sustainability Management

**Module label:** Strategic Sustainability Management  
**Module code:** wir909  
**Credit points:** 6.0 KP  
**Workload:** 180 h  
**Used in course of study:**  
- Master Sustainability Economics and Management > Basis- und Akzentmodule

**Contact person:**  
- Module responsibility:
  - Christian Busse  
- Authorized examiners:
  - Die im Modul Lehrenden
- Module counseling:
  - Claudia Stüwe

**Entry requirements:**

**Skills to be acquired in this module:** This module provides students with the opportunity to scrutinize firms’ sustainability management from a strategic perspective. Specifically, students learn to evaluate sustainability-related management practices critically, and they are enabled to relate corporate sustainability to a firm’s conventional performance objectives. To this aim, students also familiarize themselves with the scholarly discourse on sustainability that is published in leading management journals. In addition to broader strategic considerations students become acquainted with the specific sustainability-related challenges in global supply chains and begin looking at sustainability from an inter-organizational perspective. Furthermore, students will be enabled to frame sustainability aspects as springboards for more innovative and entrepreneurial firm behavior. The theoretical foundations of the module will be supplemented by practical examples. Students will also refine their reading, writing, presentation, and discussion skills in the module. Moreover, the exposition to some major theoretical developments and to empirical research methods applied in academic studies can prepare students for their master thesis.

**Module contents:**  
- Firms’ motivation for sustainable business conduct; Conception of sustainability; Stakeholder theory; Legitimacy; Decoupling; Agency; Sustainable innovation and entrepreneurship; Sustainability and supply chain management: A brief introduction; Closed-loop supply chain management; Supply chain sustainability risks; Supplier management for sustainability; Standards for fostering sustainability in the supply chain

**Reader’s advisory:** We will work with various academic paper publications, rather than a text book.

**Links:**

**Language of instruction:** English  
**Duration (semesters):** 1 Semester

**Entry requirements**

**Skills to be acquired in this module**

This module completes the knowledge and abilities gained in the field of Environmental Informatics and it creates a strong reference to up to date topics in the field of sustainability. The content taught in this module can directly be applied in an upcoming study and professional career.

**Professional competence**

The students:

- are able to classify and explain the sustainability paradigm
- are aware of the current status of sustainability reporting
- are able to define and to model material flows
- have obtained know-how in the field of corporate environmental management information systems (CEMIS)

**Methodological competence**

The students:

- implement CEMIS
- apply different techniques and methods to case studies
- develop new case studies in teams

**Social competence**

The students:

- are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them
- present and discuss their own results with the team and the other members of the course

**Self-competence**

The students:

- learn about their own limitations and learn to accept criticism in order to strengthen their own abilities

**Module contents**

This course teaches methods, approaches and techniques in the field of information processing in order to support solutions to problems that arise from companies' impact on the environment. In particular, ICT supported approaches of production-integrated environmental protection, environmental controlling and reporting are introduced and discussed. In order to enable the integration of such approaches into environmental protection, environmental management and its systems are taught as well.

The content in detail:

- environmental management as a basis for sustainability
- sustainability and material flow management
- strategic environmental management
- eco-controlling life cycle
- characteristics and system architectures of CEMIS
- standard software systems
- environmental accounting systems

**Entry requirements**

**Skills to be acquired in this module**
This course aims at examining emerging research questions in the field of corporate environmental management information systems (CEMIS). After finishing this course, the students will have extensive knowledge regarding Business Environmental Informatics. In addition, they will be aware of recent research topics and challenges as well as relevant software solutions and practical projects.

**Professional competence**
The students:
- will obtain extensive knowledge in the field of CEMIS
- know emerging research questions and challenges as well as software solutions and projects

**Methodological competence**
The students:
- find their own solutions or apply already existing approaches to new and unsolved questions in the field of CEMIS
- capture required data, analyse it and present it to their team or the whole group

**Social competence**
The students:
- are supposed to work in teams and therefore have to identify working packages and have to take on responsibility for the jobs assigned to them
- present and discuss their own results with the team and the other members of the course

**Self-competence**
The students:
- learn about their own limitations and learn to accept criticism in order to strengthen their own abilities

**Module contents**
A strong social pressure forces enterprises to question their current way of implementing their business and to include different aspects of sustainability into their strategies and operational actions. Such a rethinking of one’s business is supported by corporate environmental management information systems. Such systems aim at optimising the energy and resource usage, emission and waste minimisation as well as production integrated environmental protection. Of course they support the fulfillment of legal requirements such as waste management or hazardous material handling.

The module will cover:
- recent and emerging research questions and topics related to the field of CEMIS as well as Business Environmental Informatics.
- discussion and hands-on experience of standard software systems and newly established solutions.
- applying the knowledge obtained to the definition of new as well as on solving new case studies.

**Entry requirements**
Completed ecology-oriented Bachelor course

**Skills to be acquired in this module**
With the successful completion of the module the students will gain a general and advanced knowledge of crucial approaches and instruments of nature conservation in Germany and Europe, especially of the implementation of large protected areas (NSG, biosphere reserve, national park etc.), of maintenance/management projects and measures as well as of approaches to their integration into nature conservation and regional development strategies (via agriculture, tourism etc.) in co-operation with national park administrative authorities and other relevant actors. Additionally, the module gives basic skills in developing ecological connectivity systems (example dragonflies) as well as in developing and implementing approaches to ecological planning inside and outside the nature reserves.

**Ranking/position of the module within the course of studies:** The module focuses on problems, methods, results, and analyses relevant to nature conservation and refers to corresponding issues of modules in Bachelor courses as well as of basic modules in Master courses of Landscape Ecology.

**Module contents**

- a) Seminar "Protected areas and regional development": Survey of the most important types of large protected areas in Europe as well as current concepts of integrating the purposes of conservation with the tasks of regional development especially in peripheral rural areas
- b) Seminar "Practice of ecological planning": Presentation of relevant instruments used in spatial and regional planning aiming at the particular demands of ecological planning; closer inspection based on appropriate practical examples **this seminar takes place in the winter term**
- c) Field course "Habitat connectivity": Theory of ecological connectivity including causes and impacts of fragmentation and isolation in nature-near biotopes; investigation of migration and dispersal behaviour in selected dragonfly species of ditch systems
- d) Excursion "Protected areas": Presentation of a selected large protected area in Germany or Europe especially considering geographical, floristic, faunistic, historical, agricultural, and nature conservation aspects as well as aspects of landscape and economics

| Entry requirements | Good command of English |
| Skills to be acquired in this module | Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context. Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization. |
| Module contents | SE/EX Multifunctionality and rural development (3 CP)  
V Topical issues of agriculture and agricultural policy (1.5 CP)  
SE/EX Sustainable tourism (3 CP)  
SE/EX Renewable energy planning (3 CP)  
V Colloquium on sustainable spatial development (1.5 CP)  
SE Special subject job market: Job market and inequality in Europe (3 CP) – This course (1.07.211 / FK I) takes place in the summer semester. |
| Multifunctionality and rural development | Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context. |
| Agriculture and agricultural policy | Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers. |
| Sustainable tourism | Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context. |
| Renewable energy planning | Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-oriented point of view. Illustration by means of selected examples in a European context. |
| Colloquium on sustainable spatial development | Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context. |
| Special subject job market: Job market and inequality | This course (1.07.211 / FK I) takes place in the summer semester. Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars. |
Schmied, D. (ed.): Winning and losing. The changing geography of Europe’s rural areas. Additional literature will be announced in the seminars. |

**Primary Language:** English

**Readability Score:** 8.2

**CoT:** The module focuses on sustainable spatial development in Europe with a comprehensive approach that includes both theoretical and practical aspects. Students will acquire skills in presenting and critically reflecting on crucial demands of sustainable spatial development across various fields such as agriculture, tourism, and renewable energy planning. The module contents span from multifunctionality and rural development to sustainable tourism and renewable energy planning, providing a holistic view of sustainable development practices and policies both at a national and European level. The inclusion of case studies and the opportunity for one-day excursions in Oldenburg underscore the practical application of theoretical knowledge. Additional reading materials will be announced in the seminars to complement the core readings, which cover a range of subjects from rural studies to the changing geography of Europe’s rural areas.

**Entry requirements**

**Skills to be acquired in this module**
- With successful completion of the course, students shall:
  - be aware of and be able to evaluate advanced methods of multivariate data analysis.
  - be able to select adequate methods in relevant fields of application, like prediction, classification, and segmentation analysis.
  - be able to run computer-aided analyses and to interpret the results properly.

**Module contents**
- Various methods of quantitative data analysis such as:
  - Linear Regression,
  - Logistic Regression,
  - Linear Discriminant Analysis,
  - Principal Component Analysis,
  - Feature selection and evaluation methods.

- Master Sustainability Economics and Management > Ergänzungsmodule
- Master Wirtschaftsinformatik > Module der Wirtschafts- und Rechtswissenschaften (Master)
- Master Wirtschafts- und Rechtswissenschaften > Mantelmodule

Contact person:
- Module responsibility: Jürgen Bitzer
- Authorized examiners: Die im Modul Lehrenden

Entry requirements:

Skills to be acquired in this module:
The students are able to:
- apply the basic econometric methods,
- follow, evaluate and interpret basic empirical studies,
- apply basic econometric methods in empirical studies,
- use the econometric software STATA.

Module contents:
The module consists of a lecture and an exercise. In the module the basic statistical principles are recapitulated, deepens the knowledge of the multiple regression and introduce the students to the advanced topics of panel econometrics, binary dependent variables, instrumental variable estimation and time series econometrics.

Entry requirements
Skills to be acquired in this module
- Understanding of trade relations, international factor movements and corresponding balance-of-payments mechanisms.
- Capability to discuss structural change in global trade and productions in terms of formal models and case studies.
- Understanding of the causes and alternative strategies of economic integration in regional blocs.
- Understanding of the causes and alternative strategies of economic transformation in emerging markets.
- Ability to research data and evaluate the literature on specific aspects of international trade, production and structural change.

Module contents
The lectures and seminar papers address issues in the following subfields:
- international trade,
- international trade policies and regimes,
- geographical economics,
- foreign direct investment,
- labour migration,
- fragmentation of production,
- regulations of international trade and factor movements,
- development strategies,
- regional integration.

Reader's advisory
Further references to specific topics and current literature will be given in the events.

**Entry requirements**
The students should be enabled
- to adapt the marketing concept to sectoral, functional and institutional specifics,
- to apply specific concepts and methods of marketing in a problem-oriented way and to be able to reflect their conditions and limitations,
- to develop and present your own conceptual designs in a team.

**Module contents**
Marketing initially started as a producer-oriented concept and in recent years has developed as universal approach to influence market transactions. Against this background institutional, functional and sectoral fields of application inspired the formulation of sophisticated marketing approaches, like e.g. marketing of non-profit organisations, strategic marketing, or service marketing. The course presents the specific nature of the different fields of application and relevant consequences for marketing planning. Given the recent inflation of "hyphenated conceptions" of marketing, a reasoned diagnosis as to marketing's core identity is put forth. To this end, perspectives of transfer and integration between the approaches will be developed, that measure up to state-of-the-art theoretical as well as practical demands towards marketing as a universal market-oriented way of managing businesses. This course is divided into a preparatory seminar and an educational workshop towards the end of the term. The latter unit allows case study and role play as well as the presentation student work and boosts social competences irrespective of subject matter.

- Authorized examiners: Die im Modul Lehrenden

Entry requirements:
Successful completion of the entrance examination

Skills to be acquired in this module:
Upon completion of the module, students will be able to:
- apply specific competences to strategic research in marketing
- classify research strategies in marketing according to their meta-theoretical considerations
- estimate research strategies' claims to knowledge and their limitations
- formulate interdisciplinary research strategies aligning competences of empirical methods with the application of theory
- develop own conceptual sketches within teams and to present them

Module contents:
How is knowledge generated within the scholarly discipline of marketing? This question confronts the field of marketing with central paradigmatic assumptions. The course begins to solve this puzzle on the basis of a historical analysis of the marketing concept's development. Different scientific standpoints in marketing theory and empirical investigation are evaluated against the light of recent developments in markets and society. The current paradigms of consumption research and marketing research's basic standing in the philosophy of science are intensely treated. This also entails reflecting on the opportunities that alternative trends, e.g. a humanistic paradigm, hold in store for marketing research. The course is divided into a preparatory seminar and an educational workshop towards the end of the term. The latter unit allows case study and role play as well as the presentation student work and boosts social competences irrespective of subject matter.

Reader's advisory:
- Further literature to be announced at the start of the term.

Entry requirements

Skills to be acquired in this module

In today’s highly dynamic business environment, innovation is the key to the success of most firms. Moreover, technological and organizational innovations represent valuable instruments for achieving progress toward sustainable development. Against this background, this module familiarizes students with the tools and processes for managing innovation and for developing overall more innovative firms. The module comprises a lecture and a seminar. In the lecture, students become acquainted with the drivers to and role of innovation; they learn about designing innovative firms and developing innovation strategies; they get to know the different sources of innovation; they familiarize themselves with the methods for choosing between alternative planned innovations; they learn how innovation is implemented; and they understand how innovation benefits are exploited. The accompanying seminar is supposed to familiarize the students with select advanced topics surrounding the management of innovation. Moreover, the students train their skills in working in teams, in working with scientific literature, in academic writing, and in presenting in front of a large audience.

Module contents

Organizational change, creative destruction, ambidexterity, exploration, exploitation, absorptive capacity, sustainability transitions, innovation models, innovation networks, innovation strategy, innovation ecosystems, diffusion of innovations, organizational routines, entrepreneurship, new ventures, etc.

| Skills to be acquired in this module | The students are able             |
|                       | - to understand sources of market failures and government failures  
  - to understand taxing and spending activities of governments  
  - understand the distinction between normative and positive perspectives in the evaluation of government policy  
  - to apply economic methods to current issues in public economics  
  - present their research result in the form of written papers and oral presentations  |
| Module contents       | The course covers key concepts of public economics, which studies how government taxing and spending activities affect the economy – economic efficiency and the distribution of income and wealth.  
  - Lecture: After introducing the theory and methodology of public economics, we discuss a historical and theoretical overview of the public sector. We then focus on departures from efficiency (especially asymmetric information), taxation issues (including tax evasion, fiscal federalism and tax competition among independent jurisdictions), and the intertemporal issue of social security (especially pension system).  
  - Seminar: covers current issues in public economics, e.g. reform of health care or pension system.  |

Entry requirements
Skills to be acquired in this module
- Learning about sustainability, economics and management in different scientific contexts.
- Understanding the complexity of sustainability, economics and management.
- Discussing topics of sustainability, economics and management with students from different scientific disciplines.
- Ability to present and evaluate different concepts of sustainability, economics and management

Module contents
This module consists of two seminars (2 weekly contact hours per seminar) dealing with selected topics from the broad field of sustainability, economics and management. Out of a variety of several seminars the student can choose two most suitable seminars depending on individual choices. The seminars and the seminar contents vary each semester to provide topics relevant for current discussions within the broad field of sustainability, economics and management. Intentionally seminars from several research fields and faculties are offered to also combine different point of views and to bring students from different scientific backgrounds together. The seminars provide the possibilities for inter- and transdisciplinary exchange and discussions.

Reader's advisory

The main target of the "Eco-Venturing" module is to develop entrepreneurial skills for the development and implementation of environmental innovations and sustainable business ideas. These include:

- the ability to identify new solution needs in the context of sustainable development and the sustainable development goals set by the United Nations,
- Knowledge and skills for the entrepreneurial development and implementation of innovative solutions,
- Knowledge and skills for systematically combining economic (Eco-nomical) and ecological (Eco-logical) objectives and
- the ability to strategically develop "green" business areas and markets.

The entrepreneurial development and implementation of environmental innovations can relate both to the establishment of new companies and organisations and to the development of new solutions and business ideas within the framework of established companies and organisations (corporate venturing).

The main focus of the Eco-Venturing module is the development of new or established business start-up concepts. Under of guidance of their lecturer, participants will work together with selected regional business partners who are both economically successful and contribute to the protection of the environment and the climate, to promote such start-up concepts. What these concepts have in common is that they address the issue of sustainability.

The module "Eco-Venturing" is part of the Master's programme "Sustainability Economics and Management (SEM)" and focuses on "Eco-Entrepreneurship". The module "Eco-Venturing" can be taken either individually or in combination with the two other modules of the study focus "Eco-Entrepreneurship" ("wir 920: Advanced Entrepreneurship", "wir 832: Innovation Management"). Two of the three modules must be taken in order to be recognised as a specialisation. The Eco-Venturing module is mandatory (cf. examination regulations for the Master's programme SEM, § 4, para. 4).

The module Eco-Venturing is also available for students of the Master's programme WiRe in the ManECo area and can be credited as the module Advanced Entrepreneurship (wir849 Advanced Entrepreneurship). The same applies to students of the Master's programme in Business Informatics. Here it can also be proven as wir849 Advanced Entrepreneurship.

### Skills to be acquired in this module

- The ability to identify new solution needs in the context of sustainable development and the sustainable development goals set by the United Nations,
- Knowledge and skills for the entrepreneurial development and implementation of innovative solutions,
- Knowledge and skills for systematically combining economic (Eco-nomical) and ecological (Eco-logical) objectives and
- The ability to strategically develop "green" business areas and markets.
- The entrepreneurial development and implementation of environmental innovations can relate both to the establishment of new companies and organisations and to the development of new solutions and business ideas within the framework of established companies and organisations (corporate venturing).

Out of a variety of several seminars the student can choose two most suitable seminars depending on individual choices. The seminars and the seminar contents vary each semester to provide topics relevant for current discussions within the broad field of sustainability, economics and management. Intentionally seminars from several research fields and faculties are offered to also combine different point of views and to bring students from different scientific backgrounds together. The seminars provide the possibilities for inter- and transdisciplinary exchange and discussions.

Reader's advisory:
Depending on the topic and content of each seminar

Module responsibility:
- Peter Schaal

Authorized examiners:
- Luise Dorothee Giani
- Peter Schaal
- Thomas Lecke-Lopatta

Module counseling:
- Peter Schaal

Entry requirements:
Basic knowledge of environmental planning. Students who have not gained such basic knowledge during the Bachelor course please contact the persons responsible for the module in order to evaluate possibilities for catching up relevant knowledge.

Skills to be acquired in this module:
The students will:
- gain advanced knowledge into the formal and informal organization of spatial developmental processes in a combination of disciplinary and interdisciplinary concepts;
- get to know the system of privileged planning combined with cross-section planning as well as investigate and assess possible deductions for concrete decision making;
- elaborate case studies and typical planning problems in seminar papers and develop their own positions regarding the instruments;
- get to know assessment methods for all important ecosystem compartments and gain the skills to deduce ecosystem services from ecosystem functions.

Ranking and position of the module within the course of studies:
The module offers fundamental and advanced knowledge in the first semester on the basis of which planning exercises can be performed during the Master courses.

Module contents:
a) Development of models and assessment of ecosystem functions for environmental planning:
   Presentation of theoretical concepts and practicable methods applied to assess ecosystem functions
b) Actor-oriented planning instruments:
   Presentation of aims, forms and mechanisms of formal and informal instruments of area and environmental planning considering participative forms of the actor in different frameworks
c) Special planning:
   Presentation of legal grounds, organization, instruments and practical methods of planning institutions including negative or positive impacts on the environmental quality for humans and nature. Possibilities of influencing the planning results from the point of view of precautionary environmental protection
d) Conservation and Evaluation of Soils:
   Presentation of legal grounds, practical methods and opportunities for soil protection and soil evaluation in regional and environmental planning.

Reader’s advisory:
Additional literature will be announced during the lectures.

Entry requirements:
- none

Skills to be acquired in this module:
- By the end of the course students should have answers to the following questions:
  - How are fundamental values (or “intrinsic values”) estimated?
  - How are business strategies analyzed in order to understand the value they create?
  - What business activities determine value?
  - How is “value created for shareholders” identified?
  - How does one pull apart the financial statements to get at the relevant information for valuing equities?
  - How does ratio analysis help in valuation?
  - How does profitability tie into valuation?
  - What is growth? How does one analyze growth? How does one value a growth firm?
  - How does one analyze the quality of financial reports?
  - How does one deal with the accounting methods used in financial statements?
  - How is financial analysis developed for strategy and planning?
  - What determines a firm’s P/E ratio? How does one calculate what the P/E should be?
  - What determines a firm’s market-to-book (P/B) ratio? How does one calculate what the P/B should be?
  - How does one evaluate risk? For equity? For debt?
  - How does one evaluate an equity research report?
  - How does one trade on fundamental information?

Module contents:
- With a stock market bubble and a financial crisis in our recent history, there have been increasing calls to “return to fundamentals.” This is a course on fundamental analysis. The primary emphasis is on equity (share) valuation, with a focus on developing and applying methods for valuing firms using financial statement analysis.
- The course has a very practical focus. The methods of fundamental analysis will be examined in detail and applied in cases and projects involving listed companies. Topics include models of shareholder value, a comparison of accrual accounting and discounted cash flow approaches to valuation, the analysis of profitability, growth and valuation generation in a firm, diagnosing accounting quality, forecasting earnings and cash flows, pro-forma analysis for strategy and planning, and the determination of price/earnings (P/E) and market-to-book (P/B) ratios.
- The course does not assume “market efficiency.” Rather, it develops the techniques for challenging traded prices in order to assess whether investments are appropriately priced. It adopts the philosophy that one of the risks in investing is the risk of paying too much. The course is one for the active investor.
- Most importantly, we learn how to handle accounting and financial reports in valuation. We see that valuation is really a matter of appropriate accounting for value. The course combines accounting principles and investment principles to answer the question: How do I account for value so that I can challenge stock prices with some confidence?
- The course will be taught from the perspective of designing techniques to be used in an (independent) equity research department or firm. Accordingly, the material is pertinent to the security analyst – particularly the equity analyst – who must issue a buy, hold or sell recommendations on stocks. However, much of the material covered in the course is also relevant to the corporate financial analyst for evaluating acquisitions, restructurings and other investments, and for calculating the value generated by strategic scenarios. By the end of the course, the student should feel competent in writing a thorough, credible equity research report or investment analysis that meets the highest standards of professionalism.
- The course is of interest to those contemplating careers in investment banking (particularly in equity research), security analysis, consulting, public accounting, and corporate finance. And it will also help with personal investing.

**Skills to be acquired in this module**
The students will learn the fundamentals of the topic Entrepreneurship, including the challenges of founding enterprises and entrepreneurial action in established companies.

**Module contents**
This module deals with the development of business ideas and its realization in business models as well as its perception and evaluation. The content of the lecture further includes issues relating to team-building, resources, and finance, as well as establishing a business plan, the question of the appropriate legal form of an organization, and the specific challenges in the growth stage. Particular aspects will be amplified by guest lecturers from companies.

At the end of the course, successful students:
- communicate in everyday life and work environments,
- recognize and understand 200 characters and words,
- understand frequently used expressions,
- understand simple meanings in familiar contexts, clear instructions, standard questions and informations when pronounced slowly and clearly,
- pose and answer questions in familiar contexts,
- provide personal information in spoken and written form,
- write about themselves in simple meanings.

**Module contents**
Thematic vocabulary concerning personal information, basics of everyday life, shopping, simple standard transactions etc.
Reading: simple dialogues and texts from everyday life
Listening: short and simple dialogues from everyday life
Speaking: short dialogues in everyday life situations
Writing: short texts on personal information, questionnaires and forms
Self-learning: work with the portfolio, individual training

Skills to be acquired in this module:
- Understand international, European, and national thematic legal norms and legal questions.
- Apply international, national, and European thematic legal norms.
- Learn English legal terminology.

Module Contents:
- The module aims to introduce students who already have a scientific background to the new law of research and utilization of plants. Students will be introduced to the new law of research and utilization of plants, which is necessary for both aspiring scientists and employees in industry or administration. In principle, the Convention on Biological Diversity (1992) had already lifted the principle of free access to biological and genetic resources under international law. Through implementation in Europe (2014) and the Resource States, these rules have now become binding. This has far-reaching consequences for the research routine and product development. These new rules, in which international cooperation has become a requirement from the beginning of academic and commercial research, are brought to the students. The following topics are relevant for the teaching sessions:
  - International framework conditions for access to genetic resources and benefit sharing
  - EU-law and the filling of international legal regulations for the biological research and use of plants, as well as the implementation of genetic resources, traditions of knowledge and technology transfer
  - National rules of the Resource States for the search for genetic resources at a scientific level and commercial prospecting (e.g., permit requirements; Prior Informed Consent; Mutually Agreed Terms; Due Diligence)
  - Law of the various commercial, legal and academic ex situ collections

**Skills to be acquired in this module**
The students gain a differentiated understanding of the challenges of Coastal Zone Management in a national and European context; the questions implied therein, the stakeholders and substantial political and legal implications. At the same time they will get a first insight of selected national and international project examples while getting to know a part of their possible future field of action.

**Module contents**
- Coastal Zone Management
  - Basic demands and questions of Coastal Zone Management in a spatial planning perspective.
  - International Approaches to Coastal Zone Management
  - Field trip to a selected (inter)national place at the coast (Germany, The Netherlands) to show selected problem fields of Coastal Zone Management.

Entry requirements:
The module gives an overview of the phases and important aspects of the environmental information processing.

Professional competence:
The students:
- apply basic processing algorithms to classify and process data
- compare, evaluate and design data structures to store spatial data efficiently
- apply basic functions of a geo-information system
- describe, evaluate and apply basic processes of data mining
- describe, evaluate and apply basic geostatistics processes
- evaluate and apply multicriteria decision making processes

Methodological competence:
The students:
- use geoinformation systems for environmental application
- use data mining tools for data analysis

Social competence:
The students:
- solve tasks in teams of 2-3 students
- present and discuss their solutions in class

Self-competence:
The students:
- reflect their own behaviour with regard to the methods of environmental informatics

Module contents:
The content of the Module: Environmental information systems make information about the general environmental state available for public management and public facilities, enterprises or interested citizens. The collection, storage and evaluation of this information is interesting for computer science.

Within the scope of the lecture we will examine the processing of environmental information step-by-step, this means:
- problems of data acquisition and data processing,
- data structures and database concepts for an efficient access to (usually) spatial data,
- introduction of data analysis (in particular from geostatistics and data mining),
- introduction of multicriteria decision processes, as well as
- the supply of data supported by meta data.

The module “Umweltinformationssysteme” is accompanied by the module “Modellbildung in Simulation ökologischer Systeme”. The subjects of “Modellbildung in Simulation ökologischer Systeme” represent the dynamic aspects of environmental systems (mainly of ecological systems). Nevertheless, the modules can be
taken independently from each other.
