Contact person
- module responsibility
  - Michael Kleyer
  - Vanessa Minden
- authorized examiners
  - Alle hier genannten
- Module counseling
  - Cord Peppler-Lisbach
  - Robert Biedermann

Prerequisites

Skills to be acquired in this module
- Basic methods of explorative statistics and adequate application of statistical tests relevant to ecological data.
- To learn, interpret and apply methods of habitat modelling
- To understand the fundamentals of spatial explicit analysis of species-environment relationships as well as the fundamentals of spatial prediction of environmental requirements in species
- To adequately analyse measured and observed spatial data applying methods of spatial statistics and geostatistics, respectively
- To learn and to understand relevant methods of multivariate analysis of vegetation data
- To be able to interpret and to assess the results obtained as well as the relevant literature
- To be able to apply the treated methods independently
- To learn and to improve skills in using the statistics software R

Module contents

Part 1: Introduction to statistical analysis of ecological data NN (NN)
- Experimental design
- Explorative data analysis
- Distribution tests, data transformation
- Chi² test
- Anova, Kruskal-Wallis test
- t & U test
- Multiple comparisons, post-hoc tests

Part 2: Habitat modelling and spatial statistics (Biedermann)
- Linear (OLS) regression
- GLM (logistic regression, Poisson regression)
- Spatial explicit modelling, GIS integration
- Spatial statistics

Part 3: Multivariate analysis of vegetation ecological data (Peppler-Lisbach)
Classification:
- Cluster analysis
- Statistical degrees of fidelity

Ordination:
- Indirect procedures: PCA, CA, DCA
- Canonical procedures: RDA, CCA

**Contact person**
- Module responsibility
  - Michael Kleyer
- Authorized examiners
  - Alle hier genannten
- Module counseling
  - Gerhard Wolfgang Zotz
  - Ellen Kiel
  - Maaike Bader

**Prerequisites**
Knowledge of phytosociology, zoo-ecology, pedology and ecology, comparable to the corresponding modules of BSc. Environmental Sciences

**Skills to be acquired in this module**
Qualification imparted to students:
Upon successful completion of the module the students will gain:
- a thorough knowledge of environmental conditions and biological mechanisms enabling plant species to survive in landscapes
- a thorough knowledge of the eco-physiology of plants in landscapes
- a thorough knowledge of the environmental conditions and biological mechanisms enabling animals to survive in landscapes

Ranking/position of the module within the course of studies:
In the initial phase of the Master programme, this module imparts theories and models of the conditions of survival in plant and animals species as well as of the abiotic/biotic interdependencies in heterogenous landscapes. In combination with other compulsory modules it serves to give students a survey of the special field of Landscape Ecology and to enable them to competently select advanced modules in the following semesters.

**Module contents**
- Ecology of plants in landscapes
- Eco-physiology of plants in landscapes
- Ecology of animals in landscapes

**Recommended reading**
Literature will be announced during the course.

- Authorized examiners: Alle hier genannten

**Prerequisites**

**Skills to be acquired in this module**
Upon successful completion of the module the students will gain:
- advanced skills in analysing a landscape unit
- a thorough knowledge of geological, pedological, hydrological, hydrogeological, and botanical relationships within an ecosystem
- a thorough knowledge of the genesis and properties of Northwest German soils
- a thorough knowledge of hydrological and hydrogeological properties of Northwest Germany
- a fundamental knowledge of national and international soil systematics
- the qualification to ecologically record and assess soils (including humus form)
- the ability to perform soil ecological interpretations

**Module contents**
- Landscape unit Spiekeroog (EX/E)
- Special Pedology (L)
- Special Hydrogeology (L)
- Pedological field work (E)

**Recommended reading**
Literature will be announced during the lecture.

**Total attendance time of module**: 56 h

---

Please note that this information is from the LOK 120 module at Oldenburg University, focusing on Pedo-Hydrological Processes. The module aims to provide students with comprehensive knowledge and skills in related environmental sciences.
Module name: Environmental Planning
Module code: lök130
ECTS credit points: 9.0 KP
Workload: 270 h

Used in degree programmes:
- Master Landschaftsökologie > Basismodule
- Master Sustainability Economics and Management > Ergänzungsmodule

Contact person:
- Michael Kleyer (module responsibility)
- Authorized examiners: Alle hier genannten

Module counseling:
- Luise Dorothee Giani
- Ingo Mose
- Peter Schaal
- Sarah Witte

Prerequisites:
Basic knowledge of environmental planning. Students who have not gained such basic knowledge during the Bachelor course please contact the persons responsible for the module in order to evaluate possibilities for catching up relevant knowledge.

Skills to be acquired in this module:
The students will
- gain advanced knowledge into the formal and informal organization of spatial developmental processes in a combination of disciplinary and interdisciplinary concepts;
- get to know the system of privileged planning combined with cross-section planning as well as investigate and assess possible deductions for concrete decision making;
- elaborate case studies and typical planning problems in seminar papers and develop their own positions regarding the instruments;
- get to know assessment methods for all important ecosystem compartments and gain the skills to deduce ecosystem services from ecosystem functions.

Ranking and position of the module within the course of studies:
The module offers fundamental and advanced knowledge in the first semester on the basis of which planning exercises can be performed during the Master courses.

Module contents:
- a) Development of models and assessment of ecosystem functions for environmental planning:
  Presentation of theoretical concepts and practicable methods applied to assess ecosystem functions
- b) Actor-oriented planning instruments:
  Presentation of aims, forms and mechanisms of formal and informal instruments of area and environmental planning considering participative forms of the actor in different frameworks
- c) Special planning:
  Presentation of legal grounds, organization, instruments and practical methods of planning institutions including negative or positive impacts on the environmental quality for humans and nature. Possibilities of influencing the planning results from the point of view of precautionary environmental protection
- d) Conservation and Evaluation of Soils:
  Presentation of legal grounds, practical methods and opportunities for soil protection and soil evaluation in regional and environmental planning.

Recommended reading:

Additional literature will be announced during the lectures.

Iök210 - Practice of Nature Conservation

Module code: Iök210
ECTS credit points: 6.0 KP
Workload: 180 h

Used in degree programmes:
- Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester
- Master Sustainability Economics and Management > Ergänzungsmodule

Contact person:
- Module responsibility: Rainer Buchwald, Ingo Mose
- Authorized examiners: Alle hier genannten

Prerequisites:
Completed ecology-oriented Bachelor course

Skills to be acquired in this module:
With the successful completion of the module the students will gain a general and advanced knowledge of crucial approaches and instruments of nature conservation in Germany and Europe, especially of the implementation of large protected areas (NSG, biosphere reserve, national park etc.), of maintenance/management projects and measures as well as of approaches to their integration into nature conservation and regional development strategies (via agriculture, tourism etc.) in co-operation with national park administrative authorities and other relevant actors. Additionally, the module gives basic skills in developing ecological connectivity systems (example dragonflies) as well as in developing and implementing approaches to ecological planning inside and outside the nature reserves.

Ranking/position of the module within the course of studies: The module focuses on problems, methods, results, and analyses relevant to nature conservation and refers to corresponding issues of modules in Bachelor courses as well as of basic modules in Master courses of Landscape Ecology.

Module contents:
- a) Seminar "Protected areas and regional development": Survey of the most important types of large protected areas in Europe as well as current concepts of integrating the purposes of conservation with the tasks of regional development especially in peripheral rural areas
- b) Seminar "Practice of ecological planning": Presentation of relevant instruments used in spatial and regional planning aiming at the particular demands of ecological planning; closer inspection based on appropriate practical examples this seminar takes place in the winter term
- c) Field course "Habitat connectivity": Theory of ecological connectivity including causes and impacts of fragmentation and isolation in nature-near biotopes; investigation of migration and dispersal behaviour in selected dragonfly species of ditch systems
- d) Excursion "Protected areas": Presentation of a selected large protected area in Germany or Europe especially considering geographical, floristic, faunistic, historical, agricultural, and nature conservation aspects as well as aspects of landscape and economics

- Module counseling
  - Luise Dorothee Giani
  - Cord Peppler-Lisbach

Prerequisites:
With this module students will gain technical skills and qualifications for sampling, analysing and interpreting data within the soil-water-plant system. Field studies are performed in the context of current research questions. The studies aim at predicting the impacts of environmental changes on fluxes of water and solutes in the landscape at different scales. Students are prepared for advanced research activities. The collected field data are also used for laboratory work within the scope of the present module and further modules, e.g. for modelling purposes.

Upon successful completion of the module students will gain:
- Knowledge of pedological, hydrological and vegetation oriented ecological field inventories
- Advanced skills in the analysis of soil plant and water samples
- Advanced knowledge of ecosystem processes
- Advanced knowledge into current fields of research

Module contents:
- Physico-chemical processes in soils
- Transport of water and substances at the intersection point between soil and plant
- Transport of water and substances in the landscape
- Interdisciplinary analysis of ecosystem processes (field studies, labora

Module name: Aquatic Ecology
Module code: lök230
ECTS credit points: 9.0 KP
Workload: 270 h

Skills to be acquired in this module:
- To learn about important parameter and ecological processes of specific aquatic habitats;
- learn about threats and important disturbance factors;
- work independently on scientific question;
- learn methods and learn how to apply specific methods in field and in the laboratory experiments;
- start to development methods on your own;
- analyse the field and laboratory data, and apply modern statistical methods;
- start critical analysis and discussion of field and laboratory data;
- learn to develop mapping and assessment methods;
- study principles of typology and models describing selected systems;
- learn how to deal with nature conservation conflicts by referring to experimental field and laboratory data.

Module contents:
3 courses:
1. Lowland Waters (3 CP); 2. Bioassessment (3 CP); 3. Field Experiments (3 CP)

### Module Overview

**Module name:** Functional ecology of communities in heterogeneous landscapes  
**Module code:** lök240  
**ECTS credit points:** 15.0 KP  
**Workload:** 450 h  
**Used in degree programmes:**  
- Master Landschaftsökologie > Vertiefungsstunde zweites Fachsemester

**Contact person**  
- Module responsibility: Michael Kleyer  
- Authorized examiners:  
  - Alle hier genannten  
- Module counseling: Luise Dorothee Giani

**Prerequisites**

**Skills to be acquired in this module**  
Upon successful completion of the module students will gain:

- Technical skills in ecological field experiments, determination of plants in the field, phytosociological records, soil inventories, biomass determination and determination of biological characteristics
- Technical skills in laboratory work, statistics
- Skills in mapping plants and animals, application of GIS, spatial statistics
- Advanced knowledge of spatial ecology and the conditions of survival in heterogeneous landscapes as well as knowledge of functional ecology; assessment of academic voids between theory and empiricism
- Skills in independently dealing with ecological literature and information, respectively

**Ranking/position of the module within the course of studies:**
The module imparts action-oriented and theoretical knowledge of the conditions of survival in plant and animal species in heterogeneous landscapes. It serves the prognosis of impacts on the biodiversity caused by environmental changes. This represents a crucial qualification for environmental planning and habitat restitution projects.

**Module contents**

- Practical training in the field and in the laboratory, practical training in statistics
- Functional ecology of communities in spatio-temporally heterogeneous landscapes: Literature analyses
- Functional plant ecology: Biological characteristics related to disturbances and soil resources (laboratory analyses, statistical analysis)

**Recommended reading**

Literature will be announced during the preparatory course and is contingent on the latest developments in the research field.

lök260 - Restoration of Terrestrial Ecosystems

Module name: Restoration of Terrestrial Ecosystems
Module code: lök260
ECTS credit points: 6.0 KP
Workload: 180 h

Used in degree programmes:
- Master Landschaftsökologie > Vertiefungsmodule zweites Fachsemester

Contact person:
- module responsibility: Rainer Buchwald
- authorized examiners: Alle hier genannten

Prerequisites:
Basic knowledge in Ecology, Vegetation Science, and Zoology, comparable to the respective Bachelor modules in Environmental Sciences

Skills to be acquired in this module:
The participants will become acquainted with the possibilities and limits of renaturation and restoration projects in terrestrial ecosystems. This implies an extensive knowledge in autecology and population ecology of selected species on the one hand; on the other hand, monitoring by means of hydrological and/or pedological parameters as well as based on the vegetation and selected animal groups is crucial for evaluating such projects. In cooperation with the respective project management, student groups will contribute to the evaluation and advancement of the respective project as well as similar project(s) by performing individual records, analyses and assessments.

Ranking/position of the module within the course of studies:
The module is closely related to the Master modules "Practice of Nature Conservation", "Special Ecology" and "Ecology of Soil-Water-Plant Systems" and comprises questions of scientific and applied nature conservation.

Module contents:
Theory and Practice of Restoration Ecology (L): The lecture deals with the fundamentals of Restoration Ecology and exemplarily with the biotope systems fen and bog, grassland and heath. Restoration of Terrestrial Ecosystems (LC): The participants collect data contributing to the evaluation of current restoration projects (Hudewald, mesophilic grassland, heath, oligotrophic stagnant waters).

Recommended reading:

Additional literature will be announced during the course, if necessary.

Total attendance time of module: 56 h
Module name: Landscape Management Support Planning

Module code: lök270

ECTS credit points: 15.0 KP

Workload: 450 h

Used in degree programmes: Master Landschaftsökologie > Vertiefungsmodul zweites Fachsemester

Contact person:
- module responsibility: Michael Kleyer
- authorized examiners: Alle hier genannten

Prerequisites:
Skills to be acquired in this module:
The landscape management support plan aims at compensating for any project-related impacts on the environment. The mitigation and compensation plan is the outcome of a planning process which will be trained in this course.
Upon successful completion of the module students will gain:
- Technical skills in mapping plants and animals in landscapes: Records, sorting of records for preparing mapping keys; field mapping.
- Technical skills in landscape management support planning including GIS analysis, evaluation of the compensation of environmental impacts on selected ecosystem compartments, and planning of compensation and mitigation.

Ranking/position of the module within the course of studies:
This module imparts both action-oriented and theoretical knowledge required for landscape management support planning.

Module contents:
Mapping results obtained in the field study are fed into GIS, compensation and mitigation measures are planned, and finally the impacts are balanced by the compensation measures.

Recommended reading:
Relevant literature will be announced during the preparatory course and is contingent on the latest developments in the research field. Additionally, a script for the exercise will be handed over to the participants.

Prerequisites:
Completed Bachelor studies with ecological orientation

Skills to be acquired in this module:
The module qualifies the participants to extend their knowledge acquired in their ecologically oriented Master studies of Landscape Ecology. This comprises advanced knowledge of the flora and vegetation types in Central Europe as well as the acquisition of additional methods in vegetation ecology.

Module contents:
In the summer term, the module (6 CP) includes a one-week field course in a selected Central European natural landscape focussing on floristic, vegetation ecological, phytosociological (syntaxonomical) aspects as well as on aspects of biocoenology and nature conservation.

Recommended reading:

Presentation and critical reflection of crucial demands of a sustainable spatial development in selected fields of activities especially considering rural development. Comparison of suitable case studies in a European context. Knowledge into central control instruments of structural, regional, and agricultural policy on a national as well as on a European level. Considering specific demands of spatial development in the context of political and social processes of Europeanization.

**Module contents**  
- **SE/EX Multifunctionality and rural development** (3 CP)
  - V Topical issues of agriculture and agricultural policy (1.5 CP)
  - SE/EX Sustainable tourism (3 CP)
  - SE/EX Renewable energy planning (3 CP)
  - V Colloquium on sustainable spatial development (1.5 CP)
  - SE Special subject job market: Job market and inequality in Europe (3 CP) & #150; This course (1.07.211 / FK I) takes place in the summer semester.

Multifunctionality and rural development
Survey of the multifunctionality of rural areas, especially the importance of agriculture and forestry, tourism and recreational activities, habitation, and protection of nature as well as the demands on spatial planning and regional development involved under the conditions of sustainability. Illustration by means of selected examples in a European context.

Agriculture and agricultural policy
Survey of EU agricultural policy programmes and their strategic-instrumental implementation as well as of selected topics of current developments in agriculture presented by various guest lecturers.

Sustainable tourism
Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.

Renewable energy planning
Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.

V Colloquium on sustainable spatial development
Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.

Special subject job market: Job market and inequality
This course (1.07.211 / FK I) takes place in the summer semester.
Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

  Presentation of various concepts of sustainable tourism and its realization from the viewpoint of offer and demand. Illustration by means of selected examples in a European context.

- Renewable energy planning
  Survey of different forms of renewable energy and related demands on spatial development seen from a mainly planning and actor-orientated point of view. Illustration by means of selected examples in a European context.

- Colloquium on sustainable spatial development
  Survey of up-to-date theoretical approaches, concepts, instruments as well as practical fields of activities in sustainable spatial development in a national and European context.

- Special subject job market: Job market and inequality
  This course (1.07.211 / FK I) takes place in the summer semester.
  Three one-day excursions with varying emphasis will be performed in the vicinity of Oldenburg as an integral part of the module seminars.

Recommended reading:
- Schmied, D. (ed.): Winning and losing. The changing geography of Europe's rural areas. Additional literature will be announced during the seminars.

**Total attendance time of module**: 140 h
**Geoinformatics and Remote Sensing**

**Module code**: lök330  
**ECTS credit points**: 6.0 KP  
**Workload**: 180 h

**Used in degree programmes**
- Master Landschaftsökologie > Vertiefungsmodule drittes Fachsemester

**Contact person**
- module responsibility: Peter Schaal
- authorized examiners: Alle hier genannten
- Module counseling: Christian Aden

**Prerequisites**
Participation in the professionalizing module Introduction to Geoinformatics (BA)

**Skills to be acquired in this module**
With this module, students of the Master course will gain qualifications for the analysis of spatial data and for modelling special landscape ecological tasks. Thus, they gain technical skills which they can use for preparing their Master thesis and also an important qualification for their future professional career.

**Module contents**

a) Practical work with GIS (E)  
The students learn to compile geodatabanks as well as to use complex geographical analysis tools. Moreover, they gain knowledge into mobile application of GIS and practise data management based on map server applications.

b) Analysis and Models (S/E)  
The students will gain skills in answering spatial or landscape ecological questions by means of complex GIS analysis (erosion models, route planning) as well as basic skills in spatial data modelling.

c) Scanning analysis (S/E)  
Application and integration of data obtained by photogrammetry and aerial survey are practised on the basis of scientific articles and practical cases. The spectrum of the seminar covers work with digital landscape models, three-dimensional surface analysis as well as spectral analysis of aerial and satellite digital images.

lök345 - Advanced Limnology

Module name: Advanced Limnology
Module code: lök345
ECTS credit points: 6.0 KP
Workload: 180 h

Used in degree programmes:
- Master Landschaftsökologie > Vertiefungsmodule drittes Fachsemester

Contact person:
- module responsibility: Rolf Niedringhaus
- authorized examiners: Ellen Kiel
- Alle hier genannten
Module counseling: Rolf Niedringhaus

Prerequisites:
Basic knowledge of taxonomy + determination of mainly invertebrates, basic skills in faunistic field methods, L Animal Ecology

Skills to be acquired in this module:
E Special Aquatic Ecology
The module imparts general and special knowledge of the ecology of typical floodplain water systems with special emphasis on floodplain dynamics and the resulting processes related to those water systems. Floodplain development and (faunistic) biodiversity are further main topics comprising e.g. the explanation of ecological conditions and colonisation processes and referring to questions of nature protection, examining the habitat preference of selected species and describing the population development of typical floodplain species.

Special Aquatic Ecology
Familiarization with the course of a planning process on the basis of an exemplary project in Northwest Germany; independent development of a concept of methods for assessing the faunistic actual state and subsequent realization in the field; scientific documentation and ecologically relevant assessment of the situation in the project area using selected indicator groups (scientific determination of selected taxa); preparation of final expert opinions on the project

Module contents:
L Special Aquatic Ecology
Ecology of typical floodplain water systems (mainly oxbow lakes bodies and temporary water bodies); description of the decisive processes in floodplain and water system dynamics as well as the expres-sivity of the (faunistic) biodiversity; description of the ecological conditions and colonisation process-es relevant to questions of nature protection, aspects of biodiversity as well as habitat preference and population development of typical floodplain species.

E Special Aquatic Ecology
Description of legal and planning procedures based on a case study; development and realization of a concept of methods for assessing the faunistic current status; scientific documentation (determination of taxa), analysis (determination and classification of species-related characteristics of the taxa rele-vant to the planning) and ecologically relevant assessment of the situation in the project area; final expert opinion on the project

**Prerequisites**

Basic knowledge of Soil Science, Hydrogeology and Hydrochemistry

**Skills to be acquired in this module**

- **E:** Applied modelling of water and solute transport in groundwater: Impartment of knowledge into quantitative hydrogeology (hydraulics and advection-dispersion). Qualification to develop simple groundwater flow and transport models.
- **E:** Hydrochemical modelling of water-rock interactions using PHREEQC: Impartment of knowledge into quantitative hydrogeochemistry and skills in hydrogeochemical modelling.
- **L:** Major Soils of the World and excursion to the World Soil Museum in Wageningen (The Netherlands): Impartment of knowledge into distribution, properties and classification of soils of the world. Qualification to apply the World Reference Base for Soil Resources (WRB) and to identify the soils of the world.
- **E:** Special soil science field and laboratory exercises: Impartment of knowledge into specific field and laboratory methods. Qualification to select and apply specific field and laboratory methods as well as to analyse and interpret results.

**Module contents**

- **E:** Hydrochemical modelling of water-rock interactions using PHREEQC: Modelling of hydrogeochemical processes (speciation reactions and mineral reactions, pyrite oxidation, oxidation of organic matter, redox reactions, ion exchange, equilibrium reactions and reaction kinetics) using the software PHREEQC (http://wwwbrr.cr.usgs.gov/projects/GWC_coupled/phreeqc/)
- **L:** Major Soils of the World and excursion to the World Soil Museum in Wageningen (The Netherlands): Application of the international soil classification system “WRB”, step-wise familiarization with soils and their properties as well as with the related landscapes and catenas (from polar to tropical soils), study of varnished profiles of globally distributed soils.
- **E:** Special soil science field and laboratory exercises: Selection of current scientific objectives, construction of a sampling and investigation design, performance of field studies (preferably abroad) and laboratory analysis, analysis and interpretation of results.

### Module Information

**Module code:** lök390  
**ECTS credit points:** 6.0 KP  
**Workload:** 180 h  
**Used in degree programmes:**  
- Master Landschaftsökologie > Vertiefungsmodule drittes Fachsemester

### Contact Person
- **Module responsibility**
  - Ellen Kiel  
- **Authorized examiners**
  - Ines Wolpmann

### Prerequisites
- Basic courses of Ecology (1st and 2nd semesters LÖK)  
- Skills in determining aquatic organisms, e.g. via Bachelor modules  
  - Knowledge of forms  
  - Running water ecology  
  - Aquatic habitats  
- Master course in the module "Aquatic Ecology"  
- Comparable courses at other universities

### Skills to be acquired in this module
- Qualification to independently plan field experiments suitable for answering current ecological questions (individuals, populations, communities)  
- Methodological competence/independence in performing field experiments  
- Qualification to independently analyse the experiments in the laboratory guided by hypotheses and using adequate methods, materials and statistical methods  
- Competence in presenting results on a scientific level (scientific report presenting and discussing the method; scientific publication; both in English)  
- Impartment of manifold methodological skills in the field of aquatic ecology, experimental field research (autecological, population-ecological and synecological research approaches)  
- Impartment of extended expertise in planning experiments in general and their analysis in the field of animal ecology (application and linking of acquired skills; generalisable knowledge)  
- Practical experience in analysing field experiments in general (comprising laboratory phases, access to literature and databases, preparation of scientific publications)  
- Preparation of Master and Ph.D. theses requiring skills in experimental field research

### Module Contents
- **1st course phase (theoretical preparation and planning)**
  - Picking up current ecological research topics related to aquatic habitats, e.g. in streams and ditches (the respective system is selected prior to the start of the course and should change)  
  - Specification of questions and frame conditions by the course lecturer concerning current research questions in the fields of autecology, population ecology, and synecology  
  - Instructions for literature research and the respective analysis by students  
  - Summary and presentation of the current standard of knowledge (structured brief reviews presented to the course participants by students and commented by the lecturer as well as preparation of a synopsis as part of the term paper or the oral examination (see below))  
  - Concrete formulation of questions and working hypotheses based on literature research

- **2nd course phase (practical preparation and planning; laboratory and field work)**
  - Preparatory inspection of the investigation area accompanied by the lecturer  
  - Independent development of a concept of methods (advised by the lecturer)  
  - Presentation of the planned experiment and of the analysis (treatment of samples, data processing etc.)  
  - Independent practical preparation of experiments (calibrate equipment, prepare solutions, prepare trapping jars, determine aquatic data etc.), analysis steps (e.g. prepare laboratory equipment), and logistics (transportation, entry permissions etc.)  
  - Description of methods for all working steps in writing  
  - Independent realization of planning (advised by lecturer)  
  - Report on all procedures including reflection

- **3rd course phase (further development and application of acquired knowledge; theoretical phase)**
  - Common discussion about the possibilities of and limits to applying the procedure to concrete questions concerning other habitats, other animal associations etc.

### Recommended Reading
