Basismodule

bio210 - General Biology

Module name: General Biology
Module code: bio210
ECTS credit points: 12.0 KP
Workload: 360 h

Used in degree programmes:
- Fach-Bachelor Biologie > Basismodule
- Fach-Bachelor Mathematik > Nebenfachmodule
- Zwei-Fächer-Bachelor Biologie > Basismodule

Contact person:
- module responsibility: Gabriele Gerlach
- authorized examiners: Alle hier genannten
- Module counseling: Gerhard Wolfgang Zotz

Prerequisites:
Skills to be acquired in this module:
++ biological knowledge
+ knowledge of biological working methods
++ biologically relevant knowledge in the natural sciences and mathematics
+ interdisciplinary knowledge & thinking

The students are enabled:
- to understand and explain the fundamentals of the subjects dealt with in “Purves” or “Campbell” and to give examples,
- to find the rôle of biology in other special fields according to their inclinations and abilities,
- to reflect upon the rôle of biology in other special fields and in a modern society,
- to approach their individual planning of studies according to their inclinations and abilities

Module contents:
The lecture imparts the basic knowledge of biology and covers the subjects dealt with in the textbooks “Purves” or “Campbell”

Recommended reading:
Purves, Spektrum Verlag, latest edition
Campbell, Pearson Verlag, latest edition

bio220 - Introductory Zoology-Botany

Module name: Introductory Zoology-Botany
Module code: bio220
ECTS credit points: 9.0 KP
Workload: 270 h

Used in degree programmes:
- Fach-Bachelor Biologie > Basismodule
- Zwei-Fächer-Bachelor Biologie > Basismodule

Contact person:
- module responsibility
  - Gerhard Wolfgang Zotz
  - Olaf Bininda-Emonds
- authorized examiners
  - Alle hier genannten
- Module counseling
  - Wilko Ahlrichs
  - Thomas Glatzel

Prerequisites
Skills to be acquired in this module:
- ** biological knowledge
- + knowledge of biological working methods
- ++ biologically relevant knowledge in the natural sciences and mathematics
- + abstract, logical, analytical thinking
- + independent learning and (research-based) working
- + teamwork

THEORY:
- * To understand the fundamentals of reconstructing phylogenetic relationships
- * To know the phylogenetic system and ground pattern of high-ranking ancestral animal species
- * To know the cell structures, organization, and reproduction of plants and animals
- * To know the morphology and anatomy of individual species

PRACTICE:
- * To improve and verify the theoretical knowledge acquired from lectures and textbooks by studying the original
- * To train visual and tactile perception by studying various species
- * To learn that representations in textbooks are abstractions of a much more complex reality
- * To be able to criticize representations in textbooks and models
- * To acquire the knowledge of the function in living animals and plants by studying preserved specimens
- * Learning how to follow preparation instructions
- * Learning that the organization of individual species may be highly variable
- * Preparing records or drawings from the information obtained by original specimens studied

Module contents
GENERAL: Light microscopic methods are applied to study structures in plants and animals. Records in the form of descriptions and drawings.

BOTANY: Morphological structure and reproduction of various plant organization types with a focus on the structure of plant tissue. Representation of the relationships between structure and function with regard to absorption processes, transport processes, transpiration, and photosynthesis.

Prerequisites

Skills to be acquired in this module
++ biological knowledge
++ knowledge of biological working methods
+ biologically relevant knowledge in the natural sciences and mathematics
+ abstract, logical, analytical thinking
+ deepened expertise in biological specialist field
+ teamwork

Theory: Basic knowledge in Biochemistry, Microbiology, Cell Biology and Genetics
Practice: Basic methodological skills acquired by performing experiments

Module contents
Fundamentals of Microbiology and Cell Biology:
Molecules of life; energy and enzymes; central metabolism; breathing; photosynthesis; anaerobic metabolism; chemolithotrophy; procaryotic and eucaryotic cell structures; microbial diversity; importance of microorganisms for human beings, plants, animals, biotechnology and earth system
cell group; signal transmission and communication between cells; meiosis; mitosis; mendelian inheritance; chromosomal and molecular basis of inheritance; replication; transcription; translation; genomic organization; mutation and repair.

  - Thomas Glatzel
- authorized examiners
  - Alle hier genannten
- Module counseling
  - Klaus Bernhard von Hagen

Prerequisites:

Skills to be acquired in this module:
- biological knowledge
- knowledge of biological working methods
- independent learning and (research-based) working
- knowledge of safety and environmental issues

To determine species-rich taxa and to verify the results independently using relevant literature

Module contents:
L: Introduction to the variety of indigenous flora and fauna, presentation of important plant families and animal groups, studying the characteristics important for determination, introduction to systematics. Moreover, subjects are included that present ecological aspects of the taxa dealt with.
E: Applying literature to determine animal and plant species and to classify them systematically.
EX: Excursions to the characteristic North German biotopes. The excursions focus on correct identification and classification of plants and animals according to the properties of the living organism.

#### Prerequisites
- **Skills to be acquired in this module**
  - ++ biological knowledge
  - ++ knowledge of biological working methods
  - + biologically relevant knowledge in the natural sciences and mathematics
  - + statistics & scientific programming
  - ++ abstract, logical, analytical thinking
  - + deepened expertise in biological specialist field
  - ++ independent learning and (research-based) working
  - + teamwork

Basic knowledge on physiological processes and their underlying mechanisms with a focus on human physiology. Performing, analysing and documenting physiological experiments.

#### Module contents
The lecture (Vorlesung: 5.02.271 - Physiologie der Tiere und des Menschen) covers topics such as cell physiology, sensory physiology, neurophysiology, functions of the vegetative system, blood physiology/immune response, blood cycle, respiration and digestion. Emphasis will be on human physiology. In the following lab exercises, students get the opportunity to perform physiological experiments linking to topics from the lecture. By performing experiments on themselves and computer simulations students will gain insight into the underlying physiological principles.

#### Recommended reading

Fundamentals of metabolism and developmental physiology of plants. Theoretical knowledge acquired from lectures and textbooks is improved by experiments, the instructions for experiments are applied independently, laboratory device is handled independently, measured values are calculated independently, the correctness of experimental results is assessed, the results obtained are interpreted and compared to theoretical expectations.

#### Module contents

**L: Theoretical knowledge of metabolism and of the control of development in plant organisms, introduction to genetic engineering.**

**S: Presentation of experiments, presentation of theoretical fundamentals of experiments.**

**L: Photosynthesis: Physiology of light and dark reactions, photosynthetic ability and environmental factors.**

**Ecophysiology: Influence of mineral substances on plant growth, function of light as developmental factor, function of plant hormones as developmental factors.**

#### Recommended reading

- ++ (scientific) communication skills
- + project and time management

Introduction to both microevolution (speciation and species concepts, adaptation and selection, behavioural ecology, reproduction systems) and macroevolution. Introduction to phylogenetics (phyloinformatics, molecular systematics, phylogeography).

Module contents:
The lecture imparts basic knowledge in areas including population biology, phylogenetic systematics, phyloinformatics, behavioural and reproduction ecology. These fundamentals are extended in the seminar and exercises.

**Prerequisites**

**Skills to be acquired in this module**
- biological knowledge
- knowledge of biological working methods
- abstract, logical, analytical thinking
- deepened expertise in biological specialist field
- independent learning and (research-based) working
- data presentation and evidence-based discussion (written and spoken)
- teamwork
- (scientific) communication skills
- project and time management
- knowledge of safety and environmental issues

Extended knowledge of biodiversity and evolution of plants focusing on reproduction, dispersal, germination and establishment of plants

**Module contents**
- L: Pollination, dispersal, germination of plants, plant breeding
- S: Pollination and dispersal biology of plants in a systematic context
- LC: Pollination, fertilisation, dispersal and germination biological experiments in regard of adaptation to environmental factors

**Recommended reading**
The course does not follow a special textbook. The following German literature is recommended to students interested in the course: Dieter Heß – Die Blüte, Eugen Ulmer Verlag as well as Leins & Erbar -Blüte und Frucht, Schweizerbartsche Verlagsbuchhandlung.

**Language of instruction**

Prerequisites
Skills to be acquired in this module
- ++ biological knowledge
- ++ knowledge of biological working methods
- ++ biologically relevant knowledge in the natural sciences and mathematics
- + statistics & scientific programming
- + interdisciplinary knowledge & thinking
- ++ abstract, logical, analytical thinking
- ++ deepened expertise in biological specialist field
- ++ independent learning and (research-based) working
- ++ data presentation and evidence-based discussion (written and spoken)
- + teamwork
- ++ (scientific) communication skills
- + project and time management

Basic knowledge and practical experience in biological oceanography
Apply theoretical concepts from different fields in marine ecology
Analyse, present, and interpret results from the marine ecological literature and own investigations
Acknowledge the importance of general ecological concepts for ecosystem management
Gain experience in the application of field and lab methods in ecology

Module contents
Lecture Biological Oceanography
2 SWS = 3 CP. Presence time 24 h, additional study time 66h, winter-term
Abiotic environmental conditions in marine systems (light, temperature, chemical and physical properties of the water, waves, tides, global distribution of water masses and currents. Pelagic communities, plankton (phyto-, zoo-, bacterio-, viroplankton), microbial loop, sedimentation, C-and N cycling, Nekton, Fisheries, El Nino, Benthic communities, estuaries.

Exercise Concepts in marine ecology
6 SWS = 9 CP. Presence time 70 h, additional study time 200h, winter-term
Practical and theoretical exercises on marine ecology, including field studies, experiments and working with case studies from the literature. The focus is on concepts here, pinpointing at general ecological frameworks.

Lecture Marine Ecology
2 SWS = 3 CP. Presence time 24 h, additional study time 66h, winter-term
Ecology of marine systems: estuaries, rocky and sediment coasts, pelagial, shelfs, mangroves, seagrass meadows, coral reefs, deep sea, polar regions. The focus is on ecological specifics and interactions in the biotic communities of these systems. The second half of the lecture will focus on importance and consequences of overfishing, habitat destruction, pollution, climate change and bioinvasion on marine systems.

### Module Information

**Module name:** Morphology, Phylogeny, and Evolution of Metazoa  
**Module code:** bio340  
**ECTS credit points:** 15.0 KP  
**Workload:** 450 h

**Used in degree programmes:**  
- Fach-Bachelor Biologie > Akzentsetzungsmoduls  
- Master of Education (Gymnasium) Biologie > Mastermodule  
- Zwei-Fächer-Bachelor Biologie > Akzentsetzungsmoduls

**Contact person**  
Module responsibility  
- Olaf Bininda-Emonds

**Prerequisites**

**Skills to be acquired in this module**  
++ biological knowledge  
+ knowledge of biological working methods  
++ biologically relevant knowledge in the natural sciences and mathematics  
+ statistics & scientific programming  
+ interdisciplinary knowledge & thinking  
+ abstract, logical, analytical thinking  
++ deepened expertise in biological specialist field  
+ independent learning and (research-based) working  
++ data presentation and evidence-based discussion (written and spoken)  
+ teamwork  
++ (scientific) communication skills  
+ project and time management

Upon successful completion of the module the students will gain:  
1. a survey of topical subjects relating to the morphology and phylogeny of animals,  
2. a thorough knowledge of the development of morphological characteristics,  
3. technical skills in studying morphological structures, and  
4. knowledge into recent hypotheses on the phylogeny of animals.

**Module contents**

Lecture: Details regarding the morphology and evolution of Metazoa from an explicit phylogenetic framework  
Seminar: Presentation and discussion of recent subjects and issues relating to the evolution of Metazoa; presentation of individual metazoan taxa  
Exercise: Preparation and documentation of exemplary species of Metazoa; various field studies (e.g. visit to the Dierenpark Emmen or to the Zoo am Meer (Bremerhaven), sampling aquatic micrometazoans, observing birds)

**Recommended reading**

Relevant literature will be announced during the first seminar and is contingent on the latest developments in the research field.

+ (scientific) communication skills
+ project and time management

Skills to be acquired in this module:
* Preparation and organization of sampling
* Keeping organisms – field study
* Marine deposits, development of marine sediments and their effects on the fauna
* Methods of meiofauna and macrofauna sampling, also plankton sampling
* Methods of quantitative community analysis
* Diversity comparison of various sites applying statistical methods
* Multivariate statistics for correlation of biocenoses and environmental variables
* Biocenoses of marine habitats
* Biology, morphology, systematics, behaviour and ecology of selected taxa in marine water systems
* Formulation and definition of scientific questions and selection of methods
* Habitat and biocenoses, interstitial, littoral (lotic, lenitic), diversity
* Planning behavioural experiments
* Presentation and discussion of scientific results
* Independent scientific work in groups and presentation of results

By active participation the students acquire the following knowledge/abilities/qualification:

Module contents:
The module gives an introduction to marine biodiversity research demonstrated by various animal groups from the Wadden Sea and the North Sea including independent sampling on the coast and on the islands. The students will collect the organisms in the field or on board using sampling equipment. In the laboratory course, the biology and morphology as well as the ecology and behaviour of certain species are investigated and documented. The morphology of marine sediments and their development are further aspects of this module.

- Passed module Flora/Fauna

Skills to be acquired in this module:
- Biological knowledge
- Knowledge of biological working methods
- Deepened expertise in biological specialist field
- Independent learning and (research-based) working
- Data presentation and evidence-based discussion (written and spoken)
- Scientific communication skills
- Knowledge of safety and environmental issues

The module is intended to give students in-depth knowledge on plant determination and the diversity of plants. Students shall increase their knowledge on species and learn and improve their abilities in plant determination and plant conservation.

Module contents:
The module comprises a lecture in the Botanical Garden, where plants will be observed and investigated. This includes algae, bryophytes, ferns, gymnosperms and various families of angiosperms. The seminar is intended to let students study in-depth additional plant families with their typical characters. The exercises will be used to apply the abilities to plant species in the vicinity of Oldenburg and to practice methods in mapping and surveying plant species.

Prerequisites:

Skills to be acquired in this module:
- ++ biological knowledge
- ++ knowledge of biological working methods
- + abstract, logical, analytical thinking
- + deepened expertise in biological specialist field
- + data presentation and evidence-based discussion (written and spoken)

Imparting basic knowledge and relations of neurobiology. Transfer achievement: Preparing scientific records from the results of independent experiments.

Module contents:
In its first part, the lecture (4 H/W) covers the molecular and cellular fundamentals of neurobiology, the electrical processes in nervous cells, the organization and development of the nervous system, its function explained by simple circuits as well as the sensorimotor integration underlying any behaviour.

In the seminar (1 H/W), individual subjects of the lecture are consolidated. In the subsequent block laboratory course (6 H/W), this theoretical knowledge is verified under real-world conditions by simple experiments related to the subjects dealt with in the lecture. Unobjectionable scientific minutes are to be prepared of the experiments and the individual results are to be presented in a seminar paper.

- Knowledge of biological working methods
- Biologically relevant knowledge in the natural sciences and mathematics
- Statistics & scientific programming
- Interdisciplinary knowledge & thinking
- Abstract, logical, analytical thinking
- Independent learning and (research-based) working
- Data presentation and evidence-based discussion (written and spoken)
- Teamwork

Skills to be acquired in this module:
- Learning and applying mathematical methods to analyse biological data, extending school knowledge of mathematics, acquiring fundamental programming skills

Module contents:
The course aims at Biology students who want to extend their school knowledge of mathematics and to practise it. The course is guided by practical examples of data analysis in Biology, the respective mathematical basis of which is explained and applied. Subjects are: Matrix algebra, function designator, sequences and series, distributions, descriptive statistics, concept of statistical tests among others. In the exercises, the students are introduced to the programming language R and learn to solve problems of data analysis independently, e.g. while keeping the minutes in a laboratory course.

Skills to be acquired in this module

++ biological knowledge
++ knowledge of biological working methods
+ biologically relevant knowledge in the natural sciences and mathematics
++ abstract, logical, analytical thinking
++ independent learning and (research-based) working
++ data presentation and evidence-based discussion (written and spoken)
++ teamwork
+ (scientific) communication skills
+ project and time management
+ knowledge of safety and environmental issues

The students have a survey of the arrangement, function, and biosynthesis of the most important substance classes and metabolic processes, learn basic experimental methods of biochemistry and are able to present and interpret experimental results.

Module contents

The module gives an introduction to conceptions and methods of biochemistry.

Recommended reading

General textbooks of Biochemistry, e.g.:
Biochemie, Müller-Esterl
Biochemie, Lubert Stryer
Lehninger Prinzipien der Biochemie, David L. Nelson und Michael M. Cox
Principles of Biochemistry, Horton et al.

Prerequisites

Skills to be acquired in this module

Aufbauend auf einem mittleren Abiturwissen werden Teile des Schulstoffs wiederholt (Ableitung und Integral), ergänzt (allgemeiner Abbildungsbegriff, Folgen und Reihen) und weiterentwickelt (Taylorreihe, Differentialgleichungen). Die Mathematik wird dabei im wesentlichen ohne Beweise als Handwerkszeug präsentiert. Die Ideen hinter den Begriffen und die Bedeutung der Ergebnisse werden jedoch ausführlich erklärt.

Die Studierenden sollen
- ihr Schulwissen wiederholen und festigen,
- die Anwendung von Mathematik in der Biologie mit zahlreichen praktischen Übungsaufgaben lernen,
- ihr allgemeines Wissen mathematischer Methoden und Modelle verbreitern und üben,
- die grundlegenden Formen von diskreten und kontinuierlichen, ungebremsten und gebremsten Wachstumsprozessen kennenlernen,
- erfahren, wie analytisches und abstraktes Denken bei dem Studium realer Probleme helfen kann.

Module contents

Folgen und Konvergenz: Abbildungen und Funktionen, rekursiv definierte Folgen und diskrete Wachstumsmodelle, Konvergenz, Reihen.
Reelle Funktionen: Grenzwert und Stetigkeit, Exponential- und trigonometrische Funktionen, Koordinatentransformationen.

Recommended reading
Ein Vorlesungsskript wird elektronisch bereitgestellt.
