Skills to be acquired in this module:  
++ Neurosci. knowlg. + Expt. methods + Independent research + Scient. literature + Social skills  
++ Interdiscipl. knowlg. Maths/Stats/Progr. + Data present./disc. + Scientific English Ethics  

Upon successful completion of this course, students:  
- know the fundamentals of behavioural ecology and neuroethology  
- are able to present and critically assess scientific data and approaches  

Module contents:  
The lecture "Neuroethology" provides an introduction to the mechanisms underlying the behaviour of animals. Subjects are, e.g., the mechanisms of perception, control of movement patterns, mechanisms of learning, orientation and navigation.  
The lecture "Behavioural ecology" provides an introduction to topics such as predator-prey interactions, optimal food utilization, spatial and temporal distribution of animals, social relations and group formation, mating systems and reproductive strategies, sexual selection, investment of parents in offspring, and communication.  
In the seminar "Current issues of Ethology", current original literature relating to behavioural biology is reported and discussed.
