Entry requirements
Skills to be acquired in this module
Students will:
- analyse the reciprocal interaction between business organizations and society
- identify cultural processes (e.g. social acceleration, relationship between technology and society, subjectification, scientification, medialization)
- understand and interpret the meaning of products and services for social practices

Module contents
Business organizations are a product of culture, but at the same time organizations themselves shape our culture. That means that on one hand organizations are influenced by cultural processes, e.g. through the changing demand for products and services or changes in our legal system. Organizations are also greatly influenced by informal social perception. What is accepted and non-accepted business practice? This social perception has direct positive or negative influence on business reputation. On the other hand, the influence of business organizations on cultural processes has hardly been acknowledged and examined by scientists. Therefore this is the focus of the module: Corporate strategies are cultural propositions. With their business strategies and their own cultural and social practices business organizations influence significantly how a society changes over time. In this module the economic interaction between suppliers and consumers is discussed by reading and discussing scientific literature during lecture. In the seminar students will present case studies.
